When Vice President Spiro T. Agnew was forced to resign from office after being charged with tax evasion, President Richard M. Nixon appointed Ford to the vice presidency on 10 October 1973. By that time, Nixon was already embroiled in the Watergate scandal, which in turn would force his own resignation less than a year later. When Nixon resigned the presidency on 9 August 1974, Ford automatically succeeded him to become the thirty-eighth president of the United States.

A plainspoken and unassuming man, Ford's immediate goal as president was to restore public confidence in the presidency, which had been badly shaken by Watergate and the executive excesses of the Nixon presidency. Lacking a broad political base and with no popular mandate, Ford tried, without great success, to bolster the spirits of a nation left deeply divided and scarred by both the Vietnam War and the debilitating Watergate political crisis. He also attempted to revive the faltering economy, which had been seriously weakened as a result of the first energy crisis that had begun in 1973. The crisis had brought about the quadrupling of oil prices in less than a year's time.

The American economy was plagued by galloping inflation combined with a stubborn recession and high unemployment, phenomena dubbed "stagflation." Without doubt, stabilizing the nation's economic woes was Ford's primary domestic imperative. Neither the president nor Congress, which reduced the federal budget, was able to remedy the economic situation.

Ford's most controversial act as president was his issuance of a full and unconditional pardon for Nixon, which he announced on 8 September 1974. Ford defended his action by arguing that he was bringing closure to the Watergate affair. Much of the public was embittered by the pardon, which ironically occurred just a week before Ford granted only a partial pardon to Vietnam War resisters and military deserters.

In foreign affairs, Ford continued to pursue the Nixon-Kissinger policy of détente with the Soviets, managing to reach a new arms limitation agreement during his short tenure in office. He also helped stabilize the Middle East by providing aid to both Egypt and Israel and by brokering an interim truce agreement between the two nations. Finally, he was proactive in maintaining America's international standing and prestige after the humiliating collapse of both the Republic of Vietnam (ROV, South Vietnam) and Cambodia.

Ford lost the 1976 election to former Georgia governor Jimmy Carter by one of the narrowest margins in U.S. history. Ford then went into retirement. Despite his limited successes, he provided a measure of stability to a nation shell-shocked by political scandal and economic turmoil, which in itself was

no easy task. Ford died at his home in Rancho Mirage, California, on 26 December 2006.

Resolution passed by the U.S. Congress on 29 January 1955 in response to the First Taiwan Strait Crisis (1954–1955), empowering President Dwight D. Eisenhower to fully defend the Republic of China (ROC, Taiwan), historically known as Formosa, to include the dispatch of troops there. It is also known as the Formosa Resolution.

In August 1954, Nationalist China leader Jiang Jieshi sent more than 50,000 ROC troops to the offshore islands of Jinmen (Quemoy) and Mazu, which the People's Republic of China (PRC) claimed as its own. Within days, PRC leaders announced plans to retake Taiwan and the surrounding islands by force. The Eisenhower administration bluntly warned Beijing not to attempt its so-called liberation of Taiwan. Nevertheless, on 3 September the PRC began shelling Jinmen, precipitating a full-blown crisis.

On 12 September the Joint Chiefs of Staff (JCS) counseled Eisenhower that nuclear weapons should be used against the PRC if it launched a full-scale invasion of Taiwan, and the Eisenhower administration made certain that Beijing knew of this plan. In November the Chinese sentenced twelve American airmen held since the Korean War to long prison terms, which only increased the pressure on Eisenhower to launch a nuclear strike on Mainland China. Eisenhower rebuffed such drastic action, and on 3 December the U.S. government hastily concluded the United States–Republic of China Mutual Security Treaty as a show of solidarity with Taipei. The U.S. Senate ratified it in early February.

Meanwhile, PRC and ROC forces continued to clash in the Taiwan Strait, with Jiang's forces taking heavy casualties. To send an even stronger signal to

Formosa Doctrine (1955)

Beijing and empower the president to take any action necessary to defend Taiwan, both houses of Congress passed the Formosa Resolution on 29 January 1955. The act essentially broadened the scope of the Mutual Security Treaty by extending U.S. commitments to defend from PRC incursions the offshore islands in addition to Taiwan. In early spring, as the crisis continued, the United States warned publicly of the potential use of nuclear weapons against the PRC. In May 1955 the PRC halted its shelling and agreed to a negotiated truce.

Forrestal, James Vincent (1892–1949)

U.S. secretary of the navy (1944–1947) and first secretary of defense (1947–1949). Born in Beacon, New York, on 22 May 1892, James Forrestal enrolled at Dartmouth College in 1911 and transferred to Princeton University, which he left before receiving a degree. In 1916 he found work as a bond salesman on Wall Street. In 1917 he enlisted in the U.S. Navy, serving in the new Naval Aviation Department.

Following World War I, Forrestal returned to Wall Street, and in 1923 Dillon, Read & Company named him a firm partner. In 1937 he became the company's president. In June 1940 President Franklin D. Roosevelt recruited Forrestal as a special assistant. Two months later Roosevelt appointed him undersecretary of the navy. In May 1944 Forrestal became secretary of the navy.

Although Forrestal objected to a proposed postwar army-navy merger, he did support the unification of the armed services championed by President Harry S. Truman. In September 1947, Truman appointed Forrestal secretary of the new Department of Defense, created by the sweeping 1947 National Security Act. Forrestal worked diligently to forge cohesiveness among the armed forces. As an anticommunist hard-liner, however, Forrestal was frustrated by the draconian cuts in military spending in the immediate postwar era. At the time, both Congress and the Truman administration were loath to increase military spending in the face of strained budgets, large war debts, and the U.S. monopoly in atomic weapons.

In 1948 Forrestal was criticized for his inability to stem air force intransigence in the controversy involving manpower needs and budget allocations within the Defense Department. Air force proponents had been beating the drums for more manpower and money at the expense of the other military services. The secretary also fell out of favor because of his pro-Arab views and opposition to the 1948 U.S. recognition of the State of Israel. By late 1948, Forrestal grew increasingly despondent over what he saw as unfair criticism and a lack of congressional and administration support.

As a result of these intense conflicts, his growing fears of the Soviet threat, and his increasingly precarious mental state, Forrestal resigned on 28 March 1949 after suffering what was then termed a mental breakdown. Shortly thereafter he was admitted to the Bethesda Naval Hospital. On 22 May 1949, Forrestal committed suicide by jumping from a sixteenth-story hospital window. Praised for his distinguished service to the U.S. armed forces, he was buried with full military honors at Arlington National Cemetery.

West European nation covering 211,208 square miles, roughly twice the size of the U.S. state of Nevada and somewhat smaller than Texas, with a 1945 population of 40 million. France is bordered to the west and northwest by

France

the Atlantic Ocean and the English Channel; to the northeast by Belgium, Luxembourg, and Germany; to the east by Switzerland and Italy; and to the south by the Mediterranean Sea and Spain. In June 1940, Germany defeated and occupied France. The collaborationist Vichy regime notwithstanding, the country emerged as one of the victors of the war in 1945. This was mainly because of the resistance movement that was coordinated and conducted by France Libre (Free France), initially established and led from London by General Charles de Gaulle.

In the postwar period, France became one of the pillars of West European cooperation and integration and was an important component of the Atlantic Alliance. From 1958, however, France embarked on a more independent foreign policy. The former French Empire was dismantled through a difficult process of decolonization and in some cases, such as Indochina and Algeria, only after protracted wars. Constitutionally, France passed through the interregnum of the institutionally weak Fourth Republic (1946–1958) to the Fifth Republic (since 1958), created by de Gaulle and disposed to be a far more stable and enduring political system than the one it replaced.

The transition period between the August 1944 liberation of Paris and the establishment of the Fourth Republic was characterized by major structural reforms and a complicated process of constitution making. The reforms were implemented mainly during 1945–1946, among them the nationalization of key sectors of the economy and industry, improvement of the social welfare system, and the introduction of centralized economic planning.

Disagreements over constitutional issues and economic policy led to the breakup of the tenuous coalition of the Left and Center parties, with de Gaulle resigning in January 1946. The biggest conflict resulted from differing constitutional concepts. De Gaulle favored a strong presidency overseeing a powerful central government, while political parties fought for a constitution that gave party politics the dominant role in the political system. The parties prevailed, but three referenda were necessary in order to promulgate a new constitution. On 21 October 1945, an overwhelming majority voted against reinstating the constitution of the Third Republic. In May 1946 the first draft of a new constitution was rejected. Finally, on 13 October 1946, a second draft was accepted, with more than 32 percent of the voters abstaining.

The constitution of the Fourth Republic aimed at giving the premier considerable power, but as it turned out the main winners were actually the National Assembly and the political parties. At the beginning of 1947, with the institutions of the Fourth Republic established, the parliament elected the first president, Vincent Auriol, on 16 January.

The Fourth Republic produced decidedly mixed results. On the one hand, it laid the foundations for success in both domestic and foreign affairs. Internally, however, it was subject to revolving-door governments that in the long run brought gridlock and instability. The main achievements of the Fourth Republic were related to economic development. Efficient use of foreign aid, especially Marshall Plan assistance, accelerated recovery from the war. The combination of centralized planning, an end to protectionism, and

a disciplined focus on investments over consumption all led to impressive growth rates and unprecedented industrial expansion in the 1950s. Although inflation remained a constant concern, the overall economic policies of the Fourth Republic created a solid basis upon which the economic successes of the 1960s were built.

Externally, the Fourth Republic's main accomplishments were related to the strategic orientation of its foreign policy, especially concerning West European and Atlantic affairs. From the start of the Cold War, France placed itself firmly in the Western camp, and the representatives of the French Communist Party were ousted from government in May 1947. France enthusiastically supported the Marshall Plan; joined the Organization for European Economic Cooperation (OEEC), established in April 1948 to distribute U.S. aid; and was one of the founding members of the North Atlantic Treaty Organization (NATO), chartered in April 1949. With respect to the Federal Republic of Germany (FRG, West Germany), initial efforts to pursue a harsh occupation policy and detach the Saar gave way to close cooperation, which became a pillar of the West European Integration Movement. Following France's proposed May 1950 Schuman Plan, the European Coal and Steel Community (ECSC) was formally established in April 1951. France played an active role in the preparation of the Treaty of Rome (25 March 1957), which founded the European Economic Community (EEC) and included the Common Market and the European Atomic Community (EURATOM).

Despite these successes, the Fourth Republic was unable to overcome its institutional deficiencies or cope with the problems created by decolonization. The political system remained highly unstable, thanks to the inherent structural weaknesses of the executive branch. Contrary to the intentions of the constitution, governmental power was severely restrained by a preponderant National Assembly and its many shifting coalitions. The result was a series of governmental crises accompanied by constantly changing cabinets; the average tenure of a government during the Fourth Republic was slightly more than seven months. The deplorable state of political affairs was particularly evident in December 1953, when the National Assembly required thirteen ballots before finally electing René Coty president of the Fourth Republic.

These institutional weaknesses affected the French colonial system, and vice versa. France was forced to retreat from Indochina after a bloody, unpopular eight-year war (1946–1954) that culminated in the ignominious defeat at Dien Bien Phu in May 1954. Barely half a year later, in November 1954, Algerian rebels began an armed struggle against their colonial French rulers. Fearing a possible domino effect, France granted Morocco and Tunisia independence in 1956. But the attempt to hold on to Algeria, France's most important North African colony where almost 1 million Frenchmen had settled, proved futile, even with 500,000 ground troops by 1958.

Finally, the combination of a new government crisis in Paris in April 1958, riots by French nationalists in Algiers in May, and a rebellion of part of the French Army including high-ranking officers led to the fall of the Fourth Republic. President Coty informed the National Assembly and the Senate

on 29 May that because the country was “on the brink of civil war,” he had asked de Gaulle to take charge of the formation of a new “government of national salvation.”

On 1 June 1958, the National Assembly elected de Gaulle head of a provisional government for six months. Granted immense power, the general initiated the drafting of a new constitution that was adopted by referendum on 28 September 1958. The constitution of the Fifth Republic gave the executive branch—especially the president—much broader powers, mainly at the expense of the National Assembly. The president selected the prime minister and generally played the leading role. The government would continue to be responsible to parliament, but the president had the authority to dissolve the National Assembly. And instead of the National Assembly alone choosing a leader, a college of deputies, senators, and local representatives, comprising more than 80,000 persons, would elect the president for a seven-year term. On 21 December 1958, de Gaulle was elected president of the Fifth Republic by a clear majority of the college.

First and foremost, de Gaulle had to find a way out of the Algerian War. However, neither the Algerian independence movement nor the colonists demanding the defense of French Algeria were willing to accept his initial plans for a compromise, which called for an autonomous Algeria with continuing special ties to France. Disturbances both in mainland France and in Algeria, and particularly the abortive April 1961 military putsch in Algiers led by General Raoul Salan, accelerated the trajectory of Algerian independence. Other options were gradually eliminated, and on 8 April 1962 the Évian Accords of 18 March between

the French government and the Provisional Government of the Algerian Republic were approved by an overwhelming majority in a national referendum. However, repercussions of the Algerian conflict continued to affect politics and society in France. The army insurgents in Algiers had formed the Organisation de l’Armée Secrète (OAS, Secret Army Organization), which turned into a purely terrorist force that tried repeatedly to kill de Gaulle and destabilize the government. And the country had to absorb almost 1 million refugees from Algeria.

Despite the preoccupation with Algeria, de Gaulle managed at the same time to lay the most important foundations of a stable Fifth Republic. The new institutions set in place proved as viable as the constitution, which was amended once in October 1962, providing for election of the president by direct universal suffrage. A program of inflation control and austerity measures strengthened the economy and the currency, with a new franc being introduced in 1960. Political stability, economic success, and the solution of the colonial conundrum allowed de Gaulle to pursue his ambitious foreign

policy plans. These elements also contributed to his victory in the December 1965 presidential elections.

De Gaulle aimed at forging an independent, middle-course foreign policy and strengthening France's role in world affairs. He pushed successfully for the implementation of an independent French nuclear deterrent (*Force de Frappe*). In February 1960 France tested its first atomic bomb, and in August 1968 it detonated a thermonuclear bomb, thus achieving the basis of an independent nuclear force. Without giving up the global orientation in Atlantic or in European affairs, de Gaulle changed foreign policy priorities and approaches. In March 1966, France withdrew from NATO's integrated military command and gave notice that it was terminating the stationing of U.S. and Canadian forces in the country. But the nation remained a NATO member, and de Gaulle, often perceived in the United States as anti-American, remained a reliable U.S. Cold War ally.

De Gaulle's European policy combined the intensification of West European integration efforts with initiatives for détente and cooperation with Eastern Europe and the Soviet Union. The main pillar of integration remained the EEC, with the ongoing French-German entente as the driving force. With respect to the development of the EEC, de Gaulle favored inter-governmental cooperation and the supremacy of national interests over supranational ones. He also vigorously demanded a Common Market for agricultural products. In addition, he twice blocked the entry of Britain into the EEC, fearing that its membership would undermine established West European positions.

In the spring of 1968, a serious rebellion against the French political and social order erupted, beginning with student protests and followed by massive labor strikes. The crisis came to a head in the last week of May 1968 and resulted in bloody confrontations between police and protesters. The political leadership, caught by surprise by the Events of May, vacillated for some time. Obvious differences emerged between President de Gaulle and Premier Georges Pompidou. Although the government restored order by June 1968, de Gaulle never fully regained his former authority. On 27 April 1969, his proposals for constitutional amendments of minor importance were rejected in a referendum. Having publicly announced the issue as a referendum on his leadership, de Gaulle resigned the following day.

The continued development of France after de Gaulle's departure confirmed the long-term efficacy of his political and institutional leadership. The Fifth Republic, attacked as tailor-made for its creator by many of its critics, nonetheless remained intact. It also proved quite amenable to the change in leadership.

De Gaulle's first two successors had served in government during the 1960s. Pompidou, prime minister during 1962–1968, was elected president on 15 June 1969. Following his death in April 1974, former finance minister Valéry Giscard d'Éstaing became president, having defeated socialist François Mitterrand in a close second ballot in May 1974. Pompidou was inclined toward a more liberal leadership style and to a less state-oriented economic policy than his predecessor, but in general terms he adhered to Gaullism.

The army insurgents in Algiers had formed the Organisation de l'Armée Secrète (OAS, Secret Army Organization), which turned into a purely terrorist force that tried repeatedly to kill de Gaulle and destabilize the government.

A crowd views cars destroyed in the May 1968 Paris riots, when angry students and workers took to the streets to protest against widespread poverty, unemployment, and the policies of the government of President Charles de Gaulle. (Alain Nogues/Corbis Sygma)

During the premiership of Jacques Chaban-Delmas (1969–1972), important social reforms were introduced under the banner of the “new society.” Pompidou’s most important foreign policy change was the lifting of the veto against Britain’s entry into the EEC. His proposal was approved by referendum in April 1972.

Giscard distanced himself more clearly from the Gaullist tradition, announcing the establishment of an “advanced liberal society” that first and foremost was meant to implement radical economic reform based on the classical principles of a free-market economy. But the consequences of the world economic crisis of the mid-1970s restrained further reforms, and France entered the late 1970s in a prolonged economic crisis with sinking industrial production, rising unemployment, and rampant inflation. Giscard’s main achievements in foreign policy were his initiative for meetings among representatives of the most industrialized countries (G7) and the establishment of the European Monetary System.

During the 1970s, the formerly amorphous and atomized political party system became more stable and coherent because of the coalescence of five organizations. The Communist Party continued to represent the traditional far Left, albeit with declining influence. The Socialist Party was revitalized by its merger with several small groups in 1971 and restructured under the

leadership of Mitterrand. The Center-Right was divided mainly between the Union pour la Démocratie Française (UDF, Union for the French Democracy) and Gaullism's Rassemblement pour la République (RPR, Rally for the Republic), which was nearer to the political philosophy of de Gaulle and was founded in December 1976 by Jacques Chirac. During the 1980s, a new party emerged on the far Right, the nationalistic and xenophobic Front National (National Front) led by Jean-Marie Le Pen.

Thanks to a quasi coalition of the Left and severe friction between Giscard and Chirac, Mitterrand defeated Giscard in the second round of presidential elections in May 1981. For the first time in the history of the Fifth Republic, the Left came to power. The new government formed by Prime Minister Pierre Mauroy included four ministers from the Communist Party and began with an ambitious program of social reforms and economic nationalization. But a deteriorating economic situation soon forced Mitterrand to adopt a radical change. He turned to a program of austerity measures and in July 1984 replaced Mauroy with Laurent Fabius. The Communist Party ministers left the government following these actions.

Institutionally, no major developments emerged after 1981 except for one: the so-called cohabitation. The authors of the constitution obviously had not foreseen the possibility that the president and the government could belong to different parts of the political spectrum. This happened for the first time in 1986, when the RPR and UDF won a clear parliamentary majority, forcing Mitterrand to appoint Chirac as prime minister. This first cohabitation lasted until 1988, and in the 1990s two similar situations followed. Nevertheless, the functioning of the Fifth Republic was not substantially altered by this new phenomenon.

In foreign affairs, continuity was even more evident in the 1980s. By and large, Mitterrand stuck to the main principles of Gaullist foreign policy: defending the independence and national interests of the country but remaining a reliable member of the Atlantic Alliance, concentrating on the Franco-German entente as the main pillar of West European policy, and enhancing détente but firmly supporting the United States in crisis situations. Together with German Chancellor Helmut Kohl, Mitterrand was instrumental in paving the way for the 1991 Maastricht Treaty leading to the European Union (EU).

During the Cold War, France remained one of the pillars of the Western alliance and a driving force behind West European cooperation. De Gaulle pursued an independent course in foreign policy, leading at times to sharp differences with the United States, but this was designed to enhance the position of France and Western Europe and did not represent a repudiation of basic Western interests vis-à-vis the Soviet Union.

France, Air Force

Despite the poor state of the French Air Force at the end of World War II, it was to play a significant role in the Indochina War (1945–1954), the Algerian War (1954–1962), and the Suez Crisis (October–November 1956). Most important, after France successfully tested its first atomic bomb on 13 September 1960, the air force began exercising a nuclear deterrence role. French aircraft by the 1960s were regarded as some of the world's most advanced, a legacy of substantial military spending during the early Cold War years.

At the end of World War II, France had to reconstruct its entire military, including the air force. During the war the air force, consisting of approximately 145,000 personnel, had been attached to American, British, and Soviet flying units. There had been only one large French air unit, the First Air Division, which at the end of the war was stationed in Germany. Upon liberation, the French government began the task of revamping its air force by ordering more than 6,000 new aircraft, including light planes (primarily Moranes), light twin-engine planes (including NC 701s, SO 91s, and C499s), transport planes (primarily Bloch 161s and Ju-52s), and warplanes (VB 10s, B1 175s, and MS 472s). By the close of 1945, some 900 new planes had been delivered. These aircraft helped equip a force that during the latter part of the war was flying aircraft provided by its allies and making use of captured German planes. Air force personnel were initially cut to below 60,000, but beginning in 1952 those numbers significantly rose.

Although French Air Force officers felt vindicated by the importance of airpower in World War II, there was no unanimity on the future role of airpower, and many military leaders continued to view the air force as auxiliary and subservient to land forces. Much of this debate on the role of the air

Two French Air Force Dassault Mirage F-1C aircraft armed with Matra 550 Magic air-to-air missiles on the wing tips and Matra R.530 air-to-air missiles under the fuselage, May 1986. (U.S. Department of Defense)

force became moot with the formation of the North Atlantic Treaty Organization (NATO) in 1949, which obligated France to assign two wings of its air force to the Western alliance.

France began the Indochina War with a modest air element of a dozen ex-RAF Spitfire and some ex-Japanese Oscar III fighters, eighteen U.S.-built C-47 transports, and four U.S.-built PBY patrol bombers. Junkers Ju-52s, Siebels, and Martinets were soon added to the inventory, which grew throughout the conflict. By 1948, France had committed about 10 percent of its total aircraft to the conflict. In late 1949, the United States provided P-63 King Cobra, F6F Hellcats, and F8Fs Bearcat fighters as well as B-26 Invader bombers, the latter the first purpose-built bomber used in the war. The air force made an important contribution to the war, primarily in providing aerial transport to remote areas, including both parachute and resupply operations. Because of the difficult mountain and jungle terrain, the air force also acted as flying artillery. In 1950, the French began using helicopters in the war; Hiller UH-12As, H-23As, H-23Bs, and Sikorsky S-51s and S-55s proved highly effective in troop transport and medical evacuations. The French fleet of forty-two helicopters evacuated 10,000 people and rescued 38 downed pilots.

In both the Algerian War and the Suez Crisis, the French made extensive use of aircraft. In the Algerian War, the French relied on 700 American

T-6 Texans, but these aircraft proved vulnerable to ground fire and were later replaced with armored planes, including A-1 Skyraiders. Helicopters (Bell 47s, H-19s, and H-34s) flew highly effective troop transport, medical evacuation, reconnaissance, and close-air-support missions. The French also employed their new U.S.-built F-100 Super Sabre attack aircraft in Algeria.

In the 1956 Suez operation, the French employed U.S.-built F-84F Thunderjets, some of which were flown out of Cyprus and Malta. These destroyed much of the Egyptian bomber force based at Luxor. Nord 2501s dropped French paratroopers in two airborne assaults on 5 October. Also, during the last week of October the French turned over to Israel eighteen F-84Fs and some Noratlases to buttress that country's air defense.

A new era began in the late 1950s when Charles de Gaulle questioned American resolve to use its nuclear weapons in the event of a Soviet attack against Western Europe. France withdrew from the NATO military command structure and developed its own nuclear strike force, the Force de Frappe. From 1964 to 1974, three wings of Dassault Mirage IV supersonic bombers, based in nine different locations, provided the delivery capability for France's 70-kiloton free-fall nuclear bombs. By the mid-1970s, with the advent of missile delivery systems with 150-kiloton nuclear warheads, the French bomber force was reduced in number. Intermediate-range S-2 ballistic missiles, with a range of up to 2,000 miles, were housed in underground silos at Saint Christol. Beginning in May 1980, the S-2s were replaced with S-3s capable of carrying a 1.2-megaton thermonuclear warhead.

By 1990, with 93,100 active personnel and more than 500 combat aircraft in service, France's Air Force provided a strong air defense. Although its participation was limited, French airpower deployed in the Persian Gulf War was the third largest. But it was its strategic forces of 18,710 personnel maintaining a modest nuclear arsenal that constituted France's most significant contribution to the Cold War.

During the Cold War the French Army concentrated on two primary missions. The first was to maintain the peace in Western Europe; the second focused on reconstituting the French colonial empire. These two missions were at times contradictory because effort in one took away from the other. Immediately after World War II, the French Army was the only significant West European ground force. Although France sent troops to the Federal Republic of Germany (FRG, West Germany) in occupation duties and as a deterrent to a Soviet invasion, increasingly its resources were committed to the fight to maintain France's overseas empire, first in the Indochina War (1945–1954) and then in the Algerian War (1954–1962). France also provided a small ground contingent to the Korean War (1950–1953), and French forces, both ground and airborne, participated in the Suez Crisis (October–November 1956) and made a significant contribution to the Persian Gulf War (January–February 1991).

With the end of World War II, France reduced troop levels from 1.3 million men to only 460,000. Much of France's military hardware had been provided by the United States, although the French Army made use in the immediate postwar period of some captured German equipment. Postwar military expenses nevertheless were large, constituting one-third of France's total budget between 1952 and 1954. The army's manpower went up again during the Cold War, peaking at 829,000 personnel in 1957. In March 1966 France officially withdrew from the military command structure of the North Atlantic Treaty Organization (NATO), recalling two army divisions and seven tactical air wings. Under President Charles de Gaulle the country pursued a policy of military independence in both conventional and nuclear capability.

The French Army spent much of the Cold War fighting overseas. In September 1945, French forces arrived in Indochina to reclaim control of the region, which was contested by Vietnamese nationalists led by Ho Chi Minh. War broke out there in late 1946 and continued with growing intensity until 1954. The French Foreign Legion played a key role in the war. In 1948, the Foreign Legion formed parachute units: the 1st, 2nd, and 3rd Battalions of the Regiment Étranger de Parachutiste (REP). In 1948 the French Army deployed the 1st and 2nd REP to Indochina, while the 3rd was dispatched to Algeria. In Indochina, France used parachute battalions of both the regular army and Foreign Legion extensively, resulting in high casualty rates.

The Indochina drama came to an end in May 1954 with the French defeat in the Battle of Dien Bien Phu. This military defeat enabled French politicians to shift responsibility to the military and extract the country from an unpopular war through negotiations at the Geneva Conference. Although Viet Minh and Vietnamese fighting on the French side sustained many more casualties, the war claimed some 20,000 French dead, with an especially heavy toll in officers and noncommissioned officers. The war had been fought largely by the professional army and the French Foreign Legion, since no draftees were ever sent to Indochina.

France participated in the Korean War, but its numbers were small because of its commitment to Indochina. The French government regarded

French troops in Inchon, Korea, waiting to board a ship to take them to Indochina, 1953. (Library of Congress)

the fronts of Indochina and Korea as mutually supporting and so sent the highly effective Battalion de Corée (Korean Battalion), numbering 1,185 men. It was attached to the U.S. 2nd Infantry Division and fought in a number of hard battles, winning three U.S. Presidential Unit Citations. In Korea, France lost 271 men killed and another 1,008 wounded.

Almost immediately after the end of the Indochina War, the French Army was transferred to fight in Algeria. Algeria had been French since 1830 and was held to be an integral part of France, formed into three French departments. French leaders, and especially the French Army, were determined that this time there would be no defeat. At the war's onset, the French had 57,000 men in Algeria, but in the course of the war the ground commitment grew to more than 500,000. Army leaders, believing that they were about to be sold out by the government in Paris, played a key role in May 1958 in the return to power of de Gaulle. Although he initially pledged no retreat from a French Algeria, as the military options closed he gradually moved away from this position and toward negotiation with the rebels formed as the National Liberation Front (NFL). A faction of several hundred army officers then tried to topple de Gaulle and, when this failed, formed the Secret Army Organization (OAS) to wage a terrorist campaign. This failed to win support among the French public, and in 1961 the revolt was broken. In

1962 Algeria received its independence. The war had claimed the lives of some 17,000 Frenchmen.

In the postcolonial era, France continued to exert great influence in the third world, most notably in its former empire in Africa, where it claimed that it helped to curtail interventionist policies by the Soviet Union. During the 1970s French forces were stationed in Chad (2,500 troops), Gabon (400 troops), the Ivory Coast (600 troops), Senegal (1,450 troops), the Malagasy Republic (1,250 troops), and former French Somaliland (3,600 troops). In Africa the French Army operated a total of 1,400 aircraft, including 400 Alouette helicopters. French military intervention in Africa occurred frequently during the Cold War period: Cameroon (1959–1964), Mauritania (1961), Senegal (1959–1960), the Congo (1960, 1962), Gabon (1960, 1962), Chad (1960–1963, 1977–1980, 1983–1984), Djibouti (1976–1977), Zaire (1977, 1978), and the Central African Republic (1979).

During the Cold War the independence of the French military proved problematic for NATO strategists as well as for their Soviet counterparts. Since French and Western strategy was based on the defense of the Federal Republic of Germany (FRG, West Germany), a great deal of the French Army's effort was concentrated there. Late in the Cold War, the French military command, confident of its nuclear capability, believed that any conflict with the Soviets would be of short duration. In contrast, the U.S. military planned for protracted combat. If the French lack of integration in the NATO force inconvenienced Western leaders, it proved equally difficult for the Soviets, who had to formalize a strategy that took into account this unpredictable element of the Western alliance. The chief French Army weakness during the Cold War came in the deployment of large forces. This was the consequence of its emphasis on small-scale operations. Thus, during the Persian Gulf War in 1990 the French Army was only able to deploy an armored division consisting of two brigades, which had to be augmented with U.S. infantry and field artillery.

In 1988 the French Army created the Force d'Action Rapide, a rapid response force of 47,000 personnel designed for quick deployment to Central Europe or other hot spots. At the same time, a joint French-German brigade was based in West Germany. By the late 1980s, the French Army numbered 342,000 men, of whom 114,000 were regulars.

France, Navy

The French Navy was in considerable disarray at the end of World War II. Little remained of the powerful fleet with which the nation had begun the war. Two battleships, the *Richelieu* and the incomplete *Jean Bart*, and a few cruisers, destroyers, and submarines had escaped the German occupation of France in 1940. Most of these ships had been widely dispersed and later re-joined the war with the Allies. Most of the fleet had been scuttled at Toulon at the end of 1942 rather than have it fall into the hands of the Germans.

As a consequence, France relied heavily on its allies, Britain and the United States. These two powers provided ships that were surplus to their own requirements and also supplied to France, German, and Italian prize vessels. The Italian ships in particular were modern, powerful ships. But this also meant a logistical nightmare, with a profusion of incompatible systems and ordnance. Equipment was also difficult to maintain due to a shortage of spare parts. Repairs to French ships taxed the resourcefulness of French Navy dockyard repairmen at Brest and Toulon.

In April 1945 Britain transferred to France the U.S.-built escort carrier *Biter*, which the French renamed the *Dixmude*. It saw service off Indochina. In August 1946, Britain also transferred the carrier *Colossus*, renamed by the French the *Arromanches*. During the postwar years France added a number of modern French-built warships to its fleet, including the light carriers *Foch* and *Clemenceau* (for fixed-wing aircraft), *Jeanne d'Arc* (for helicopters), the anti-aircraft cruisers *De Grasse* and *Colbert*, and the destroyer/command ship *La Galissonnière*. In 1960 naval manpower stood at 62,000, but by the late 1980s that number had been cut to 32,804 (of which three-fourths were regulars). In the twilight years of the Cold War, the French fleet consisted of three carriers, forty-two surface combat vessels, twenty-nine mine hunters and minesweepers, fourteen patrol craft, sixteen attack submarines (of which three were nuclear-powered), and seven ballistic-missile nuclear submarines.

The modest naval resources available to France at the onset of the Cold War were placed under great strain as the nation attempted to reassert control over its colonial holdings. Although there was no enemy fleet to contend with in Indochina, France nonetheless utilized its navy to combat Viet Minh forces. On 23 November 1946, on the orders of French high commissioner to

Indochina Admiral Georges Thierry d'Argenlieu, the cruiser *Suffren* shelled Haiphong, killing between 200 and 1,000 Vietnamese and effectively beginning the Indochina War. During the eight-year-long Indochina War, the navy played an important role especially in riverine warfare, supporting army operations ashore and conducting amphibious operations. Junks and river craft as well as landing craft were brought in from Singapore.

Because of its heavy commitment to the fighting in Indochina, France contributed only one ship to assist the United Nations Command (UNC) during the Korean War. The frigate *La Grandière* performed patrol and blockade duties off the Korean coast.

In 1951, the United States transferred to France the light carrier *Langley*, renamed the *Lafayette*. Its sister ship, the *Belleau Wood* (renamed the *Bois Belleau*), joined the fleet two years later. In addition to the two aircraft carriers, Britain provided its share of captured German vessels, including four large destroyers and four torpedo boats. The navy used many of these ships, including the carriers *Lafayette* and *Bois Belleau*, in Indochina. The *Lafayette*, flying F4U-7 Corsairs, completed the last naval mission of the war.

By the mid-1950s, a new French-made navy took shape. The French naval command decided to scrap the old German ships while retaining the ex-American and ex-British ships for training purposes. France's respectable fleet of warships included two aircraft carriers, a cruiser, seventeen large destroyers, eighteen frigates, and fourteen submarines.

The battleship *Richelieu* was little altered. It served in Indochina and was hulked in 1959. The *Jean Bart*, which had been extensively damaged in the Allied landing at Casablanca in November 1942, underwent considerable renovation. New antiaircraft armament was installed in 1951–1952. The *Jean Bart* was stricken from the navy list in 1960.

French naval aviation played an important role in the Algerian War (1954–1962), providing both transport and close air support. In November 1957, the navy formed a special helicopter group that worked closely with four commando units of the French Special Naval Forces. The French pressed the *Jean Bart* into service during the 1956 Suez Crisis as a fire support ship, while aircraft from the *Lafayette* also participated.

On his return to power in 1958, Charles de Gaulle sought to strengthen the navy. De Gaulle saw the navy as playing an important role in a foreign policy independent of both Washington and London. Believing that he could not rely on the United States to risk its own nuclear destruction to defend Europe with nuclear weapons against a Soviet attack, de Gaulle gradually separated France from the North Atlantic Treaty Organization (NATO). In 1959 he withdrew the French Mediterranean fleet from the alliance's command. In 1963, France also withdrew ships from NATO's Atlantic command. Hand in hand with de Gaulle's decision to separate France from the NATO military command structure came the decision to develop a submarine nuclear deterrent, the Force de Dissuasion, similar to the U.S. Polaris. France's augmented fleet also possessed a considerable intervention capability, including colonial sloops, amphibious assault ships, and minesweepers. Despite these developments, the French Navy continued to maintain direct links with NATO.

The French nuclear deterrent force, known as the Force de Frappe, consisted of land, air, and sea-based delivery systems. In 1967, France launched the *Redoubtable*, the country's first nuclear-powered ballistic missile submarine. The Redoubtable class of submarines was designed to carry sixteen French underwater launched Mer-Sol-Balistique-Stratégique (MSBS) missiles, with a range of 1,900 miles. Each MSBS was designed to carry a nuclear warhead of 0.5 megatons.

By the end of the Cold War there were serious doubts about the ability of the French Navy to fulfill its worldwide policing commitments. New programs were also under way to replace aging vessels with new vessels, such as the Floréal-class frigates. The end of the Cold War brought retrenchment for the French Navy. This meant cuts and delays in ship construction programs, including that of the new aircraft carrier *Charles de Gaulle*.

Franco, Francisco (1892–1975)

Spanish Army general and fascist dictator of Spain. Born into a middle-class family in El Ferrol in Galicia on 4 December 1892, Francisco Paulino Hermenegildo Teóduelo Bahamonde Franco did not enter the navy, as was family tradition, but instead joined the Infantry Academy at Toledo in 1907. Graduating in 1910 in the bottom third of his class, Franco was commissioned a second lieutenant and was posted to Spanish Morocco.

Franco's leadership, courage, and absolute ruthlessness were demonstrated during the Riff Rebellion in Morocco. Seriously wounded in 1916, he won battlefield promotions for bravery. In 1920 he became deputy commander of the Spanish Foreign Legion in Morocco. In June 1923 King Alfonso XIII personally promoted Franco to lieutenant colonel and gave him command of the Foreign Legion. That same year the young colonel married María del Carmen Polo y Martínez Valdés, from one of Spain's most influential families, with the king serving as best man by proxy. In 1925 Franco won

promotion to colonel and, the next year, to brigadier general. At age thirty-three, he was the youngest general in any European army.

An archconservative, Franco was closely identified with General Miguel Primo de Rivera, who governed Spain in the name of Alfonso XIII during 1923–1930 and who in 1928 appointed Franco commander of the General Military Academy of Zaragoza (Saragossa). In 1931, upon the proclamation of a republic, the Left came to power and the government transferred Franco to the Balearic Islands, where he served during 1931–1934. He gained some credit with the government by refusing to join an abortive coup led by General José Sanjurjo in 1932, but this was probably because he thought that the attempt would be unsuccessful. Promoted to major general, Franco returned to Spain to play a role in crushing a miners' revolt in Asturias in 1935, then accepted the post of chief of staff of the army from the new conservative government of Spain later that year.

The leftist Popular Front won the hotly contested national elections of February 1936, and the new government sent Franco to command the Canary Islands garrison. As expected, the conservatives defied the mandate, and Franco was in the forefront of the revolt that began in July 1936. The untimely deaths of Generals José y Sacanell Sanjurjo and Emilio Mola Vidal left Franco as the Nationalist military leader. Thanks to German aircraft, he was able to airlift units of the Foreign Legion from Morocco to Spain. In September 1936 he became chief of the Nationalist government, and in April 1937 he assumed leadership of the Falange party. He became de facto head of Spain with the fall of Madrid in March 1939, marking the end of the civil war. Franco then carried out a ruthless purge of the opposition. Throughout his long years in power, Franco remained true to his mission of preserving traditional Catholic Spain.

With the beginning of World War II, Franco openly sided with fascist dictators Adolf Hitler and Benito Mussolini. The Caudillo (leader), as Franco became known, met with Hitler in October 1940 and pledged his loyalty. Much to the Führer's intense irritation, Franco then refused to bring Spain into the war because he believed that Spain was better served in nonbelligerency. But Spain was hardly neutral. Franco sent the 18,000-man Blue Division to fight in the Soviet Union. He also provided the Germans with observation posts in Spanish Morocco to monitor Allied ship movements, and he allowed Axis submarines to be serviced in Spanish ports.

After the Allied landings in North Africa, however, Franco shifted to a strictly neutral stance. When Mussolini fell from power, Franco concentrated on winning the sympathy of the Allies. He pushed the Falange into the

One of the most durable of twentieth-century dictators and perhaps the most dominant figure in Spanish history since the sixteenth century, Francisco Franco commanded the Nationalist forces during the Spanish Civil War and was then de facto ruler of Spain from 1939 until his death in 1975. (Illustrated London News Picture Library)

background and “Franco the Caudillo,” smacking of fascism, was replaced in official usage by “Franco the Chief of State.”

After the war the Allies punished Franco’s wartime conduct with quarantine treatment. Spain was kept out of the United Nations and was condemned for its fascist nature and close association with the Axis states, but with the coming of the Cold War, Washington came to regard Franco’s regime as a bulwark against communism. In the revisionist version, Franco became the shining knight who had saved Europe from atheist communism. The United States established air and naval bases in Spain, and U.S. aid propped up the regime—a policy remembered with bitterness by many Spanish democrats. In 1953 Franco secured a Concordat with the Vatican, and in 1955 he won Spain’s admission to the United Nations.

Franco declared Spain a monarchy in 1947. The Law of Succession of that year declared Franco chief of state for life and established a Council of the Kingdom to deal with any future questions of succession. Franco relaxed his authoritarian regime somewhat in the 1950s, but unrest in the 1960s led to renewed repression. Having selected Prince Juan Carlos de Bourbon, grandson of Alfonso XIII, as his heir, Franco died in Madrid on 20 November 1975.

Franco-German Friendship Treaty

(22 January 1963)

Treaty signed between French President Charles de Gaulle and Federal Republic of Germany (FRG, West Germany) Chancellor Konrad Adenauer in Paris on 22 January 1963. De Gaulle sought to end the FRG’s military dependence on the United States and bring West Germany into a special relationship with France that would lead to a general European defense arrangement under the French nuclear deterrent. Adenauer sought a visible sign of Franco-German reconciliation.

The treaty is often viewed as having resulted from de Gaulle’s initiative, but that really rested with Adenauer. In September 1962 de Gaulle had met

with the German chancellor in Bonn, and the two men discussed a wide range of issues. In the course of the meetings, Adenauer had expressed doubts about British entry into the European Economic Community (EEC). On his part, de Gaulle saw Britain as a rival to France for European leadership and sought to exclude it from Europe. De Gaulle saw a British-dominated and English-speaking EEC as a distinct possibility. In the course of their talks, Adenauer committed himself to supporting France in keeping Britain out of Europe in return for a Franco-German treaty of cooperation that would be his crowning achievement as chancellor.

De Gaulle sought to move swiftly, as Adenauer was committed to leave his post by the autumn of 1963. The signing of the treaty followed de Gaulle's most sensational presidential news conference on 14 January 1963, which marked a major turning point in his foreign policy. Angry over the British-U.S. meeting at Nassau to resolve the Skybolt Affair, in which he had not been consulted, de Gaulle turned his back on the British and Americans. He announced that he was vetoing British membership in the EEC. He rejected U.S. President John F. Kennedy's offer of Polaris missiles in a North Atlantic Treaty Organization (NATO) force and announced that France would go its own way as a nuclear power. He also said that France would develop its special relationship with the FRG. While he did not declare at this time that France and the FRG would sign a special treaty, as much was implied.

On 21 January 1963, Adenauer traveled to Paris and the next day signed the treaty. The treaty provisions called for regular consultation between the heads of state of France and the FRG, with in-person meetings at least twice a year and meetings between the two foreign ministers and defense ministers at least four times a year. Officials from key ministries would meet monthly. The two leaders also pledged consultation on all important foreign policy matters with a view toward working out common policy positions. They also promised that their two countries would work closely on defense matters, would exchange personnel, and would draw up appropriate armament plans and plans to finance them. Finally, the two leaders promised to promote the teaching of the other's language and to promote cultural and educational exchanges. De Gaulle was not pleased about Adenauer's insistence that the treaty be ratified by the German Bundestag and that it contain a preamble that specified that the treaty would not militate against German commitments to the Western alliance.

Although other Western leaders criticized the pact as weakening NATO and the Western European Union, it did not have that effect. Cooperation between the two states did continue, and on 22 January 1988 French President François Mitterrand and German Chancellor Helmut Kohl marked the treaty's twenty-fifth anniversary by signing a new treaty that established joint councils on both economic and defense issues. It established a 4,000-man Franco-German brigade stationed in the FRG.

The 1963 Franco-German Friendship Treaty was an important event in European history. While more symbolic than substantive, the treaty nonetheless marked the end of centuries of rivalry and hostility between the two

states and their intention to take the lead in the creation of a united West European community.

Frei Montalva, Eduardo (1911–1982)

Eduardo Frei was a key politician in mid-twentieth-century Chile. As president after 1964, he sought a middle course between capitalism and communism that satisfied neither the Left nor the Right of Chile's political spectrum. (Government of Chile)

Chilean politician and president (1964–1970). Born in Santiago on 11 January 1911, Eduardo Frei Montalva earned a law degree from the Catholic University in Santiago in 1933. He then entered the Conservative Party, helping to organize the National Movement of Conservative Youth. After a falling out with Conservative Party leaders because of his ideas for social reform, he helped establish the Falange Nacional and was elected president of that organization in 1941. He then led the Falange Nacional in supporting the Radical Party, under which he began his political career as a federal government minister of public works in late 1945. Then, in 1949, he won a seat in the Chilean Senate.

Frei ran for president on the new Partido Demócrata Cristiano (PDC, Christian Democratic Party) ticket in 1958 but garnered only 20.7 percent of the vote. Undeterred, he carefully prepared for the 1964 election, summoning some of Chile's top intellectuals and professionals to his cause. The PDC's political platform, "Revolution in Liberty," called for land reform, legalized unionization of rural workers, partial nationalization of Chile's mining industry, and tax reform. Fearing a victory by Salvador Allende Gossens's left-wing coalition, Washington policy-makers gave covert assistance to the PDC. Frei won the 1964 election, and as president he implemented part of the PDC program.

The United States viewed Frei's Chile as a model and thus provided the nation with considerable economic assistance under President John F. Kennedy's Alliance for Progress program. Slow economic growth and persistent inflation hurt the PDC in the 1970 elections, however, and Allende won a three-way race with a slim plurality (the PDC came in third). As dictated by the Chilean constitu-

tion, the Chilean Congress chose among the top two candidates, a process in which it normally chose the winner according to the popular election. U.S. Ambassador to Chile Edward M. Korry unsuccessfully attempted to persuade Frei to throw his support behind second-place conservative Jorge Alessandi Rodríguez in a bid to prevent the Congress from choosing Allende, who was subsequently elected.

In March 1973 Frei was elected to the Senate. Following a military coup in September 1973 that propelled General Augusto Pinochet Ugarte into power, Frei became a vocal critic of the resulting dictatorship. He died in Santiago on 22 January 1982.

British scientist who passed atomic secrets to the Soviet Union. Born in Rüsselsheim, Germany, on 29 December 1911, Klaus Emil Julius Fuchs was the son of Emil Fuchs, a socialist and leading figure in Germany's Quaker movement. Klaus Fuchs studied physics and mathematics at Leipzig and Kiel. A member of communist youth organizations, he fled Nazi Germany in 1933, first to Paris and then several months later to Britain, where he studied physics at the University of Bristol and then earned a doctorate in advanced physics at the University of Edinburgh.

As a resident alien, Fuchs was sent to an internment camp in Canada in 1940 but was released in 1941 as the result of the intercession of one of his former teachers. In May 1941 he began work at the University of Birmingham on the Tube Alloys program, the British project to build an atomic bomb. He also made contact with a German communist émigré who introduced him to Simon Kremer, the Soviet military attaché and spy in London. After the German invasion of the Soviet Union in June 1941, Fuchs began passing secrets to the Soviets. He never accepted payment for his spying activities, which he claimed that he undertook purely out of ideological conviction.

Overlooking his former communist connections in Germany, the British government granted Fuchs citizenship in August 1942 as a reward for his scientific services. In 1943, he left for the United States with a number of other British scientists to work on the American atomic bomb, first at Columbia

Fuchs, Klaus
(1911–1988)

He never accepted payment for his spying activities, which he claimed he undertook purely out of ideological conviction.

Klaus Fuchs, British atomic scientist and spy who supplied information on the atomic bomb to the Soviet Union, helping to speed its own development of that weapon. (Library of Congress)

University in New York City and then at Los Alamos, New Mexico. Fuchs immediately began channeling information on the project to the Soviet Union. Although other spies also provided useful information, Fuchs's espionage was by far the most important. He furnished precise drawings and measurements of the Fat Man bomb. Nuclear scientist Robert Oppenheimer estimated that information provided by Fuchs saved the Soviet Union ten years in the development of its own atomic bomb, although the Central Intelligence Agency (CIA) put it at only several years.

Fuchs returned to Britain after the war and headed the theoretical division of the Harwell Atomic Research facility. When his treason was revealed in the Venona intercepts (not deciphered until 1949), Fuchs admitted to his role and was arrested in 1950. He pled guilty and was sentenced in March 1950 to fourteen years in prison. Released in June 1959, he immediately moved to the German Democratic Republic (GDR, East Germany), where he was granted citizenship and headed its Institute for Nuclear Physics until his retirement in 1979. Fuchs died near Dresden on 28 January 1988.

Fujiyama Aiichirō

(1897–1985)

Japanese businessman, politician, and foreign minister (1957–1960). Born in Tokyo on 22 May 1897, Aiichirō Fujiyama attended Keio University and became an influential representative of big business in prewar Japan. In 1944, he helped to precipitate the fall of wartime Prime Minister Hideki Tōjō's government. Fujiyama was then purged from public life for three years following Japan's surrender. He subsequently returned to the business world and undertook several diplomatic missions, including participation as a member of the Japanese delegation to the 1951 United Nations Economic, Social and Cultural Organization (UNESCO) conference in Paris and the 1955 Bandung Conference.

In July 1957 Prime Minister Kishi Nobusuke unexpectedly asked Fujiyama to serve as foreign minister. In this post, Fujiyama believed that Japan should serve as a mediator between the communist and capitalist states and that Japan should reach out to the People's Republic of China (PRC).

Fujiyama viewed Japan's relationship with the United States in strictly utilitarian terms, arguing that Japan should provide basing rights to the United States in return for security guarantees. Hence, he undertook the delicate task of renegotiating the United States–Japan Security Treaty in January 1960, fully expecting restored relations with the PRC to follow. However, the popular crisis sparked by the undemocratic ratification of the treaty forced Nobusuke's cabinet to resign on 19 July 1960, effectively ending Fujiyama's diplomatic career. He remained in parliament, however, concentrating his political energies on winning diplomatic recognition for the PRC. Fujiyama retired from politics in 1975 and died on 22 February 1985 in Tokyo.

Japanese politician, bureaucrat, and prime minister (1976–1978). Born in Gunma Prefecture, Japan, on 14 January 1905, Fukuda Takeo, the son of a wealthy farmer, graduated from Tokyo Imperial University and entered the Ministry of Finance in 1929. Implicated in a political scandal, he resigned his ministry post in 1948 and entered electoral politics. As a financial specialist in the ruling Liberal Democratic Party (LDP), he held important party positions and finally became prime minister in December 1976 after a power struggle forced Prime Minister Miki Takeo to resign.

As prime minister, Fukuda advocated his omnidirectional peace diplomacy, which aimed at adjusting Japanese foreign policy to détente, although détente was gradually fading during his tenure in office. He also enunciated what was termed the Fukuda Doctrine in August 1977, which was designed to fortify Japan's relations with Association of Southeast Asian Nations (ASEAN) countries. He expressed his concern over U.S. President Jimmy Carter's controversial proposal to withdraw American troops from Korea but

Fukuda Takeo
(1905–1995)

did not formally challenge Carter's policy. Fukuda tried to strengthen U.S.-Japanese defense mechanisms and increased the budget for aid to American military bases in Japan. As a result, the two nations issued the Guidelines for U.S.-Japan Defense Cooperation in 1978.

When Fukuda visited Washington in May 1978, Carter urged him to conclude a peace treaty with the People's Republic of China (PRC) as the United States grew closer to the PRC and more wary of the Soviet Union. Fukuda subsequently concluded the Sino-Japanese Peace and Friendship Treaty in August 1978 in spite of his traditional foreign policy conservatism and relatively close ties to Taiwan. The Soviet Union vociferously criticized Japan for having signed the treaty. Soon thereafter, Fukuda lost his party's leadership to Ōhira Masayoshi in a party election and resigned as prime minister in December 1978. Fukuda died in retirement in Tokyo on 5 July 1995.

Fulbright, James William

(1905–1995)

U.S. congressman and senator. Born in Sumner, Missouri, on 9 April 1905, James William Fulbright moved with his family to Arkansas. He was educated at the University of Arkansas and won a Rhodes Scholarship to Oxford University, where he studied history. He then earned a law degree from George Washington University in Washington, D.C. During the 1930s, he worked in the Antitrust Division of the Department of Justice and was an instructor at the George Washington University Law School. In 1936 he returned to Arkansas where he taught law, and from 1939 to 1941 he was president of the University of Arkansas.

In 1942 Fulbright won election as a Democrat to the U.S. House of Representatives and in 1944 was elected to the Senate, remaining there for thirty years. Deeply interested in international affairs and in enabling different nations to understand and respect each other, in 1943 Fulbright introduced a resolution calling for U.S. membership in a postwar international organization to maintain peace, an important step in congressional endorsement of the future United Nations (UN). In 1946 Fulbright sponsored legislation that

established an international exchange program for scholars and students that eventually subsidized the studies of several hundred thousand individuals from more than sixty countries. Strongly committed to the UN, Fulbright also sought to preserve Western Europe from the potential Soviet threat by opposing resurgent congressional isolationism and staunchly supporting the Truman Doctrine, the Marshall Plan, the North Atlantic Treaty Organization (NATO), and the containment policy.

In the 1950s Fulbright worked to censure and restrain the anticommunist excesses of Senator Joseph R. McCarthy and in the 1960s challenged the right-wing John Birch Society. By the late 1950s, Fulbright saw no practical alternative to the policies of peaceful coexistence that both Soviet and American leaders advocated. As chairman of the Senate Foreign Relations Committee (SFRC) from 1959 to 1975, Fulbright admired John F. Kennedy's relatively flexible responses to Soviet threats in Berlin and Cuba.

Fulbright initially supported his longtime Senate colleague, President Lyndon B. Johnson, on Vietnam, voting for the August 1964 Tonkin Gulf resolution that gave the president great latitude to handle the burgeoning crisis there. Soon, however, Fulbright's reading and interviews with journalists and others convinced him that the United States was supporting an unpopular puppet regime against an indigenous and genuinely nationalist revolutionary movement. He clashed repeatedly with Johnson and Secretary of State Dean Rusk. In 1966 the SFRC held televised hearings on Vietnam in which such misgivings were openly expressed, and the following year further hearings questioned the continuing U.S. nonrecognition of the People's Republic of China (PRC). In 1967 Fulbright published *The Arrogance of Power*, a widely read and sweeping critique of American foreign policy.

When Richard M. Nixon became president in 1969, Fulbright applauded his initiatives to improve relations with China and the Soviet Union but quickly parted company with him over Vietnam and Cambodia, deploring his policies even more than Johnson's. Believing that strong Cold War executive leadership had caused growing abuses, Fulbright publicly advocated the passage of congressional legislation curbing presidential power. After losing his 1974 reelection race, Fulbright left the Senate, practicing law and enjoying the role of elder statesman and mentor to his Arkansan protégé, future president Bill Clinton. Fulbright died in Washington, D.C., on 9 February 1995.

G

Soviet cosmonaut and first human in space. Born on 9 March 1934 to a collective farm family in Klushino, 100 miles west of Moscow, Yuri Gagarin developed an interest in flying after observing Soviet pilots during World War II and learned to fly while a student at a four-year technical school in Saratov in the early 1950s. He subsequently joined the Soviet Air Force and studied at the Orenburg Aviation School, from which he graduated as a lieutenant with top honors in November 1957. After spending two years as a fighter pilot, in 1959 Gagarin began cosmonaut training, demonstrating superior physical and intellectual abilities that resulted in his selection by Sergei Korolev, chief designer of the Soviet space program, to pilot the first manned mission into space.

On 12 April 1961, at the controls of the spacecraft *Vostok I*, Gagarin became the first man to orbit Earth, completing his mission in 108 minutes at a speed of 18,000 miles per hour. Soviet leader Nikita S. Khrushchev hailed Gagarin's accomplishment, which came just three and a half years after *Sputnik 1*, another triumph of the alleged superiority of socialism over capitalism. Gagarin's success was a major Soviet achievement and a key propaganda victory in the Cold War space race.

After his mission, Gagarin was promoted to the rank of major and was honored with the Hero of the Soviet Union Medal. From then on, he enjoyed a life of privilege but longed to return to space. In 1967 he commenced training for the *Soyuz* program. Gagarin was killed while piloting a MiG-15 fighter on the outskirts of Moscow on 27 March 1968 and was buried, alongside other prominent Soviet citizens, near the Kremlin Wall.

Gaither Report

(November 1957)

Top secret report issued by a panel of U.S. defense and military experts in November 1957. President Dwight D. Eisenhower commissioned the so-called Gaither Committee, chaired by the RAND Corporation's H. Rowan Gaither, to study the nation's defenses and strategic posture after the launching of the Soviet spacecraft *Sputnik 1* earlier that same year. The rather alarmist report spurred opposition to Eisenhower's New Look defense posture and called for a \$44 billion program to bolster conventional U.S. forces and the further development of missile and rocket capabilities.

Eisenhower tasked the Security Resources Panel primarily with studying the nation's civil defense needs. But the hawkish committee members went far beyond their mission and considered all aspects of the nation's defenses. The report was coauthored by Paul Nitze, anticommunist hard-liner and principal author of National Security Council Report NSC-68, and retired Colonel George Lincoln, a West Point professor and respected military planner and strategist.

The report argued that the Soviet Union harbored expansionist intentions and highlighted the alleged widening disparity between American and Soviet weapons programs. It concluded by proposing a \$44 billion program of military spending in order to close the unproven gap. The report's proposals were similar to those advocated in NSC-68. But just as Eisenhower had rejected some of the strategic doctrines of NSC-68, he also rejected the Gaither Committee's findings. He objected to the high costs of its proposals and did not believe, as the panelists had argued, that such a dramatically expanded national security program would have no harmful effect on the nation's economy. Moreover, he tended to view the report as an unnecessary knee-jerk reaction to *Sputnik*, which had created panic among some that the United States was not only losing the space race but was also losing ground to the Soviets on the scientific and military fronts.

Although Eisenhower objected to many tenets of the Gaither Report, he did not simply dismiss the recommendations out of hand. In fact, during the late 1950s, he presided over a substantial expansion of the U.S. nuclear arsenal. This effort was overlooked by contemporary observers.

Despite Eisenhower's directive that the Gaither Report be kept secret, the contents were widely leaked. The release of this information fed the growing perception of a technological gap between the Soviet Union and the United States, contributing to increased anxiety among the American public and a loss of confidence in Eisenhower's national security policies. Some con-

temporary observers interpreted President John F. Kennedy's November 1960 election victory as a repudiation of Eisenhower's policies and an affirmation of the Gaither Committee's findings. Indeed, Kennedy's campaign rhetoric, which repeatedly cited a missile gap between the two superpowers, was an important part of his campaign strategy, although such a gap never did exist in reality.

British politician and Labour Party leader (1955–1963). Born in London on 9 April 1906, Hugh Todd Naylor Gaitskell was educated at the Winchester School and New College, Oxford. After leaving Oxford he taught political economy for a time at the University of London. He was inspired to join the Labour Party after witnessing the General Strike of 1926 and working in the industrial region of Nottinghamshire. During World War II, he served in various economic ministries and in 1945 was elected to the House of Commons.

Gaitskell was subsequently appointed parliamentary secretary to the Ministry of Fuel and Power by Prime Minister Clement Attlee and held that post from 1945 to 1947. In October 1947 Gaitskell became minister of fuel and power and then went on to serve as minister of state for economic affairs in 1950. That same year he was appointed chancellor of the exchequer and held that post until October 1951. His April 1951 budget included arms spending increases mostly at the expense of social and health programs, which prompted the resignation of Aneurin Bevan, a leading left-wing parliamentarian and social welfare proponent. Bevan was later defeated by Gaitskell in the party leadership contest of December 1955.

Throughout much of the 1950s, the Labour Party was consumed by a Left-Right power struggle that pitted Bevan against Gaitskell, although it did manage to unite in strong opposition to Prime Minister Anthony Eden's role in the 1956 Suez Crisis. Patriotic, pro-American, an advocate of the British nuclear weapons program, and a moderate in economic affairs, Gaitskell clashed seriously with his party in 1959 when he sought to weaken its commitment to public ownership of industry. He again precipitated a row in the

Gaitskell, Hugh
(1906–1963)

party in 1960 when Labour voted to abandon Britain's nuclear arsenal, a move that Gaitskell vehemently opposed. The vote was reversed the following year. In 1962 Gaitskell opposed British entry into the Common Market (European Union, or EU), which he viewed as the beginning of the end of Britain as an independent state. Gaitskell was the Labour leader for eight years until he died unexpectedly in London on 18 January 1963, never having led his party to victory at the polls.

Galbraith, John Kenneth

(1908–2006)

Well-known economist, U.S. government official, diplomat, and prolific author of groundbreaking books dealing with economics and society. Born on 15 October 1908 in Iona Station, Ontario, Canada, John Kenneth Galbraith received a BA from Ontario Agricultural College (now the University of Toronto) in 1931 and then pursued studies in economics at the University of California at Berkeley, from which he received an MS in 1933 and a PhD in 1934. He taught at Berkeley and then Princeton University before settling in as a professor at Harvard University in 1948. He would remain on the faculty there until his retirement in 1975.

An ardent Democrat, Galbraith became involved in government work and politics at a young age. He was an admirer of President Franklin D. Roosevelt's New Deal economic policies and was an adherent of Keynesian economics, which prescribe government spending and periodic intervention in order to keep the economy on an even keel. In the early 1940s, during World War II, Galbraith was recruited as deputy administrator of the Office of Price Administration (OPA). Galbraith—barely thirty-five years old at the time—proved to be an able administrator and an excellent organization man. The OPA managed all prices for consumer goods and other products during the war. In 1945, Galbraith served as the director of the U.S. Bombing Survey.

When the war ended, Galbraith returned to teaching and writing at Harvard, but he was never far away from the politics and power of Washington. He served as an advisor and strategist for Democratic Senator Adlai Stevenson's presidential bids in 1952 and 1956. A true renaissance man, Galbraith authored several novels in addition to his many other works. His most famous books include *The Great Crash* (1955), *The Affluent Society* (1958), and *The New Industrial State* (1967). During the 1960 presidential election, Galbraith served

as economic advisor to John F. Kennedy's campaign. President Kennedy rewarded Galbraith with the ambassadorship to India, a position he held during 1961–1963.

In 1968 Galbraith, as chairman of Americans for Democratic Action (ADA), worked feverishly in support of Senator Eugene McCarthy's presidential bid and was instrumental in helping put his name in nomination at the 1968 Democratic National Convention. Galbraith had been an early and vocal opponent of the Vietnam War, which earned him no accolades in the Lyndon B. Johnson administration. Galbraith continued to write, speak, and teach on a variety of subjects well into his nineties. He died of natural causes on 29 April 2006 in Cambridge, Massachusetts.

John Kenneth Galbraith, noted economist and U.S. ambassador to India under President John F. Kennedy. (National Archives and Records Administration)

Indian politician and prime minister (1966–1977, 1980–1984). Indira Gandhi, born Indira Priyadarshini on 19 November 1917 in Allahabad, India, was the only child of Jawaharlal Nehru, a leader of India's independence movement and India's first prime minister. She was educated at home, at schools in India and Switzerland, and at Somerville College, Oxford University, although she did not earn a degree. In 1942 she married Feroze Gandhi, from whom she later separated.

In 1959 Gandhi was elected president of the ruling Indian National Congress (INC) party for one year. Following the death of her father in 1964, Gandhi joined the government headed by Lal Bahadur Shastri as minister of information and broadcasting (1964–1966) and was elected to the parliament. Following Shastri's sudden death in January 1966, a coterie of senior INC leaders arranged for Gandhi's election as prime minister. Soon, however, she broke free from their control, split the party, and emerged as India's undisputed leader.

In 1971, India faced a major crisis with a revolt in East Pakistan, leading to the Pakistani government's military crackdown there. Gandhi signed the Indo-Soviet friendship pact to balance the U.S. tilt toward Pakistan and led

Gandhi, Indira
(1917–1984)

Indian prime minister Indira Gandhi broke through traditional gender boundaries and helped lead her nation through its formative years of independent, democratic government. (Library of Congress)

India in a successful war against Pakistan in December 1971. In 1972 she signed the Shimla Agreement with a defeated Pakistan, committing both sides to a peaceful solution of their dispute over Kashmir.

Gandhi's populist domestic policies failed to improve India's economy. High inflation, widespread poverty, increasing corruption, and the interference of her younger son, Sanjay Gandhi, in the government began eroding her popularity, and the nuclear tests she ordered in 1974 failed to restore her standing. In the midst of popular unrest against her government, in June 1975 the court annulled her election to the parliament. Rejecting demands for her resignation, she imposed emergency rule and imprisoned her political opponents. In the 1977 elections, Gandhi and the INC were routed. The coalition government that assumed power soon split, however, and she returned as prime minister in 1980.

Following the tradition established by Nehru, Gandhi played an active part in the Non-Aligned Movement. However, her leftist domestic policies and the need to counterbalance what India perceived as a U.S.-Pakistani-Chinese axis gave her foreign policy a pronounced pro-Soviet tilt. Under her leadership, India continued to champion developing-world causes at the United Nations (UN) and elsewhere, often following policies close to the Soviet position. Nevertheless, she was reluctant to be completely tied to the Soviet Union. In the 1980s, India turned to the West for arms acquisitions with the aim of reducing its dependence on the Soviet Union. Following Gandhi's 1982 meeting with U.S. President Ronald Reagan, Indo-U.S. relations improved.

Gandhi was a supremely gifted politician and was immensely popular at home. However, India's economy continued to stagnate during her period in power. Her authoritarian style and commitment to the maintenance of her family's hold on power also led to the creation of a political culture dominated by sycophancy, nepotism, and the ruthless removal of potential rivals.

Gandhi was a supremely gifted politician and was immensely popular at home. However, India's economy continued to stagnate during her period in power. Her authoritarian style and commitment to the maintenance of her family's hold on power also led to the creation of a political culture dominated by sycophancy, nepotism, and the ruthless removal of potential rivals.

During 1980–1984, India faced a secessionist movement by Sikhs in the state of Punjab and militancy in India's northeast. Gandhi's decision to order an army assault on the Golden Temple in Amritsar, the holiest Sikh shrine, further angered the Sikhs. On 31 October 1984, Gandhi was assassinated by two of her Sikh security guards in New Delhi. She was succeeded by her eldest son, Rajiv Gandhi.

Indian spiritual leader and anticolonial activist famous for his philosophy of nonviolent civil disobedience that contributed to India's independence in 1947. Born on 2 October 1869 in Porbandar, India, Mohandas Karamchand Gandhi was the son of a local administrator. After his father's death in 1885, Gandhi's family provided him with the financial means to receive legal training in Great Britain. In 1888 he went to London, where he studied law at University College until 1891. Upon his return to India, however, he failed to find a viable law practice, and in 1893 he was forced to find employment in South Africa.

Gandhi's experiences with prejudice and racism in South Africa drove him to fight for the rights of the country's Indian minority. Initially, he believed that protesting against injustice through petitions and the press would induce the white government to end its discriminatory practices. By 1905, however, he had achieved few tangible results. Disillusioned with strictly legal means of protest, he developed satyagraha ("truth force"), a form of nonviolent civil disobedience intended to confront the government with the Indian population's grievances. In 1907, Gandhi launched his first nonviolent campaign to protest against discriminatory legislation aimed at South Africa's Indian population. A second satyagraha against discriminatory legislation in 1913 led to the arrest of thousands of protestors and compelled white authorities to repeal the discriminatory laws.

In 1915, Gandhi returned to India to support the struggle against British colonial rule there. In less than two years, he became a prominent figure in the Indian National Congress (INC), a middle-class organization that called for increased Indian autonomy. Also championing the cause of the country's large peasant population, he helped to organize smaller civil disobedience campaigns between 1916 and 1918.

In 1919, Gandhi called for a large-scale satyagraha to protest newly passed repressive legislation. British authorities responded to the demonstrations with brutal force, resulting in the massacre of some 400 Indian protestors in April 1919 in Punjab Province. Although Gandhi canceled the protest shortly afterward, the carnage served only to boost the nationalist movement. By 1920, Gandhi had become a nearly divine figure in India and was frequently referred to as "Mahatma," or Great Soul.

In 1921, Gandhi and the INC launched another nonviolent protest campaign intended to further erode the legitimacy of British rule through boycotts

**Gandhi, Mohandas
Karamchand**
(1869–1948)

Independence
brought near anarchy
to India and
Pakistan. Millions
of people were
uprooted and forced

state to another.

The leader of modern Indian nationalism, Mohandas Gandhi infused the movement with Hindu spirituality. To Gandhi, moral values always superseded material ones, and the improvement of human souls was a necessary precursor to the improvement of India. He was an apostle of nonviolence and civil disobedience, proving that these ideals could unite diverse peoples and bring great accomplishments. (Hulton-Deutsch Collection/Corbis)

and other noncooperation campaigns across the country. By early 1922, 17,000 Indians had been arrested for their anticolonialist activities. Frustrated with the seeming failure of satyagraha, some Indians abandoned nonviolence and began a guerrilla war against the British, which was quickly subdued by British colonial troops.

In March 1922, Gandhi was sentenced to six years in prison but was released in 1924 because of deteriorating health. In prison, he completed his most important works on nonviolent protest, *Satyagraha in South Africa* and *The Story of My Experiments with Truth*.

In 1930 as British authorities continued to reject negotiations over India's independence, the INC asked Gandhi to organize yet another civil disobedience campaign. Focusing on an unjust tax code that forced Indians to buy British-produced salt, Gandhi and 78 followers set out on a 241-mile march to the western coast of India in March 1930 to rally supporters before deliberately breaking the so-called Salt Law. Inspired by the Salt March, tens of thousands followed Gandhi's example. By the end of the year, almost 60,000 Indians had been arrested for their defiance. But the movement had secured few concessions, and after the collapse of another round of protests in 1932, Gandhi withdrew from public life and began to champion the unpopular cause of India's caste of untouchables—a large hereditary group in India who, in traditional Hindu belief, are considered impure by birth and should not come in contact with members of higher castes.

During World War II, Gandhi organized his last satyagraha against colonial rule. His 1943 Quit India movement was largely ineffective, however, and it soon degenerated into a violent campaign of sabotage against government buildings. Nevertheless, the series of anticolonial protests

begun in the 1920s had seriously eroded Britain's international prestige and indigenous support. By 1944, British authorities finally indicated their willingness to negotiate over India's independence. Three years later, on 14 August 1947, the former British colony was partitioned into the two independent states of India and Pakistan.

Independence brought near anarchy to India and Pakistan. Millions of people were uprooted and forced to move from one state to another. Religious hatred mingled with greed, and perhaps a quarter of a million people died in the violence. In volatile Calcutta, Gandhi kept the peace only by offering his own person as a hostage and beginning a fast unto death. He was assassinated by a Hindu extremist on 30 January 1948 in Delhi. Gandhi was, and continues to be, a powerful, almost mythical figure in civil and human rights circles. Indeed, the U.S. civil rights movement of the 1950s and 1960s took many of its cues from his anticolonial movement. Dr. Martin Luther

King Jr., the U.S. civil rights leader, was an ardent adherent of Gandhi's ideal of nonviolent social change.

Prime minister of India (1984–1989). Rajiv Gandhi, the eldest son of Indian prime minister Indira Gandhi, was born on 20 August 1944 in Bombay (now Mumbai). He was educated at the elite Doon School in Dehra Dun, the University of London, and finally Trinity College, Cambridge University. After his university training, he became a commercial pilot for India Airlines, avoiding the political world entirely. However, when his brother Sanjay was killed in a plane crash in 1980, Rajiv's mother Indira drafted him into politics.

Gandhi then replaced Sanjay as his mother's closest political advisor, and in February 1981 he won election to parliament on the Congress Party ticket. Gandhi was chosen to succeed his mother as prime minister upon her assassination on 31 October 1984. In December, he led the Congress Party to a landslide victory and was duly elected prime minister in his own right.

As prime minister, Gandhi was credited with a significant economic boom, which was achieved by his proindustry policies and his government's encouragement of foreign investment. In foreign affairs, he improved India's relations with the Soviet Union, which in turn strained relations with the United States. Gandhi also increased efforts to suppress Muslim separatist movements in the Indian states of Jammu and Kashmir, and in 1987 he sent troops to Sri Lanka in a failed attempt to stop the Tamil-Sinhalese civil war there. Amid allegations of government corruption and the waning popularity of the Congress Party, Gandhi resigned his office in December 1989 after his party lost its parliamentary majority. He remained in parliament and was an active member of the opposition until he was assassinated while on the campaign trail by a Tamil suicide bomber seeking revenge for his intervention in Sri Lanka. Gandhi died on 21 May 1991 in Tamil, Nadu.

Gavin, James Maurice (1907–1990)

Gavin participated
in Operation
MARKET-GARDEN and
ended World War II
with more combat
jumps than any
other general officer.

U.S. Army general. Born in Brooklyn, New York, on 22 March 1907, James Gavin enlisted in the army in 1924. He secured an appointment to and graduated from the United States Military Academy, West Point, in 1929. He served in a variety of postings in the United States and the Philippines and was an instructor at West Point at the start of World War II. He transferred to the airborne infantry, and in August 1942 he took command of the 505th Parachute Regiment. Shortly thereafter he was promoted to colonel. He led the 505th in North Africa, Sicily, and Italy. In October 1943 he was promoted to brigadier general and became deputy commander of the 82nd Airborne Division. He assisted in planning the invasion of France and then participated in Operation OVERLORD with the division. In August he took command of the 82nd, at age thirty-seven the youngest divisional commander in the U.S. Army. Two months later he was a major general. He participated in Operation MARKET-GARDEN and ended the war with more combat jumps than any other general officer.

Following World War II, Gavin served in various staff positions. These included stints with the Department of Defense Weapons System Evaluation Group and the headquarters of the Allied Forces Southern Europe. He then commanded VII Corps in Germany. In 1954 he returned to Washington to serve as the deputy chief of staff for plans and in 1955 was assigned to the newly created chief of research and development position on the army staff as a lieutenant general, the youngest in the U.S. military.

Gavin was an innovator who advocated exploiting advanced technology to enhance American military capabilities. He conceptualized the use of helicopters to improve army mobility and is regarded as the father of the air assault concept. He criticized the emphasis on the Strategic Air Command (SAC) and long-range nuclear forces during the Dwight D. Eisenhower administration. Gavin argued for a more flexible force structure that could respond to limited-war scenarios. He strongly supported the use of tactical nuclear weapons on the modern battlefield, and he was also an early advocate of reconnaissance satellites and the military use of space. He was critical of the role played by the Joint Chiefs of Staff (JCS), urging that it should be limited to planning and that actual operations be carried out by integrated unified command staff, which would ease interservice rivalries.

Despite his criticisms, Gavin was slated for promotion to full general. But in 1958, on the eve of his promotion and assignment as commander of

the Seventh Army in Europe and after thirty-three years in the military, he abruptly resigned from the army in frustration, saying that he would not compromise his principles.

Gavin retired from active duty in March 1958. That same year he published *War and Peace in the Space Age*. A critique of the Eisenhower administration's New Look military policy, it held that the United States needed strong conventional forces to deal with limited wars. Such ideas found credence in the early 1960s during the Kennedy administration.

Gavin was a senior executive for Arthur B. Little, Inc., until 1974, with a brief sabbatical during 1961–1962 when he was the U.S. ambassador to France. He opposed American involvement in Vietnam. Gavin died in Baltimore on 23 February 1990.

German Army general and head of the Bundesnachrichtendienst (BND), the foreign intelligence service of the Federal Republic of Germany (FRG, West Germany). Born on 3 April 1902 in Erfurt, Reinhard Gehlen completed his secondary education in Erfurt and joined the German Army as a cadet in 1921. He was commissioned a second lieutenant in 1923. Promoted to captain following graduation from the Army Staff College, he became a general staff officer and held a variety of staff positions.

In April 1942, without any prior experience in intelligence work, Gehlen became head of the Foreign Armies East Department. After initial failures at estimating enemy capabilities, he reorganized his department and created his own espionage organization and a comprehensive information bank on the Soviet Union. He also took a leading role in recruiting more than 100,000 Soviet prisoners of war into the Russian Liberation Army to fight on the German side.

Gehlen's intelligence information was generally accurate, and he directed an extensive network of agents throughout Eastern Europe. In autumn 1944 he was preparing to transfer the military intelligence service to U.S. authorities in case Germany lost the war. In December 1944 he won promotion to generalmajor (equivalent to U.S. brigadier general). Adolf Hitler disliked

Gehlen, Reinhard
(1902–1979)

Gehlen's accurate but gloomy assessments of Germany's military prospects on the Eastern Front and dismissed him from his post on 10 April 1945. Predicting a postwar rupture between the United States and the Soviet Union, Gehlen had copied his files and planned to offer them to the United States. He surrendered to U.S. forces in Bavaria at the end of the war.

In the U.S. Army's Counter-Intelligence Corps Camp in Wiesbaden, Gehlen was united with a group of his former staff members who were subsequently flown to Washington, D.C., after an initial screening of Gehlen's intelligence material. In July 1946 the group returned to Germany and formed the Organisation Gehlen, an intelligence service under the supervision of the U.S. Army Intelligence Service. The agents' network was soon extended into the Soviet occupation zone. Results were forwarded to the newly established U.S. Central Intelligence Agency (CIA). In 1955, the Organisation Gehlen was taken over by the FRG and renamed the Bundesnachrichtendienst. Gehlen became its first president.

After the German Democratic Republic's (GDR, East Germany) national uprising of 1953 and the erection of the Berlin Wall in 1961, the initially favorable situation of sources for the BND sharply diminished, and Gehlen sought to compensate for the lack of agents with enhanced technical reconnaissance. He retired in April 1968. Gehlen died in Berg am Starnberger See on 8 June 1979.

General Agreement on Tariffs and Trade (January 1948)

A package of trade rules and tariff concessions that provided the basic legal framework for international commerce throughout the Cold War, from its adoption in 1948 until its replacement by the World Trade Organization (WTO) in 1995. The General Agreement on Tariffs and Trade (GATT) was

Japanese Prime Minister Kishi Nobusuke (standing, *center rear*) welcomes delegates at the fifteenth general meeting of the General Agreement on Tariffs and Trade (GATT) in 1957. GATT, a set of international agreements, was first adopted in 1947. (Bettmann/Corbis)

never intended to be anything more than a temporary arrangement, and its nearly fifty years of life are testament to the difficulties in implementing the ideals of the 1944 Bretton Woods Conference.

Representatives to the Bretton Woods Conference envisioned three institutions that would be responsible for the postwar economic order: the International Monetary Fund (IMF) and the World Bank, which did indeed come into existence shortly after end of World War II; and an International Trade Organization (ITO), an adjunct of the United Nations (UN) that would monitor global trade practices and enforce a sweeping range of business, employment, and investment protocols. Given the devastating effects of protectionism during the Great Depression, a powerful body dedicated to trade liberalization and the reduction—as far as possible—of all remaining tariff barriers held a strong attraction to the Western Allied powers at the end of the war.

Negotiations mapping out the ITO's constitution began shortly after the end of hostilities. As a stop-gap measure until the formal inauguration of the ITO, twenty-three nations met in Geneva in 1947 to pledge 45,000 immediate tariff concessions (affecting approximately 20 percent of all world trade at the time). They also contracted to provisionally accept many of the trade rules embodied in the ITO Charter. This General Agreement came into force

in January 1948. Two months later, the ITO proper was officially unveiled at the UN Conference on Trade and Employment in Havana, but the optimistic mood at its birth proved short-lived. Ratification of the charter by the U.S. Senate proved impossible because of aggressive lobbying by hostile American corporate interests, and in 1950 the U.S. government formally withdrew from the organization, leaving it moribund. The premature death of its anticipated successor left GATT the only workable instrument of international trade law.

GATT had scarcely any institutional basis or permanent staff, and it was restricted to questions of trade in merchandise only. With its limited structure and scope, it could not provide the permanent settlement of commercial questions that had been envisaged for the ITO, and from 1949 onward a number of follow-on talks, or trade rounds, occurred, resulting in the amendment and extension of the original rules laid down by the founding twenty-three nations. These lengthy negotiations, often lasting several years, produced a series of supplementary agreements on further tariff reductions, and, from the 1960s onward, new procedures regulating subsidies, licensing, and the dumping of cheap exports on vulnerable domestic markets. Most GATT rules were multilateral and binding on all signatories, although a few were voluntary plurilateral arrangements. By the 1973–1979 Tokyo Round, 102 countries were taking part in GATT negotiations, testifying to their success in overall trade liberalization, but the Tokyo talks also underlined the long-inherent flaws in the GATT model. Too many loopholes were being exploited by signatory nations that allowed protection in all but name, the dispute settlement process was patently broken, and, most critically, the unregulated service and intellectual property sectors were now far more important to the world economy than they had been in the 1940s, leaving GATT ill-equipped to oversee the expanding global marketplace.

Prodded by these inadequacies, the Uruguay Round that opened in 1986 saw an attempt to comprehensively revise and modernize GATT. These talks lasted more than seven years (the longest and largest trade negotiations in history) and came to encompass virtually every aspect of international commerce. Ultimately, after a number of false starts and seeming deadlocks, in 1994 the talks resulted in agreement on a World Trade Organization (WTO), established the following year, that finally realized the vision of the ITO.

GATT was then placed in long-overdue retirement. Its limitations were manifest from the outset, but for an intended temporary measure not designed to carry the burden that history placed upon it, GATT made a significant contribution to the long postwar economic boom by keeping trade tariffs low.

International conference called to discuss long-standing tensions in East Asia. The Geneva Conference on the Far East opened in that Swiss city on 26 April 1954, with negotiations concentrating on transforming the previous year's armistice in Korea into a permanent peace. Negotiations on that issue produced no results, however. Separate negotiations over the ongoing war in Indochina began on 8 May, one day after the fall of the French bastion of Dien Bien Phu in northwest Vietnam to the Viet Minh. The Indochina talks involved representatives—in most cases the foreign ministers—of France, the Democratic Republic of Vietnam (DRV, North Vietnam), the United States, the Soviet Union, the People's Republic of China (PRC), Britain, Laos, Cambodia, and the State of Vietnam (later the Republic of Vietnam).

The Viet Minh capture of Dien Bien Phu seemed to offer a perfect opportunity to resolve the long Indochina War. Two days later the Western powers resisted a demand by the communist powers that the “resistance governments” of Laos and Cambodia (the Pathet Lao and the Free Khmer, respectively) be represented at the talks. On 17 June longtime critic of the Indochina War Pierre Mendès-France became French premier and foreign minister. On 20 June he imposed a thirty-day timetable for an agreement, promising to resign if one was not reached. The Geneva Accords were signed on the last day of the deadline, 20 July, but only because the clocks were stopped; it was actually early on 21 July.

The leading personalities at Geneva were Mendès-France, PRC Foreign Minister Zhou Enlai (Chou Enlai), Soviet Foreign Minister Vyacheslav Molotov, British Foreign Minister Anthony Eden, U.S. Secretary of State John Foster Dulles, DRV Premier Pham Van Dong, and State of Vietnam Foreign Minister Nguyen Quoc Dinh. Dulles left the conference after only a few days. He saw no likelihood of an agreement on Indochina that Washington could approve, and he disliked the idea of negotiating with Zhou (the United States had yet to recognize the PRC), whom he deliberately snubbed. Dulles ordered the U.S. delegation not to participate in the discussions and to act only as observers.

The Geneva Conference produced separate armistice agreements for Vietnam, Cambodia, and Laos. But Pham Van Dong found himself pressured by Zhou and Molotov into an agreement that gave the Viet Minh far less than it had won on the battlefield. Pending unification of Vietnam, there was to be a temporary dividing line (“provisional demarcation line”) at the 17th Parallel (Pham had wanted the 13th Parallel). A demilitarized zone would

extend 5 kilometers (3 miles) on either side of the line in order to prevent incidents that might lead to a breach of the armistice. The final text provided that “the military demarcation line is provisional and should not in any way be interpreted as constituting a political or territorial boundary.” Vietnam’s future was to be determined “on the basis of respect for the principles of independence, unity, and territorial integrity” with “national and general elections” to be held in July 1956. Troops on both sides would have up to 300 days to be regrouped north or south; civilians could also move in either direction if they so desired. An international supervisory and control commission (ISCC) composed of representatives from Canada, Poland, and India (a Western state, a communist state, and a nonaligned state) would oversee implementation of the agreements.

Pham was bitterly disappointed that nationwide elections were put off for two years. Eager to take advantage of the Viet Minh’s military successes, he had initially sought a delay of only six months after conclusion of a cease-fire. The DRV accepted the arrangements only under heavy pressure from the PRC and USSR and because it was confident that it could control southern Vietnam. There is every reason to believe that the Chinese leadership was willing to sabotage their ally in order to prevent the formation of a strong regional power on their southern border.

As it worked out, in 1956 the new government of the Republic of Vietnam (RVN, South Vietnam) headed by Ngo Dinh Diem claimed that it was not a party to the Geneva Agreements and was thus not bound by them. Supported by the Eisenhower administration in this stand, Ngo refused to authorize the previously agreed upon elections to reunify Vietnam. This decision led to a resumption of the war, with the Americans taking the place of the French.

Geneva Conference (1955)

Four-power conference among the United States, the Soviet Union, Great Britain, and France convened to discuss German reunification, the status of East European states, and disarmament. At the invitation of the Soviet Union, U.S. President Dwight D. Eisenhower, over the objections of Secretary of State John Foster Dulles, agreed to meet with Soviet Prime Minister Nikolai Bulganin in Geneva to discuss Soviet Premier Nikita Khrushchev's disarmament proposals. Eisenhower shared Dulles's concerns about the efficacy of summit diplomacy and questioned Khrushchev's motives but also believed that the United States must be willing to meet directly with leaders of the Soviet Union.

Coming on the heels of the May 1955 Austrian State Treaty, which provided for the withdrawal of all foreign forces from Austria, Washington and Moscow seemed committed to reducing international tensions. Although Bulganin was nominally in charge of the Soviet delegation, the Geneva Conference served as Khrushchev's debut as the real power in the post-Stalin Soviet leadership. Khrushchev's newfound confidence, based upon increased Soviet strength in both conventional and strategic arms, prompted him to call for peaceful coexistence between the Western and Eastern blocs based upon mutual strength and respect.

The Geneva Conference had mixed results for both the Soviets and Americans. On the one hand, in the short term, the summit popularized the so-called Spirit of Geneva, demonstrating the willingness of both sides to at least temporarily suspend belligerent rhetoric, which reassured much of the world. Clearly, both countries recognized the danger that nuclear weapons presented to the rest of the world. Most important, both nations agreed that nuclear war would lead to mutual genocide.

On the other hand, the Soviets rejected Eisenhower's Open Skies Proposal, a plan to open Eastern and Western bloc nations to aerial inspection of military installations; summarily dismissed his rather feeble attempts to establish freedom for Eastern Europe; and refused to support a reunified Germany except on a neutralized basis.

By December 1955 each side had begun to charge the other with violating the Spirit of Geneva. In reality, the Soviets and Americans defined the Spirit of Geneva according to their own interests. For Washington, it meant agreeing to reunify Germany through free elections, upholding the United Nations Charter calling for independence for all nations, and ending Soviet adventurism. For Moscow, it meant acceptance of peaceful coexistence, recognition of a divided Germany, and acknowledgment of its sphere of influence in Eastern Europe. Thus, the Geneva Conference only temporarily reduced tensions between the superpowers.

Geneva Conference (1959)

Meeting of the foreign ministers of France, Great Britain, the Soviet Union, and the United States intended to relieve Cold War tensions caused by the Berlin Crisis. The major powers had long clashed over divided Germany, and the goal of the conference was to negotiate a reunification of the two Germanies under circumstances agreeable to all.

The Geneva Conference of Foreign Ministers opened on 11 May 1959 with a statement by United Nations (UN) Secretary-General Dag Hammarskjöld. Opening statements by representatives of the four participant nations came two days later. The principals were Christian A. Herter for the United States, Selwyn Lloyd for Britain, Maurice Couve de Murville for France, and Andrey Gromyko for the Soviet Union. In a preconference compromise, representatives from the Democratic Republic of Germany (GDR, East Germany) and the Federal Republic of Germany (FRG, West Germany) also attended, although they were seated at adjacent tables rather than at the central table with the Big Four.

The meeting was convened in response to a threat made by Soviet leader Nikita Khrushchev to sign a separate peace treaty with East Germany, thereby negating the Allies' legal basis for the occupation of West Berlin. The United States had made clear that it would defend its right to be in West Berlin and that any attempt to force the Western powers from the city would result in war. The situation in Berlin specifically and in Germany generally threatened to spawn a major conflagration.

The framework for discussions, to which the four powers had agreed before the conference, contained two parallel proposals: first, that Germany be unified in stages, concluding in a single German state, and second, that arms limitation agreements should move forward at each stage of the German reunification process. Herter, standing in for ailing U.S. Secretary of State John Foster Dulles, offered the initial American proposal, which amounted to a reiteration of the American proposals presented earlier at the 1955 Geneva Conference, now bundled as a package.

Specific proposals included reunification of Berlin and Germany, a peace treaty with the new Germany, and arms limitation for the new state. Gromyko wanted to unwrap the package to deal first with Berlin before moving on to other questions. He was disturbed by the prospect of West Germany joining the North Atlantic Treaty Organization (NATO), a possibility not eliminated by the American proposal. As a result, Gromyko rejected Herter's proposal and threatened to renew the six-month deadline for a German peace treaty.

The day the first session ended, 27 May, marked the expiration of the original six-month deadline Khrushchev had set for a solution to the Berlin question. No progress had been made.

During the first session Dulles died, and the ministers soon adjourned to Washington for the funeral and a short break before returning to Geneva for a second session. Negotiations in this session ended almost as quickly as they began because Khrushchev and GDR leader Walter Ulbricht instructed Gromyko to renew the six-month deadline over Berlin.

On 16 June, Herter proposed an amended version of previous offers with similar proposals and new concessions to the Soviets, including promises not to augment existing American forces in Berlin, not to provide the new German state with nuclear weapons, and not to sponsor subversive activities against East Germany. Gromyko rejected this proposal but did extend the deadline for a German peace treaty to eighteen months. On 20 June, the conferees agreed on a three-week recess until 13 July.

Khrushchev provided Gromyko with no real power to negotiate a deal with the West, and Gromyko gave little ground on any issue. U.S. President Dwight D. Eisenhower soon became convinced that only high-level, leader-to-leader talks would yield diplomatic results. In July, Eisenhower duly sent Vice President Richard Nixon to Moscow in the hopes of extracting concessions from Khrushchev and with a note from Eisenhower inviting the Soviet leader to visit the United States that fall. Khrushchev accepted, and when Eisenhower announced the bilateral summit on 3 August, he removed any impetus for the Geneva Conference, which ended on 5 August 1959 having made no progress regarding Germany.

First meeting between U.S. President Ronald Reagan and the new General Secretary of the Central Committee of the Communist Party of the Soviet Union Mikhail Gorbachev held on 21–22 November 1985 in Geneva,

**Geneva Meeting,
Gorbachev and Reagan**
(21–22 November 1985)

U.S. President Ronald Reagan meets with Soviet leader Mikhail Gorbachev during the Geneva Summit in Switzerland in November 1985. (Ronald Reagan Library)

Switzerland. The two leaders sought meaningful discussions on arms control, the Afghanistan War, and human rights.

The series of events that led to the Geneva Meeting began in November 1982 with the death of Soviet leader Leonid Brezhnev, who was succeeded by Yuri Andropov. In March 1983, Reagan unveiled his Strategic Defense Initiative (SDI), a space-based missile defense shield intended to protect the United States from nuclear attack and begin the process toward total nuclear disarmament. In September 1983, Soviet fighters shot down Korean Air Lines Flight 007 over the Sea of Japan, and two months later the Soviets walked out of arms reduction talks taking place in Switzerland. Meanwhile, the United States followed through with plans to deploy cruise and Pershing II missiles in Western Europe. Superpower relations had reached a nadir.

Andropov died in February 1984 and was replaced by Konstantin Chernenko. When Chernenko died in March 1985, Gorbachev succeeded him. During Chernenko's funeral, Reagan sent a personal message to Gorbachev through Vice President George H. W. Bush requesting a fresh start in U.S.-Soviet relations.

In frigid weather and without his overcoat, the seventy-four-year-old Reagan met the fifty-four-year-old Gorbachev halfway down the steps of the building in which they held their first discussion. Gorbachev chided Reagan good-naturedly for not wearing a coat. This initial image was, at least, quite positive. The official agenda outlined several items for discussion, mainly SDI, regional conflicts, bilateral

relations, and human rights. In their first meeting, which was supposed to last fifteen minutes, the two leaders spoke for an hour.

Through fifteen hours of meetings and an additional five hours of private discussions, the two heads of state covered topics including a 50 percent reduction in nuclear arms, an intermediate nuclear forces treaty, Afghanistan, Angola, Nicaragua, Ethiopia, Kampuchea, El Salvador, new consulates in Kiev and New York City, and cultural exchanges between the superpowers. In general, Reagan detailed the problems that divided the two nations, while Gorbachev wished to talk about areas of mutual agreement.

In the end, Reagan and Gorbachev failed to reach any lasting agreements on any of the major issues. The major obstruction was Reagan's refusal to give up his plans for SDI. Gorbachev was wary about SDI and argued that it only made sense if the United States was planning a nuclear first strike. Reagan countered that SDI was vital to American interests and that when it worked, the United States would share the technology with the Soviets and soon nuclear weapons could be eliminated completely. Gorbachev did not believe him and asserted that he would not agree to a reduc-

tion in offensive weapons as long as the United States planned to deploy the missile shield.

The Geneva Meeting, however, was not a total failure. The two leaders agreed on the need to slow the arms race and strengthen nuclear nonproliferation efforts. They also agreed in principle that nuclear wars could not be won. More substantively, they decided to begin serious negotiations for an intermediate nuclear forces treaty even if discussions over heavier weapons were not in the works. Discussions of human rights and regional conflicts were limited.

The great impact of the Geneva Meeting was that Reagan and Gorbachev agreed to future face-to-face meetings. A Reykjavík summit was planned, and Gorbachev pledged to visit the United States in 1986, while Reagan planned to go to Moscow in 1987. Subsequent meetings between Reagan and Gorbachev were first discussed at Geneva in 1985, and those meetings helped to reduce tensions and, ultimately, end the Cold War.

In the aftermath of World War II and the Nazi regime's extermination of approximately 6 million Jews and 5 million other people, the United Nations (UN) adopted a resolution on 9 December 1948 recommending that international attention and cooperation be focused on the prevention of and punishment for genocide. It was, in fact, the horrific slaughter by the Nazis, along with the continuing efforts of jurist Raphael Lemkin (1900–1958), that prompted UN member states to formally recognize genocide as a crime under international law.

From the outset, the development of the UN Convention on the Prevention and Punishment of Genocide (UNCG) was plagued by great difficulty and controversy. For example, a contretemps erupted over whether to provide protection for political groups under the UNCG. The Soviet Union argued that the inclusion of political groups would not conform “with the scientific definition of genocide and would, in practice, distort the perspective in which the crime should be viewed and impair the efficacy of the Convention.”

Genocide

The Western world, and in particular the United States, saw the catastrophe that befell the Hutu as irrelevant as far as the bigger picture of defeating communism was concerned.

Similarly, the Polish government added that including political groups would dilute the UNCG's aims. Yet another argument against the inclusion of political groups was that unlike national, racial, or religious groups, membership in political groups was voluntary. In a later session, however, the French argued that genocide might easily be committed on political grounds sometime in the future. As a result of compromise, both political and social groups were ultimately removed from specific protection under the UNCG.

The upshot of the compromise was that the UNCG came to define genocide as constituting any acts committed with the intent to destroy, in whole or in part, a national, ethnic, racial, or religious group. The acts specifically listed as constituting genocide were killing members of the group, causing serious bodily or mental harm to members of the group, deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part, imposing measures intended to prevent births within the group, and forcibly transferring children of the group to another group.

For all intents and purposes, however, the UNCG became a dead letter of sorts during the Cold War years, a period when the world was confronted by an enormous number of bewildering stresses and strains. Characterizing many of these stresses were the numerous genocidal outbreaks that took place in former colonial territories vacated, sometimes amicably but often violently, by imperial powers in the years following 1945. Nowhere were these played out with such devastating ferocity as in Africa and Asia.

The objectives of those who initially shaped the post-1945 agenda resulted in a mixed bag of idealism vis-à-vis the attempted protection of human rights alongside a continual period of killing in large wars, small wars, civil wars, and sometimes when there was no war at all.

One place in which genocide occurred was the west African state of Biafra. The country had been formed in 1967 when the eastern state of Nigeria broke away to establish itself as an independent nation. The Nigerian Civil War that followed (1967–1970) was the first occasion in which scenes of mass starvation were brought home to a television-dominated West, and millions of people were horrified by what they saw. Less apparent was the reality that lay behind this otherwise simple case of a brutal and bloody secessionist conflict. Some scholars assert that in their determination to defeat the break-away state, the Nigerians deliberately designed and perpetuated a genocidal policy of enforced famine against the population of Biafra.

The Biafran conflict led to a death toll of up to a million people, most of them of the Christian Ibo ethnic group. The Nigerian Federal Army and the government that supported it ostensibly perpetrated genocide through what many believe were premeditated and strictly enforced policies of starvation and the military targeting of civilians.

Forced starvation was employed as a weapon of war for the purpose of destroying the Biafrans' ability to sustain themselves as a viable nation. Under such conditions, Biafra existed for only two and a half years, until its collapse in January 1970. In recent years, discussion has begun on the extent to which the countries of the West (particularly Britain) and the UN chose to turn a

blind eye to events in Biafra and whether Cold War considerations clouded their judgment as they framed their policies toward the breakaway state.

The year 1971 saw a struggle in which East Pakistan sought to secede from West Pakistan, a move that was resisted with staggering violence. The subsequent emergence of the independent nation of Bangladesh (the former East Pakistan) was accompanied by some 3 million dead and 250,000 women and girls raped, the result of a calculated policy initiated by the government of West Pakistan for the purpose of terrorizing the population of East Pakistan into accepting a continuance of a united Pakistani state.

The following year, 1972, saw another outbreak of genocidal violence, this time in the tiny central African nation of Burundi, where a Hutu-instigated uprising against Tutsi domination resulted in the military subjugation and massacre of thousands of Hutu civilians over a five-month period. The final death toll numbered up to 150,000 people and ushered in a period of Tutsi dominance that was to last for several decades. In the meantime, the Hutu majority population was reduced to a position of institutionalized second-class subservience.

It was characteristic of the era that Burundi became (as Biafra and Bangladesh had been before it) a location for Cold War rivalries. The Western world, and in particular the United States, saw the catastrophe that befell the Hutu as irrelevant as far as the bigger picture of defeating communism was concerned. The French government saw the conflict as an opportunity to reinforce its preferred Francophone client state, while communist countries such as the People's Republic of China (PRC) and the Democratic People's Republic of Korea (DPRK, North Korea) took the opportunity to assist the Tutsi junta with arms and infrastructural support as a means to coax the regime away from the West.

Just over two years after the worst of the violence ceased in Burundi, the Khmer Rouge (Red Khmer) won a bloody civil war in Cambodia. This commenced one of the most radical attempts at remodeling an existing society that the world has ever known. In taking the Cambodian people back to "Year Zero," as Khmer Rouge leader Pol Pot put it, at least 1.5 million people (some estimates put the total higher, at between 1.7 million and 2 million) lost their lives. The killing continued for more than three years and did not come to an end until Vietnam invaded Cambodia in 1979 and drove the Khmer Rouge from power.

Vietnam's intervention was not based on altruism or concern over the genocide per se but rather was a result of political differences and violent border skirmishes and incursions by the Khmer Rouge. Nations such as the United States, Britain, and Australia looked the other way as the Khmer

Mass grave containing the bodies of Bengali intellectuals, killed by Razakars during the war for Bangladeshi independence, 18 December 1971, in a clay pit near Dhaka. (Christian Simonpietri/Sygma/Corbis)

Rouge carried out its genocide. In the Cold War environment, the communist Khmer Rouge was seen as the enemy of communist Vietnam, and in a bizarre strategic game of prioritizing, the countries of the West preferred to consider the Khmer Rouge less of a threat than the Vietnamese (and, of course, the United States still harbored great animosity toward Vietnam). This was a case of “my enemy’s enemy is my friend” taken to the extreme.

In 1975, yet another Cold War genocide was occurring in Asia, this time in the former Portuguese territory of East Timor. In 1975 the Frente Revolucionária de Timor-Leste Independente (Fretilin, Revolutionary Front for an Independent East Timor), one of the political factions jockeying for power in the aftermath of Portuguese decolonization, declared the territory’s independence. Within weeks, Indonesia invaded, declared East Timor its twenty-seventh state, and began a systematic campaign of human rights abuses that brought mass murders, starvation, and death by torture of up to 200,000 people, about a third of the preinvasion East Timorese population.

For many years the international response to what was happening in East Timor was one of indifference. Indonesia’s neighbor, Australia, was especially keen not to antagonize the populous nation to its north and was the first (and for a long time the only) country to recognize the *de jure* incorporation of East Timor into Indonesia. UN resolutions calling on Indonesia to withdraw from East Timor were ignored, and the United States, anxious not to alienate the Indonesians, skirted the whole issue. Only in 1999, after a long period of Indonesian oppression and the threat of another outbreak of genocidal violence (this time committed by Indonesian-backed militias and units of the Indonesian Army), was East Timor freed.

In sum, the Cold War had a devastating effect on post-1945 hopes that a new nongenocidal regime could be imposed across the globe. Not only were peoples and groups in conflict left to fight out their differences unimpeded, but all too often, as capitalist and communist states saw the possibility of achieving an advantage through either action or inaction, those committing genocidal acts were frequently aided and abetted for the most blatant of *realpolitik* motives. Britain, for example, refused to assist Biafra in alleviating its distress, for to do so would further undermine Nigeria at a time when oil exploration was starting to bear fruit, and a strong Nigeria was needed to keep out Soviet influence in sub-Saharan Africa.

As long as the Cold War continued, there was little chance that the kind of pressures likely to lead to a genocidal situation would find a release valve. The great powers played a leading role in manipulating local conflicts to suit their own needs, after which each side was able to serve as a proxy in the greater ideological conflicts of the time. The Cold War showed with great clarity that the world’s major players paid only lip service to their postwar commitment to never again stand by while genocide took place.

Federal Republic of Germany (FRG, West Germany) politician, leader of the Free Democratic Party (FDP), minister of the interior (1969–1974), foreign minister (1974–1992), and vice chancellor (1974–1992). Born on 21 March 1927 in Reideburg, Germany, Hans-Dietrich Genscher studied law and political economy at the universities of Halle and Leipzig, both in the Soviet zone of occupation, during 1946–1949 and became a junior lawyer at Halle after his 1949 graduation. During 1946–1952, he was a member of Germany's Liberal-Democratic Party (LDPD).

Due to rising Cold War tensions, Genscher left Halle in the German Democratic Republic (GDR, East Germany) for Bremen in the FRG in 1952 and worked as a solicitor. In 1954 he joined the FDP; two years later, he became assistant secretary and in 1959 the secretary of the FDP group in the Bundestag. From 1962 to 1964, he served as FDP party secretary, and in 1965 he was elected to the Bundestag. From 1968 to 1974 he was FDP deputy chairman, and during 1974–1985 he served as FDP chairman.

Genscher was appointed minister of the interior in the Willy Brandt government in October 1969, a post he retained until 1974. In the Helmut Schmidt government, Genscher became minister of foreign affairs and vice chancellor on 16 May 1974. As such, he proved to be a strong supporter of Ostpolitik, the diplomatic effort in Eastern Europe, and of the close alliance of West Germany with North Atlantic Treaty Organization (NATO) allies and its European partners. After disputes erupted over economic policies, Genscher and three other FDP ministers resigned from the Schmidt government on 17 September 1982.

A month later, in the new coalition government under Helmut Kohl, Genscher again assumed the posts of minister of foreign affairs and vice chancellor. In the 1980s, he committed himself to a new détente policy and cultivating better East-West relations, intending to take Soviet leader Mikhail Gorbachev's policy of glasnost and perestroika very

seriously. During 1989–1990, Genscher and Kohl became the chief political architects of Germany reunification. Genscher reached the zenith of his popularity in September 1989 when he spoke to 6,000 East German refugees who had fled to the West German embassy in Prague and announced that they were allowed to leave for the FRG on the same day.

In May 1990, Genscher chaired the first meeting of six foreign ministers, the so-called Two-Plus-Four Talks, in Bonn, where the international ramifications of Germany's unity were discussed. In mid-July 1990, he accompanied Kohl to his meeting with Gorbachev in the Caucasus, which is regarded as a historic milestone on the road to reunification. In May 1992 Genscher retired from his ministerial posts, but he remained a member of the Bundestag until 1998.

Gensuikyō

Japanese antinuclear weapons congress officially formed in 1955. Gensuikyō (Gensuibaku Kinshi Nihon Kyōgikai, or Japanese Council against Atomic and Hydrogen Bombs) began as a petition signed by some 33 million people after the so-called Lucky Dragon Incident of 1 March 1954 in which radiation from a U.S. hydrogen bomb test on Bikini Island fell on a Japanese fishing boat. By the 1960s Gensuikyō had grown into perhaps the greatest grassroots movement in Japanese history and the world's largest antinuclear weapons organization.

Gensuikyō was formally created in September 1955. Thereafter, annual international congresses were held in Hiroshima on the anniversary of the atomic bombing there. However, the organization gradually lost support as it came under increasing Chinese and Soviet influence. Gensuikyō suffered its first major split in 1961, when groups affiliated with the Japanese Democratic Socialist Party established their own antinuclear organization. The 1961 congress witnessed a fierce struggle between members of the Japanese Socialist Party (JSP) and the Japanese Communist Party (JCP) as well as between advocates of total nuclear disarmament and those who viewed U.S. imperialism as the enemy of peace. The JCP's view ultimately prevailed. Henceforth,

Gensuikyō supported Moscow, which it called a “peace force,” even after the Soviet resumption of nuclear testing shortly thereafter.

When the 1962 Gensuikyō congress refused to denounce a massive Soviet atmospheric nuclear test, JSP delegates walked out. Disagreements over the 1963 Partial Nuclear Test Ban Treaty destroyed any lingering hope of reuniting the Japanese peace movement. When the Gensuikyō congress opened a week after the treaty was signed, Soviet and Chinese delegates clashed bitterly over the treaty, with the JCP adopting the Chinese line. The following year the JCP prevented Soviet delegates from being heard at all, so they subsequently attended a rival JSP congress. By February 1965, with Soviet support, the JSP congress was transformed into the Gensuibaku Kinshi Kokumin Kaigi (Japanese Citizens’ Conference for the Abolition of Nuclear Weapons). The two rival antinuclear organizations maintained their separate identities into the post–Cold War era.

King of Great Britain (1936–1952). Born on 14 December 1895 in Sandringham, England, Albert Frederick Arthur George was the second son of future King George V and Queen Mary. Called “Bertie” by his family, he was a shy and sickly child who received only a marginal education until he graduated without distinction from the Royal Naval College in 1913. He served in the Royal Navy during 1913–1916, seeing action during World War I at the Battle of Jutland, but ill health ended his naval career. After the war he spent a year at Trinity College, Cambridge; became Duke of York in 1920; and married Lady Elizabeth Bowes-Lyon in 1923. The couple had two daughters, Elizabeth and Margaret.

In 1936, the Duke of York unexpectedly and reluctantly ascended the throne in the wake of the 1936 abdication crisis of his elder brother King Edward VIII. The duke was crowned George VI to maintain a sense of royal continuity. King George VI largely overcame his chronic stammering and shyness to become a much-loved and effective monarch.

George remained in London during the German Blitz of World War II, while Buckingham Palace was bombed nine times. The king regularly visited bombed-out sections of London and visited British troops in the field,

greatly endearing him to his people and boosting national morale. His younger brother, the Duke of Kent, was killed in action in the war, creating a bond of sympathy between the royal family and English families who had lost loved ones. The king also converted the gardens of Windsor Castle into crop fields, which he himself tended.

Throughout the war, King George VI maintained a close relationship with Prime Minister Winston Churchill and was disappointed with the Labour Party victory in the 1945 elections. George opposed Soviet expansion in Eastern Europe and gave his full support to Churchill's 1947 Fulton, Missouri, "Sinews of Speech" speech (also known as the "Iron Curtain" speech). In 1947 George helped facilitate Indian independence. He also backed Prime Minister Clement Attlee's decision to dispatch troops to the Korean War in 1950.

King George's health deteriorated rapidly in the late 1940s. In September 1951 cancer necessitated the removal of his left lung, a procedure from which he never fully recovered. He died at Sandringham on 6 February 1952 and was succeeded by his daughter as Queen Elizabeth II.

Georgia

Former Soviet republic. Located in Transcaucasia at the crossroads of Europe and the Middle East, Georgia covers 26,911 square miles, making it slightly larger than the U.S. state of West Virginia. It borders on Russia to the north, Azerbaijan to the east, Armenia and Turkey to the south, and the Black Sea to the west. Its 1945 population was roughly 3.5 million. Frequently invaded and torn between stronger powers, Georgia's position as a border region resulted in the development of a national identity and culture reflecting diverse influences. The most enduring cultural legacies include Georgia's conversion to Christianity in the early fourth century and development of a unique alphabet, both of which contributed to the formation of a strong national identity.

Georgia's role in the early years of the Cold War was influenced, in part, by its geostrategic position on the southern border of the Soviet Union. At the end of World War II, Soviet dictator Josef Stalin laid claim to the provinces of Kars and Ardahan in eastern Turkey, which had been incorporated into the Russian Empire in the nineteenth century and ceded to Turkey after the 1917 Bolshevik Revolution. These claims were initially made on behalf of Soviet Armenia, but claims on behalf of Soviet Georgia followed shortly thereafter.

Soviet pressure on Turkey combined with Soviet aid to communist guerillas in the Greek Civil War and the continuing Soviet occupation of northern Iran, however, elicited a strong response from U.S. President Harry S. Truman. The 1947 Truman Doctrine was thereby promulgated to provide aid to Turkey and Greece in their struggle against communist insurrections. This strong rebuff was one of the key factors that induced the Soviets to drop their claims to the disputed provinces.

Soviet Georgia underwent major economic and social changes in the 1950s and 1960s as a period of relative stability took hold in the Soviet Union. In 1956, however, at the Twentieth Congress of the Communist Party of the Soviet Union, Soviet leader Nikita Khrushchev denounced Stalin and began the process of de-Stalinization. Stalin, a Georgian by birth, was viewed by many Georgians as an important national figure and a strong leader who saved the Soviet Union from Nazi Germany. Georgians were alarmed by Khrushchev's attacks on Stalin's memory and took to the streets to express their displeasure. Their protests were violently disbursed by the Soviet security forces, resulting in a number of deaths and injuries.

By the 1970s, life in Georgia under the first secretary of the Georgian Communist Party, Eduard Shevardnadze, who dominated its political life during 1972–1985, was marked by an emphasis on law and order accompanied by several anticorruption campaigns. In 1978, Soviet Premier Leonid Brezhnev recommended changes to the Soviet constitution and corresponding changes for the republics of the Soviet Union. Such changes normally received rubber-stamp approval from the Soviet republics. However, in the new Georgian constitution, the clause maintaining Georgian as the official language was removed. This sparked widespread disaffection and street protests. Brezhnev backed down, and the Georgians were successful in maintaining the official status of their language.

Georgian political activism during the Brezhnev era took place within the context of increasing standards of living and rising expectations. These expectations were further increased when Mikhail Gorbachev became Soviet general secretary in 1985. Soon after assuming power, he embarked on an ambitious program of restructuring Soviet society and economy through his *glasnost* and *perestroika* reform initiatives. Gradually, *glasnost* and *perestroika* reached the periphery of the Soviet Union, and Georgian political and social activists took advantage of the opportunities made available by Gorbachev's policies to push for widespread reforms. Dissatisfaction with the state of affairs in Georgia led some people to advocate for independence as well.

Various reform groups surfaced with varying political, social, and economic agendas, but gradually those forces advocating Georgian independence became predominant. By early 1989, nationalist forces had begun to hold demonstrations. The turning point of the independence movement took place on 9 April 1989. Georgian demonstrators had initially been protesting against developments in Abkhazia, an autonomous region inside Georgia. Soon, however, their demands broadened, and the demonstrators agitated for independence. Despite the fact that the demonstrations were peaceful and attended largely by women and young people, Soviet troops intervened with gas and sharpened shovels, killing some twenty people and wounding several hundred others. Responsibility for this shocking turn of events, known as the April Tragedy, was debated widely in Georgia and throughout the Soviet Union. Most believed it to be the work of the central authorities in Moscow, and this only served to galvanize opposition to Soviet rule.

Popular pressure, opposition strikes, and other forms of civil disobedience led to multiparty elections for the Georgian Supreme Soviet in October 1990, in which the supporters of the popular oppositionist and Georgian nationalist Zviad Gamsakhurdia won a majority of the seats, followed by the Georgian Communist Party. Gamsakhurdia was sworn in as chairman of the Supreme Soviet in November 1990. The new Georgian parliament then decided not to participate in Gorbachev's March 1991 all-Union referendum on the future

of the Soviet Union and instead organized a national referendum on independence. In the referendum, more than 98 percent of the population favored independence. On 9 April 1991, the second anniversary of the April Tragedy, the Georgian parliament adopted a declaration of independence and formally seceded from the Soviet Union. In May 1991, Gamsakhurdia was elected president of the Republic of Georgia with 86 percent of the vote.

Despite these sweeping democratic changes, however, Georgian political life was far from stable. Gamsakhurdia's increasingly erratic behavior, accompanied by his stridently nationalist rhetoric, alienated large segments of the population, especially the Abkhazians and South Ossetians, two autonomous non-Georgian ethnic groups. In December 1991 he abolished the autonomy of South Ossetia in response to a local drive for independence from Georgia. Political conflict soon gave way to armed strife, which lasted until a Russian-mediated cease-fire was brokered in July 1992. Tensions in Abkhazia would not result in open warfare until 1992, after the end of the Cold War.

The failed August 1991 coup against Gorbachev was a further blow to Gamsakhurdia's credibility when he declined to denounce the plotters. His position deteriorated even further during the fall of 1991, and in December 1991 civil war broke out in Georgia, forcing him to flee the country. Conflict would ravage the country until the return of Shevardnadze to power in March 1992.

The German Democratic Republic (GDR, East Germany) was officially created on 7 October 1949 as a direct result of the Cold War. Unable to arrive at a postwar settlement with Great Britain, France, and the United States regarding Germany, the Soviet Union allowed its zone of occupation to become a sovereign state. East Germany's population in 1950 was 18.4 million people.

At the February 1945 Yalta Conference, the Allies had agreed to jointly occupy Germany pending the final resolution of a peace treaty. Germany and Berlin, its capital, were divided into four zones to be administered by the

May Day rally in the Soviet sector of Berlin, 1951. (Bettmann/Corbis)

four victorious powers. Although the occupied territories were to be treated as a single economic unit, disputes over the disposition of resources surfaced almost immediately. The future of Germany became an immediate subject of debate, with the Soviet Union pressing for the formation of a communist Germany.

The first steps in this direction were taken even before the war ended. Walter Ulbricht, a German communist who had spent the war years in the Soviet Union training for this eventuality, led a group of exiles back to Germany with the Red Army. With Soviet support, they placed sympathizers in key posts in the new, superficially democratic administration of the occupied territory. The communists' record of resisting the Nazis allowed them to outmaneuver other political parties permitted in the Soviet zone. The German Social Democratic Party (SPD), however, remained a challenge. Backed by the Soviet military authorities, Ulbricht engineered the merger of the eastern branches of the SPD with the German Communist Party (KPD) in April 1946. The resulting Socialist Unity Party (SED) was under communist control by 1948.

Even though Soviet military authorities allowed the so-called Bloc Parties (the Christian Democratic Union, the Liberal Democratic Party, the Democratic Farmers' Party, and the National Democratic Party) to operate in their zone, the SED had an effective monopoly on power. The mass organizations that were given a place in the new political system (the Free German Trade Unions, the Free German Youth, the German Women's League, and the Cultural League) were also under the SED's firm control. The German communists, with the aid and support of the Soviets, had thus laid the foundations for a single-party state by the time the disputes between the Western powers and the Soviets came to a head in April 1948, in the form of the Berlin Blockade.

The blockade itself was the result of a series of disagreements over the administration of Berlin as well as over the future development of Germany. Both sides used the process of granting incrementally greater authority to Germans and German institutions as leverage in negotiations. The end result was the 1949 creation of two separate German states, the Federal Republic of Germany (FRG, West Germany) and East Germany.

The Western Allies did not immediately recognize the East German state. The West German state, they contended, was not intended as a permanent solution to the German question. By and large, the Western Allies and the new West German government viewed the division of Germany as the result of deliberate Soviet policy and continued to claim the right to represent all Germans. The Soviets, on the other hand, appeared to consider the question closed. They granted East Germany immediate recognition as a sovereign, constitutional state, whereas West Germany was deemed a self-governing Allied Protectorate.

Despite the appointment of Wilhelm Pieck as East Germany's first president, Ulbricht remained the driving force in the government's development. His policies were slavishly Stalinist. Under the slogan of "constructing socialism," he purged the SED, established the infamous Ministry for State Security (Stasi), and introduced a Marxist-Leninist curriculum in the schools. State investment focused on creating heavy industry at the expense of consumer goods, while collectivization was the goal in agriculture. In addition, the East German government continued to make reparations payments to the Soviet Union in the form of goods and capital stock. Poor economic conditions combined with an increasingly totalitarian political structure caused many East Germans to flee the country. The East German government closed its border with the West in May 1952, but the exodus continued, as Berlin remained an open city. On average, more than 175,000 people per year left East Germany for West Germany between 1949 and 1953.

Open rebellion against the SED regime, however, did not coalesce until June 1953. The failure of the government to rescind an increase in the expected levels of production—in line with Soviet policy since the death of Josef Stalin in March 1953—spurred mass strikes in Berlin. Demonstrations in the capital on 16 June 1953 spread to the rest of the country the following day, until the Soviet Army sent tanks to quell the disturbances. Ironically, the

uprising strengthened Ulbricht's position, as the Soviets were now clearly committed to supporting his regime.

Ulbricht nonetheless instituted limited reforms aimed at placating East Germans. The SED dropped its Five-Year Plan and adopted a more balanced Seven-Year model, collectivization was temporarily abandoned, and the centralized economy shifted its focus to providing more housing and basic consumer goods. Without fundamental reforms, however, the East German economy continued to lag far behind that of West Germany. Ulbricht's solution to this slow growth was to increase the tempo of socialization in the late 1950s, resuming collectivization and pressing business owners into cooperatives. The regime also stepped up its communist indoctrination efforts. East German youths were pressed to join the police and armed forces (East Germany had become part of the Warsaw Treaty Organization in 1955) to demonstrate their commitment to socialism. In the meantime, the flow of refugees moving through Berlin from East to West accelerated.

The solution to this problem, proposed by Ulbricht and approved by Soviet leader Nikita Khrushchev, was to close the border in Berlin as well. On the night of 12–13 August 1961, East German police units began constructing the Berlin Wall. Labeled an antifascist bulwark by the SED regime, the wall's construction was seen in the West as an admission of defeat. It served its purpose, however. Not only did it stop the drain of talent and manpower, but it also allowed the East German government room to experiment with reforms.

On the very night that the Berlin Wall went up, Ulbricht initiated a program of de-Stalinization, changing the names of streets, squares, buildings, and factories. By 1963, the regime was comfortable enough to announce the New Economic System (NES). Aimed at improving productivity and making management more responsible, the NES was a limited market-oriented system that brought a short-term surge in growth. In the long run, however, the SED was unwilling to surrender enough control over the economy to make the system work. The NES was abandoned in 1970.

Curiously, in 1968 the SED had promulgated a new constitution that not only cemented the party's leading role in politics but also declared East Germany a socialist state, bringing the construction phase to a close. East Germany, however, could hardly be considered successful. The economy was stagnant, and East Germans continued to seek refuge in the West whenever they could. Pressure from the West, in the form of the Hallstein Doctrine, left the state isolated beyond the Soviet bloc.

Ulbricht, aging and increasingly out of touch, was quietly pushed aside in favor of Erich Honecker, formerly head of the communist youth organizations, in 1971. In Cold War terms, West German politics had shifted decisively as well, as the SPD came to power in 1969. As part of an initiative known as Ostpolitik, Willy Brandt, the new chancellor of West Germany, favored opening relations with East Germany. Honecker spoke of "no taboos," indicating a willingness to open East German society and culture, if not East German politics and the Berlin Wall.

The increased flexibility on both sides paid handsome dividends. Brandt opened his initiative with a visit to East Germany in May 1970 to discuss

intra-German relations. Progress was limited, however, as Ulbricht insisted on linking other issues to the question of West Berlin's status. Under Honecker, representatives of West Germany and East Germany managed to work out new agreements on transit and tourism (part of the four-power Berlin accord of 1971) relatively quickly. On 8 November 1972, after only six months of negotiations, the two states concluded a Basic Treaty that established relatively normal relations between them. While the two Germanies stopped short of full-scale recognition, the Basic Treaty acknowledged the reality of two states.

This was a major triumph for East Germany, as its diplomatic isolation came to an end. Trade with the West grew substantially, and increasing visits from West Germans provided a steady source of hard currency. To a considerable degree, the West underwrote the refurbishment of the East German infrastructure. This allowed Honecker to implement social programs on a grand scale. Between 1971 and 1980, the regime built more than a million new housing units and renovated half a million more. Economic policy centered on the provision of consumer goods, and the East German standard of living, although still lower than West Germany's, was the highest in the Soviet bloc.

Under Honecker, moreover, the SED regime scaled back indoctrination campaigns, accepting public conformity as being sufficient. Most East Germans went along with the bargain, supporting—or at least not opposing—the SED in public and otherwise retreating into their private lives. Those who continued to criticize the regime openly, such as Wolf Biermann and Vera Wollenberger, usually found themselves “exiled” to the West. The Stasi established an extensive network of spies and informants that effectively quashed any nonconformist movements before they could start.

Honecker's no-taboos state thus evolved into a stagnant society—a “niche society” as Günter Gaus famously termed it—in which stability and outward conformity were most important. The politics of the East German state were nonetheless hollow. Although the SED professed confidence in its support from the population, it consistently refused to allow citizens below retirement age to travel to the West. Supported financially by West Germany and politically by the Soviet Union, however, East Germany played an increasingly important role in Cold War and international politics. In the early 1980s, the Soviet Union and the United States came to loggerheads over the deployment of nuclear missiles on German territory. Although Honecker accepted the missiles, he acted as a moderating force in the standoff. He insisted that gains in West German–East German relations would lead to a solution favorable to the Soviets and that the entente therefore needed to be preserved.

The Soviets effectively turned the tables under Soviet President Mikhail Gorbachev. When Honecker steadfastly refused to go along with Gorbachev's radical program for reforming socialism internally (*perestroika*), the Soviet leader made it clear that support for East Germany would be limited. This along with Honecker's continuing liberalization of intra-German relations—allowing independent political demonstrations in 1987, for example, or

televising debates between East and West German politicians—ultimately led to the collapse of the East German state.

When the Hungarian government removed the fortifications along its border with Austria in May 1989, more than 30,000 East Germans fled along this route in just six months. Honecker refused to acknowledge the mass exodus, and during a visit to East Germany on 7 October 1989, Gorbachev made it clear that the Soviet Union would not intervene as it had in 1953. Two days later, demonstrations against the SED regime began in Leipzig.

Reformers within the SED, led by Egon Krenz, seized the opportunity to oust Honecker at the party plenum on 18 October 1989. On 9 November they announced that citizens of East Germany would be allowed to travel freely. Within days, millions of East Germans had broken through the Berlin Wall, literally in many cases, to visit West Germany. Further attempts at reform by the Krenz government paled against the economic lure of the West, however. On 18 March 1990, East Germans voted overwhelmingly for unity with West Germany. State treaties for the economic (1 July 1990) and political (3 October 1990) union of the two Germanies soon followed. The German Democratic Republic, one of the central players in the Cold War in Europe, had ceased to exist.

German Democratic Republic, Armed Forces

The armed forces of the German Democratic Republic (GDR, East Germany) included the Nationale Volksarmee (NVA, National People's Army), the Grenztruppen (Border Troops), units of the Ministerium für Staatssicherheit (MfS, Ministry of State), the Volkspolizei (VP, People's Police), the Kampf-

gruppen der Arbeiterklasse (Combat Groups of the Working Class), and the Zivilverteidigung (Civil Defense). The NVA was, however, the heart of East Germany's national defense structure. In July 1952 the armed military police force was transformed into the Kasernierte Volkspolizei (KVP, Garrisoned People's Police), predecessor of the armed forces of East Germany.

The rearmament of East Germany was made public in May 1955 in conjunction with the foundation of the Warsaw Treaty Organization (Warsaw Pact), which was itself a response to the incorporation of a rearmed Federal Republic of Germany (FRG, West Germany) with the North Atlantic Treaty Organization (NATO) that same month. On 18 January 1956, the East German parliament, the Volkskammer (Chamber of People's Deputies), established the NVA and the Ministry of National Defense (MFNV). By 1 March 1956, the command authorities of the new army reported their operational readiness.

The NVA was organized in three military services: ground forces, consisting of two armored and four motorized rifle divisions (1987 peak strength of some 106,000 troops); air force/air defense, consisting of three divisions (1987 strength some 35,000 troops); and the People's Navy of three flotillas (1987 peak strength of approximately 14,200 men).

At its inception, the NVA was a volunteer army. Only after the August 1961 construction of the Berlin Wall was the framework for compulsory military service created. It went into effect in 1962. Until spring 1990, there was no specific provision made for conscientious objectors, and all able-bodied East Germans served a minimum and compulsory eighteen-month tour of duty. In 1964, however, it became possible to satisfy the conscription requirement as a so-called construction soldier.

East Germany's close association with Soviet military models and the state's strong desire to establish unquestioned political supremacy quickly transformed the NVA into an army of the Socialist Unity Party of Germany (SED). Almost all NVA officers were members of the SED, and a network of political officers and members of the state security apparatus provided the required political indoctrination and supervision of the rank and file.

The NVA was equipped in accordance with the recommendations of the Joint Armed Forces Command of the Warsaw Pact. Thus, from 1962 the NVA received Soviet short-range missiles, and although it did have means of delivering nuclear weapons, the nuclear warheads remained in Soviet custody. Also in 1962, the air force became part of the unified air defense system of the Warsaw Pact. Beginning in 1963, the navy was equipped with Soviet missile patrol boats and landing craft capable of conducting offensive operations in the Baltic Sea.

In the prelude to the 1968 Warsaw Pact invasion of Czechoslovakia, several NVA training exercises allowed Soviet forces in East Germany to be deployed elsewhere and provided cover for the general Warsaw Pact troop buildup. Although two NVA divisions were prepared to take part in the actual invasion, they were not requested. NVA participation was limited to a small liaison team at Warsaw Pact headquarters within Czechoslovakia.

The East German minister of defense commanded the Joint Warsaw Pact maneuvers in 1970, code-named WAFFENBRÜDERSCHAFT (brothers-in-arms), which were conducted on East German territory—proof positive that East Germany had been successfully integrated into the alliance.

In spite of the official policy of détente, combat capability and readiness were increased during the 1970s and accelerated in the early 1980s after the end of détente. In case of war, the NVA would reach a personnel strength of some 500,000 troops and would become part of the 1st and 2nd Front within the 1st Strategic Echelon. Under the command of the Soviet main force, attacks were to be launched on the territories of West Germany, Denmark, and Benelux. A special force supported by combat groups, border troops, and police readiness units were to invade West Berlin.

As civil unrest in Poland increased during 1980–1982, one NVA division was kept on alert should an invasion have been required. During the domestic crisis and disorder during the Velvet Revolution in October and November 1989, “groups of one hundred” were formed, comprising a total of 20,000 troops, to support East German police forces. The operation was conducted to secure buildings and institutions from damage or destruction.

Between 1989 and 1991, there was an initial phase of disorientation that in January 1990 was followed by demonstrations and strikes in more than forty garrisons. The NVA leadership stabilized the situation by making concessions and launching reforms. The disbanding of the political machinery within the armed forces and the introduction of democratic structures based on the rule of law after the first free elections in East Germany in March 1990 caused more uncertainty vis-à-vis the role and place of the NVA. Sweeping democratic-style reform was carried out against the backdrop of the still unsolved issue of whether there would be two armies on German territory after the reunification.

After the Soviet Union agreed to the reunified Germany’s membership in NATO, the end of the NVA was sealed. On 24 September 1990, it was removed from the military organization of the Warsaw Pact and was officially disbanded on 2 October. On the day of reunification, 3 October 1990, the Bundeswehr (Federal Armed Forces) of Germany integrated more than 89,800 former NVA members and 48,000 civilian employees.

The victorious Allied powers in World War II—the United States, the Soviet Union, Great Britain, and, belatedly, France—began working out guidelines and structures for the eventual occupation of Germany as early as 1944. Unable to agree on a uniform policy, they resorted to vague compromises in the final declaration at Potsdam on 2 August 1945, some three months after the German surrender.

The Allies established four supposedly temporary zones of occupation. While these largely followed old German state borders, Prussia was dissolved because of its association with militarism. U.S. forces occupied southwestern Germany, including Bavaria, northern Baden, northern Württemberg, and Hesse. The Americans also controlled the North Sea port city of Bremen in order to facilitate supply. The British zone, in northern Germany, included Schleswig-Holstein, Lower Saxony, Northrhine-Westphalia, and the city of Hamburg. France governed the southwestern German region that abutted it: the Rhine-Palatine and southern Baden. The Soviet zone of occupation comprised Saxony, Thuringia, Mecklenburg, Pomerania, Brandenburg, and

Saxony-Anhalt. American troops had liberated and occupied significant portions of Mecklenburg and Thuringia at the conclusion of hostilities but, despite urging by British Prime Minister Winston Churchill to remain in place, withdrew according to the agreements and in exchange for the Soviet handover of portions of Berlin.

The German capital was also divided into four zones of occupation and administration. The city center and the larger eastern portion of the city fell to the Soviet Union, while the three Western Allies divided the remainder. This arrangement left the Soviets in control of 31 percent of the German territory and about half of its resources, according to American estimates at the time. Lieutenant General Lucius Clay, the first administrative head of the American zone, noted that the Soviets had gotten the agriculture, the British received the industry, and the Americans controlled the scenery of Germany.

In theory, Germany was to be administered as a single economic unit according to the agreements made at Yalta and Potsdam. Although the Allied military commander in each zone enjoyed virtual autonomy, there was also a four-power Allied Control Commission (ACC) responsible for the administration of all of Germany and a corresponding Kommandantura for Berlin. The Allies agreed in principle on three primary objectives: the deindustrialization, demilitarization, and de-Nazification of German society. The most significant and efficacious joint enterprise in this regard was the International Military Tribunal (IMT) established in Nuremberg to conduct trials of Nazi leaders and high-ranking military officers for war crimes and crimes against humanity.

Even this undertaking saw disagreements among the Allies, and the implementation of the so-called 3Ds program varied widely across the zones of occupation. The Americans adopted a strategy of establishing administrative beacons at the state level, while the British attempted to create a single administration for their entire zone and even nationalized some industries. They tended to focus on reeducation with an eye toward creating a democratic German society in the near future. Both the French and the Soviets created strict military regimes that focused on extracting reparations and left Germans little room for initiative.

The Soviets, in fact, were bent on creating an entirely new social and political order in Germany and carried out a program of radical reform without consulting the ACC. German banks were dispossessed in July 1945, all estates over 245 acres were seized without compensation in September, and between October 1945 and November 1946 the Soviet military authorities confiscated all industrial enterprises in their zone. The Soviets disassembled almost 1,500 factories and shipped them back to the USSR as reparations. They also took the lion's share of remaining industrial and agricultural production.

Although the British and Americans had agreed at Potsdam that each power might take reparations from its own zone and allowed that the Soviets might claim another 10 percent of Germany's industrial production from their zones without payment, Clay felt that this went beyond the spirit of the agreement. On 4 May 1946, he suspended economic exchanges with the

French and Soviet zones on grounds that they were not treating Germany as a single economic unit. He also suspected that the new Socialist Unity Party of Germany (SED)—a forced fusion of the German Social Democrats in the Soviet zone and the German communists—was intended as an instrument for controlling German politics as a whole.

U.S. policy shifted to counter these moves and to sidestep the continuous French objections to reestablishing German administration. In July 1946, U.S. Secretary of State James Byrnes announced that the United States was prepared to join forces and zones with any other power in order to ease the burden of occupation. The British cabinet accepted the offer on 25 July. By 1 January 1947, the British and Americans had established a unified economic administration for Bizonia, which included half of all German territory and almost two-thirds of the German population. A German Economic Council was given day-to-day authority over the region's economy, although the Allies retained all practical political power.

The separation of economy and politics quickly became impractical when the United States announced its intention to aid in the reconstruction of Europe through the European Recovery Program (ERP), also known as the Marshall Plan. This necessitated currency reform in Germany, as the reichsmark had become useless and the German economy survived largely via black market activity. The Soviets, however, refused to participate in either the currency reform or the ERP. When a final attempt at compromise collapsed at the London Conference of Foreign Ministers in December 1947, U.S. Secretary of State George Marshall informed the Soviets that the Americans and British intended to forge ahead even if it meant the creation of a separate West German state.

The Soviets responded in January 1948 by claiming all of Berlin as part of their zone because the Western powers had violated the occupation agreements. To counter the West German Economic Council, the Soviets granted their own East German Economic Council (created in June 1947) the right to exercise governmental authority in the Soviet zone on 12 February 1948. A month later, they oversaw the creation of a preliminary German parliament in Berlin. The Soviet representative, Marshal Vasily D. Sokolovski, left the ACC on 20 March 1948, declaring that it held no authority over the Soviet zone. On 16 June, the Soviets abandoned the inter-Allied administration of Berlin as well and began to restrict the exchange of goods between West Berlin and the Soviet zone of occupation. They implemented a full blockade on 24 June 1948, four days after the Western powers went ahead with the currency reform.

Germany was now divided into two virtual states, the French having agreed to join their zone to a federal West Germany at the London Six-Power Conference held from 23 February to 6 March 1948. Both sides moved quickly to formalize the arrangement.

On 1 July 1948, the Western powers instructed the minister-presidents of the West German states to convene a national constituent assembly. Instead of a constitution (which they felt would preclude unification), the resulting German Parliamentary Council drafted the Basic Law in September 1948. It

was approved on 10 May 1949 and promulgated on 23 May 1949, with the first elections for a West German parliament following in August 1949. Allied high commissioners replaced the Allied military government, which was suspended. An occupation statute limiting the sovereignty of the Federal Republic of Germany (FRG, West Germany) in matters of foreign affairs, foreign trade, and currency exchange remained in effect until 9 May 1955.

In the Soviet zone, a parallel People's Parliament passed a draft constitution in November 1948. This was confirmed on 30 May 1949 and was put into effect on 7 October 1949, officially creating the German Democratic Republic (GDR, East Germany). The Soviets, like the Western Allies, remained in Germany as an occupying power, and there was no formal peace treaty following World War II until the Two-Plus-Four Treaty of 12 September 1990 officially brought it to a close. The burden of occupation was, however, gradually lessened over the years. The Soviets renounced further reparations from Germany in 1953 and declared hostilities at an end in 1955, the same year that East Germany joined the Warsaw Pact. The Soviets dissolved their Kommandantura in Berlin in 1962 and, under the leadership of Mikhail Gorbachev, refused to intervene when antigovernment protests that would eventually lead to the collapse of the East German state broke out in the autumn of 1989.

Central European nation that during the Cold War covered 96,019 square miles, about the size of the U.S. state of Oregon. With a 1948 population of 50 million people, the Federal Republic of Germany (FRG, West Germany) bordered the German Democratic Republic (GDR, East Germany) and Czechoslovakia to the east; Austria and Switzerland to the south; France, Luxembourg, Belgium, and the Netherlands to the west; and the North Sea to the north. The Allies created West Germany because of increasing Cold War tensions in the late 1940s.

Germany, Federal Republic of

At Yalta in 1945, Britain, the United States, and the Soviet Union agreed to temporarily divide and occupy Germany until a final settlement could be reached. The British, Americans, and Soviets augmented this understanding at the Potsdam Conference (17 July–2 August 1945) with a stipulation that Germany be treated as a single economic unit during the occupation.

Economics—specifically the issue of war reparations—drove a wedge between the Soviets and the Western powers even before Potsdam. The British and Americans believed that Soviet occupation was exploitative at the expense not only of the Germans but also of the other occupying powers as well. Because of this, the Americans suspended reparations deliveries to the Soviet zone in May 1946. Deliveries soon resumed, but when the Paris Conference of Foreign Ministers deadlocked over the same issue, U.S. Secretary of State James F. Byrnes approached the British and French about merging their zones into a single economic and administrative unit. The British accepted the offer in July 1946, and Byrnes announced the new policy during a speech in Stuttgart in September 1946. The two zones officially merged into Bizonia on 1 January 1947.

The administration of Bizonia effectively provided for a separate state in all but name. The occupying powers created an Economic Council of fifty-two deputies to take care of day-to-day affairs and added the Landrat (Council of States) to deal with legislative matters. They also established the Executive Committee that did the work of a cabinet, although the ultimate power still lay with the Allied military governments.

Differences over economic policy, while inextricably linked to political issues, remained the leading edge of the divide between the Soviets and the West. The announcement of the U.S.-sponsored Marshall Plan in June 1947 proved a decisive turning point. The offer of aid was open to the Soviets and their client states, but all recipients had to agree to a program of reconstruction that had clear political overtones. The USSR therefore rejected the offer.

The London Conference of Foreign Ministers held in December 1947 not only failed to heal the breach but also essentially sealed the division of Germany. Soviet Foreign Minister Vyacheslav Molotov demanded assurances that the Western powers were not going to form a separate state; U.S. Secretary of State George Marshall replied that they had already decided to take steps toward unification rather than continue to argue. In February 1948 British Foreign Minister Ernest Bevin accordingly convened a six-power conference, which included Belgium, Luxembourg, and the Netherlands, to discuss the creation of a western German state. To that end, the French agreed to join Bizonia. To protest, in March 1948 the Soviets withdrew from the Allied Control Council charged with the administration of occupied Germany. They also temporarily halted military trains moving between the Western zones and Berlin.

When a second six-power meeting laid out concrete principles for the new western German state in June 1948 and then proceeded to initiate currency reform in their zones, however, the Soviets revived the blockade. When the British and Americans responded by airlifting supplies to the city and counterblockading the Soviet zone, the communist leadership of eastern

Germany attempted to claim authority over all of Berlin. They succeeded only in forcing the city administration to seek refuge in the Western zones of the city. The year-long stalemate, however, convinced both sides that political division was the only solution.

The Western military governors formally proposed terms for a western German state in 1 July 1948. After much wrangling, the minister-presidents of the western German states accepted, although they insisted on crafting a Basic Law rather than a constitution so as not to preclude future unification.

The final draft of the Basic Law approved by the minister-presidents in February 1949 contained several important clauses. First, it set a threshold of 5 percent of the vote for a party to be admitted to representation in the new parliament. Second, it required any vote of no-confidence in a government to be accompanied by the simultaneous election of a new one. Third, it set strict limits on the powers of the head of state, although it stopped short of reducing the office to purely ceremonial status. Finally, in Article 23, it specifically provided for other German states to join at a later time. In discussions held during April 1949, the Western foreign ministers agreed to accept the German draft, although the Allies retained the right to veto any legislation that conflicted with occupation policy and to resume full authority in case of emergency. The Basic Law was accordingly ratified by the three Western military governors, the German Parliamentary Council, and nine of the German states in early May 1949. The Basic Law came into force on 23 May 1949, officially establishing West Germany.

The first West German elections were held in August 1949, with Konrad Adenauer's Christian Democratic Union (CDU) gaining 31 percent of the votes against 29 percent for the Social Democratic Party (SPD). The German Communist Party (KPD) won only 5.7 percent of the vote, while the Free Democratic Party (FDP) took 11.9 percent. On 15 September 1949, the new parliament (Bundestag) elected Adenauer chancellor by a single vote—his own. Six days later the new, simpler occupation statute entered into force, and West Germany officially became an independent state, albeit with limited sovereignty.

Adenauer and the CDU dominated the first fifteen years of West Germany's existence. Their program was essentially conservative but turned on two crucial points. The first was the acceptance of the social-market economy, a mix of socialism and capitalism crafted by Ludwig Erhard, who had been minister of economics in Bizonia. The second was anticommunism, or anti-Sovietism. While the SPD, led by Kurt Schumacher, had campaigned for nationalization of industry and a socialist, centralized economy and believed

West Germans line up in front of currency offices on 20 June 1948 waiting to get new deutsche marks. The military government in the three Western zones of occupation replaced the old reichsmark, rentenmarks, and military marks with the new deutsche mark on that date. The new currency became the foundation of the *Wirtschaftswunder* (economic miracle) in the Federal Republic of Germany (FRG, West Germany). (dpa/Corbis)

Crafty politics
and favorable

amazing speed.

that unification was the overriding goal, the CDU portrayed itself as the only reasonable bulwark against Soviet domination and was willing to sacrifice unity in the short term. Adenauer's first goal was to reestablish Germany as a reliable, democratic partner in West European affairs. Only then, Adenauer felt, could Germany take steps to regain true independence and, eventually, unity.

Crafty politics and favorable circumstance helped Adenauer achieve his first goal with amazing speed. In November 1949 West Germany signed the Petersberg Agreement, entrusting control of the production and distribution of coal and steel in the Ruhr Valley to an international authority in exchange for a more rapid end to the Allied dismantling program. This led to German membership (along with France, Italy, Belgium, Luxembourg, and the Netherlands) in the European Coal and Steel Community (ECSC), formed in April 1951 and one of the cornerstones of the European Economic Community (EEC) created six years later.

Attempts to integrate West Germany into a joint European army had already begun in 1950, when the outbreak of the Korean War caused concerns about low troop levels in Western Europe. Popular sentiment in West Germany was overwhelmingly against rearmament, but Adenauer cleverly tied the issue to German sovereignty. While telling his countrymen that rearmament was a safeguard against Soviet dominance and a step toward true independence, he also pointed out to the Allies that an occupied Germany would continue to be a drain on their resources.

This arrangement was formalized in May 1952 when Britain, France, the United States and West Germany signed the so-called Germany Treaty. This brought an end to the occupation statute in return for a firm German commitment to political, economic, and military alliance with the West. When negotiations on the proposed European Defense Community (EDC) collapsed in August 1954, the Allies invited West Germany to join the North Atlantic Treaty Organization (NATO) when it absorbed the Western European Union (WEU) in October 1954. On 5 May 1955, four days before it officially joined NATO, West Germany gained full sovereignty.

Adenauer was equally successful in domestic politics. While the Marshall Plan had jump-started the economy of western Germany already in 1948, the newborn West Germany still faced a number of daunting economic and social problems in 1949. Unemployment, exacerbated by the presence of nearly 10 million displaced persons in West Germany, hovered around 6 percent. Housing was in short supply, and the shadow of national socialism still hung over a large portion of German society. The Marshall Plan continued to provide capital, and when the Korean War brought a rapid upturn in German exports in 1950–1951, Erhard's social-market economy did the rest. During 1950–1957, the gross domestic product (GDP) of West Germany grew at an average rate of more than 8 percent. By 1960 unemployment was under 1 percent.

This economic miracle made social integration easier, enabling Adenauer's regime to successfully enact the Works Constitution Law of 1952 as

West German Chancellor Konrad Adenauer (*center*) visiting Bundeswehr maneuvers near Kunsterlager, Germany, 15 September 1958. (Library of Congress)

well as the crucial Equalization of Burdens Act of 1953. The former legislation extended the influence of workers' consultative councils in industry and created a framework for relatively smooth labor relations. The Equalization of Burdens Act taxed capital gains at a rate of 50 percent and redistributed the proceeds to the dispossessed and less fortunate over thirty years. In addition, under the Construction Act of 1950, the federal government provided grants to cities for large-scale housing projects that produced some 4 million dwelling units by 1957.

Less visibly but of equal import, West Germany undertook to pay the sizable foreign debts of the National Socialist regime and to pay compensation and make restitution to the victims of Nazi persecution. While this was in part driven by West Germany's claim to be the sole legitimate successor of the historic German state—a claim embedded in West German foreign policy in the 1950s and 1960s as the Hallstein Doctrine—Adenauer also had personal and moral reasons for the initiative. Under his direction, the West

German regime agreed to deliver over DM3 billion in goods to Israel over a period of twelve years. Federal indemnification laws provided for roughly DM2 billion per year (through 2005) in payments to individual victims.

Running on this record and with a slogan of “No Experiments,” Adenauer and his CDU-FDP coalition easily won reelection in 1957, gaining an absolute majority with 50.2 percent of the vote. This proved to be the apex of Adenauer’s achievement, however. The West German economy suffered a slight recession in 1958, and when it recovered in 1960 growth managed only a slower though still significant rate of around 4 percent. Yugoslavia’s recognition of East Germany challenged the Hallstein Doctrine and forced West Germany to sever relations with Josip Broz Tito’s regime. More important, a prolonged crisis over the status of West Berlin revealed that Adenauer’s mastery of Cold War politics was slipping while his rivals in the SPD moved to make themselves more electable.

Encouraged by the success of *Sputnik*, the first satellite launched in October 1957, and by advances in intercontinental ballistic missiles, Soviet leader Nikita S. Khrushchev pressed the Allies for a resolution of Berlin’s status. On 27 November 1957 he sent a note to the Allies demanding a peace treaty with the two German states within six months and threatened to turn control of the access routes to Berlin over to East Germany if they did not comply. Adenauer called for a firm response, but the British and Americans appeared more willing to either negotiate or accept the consequences of Khrushchev’s threat. Only France, led by Charles de Gaulle, fully supported Adenauer.

The Allies did, in December 1958, reject the Soviet demands, yet they also continued to negotiate. Behind the scenes, Adenauer even explored the possibility of accepting a divided Germany as permanent in return for the neutralization of the eastern state—an action that he believed his countrymen would condemn if they knew about it. Once President John F. Kennedy replaced Dwight Eisenhower in 1961, however, Adenauer and West Germany became increasingly marginalized in the negotiations. When the East German government began to construct a wall cutting off West Berlin in August 1961, Adenauer did not even visit the city late in the month. In his absence the city’s mayor, the charismatic SPD leader Willy Brandt, rose to national prominence.

Brandt’s run at the chancellorship in 1961, however, met with failure. The CDU retained 46 percent of the vote and renewed its coalition with the FDP, but Adenauer’s position was severely weakened. It collapsed altogether in November 1962 under the pressure of the so-called Spiegel Affair. The FDP leadership demanded that Adenauer retire if the coalition was to continue. He reluctantly agreed and, after officially recognizing Erhard as his successor, resigned in October 1963.

In his first policy statement, Erhard declared that the postwar period was over for West Germany. This turned out to be a prophetic statement, although not in the ways that Erhard intended. His government lasted only two years, collapsing under the pressure of increasing economic problems in October 1965. Erhard was forced out as leader of the CDU in favor of Kurt-

Georg Kiesinger, who then formed a governing coalition that included the SPD for the first time.

The Grand Coalition ushered in an era of controversy. For one thing, Kiesinger had been a member of the National Socialist Party. His position as chancellor brought to the fore once again debates about the Third Reich, which had been largely ignored in the 1950s, as did the 1963–1965 Frankfurt trial of sixteen former Auschwitz guards.

The Spiegel Affair had also spurred political activism and public debate about the nature of West German government. Prominent academics such as Jürgen Habermas and Theodor Adorno attacked the regime from a Marxist perspective, and some even equated the “Americanized” West Germany with the Third Reich as a state dominated by inhuman capital interests. With no parliamentary opposition to speak of, students took to the streets to voice their discontent, and a broad spectrum of grassroots social movements sprang up in the late 1960s.

This shift to the Left of the political spectrum, along with the successful management of the West German economy during 1966–1969, created the conditions under which Brandt was finally able to lead the SPD to power in October 1969. He was elected chancellor by a margin of only two votes, and the SPD had to govern in coalition with the FDP. Brandt nevertheless embarked on a bold, innovative program in both domestic and foreign policy.

Internally, Brandt’s regime oversaw the expansion of the welfare state, reformed pensions and health insurance, liberalized divorce and abortion, updated the criminal code, and relaxed laws on censorship and against homosexuality. By taking advantage of a collapse in the value of the dollar and the end of fixed exchange rates, the SPD was able to curb inflation at the same time. The most important piece of legislation in this regard was the Stabilization Law of June 1967 that allowed the government to significantly increase credit, alter corporate and income taxes, and build reserves for investment if needed in the management of the economic cycle.

It was in foreign affairs, however, that Brandt truly left his mark. As the United States and the Soviet Union opened the Strategic Arms Limitations Talks in November 1969 and entered into a period of *détente*, Brandt decided to try to improve intra-German relations in similar fashion. The aims and outlines of this policy, known as *Ostpolitik*, were readily apparent in his government declaration of 28 October 1969: the West German government would sign the Nuclear Non-Proliferation Treaty (NPT), would enter talks on the renunciation of force, and, most important, would recognize that two German states existed on German soil. Brandt did not offer full recognition to East Germany or surrender the ultimate goal of German unity.

Both the Soviets and the East Germans proved receptive to Brandt’s overture. In March 1970, Brandt traveled to the East German city of Erfurt to meet with East German leaders; they reciprocated by visiting Brandt in Kassel, West Germany, in May. Although congenial, the visits proved fruitless in the short term. In the long run, however, they marked the opening of talks that produced a series of treaties normalizing relations between the two German states in matters of trade and transit. On 8 November 1972, the

East German Premier Willi Stoph greets West German Chancellor Willy Brandt in Erfurt, the Democratic Republic of Germany (GDR, East Germany), 19 March 1970. (Bettmann/Corbis)

two German states signed the Basic Treaty, which enshrined these arrangements as well as agreements on the status of West Berlin.

Ostpolitik was not universally popular in West German political circles. Many people believed that Brandt had gone too far and had given up on German unity. Similarly, his gesture of apology during a visit to Warsaw—dropping to his knees before the grave of a victim of the ghetto there—proved too much for some members of parliament. Defections from the FDP and the SPD over these issues led Brandt to arrange new elections for November 1972.

The SPD emerged from the campaign with even greater strength, having gained some 3 million votes. Brandt, however, appeared spent. When faced with a mixture of high unemployment and strong inflation in late 1973, his government proved incapable. When his personal assistant was exposed as an East German spy the following spring, the once-dynamic chancellor stepped down.

Brandt's replacement, Helmut Schmidt, was an abrasive but decisive, pragmatic, and able politician. Whereas Brandt had played to the young and

to the left wing of the SPD, Schmidt was more conservative. To end the economic slide, he pursued a cautious policy of moderate expenditure cuts and reductions in tax concessions and took measures to restabilize the exchange rate. Along with French President Valéry Giscard d'Éstaing, Schmidt took a leading role in creating the European Monetary System, and he was a strong supporter of the International Monetary Fund (IMF) and the World Bank.

Schmidt and West Germany also assumed a central role in international relations once again during the late 1970s. Steering a careful course between West German defense commitments and a strong domestic peace movement, in 1979 Schmidt convinced NATO leaders to adopt a flexible two-track approach to countermeasures, for instance. Such conservative policies increasingly alienated the Left and even the Center portions of the SPD, however, and gradually weakened Schmidt's base. Many SPD voters defected to the new Green Party, created in 1980 as an umbrella organization for citizens with environmental concerns. At the same time, conservatives and Schmidt's allies increasingly came to view Ostpolitik as acquiescence in Soviet foreign policy, particularly when Schmidt failed to condemn both the Soviet invasion of Afghanistan in 1979 and the imposition of martial law in Poland in 1981.

By the summer of 1982, it was clear that the FDP preferred to work with the CDU. On 1 October 1982 the leader of the CDU, Helmut Kohl, engineered a vote of no-confidence that deposed Schmidt and placed Kohl at the head of the new coalition. The CDU-FDP regime took some small steps to return to the social-market economy, cutting taxes and reducing government spending along with economic intervention. Kohl's platform was not much different from that of Schmidt's in many regards, however. The inclusion of the FDP in the ruling coalition ensured that Ostpolitik remained a central if somewhat weakened plank. Kohl also pressed NATO to implement the two-track system for intermediate-range missile deployment and maintained strong European relations.

Kohl's legacy, however, is German unification. His government's implementation of Ostpolitik differed from that of the SPD regimes in insisting on unity as a goal along with self-determination and human rights. The West German government nevertheless provided East Germany with nearly DM2 billion in loans in 1983 and 1984 and extended a further DM7 billion in credits through 1989. While these sums were intended to stabilize East Germany and prevent a catastrophe along the lines of the Prague Spring, they in fact did a great deal to bring about the collapse of the East German state.

The crisis that brought a close to the era of a divided Germany caught Kohl and most Germans by surprise. Politicians on both sides of the Berlin Wall envisioned a gradual confederation of the two states, a vision that Kohl spelled out in his Ten-Point Program in November 1989. Public opinion drove the program further and faster. By the end of April 1990, Kohl and his eastern counterparts had agreed on a political and economic union. The Two-Plus-Four Treaty (the two German states plus France, Britain, the United States, and the USSR) that formalized the arrangement and gave it the sanction of the Allies of 1944 was signed in Moscow on 12 September 1990.

Since then, most of the outward signs of division and the Cold War have been eradicated. The Berlin Wall has been dismantled, and the seat of government has been returned to Berlin. The districts of the former East Germany have been fully integrated into a Federal Republic of Germany that now consists of sixteen states, and a single German state has become a central part of an increasingly united Europe. Unification has proven to be immensely expensive and socially challenging, but by the early years of the twenty-first century, Germany has shown that it was indeed up to the test.

Germany, Federal Republic of, Armed Forces

Discussions regarding German rearmament took place as early as 1946, but the British government opposed anything more than an armed and mobile police force, while the French government did not wish to see Germans rearmed in any way. Serious negotiations over the creation of a German military began in 1950, however, when the Korean War stretched Western military resources thin. Once again, French resistance was the major obstacle.

The Paris Accords of May 1955 overcame these obstacles by creating a Federal Republic of Germany (FRG, West Germany) army, the Bundeswehr, that was firmly under civilian and Allied control. In stark contrast to previous periods in German history, the Bundeswehr was under intense oversight by parliamentary committees and a public wary of military institutions. Soldiers would be subject to civil law in all matters that were not strictly military. All Bundeswehr units were designated to the North Atlantic Treaty Organization (NATO) for action, with the German government re-

taining peacetime control. Weapons and military matériel were imported from the United States, Britain, and France on a large scale until the late 1960s, when domestic military production developed.

Under the 1955 agreement, the United States and Great Britain committed themselves to maintaining a troop presence in Germany. NATO's current European partners would provide naval and air forces to complement British and American commitments. In return, West Germany would provide twelve mixed divisions (approximately 340,000 men) for the common defense of Europe by 1959, with a final strength of 500,000. Each infantry division would have three combat commands with three motorized infantry battalions and an armor battalion each; antiaircraft, engineer, communications, and reconnaissance battalions; a company of aircraft; a military police company; and combat support from three light artillery battalions and one medium artillery battalion. Tank divisions contained two armored and three mechanized infantry battalions in each combat command. Two of the divisions would be further specialized for airborne and mountain operations.

A civilian screening process was created to recruit officers and noncommissioned officers (NCOs) from World War II veterans. NATO would be responsible for all war planning and for the direction of all operations. No German general staff was permitted, on grounds that it might revive German militarism. The Bundeswehr was allowed an operations staff but on the condition that officers rotated through such duty periodically. Planners believed that half of the necessary manpower for the divisions would be volunteers, while a draft would provide the remaining numbers.

The first West German military volunteers reported for duty in November 1955, and the Law for Compulsory Service passed the West German parliament on 7 July 1956. It required all men between the ages of eighteen and forty-five to serve for twelve months, with provisions allowing conscientious objectors to fulfill their obligation through alternative means, usually administered at the state and local levels. Further exemptions, thought to include some 10 percent of eligible males, covered the sons of deceased and wounded veterans, economic hardship cases, clergy, and those deemed unfit for service. Men who became officers or NCOs would remain in the reserves, known as the Territorial Army, until age sixty. The term of service was increased to eighteen months in 1962 at the height of the Berlin Crisis (1958–1963). It was then reduced to fifteen months in 1972, as population growth began to provide more than adequate numbers of draftees.

The West German government experienced some difficulty in providing the promised troops. Part of the reason was monetary. Between 1956 and

West German soldiers prepare to fire a mortar during a North Atlantic Treaty Organization (NATO) exercise held on the Salisbury Plain Training Area in Wiltshire, Britain, 25 April 1987. (U.S. Department of Defense)

1989, the share of defense-related expenditures in the West German federal budget never sank below 12 percent. It reached its zenith in the early 1960s when it was one-third of the overall budget, yet most of the money was going to purchase matériel. On average, throughout the Cold War the West German government annually spent about 20 percent of its total budget on defense.

Beyond that, rearmament was never popular in West Germany. In October 1956, West German Defense Minister Franz Josef Strauss announced that manpower targets had been reduced from 96,000 to 80,000 for 1956 and from 240,000 to between 175,000 and 200,000 for 1957 largely because volunteers were not coming forward in the numbers anticipated. Only eleven of the twelve German divisions originally planned for 1959 were filled out and under NATO control by 1963. It took until the mid-1970s before West Germany's armed forces reached the final benchmark of 500,000 troops envisaged in 1955. In 1975, the Bundeswehr contained 345,000 soldiers, 110,000 air force personnel, and 39,000 seamen. At any given time, only 48 percent of the German armed forces were volunteers, far short of the 55 percent target that the West German governments maintained. Recruitment of long-term (twenty-one-month) volunteers and of NCOs in particular continuously fell far short of expectations, although the federal government offered numerous incentives such as vocational education programs and career guarantees.

Popular opposition to the Bundeswehr, although always strong, increased notably in early 1957 when the United States indicated that it would arm its European allies with nuclear weapons as part of a shift in NATO strategy. Before 1957, NATO planned a forward defense along the German frontier. Chancellor Konrad Adenauer had pushed for and won the integration of German units all along the line rather than having the Bundeswehr assigned a particular sector. He had also readily accepted a ban on atomic, biological, and chemical weapons for German units in order to make rearmament more palatable to the public and to the Social Democratic opposition. NATO's new strategy of nuclear deterrence, officially adopted on 21 March 1957, thus set off a maelstrom in German politics that continued into the 1960s.

Adenauer renounced German construction of nuclear weapons and declared that Germany would not accept national control over such weapons. NATO responded by introducing the two-key system, whereby German units possessed nuclear capabilities but the nuclear warheads and launchers remained under Allied control. After winning by-elections in Nordrhein-Westfalen in July 1958, Adenauer's government announced that it was prepared to equip the Bundeswehr with atomic weapons. German units received Matador rockets and nuclear-capable artillery pieces so that they could fight either a conventional or a tactical nuclear war. Bundeswehr units were also divided into either the six armored infantry or four purely armored divisions to facilitate mobility and, supposedly, increase defense against nuclear attack.

Even before this restructuring was complete, however, NATO, with some prompting from West Germany and led by U.S. President John F. Kennedy's

administration, moved to a strategy of flexible response. This deemphasized the role of nuclear weapons where German forces were concerned by creating a multilateral force that deployed nuclear-armed Polaris submarines. Two of the German armored infantry divisions created in 1957 were reorganized as straight infantry divisions, and the Bundeswehr's deployed division strength was increased by about 10,000 men to compensate for its reduced nuclear role. The question of arming West Germany with nuclear weapons was shelved for good when the coalition government led by Willy Brandt and the Social Democratic Party (SPD) signed the Nuclear Non-Proliferation Treaty (NPT) in November 1969.

In the late 1970s, however, NATO plans to station intermediate-range nuclear missiles in Germany renewed the debate over atomic weapons. German Chancellor Helmut Schmidt, who had earlier been one of the principal advocates of flexible response in Germany, declared in early 1978 that West Germany would accept nuclear weapons only if other NATO countries did as well. U.S. President Jimmy Carter eventually led a NATO climb-down on the issue, agreeing to a two-track policy that tied deployment in Germany to Soviet deployments in Eastern Europe. In the 1980s his successor, President Ronald Reagan, worked closely with German Chancellor Helmut Kohl to manage the deployment of Pershing missiles in Germany. Nuclear weapons always remained under NATO and U.S. control, and the German and American governments continued to cooperate in reducing the number of nuclear weapons stationed in West Germany.

Since the collapse of the Soviet Union and the end of the Cold War, the Bundeswehr has changed immensely. Despite the integration of the former East German Army since 1990, overall troop strength has been roughly cut in half. Although during the Cold War West German troops were never deployed on foreign soil except for training exercises and joint NATO maneuvers, the Bundeswehr has undertaken several foreign peacekeeping missions since 1991, most notably in the Balkans. German armed forces now serve as part of different international missions on several continents, most notably in the Balkans and in Afghanistan.

Germany, Federal Republic of, Rearmament and NATO

Germany's unconditional surrender in May 1945 combined with total Allied military control over Germany and widespread physical and economic devastation left the population without any desire to reconstruct military institutions. The victorious Allied powers demilitarized Germany as such, although they clandestinely utilized the professional expertise of some captured German military officers for their own purposes.

With the onset of the Cold War and particularly after 1948, military leaders in the United States, Britain, and France discussed potential West German military contributions to the Western alliance. Given the Red Army's overwhelming numerical superiority, defensive capabilities had to be increased if the North Atlantic Treaty Organization (NATO) was to contain the Soviet Union and its allies without resorting to nuclear weapons. The deliberations were controversial and inconclusive, however, with France being most skeptical and obstructionist about German rearmament so soon after World War II. When the pact establishing NATO was signed on 4 April 1949, the Federal Republic of Germany (FRG, West Germany) was conspicuously left out of the alliance.

Attitudes toward German rearmament changed drastically in 1950, however. After the Korean War began in June 1950, the Allies, particularly the United States, believed that it was time for the West Germans to contribute to their own defense. The parallels between a divided Korea and a divided Germany appeared quite obvious. The French were highly concerned about the prospects of a rearmed Germany, but in October 1950 the French government took up an earlier British suggestion that this might be done in the context of a European defense force. From there it was a short step to accepting the integration of German forces within a Western defense pact, at least in principle. It took almost five years to work out the details, however.

The Americans and British hoped to transform West Germany into a partner in the defense of Europe, while France wanted German contributions to European defense without a German military. Konrad Adenauer, chancellor of West Germany, sought a Western guarantee of the security of West Germany and West Berlin in exchange for German military contributions to NATO. Yet within West Germany there was also tremendous popular and political resistance, led by the German Social Democrats (SPD), against the notion of rearmament.

Following nearly two years of negotiation, the Allies and the West Germans appeared to have found a solution in May 1952. The foreign ministers of Britain, France, and the United States signed a treaty that would end the occupation of Germany and allow Germany to rearm. The treaty would only come into force in conjunction with a European Defense Community pact that would be signed in June, and German military contributions would be made within that context rather than independently. These agreements were ratified by the West German parliament in March 1953 after heavy debate, but the French National Assembly rejected them in August 1954, scuttling the entire framework.

British Foreign Minister Anthony Eden then proposed that West Germany and Italy be brought into the Brussels Treaty of 1948 with a view toward transforming that arrangement into a European defense pact. At the same time, Britain offered to increase its military commitment to the defense of Europe. This combination appeased the French, who had rejected the European Defense Community (EDC) in part because of its supranational clauses and implications.

The Allies thus agreed at the October 1954 London Conference to lift the occupation of West Germany and incorporate the state into NATO and the European Union (EU). They also agreed to maintain a military presence in West Germany and to carefully supervise and control West German rearmament, which meant denying it atomic, biological, and chemical weapons.

Adenauer gladly accepted these limits along with a ban on German rockets, bombers, and large warships because the limits were helpful in winning public support for rearmament in West Germany. To counter the SPD argument that rearming within NATO would antagonize the Soviet Union, Adenauer's government also pledged not to seek unification or the revision of borders by force. To further placate the French, Adenauer agreed to hold a referendum to consider whether the Saar might be made an independent state with economic ties to France.

These agreements, known collectively as the Paris Treaties, went into effect on 9 May 1955, at which time West Germany became NATO's fifteenth member.

Hungarian communist politician, deputy prime minister (1952–1956), general secretary of the Hungarian Communist Party (1956), and Hungary's last Stalinist leader. Born Ernő Singer on 8 July 1898 in Terbegec, Hungary, he

Gerő, Ernő
(1898–1980)

enrolled in medical school but dropped out when he became interested in politics. Gerő joined the Communist Party and during 1919–1939 held various political assignments in Hungary, Austria, the Soviet Union, France, Belgium, Spain, and Portugal. He joined the Comintern in 1931. During World War II he was responsible for directing propaganda efforts aimed at prisoners of war.

In May 1945 Gerő became Hungary's minister of trade and transport. In November 1948 he was named assistant general secretary of the Communist Party. A month later he was also appointed finance minister; he continued as trade and transport minister until February 1949. From 1949 to 1952 he served as president of the National Economic Council. During 1952–1956 he was deputy prime minister, and in July 1956 he replaced Mátyás Rákosi as general secretary of the party.

In a radio address the night that the 1956 Hungarian Revolution began, Gerő vehemently refused to negotiate with the insurrectionist reformers. He then asked Moscow to deploy troops to stop the revolution. Two days later, on 25 October 1956, he was relieved of all his posts and fled to Moscow. In 1960 he returned to Hungary on the condition that he be expelled from the Communist Party. As a slavish adherent of Stalinism, Gerő was largely responsible for the outbreak of the 1956 revolution. As president of the National Economic Council, he was the motivating force behind the mass industrialization drive, demanding that Hungary be made “a country of iron and steel.” This was an unrealistic goal that unduly taxed Hungarian labor and its industrial resources. Gerő died on 12 March 1980 in Budapest.

Ghana

Located on the west-central African coast, Ghana, formerly the British colony of the Gold Coast, was the first sub-Saharan African nation to achieve independence from European colonial rule. Just under 150,000 square miles in area, Gold Coast had a population of some 4 million people in 1945 and 6 million when it attained independence on 6 March 1957. The new nation captured the attention of aspiring nationalists, colonial rulers, and leaders in

Dr. Kwame Nkrumah, standing on a stool, being sworn in by Arku Korsah as the first president of the Republic of Ghana in Accra in 1960. (Library of Congress)

both the East and West. Each looked to Ghana's experience to predict the impact of African decolonization on the global balance of power.

The push for independence in the Gold Coast began in earnest in 1947 under the leadership of Kwame Nkrumah, founder of the Convention People's Party (CPP). Jailed in 1951 while agitating against colonialism, Nkrumah won the colony's first general election from his prison cell and was released to serve as the leader of government business in the colonial parliament. He became prime minister of the Gold Coast in 1952, won reelection in 1954 and 1956, and became prime minister of Ghana in March 1957.

Ghana emerged from colonial rule with excellent prospects of economic viability. The world's leading producer of cocoa, Ghana also produced nearly 10 percent of the world's gold. Rich in diamonds, bauxite, and timber, the country maintained a low national debt and strong foreign currency reserves. Politically and administratively, Ghana was in good standing, having worked with the British to create a stable parliamentary government and establish an educated and well-trained civil service.

Nkrumah's domestic agenda focused on industrialization and diversification to promote economic growth. The centerpiece of his program was the

multibillion-dollar Volta River Project (VRP), a hydroelectric dam and aluminum smelter. The administration also established new industries in fruit processing, ceramics, wood processing, and gold refining. Farm subsidies encouraged the growth of new cash crops such as sisal, palm trees, and rice. Pursuing socialist goals, the new government built roads, established post offices, and installed telephones in countless villages. These advances accompanied a nationwide program of free and compulsory education and the construction of hundreds of schools. Expanded national health services included modern hospitals in regional capitals and medical clinics in towns and villages.

In international affairs, Nkrumah's policies reflected his commitment to nonalignment and his intention to blend capitalism and socialism. Courting the economic support of the West and the ideological backing of the East, he attempted to steer a path between the two Cold War blocs, keep Cold War geopolitics out of Africa, and lead the continent to a position of respect in the world community. His Pan-African agenda included political and financial support of African states pursuing liberation.

Nkrumah demanded strong, centralized control of Ghana to achieve his goals. Within a year of independence the government passed legislation enabling the prime minister to detain political opponents without trial. Limits on freedoms of speech and the press followed in 1958 as Nkrumah established a dictatorial regime. In 1960, when Ghana became a republic, Nkrumah became president for life. By a 1964 referendum the CPP became the sole party of the state.

Nkrumah's policies and methods created economic crisis and political unrest. By 1960 the increasing costs of development and Pan-African financial commitments depleted foreign currency reserves. Deficit spending became a central feature of government fiscal planning. Nkrumah's response to the financial setbacks, including a national austerity plan and compulsory savings scheme, fostered fresh opposition. As cocoa prices continued to drop in 1963, the government increased taxes to raise revenues. By 1964, with increasing unemployment and with foreign currency reserves virtually gone, Ghana's international credit standing approached collapse. The Finance Ministry nevertheless presented a new budget to the parliament in 1965 calling for increased expenditures.

The failing economy and repressive policies led to the overthrow of the CPP government on 24 February 1966 while Nkrumah was visiting China. He sought asylum in Guinea, where he remained until his death in 1972.

The multiparty National Liberation Council (NLC), headed by Lieutenant General Joseph Arthur Ankrah, administered government until Kofi A. Busia became prime minister in the 1969 elections. Pursuing a conservative fiscal strategy that failed to improve Ghana's economy, Busia's government devalued the currency, triggering massive inflation. In 1972 Colonel Ignatius K. Acheampong led a bloodless coup to oust the Busia government.

Acheampong suspended the constitution and established the military-controlled National Redemption Council (NRC). Military control relaxed in 1974 as the government concentrated on economic development. In 1978, however, the military leadership removed Acheampong from office, giving

power to General Frederick W. Akuffo. Less than a year later, Akuffo was overthrown by Flight Lieutenant Jerry John Rawlings, who, in an effort to do away with the opposition, arranged the public execution of Acheampong, Akuffo, and six additional high-ranking military officers on grounds of corruption. Countless public servants were also summarily dismissed and their assets confiscated. Rawlings stepped down in September 1979, transferring power to civilian President Hilla Limann and the People's National Party (PNP).

Difficulties in the cocoa industry, the mainstay of Ghana's economy, plagued the PNP government. As inflation spiraled, Rawlings led a coup to depose Limann on 31 December 1981. Rawlings's Provisional National Defense Ruling Council (PNDC) instituted liberal economic reform under authoritarian rule. In 1983 Rawlings instituted a structural adjustment plan with the cooperation of the International Monetary Fund (IMF) and the World Bank. While Rawlings enjoyed popular support as a leader who returned national pride to the people, his government undertook brutal repression against any form of opposition. Allegations of human rights abuses were commonplace. As Ghana's situation improved, popular pressure induced the government to adopt a new multiparty constitution in April 1992. On 3 November 1992 Rawlings, representing the National Democratic Congress (NDC), was elected president.

Rawlings served two consecutive terms as president. In the 2000 elections, John Agyekum Kufuor of the New Patriotic Party (NPP) won victory over the NDC. Kufuor took office in January 2001, the first peaceful and democratic transfer of power since independence. Kufuor was reelected in December 2004.

Gheorghe
(1901–1965)

Romanian communist leader Gheorghe Gheorghiu-Dej (1901–1965). He dominated the political scene in his country during 1945–1965. An ardent communist, he nonetheless maintained a measure of independence for his nation within the Soviet bloc. (AFP/Getty Images)

Gheorghe Gheorghiu-Dej trained as a railway electrician. He joined the fledgling Communist Party and, because he was a trade union activist, received a punitive transfer from Galați to the village of Dej in 1931. His role in the violent Grivița railway strikes of 1933 resulted in a twelve-year sentence, alongside other prominent Romanian communists, in the Doftana and Tîrgu-Jiu prisons. After his escape a few days before the coup that toppled Ion Antonescu on 23 August 1944, Gheorghiu-Dej served as communications minister in the short-lived government of General Nicolae Rădescu. With the deposition of King Michael I and the full-scale communist takeover under the premiership of Petru Groza, Gheorghiu-Dej was appointed PCR secretary in October 1945, a position he initially shared with Teohari Georgescu and Muscovites Ana Pauker and Vasile Luca, who had been repatriated from the Soviet Union after the coup.

Gheorghiu-Dej quickly consolidated his power by removing previous PCR leader Istvan (Stefan) Foris, the Muscovites, and fellow activist Lucrețiu Pătrășcanu. He replaced them with former prison mate Nicolae Ceaușescu and also Alexandru Drăghici, who later became his minister of internal affairs, responsible for the secret police (Securitate). Emulating a Stalinist model of governance, Gheorghiu-Dej's administration created a network of pris-

ons and labor colonies. Under the guidance of Soviet police chief Lavrenty Beria, the Securitate was set up as a secret police service in 1948.

After Stalin's death in March 1953, Gheorghiu-Dej initially gave lip service to new Soviet leader Nikita Khrushchev's policies, allowing a buildup of Soviet troops on the border during the 1956 Hungarian Revolution. Nevertheless, he negotiated for the withdrawal of all Soviet troops from Romania in July 1958 and opposed Khrushchev's de-Stalinization program. After Gheorghiu-Dej further tightened his hold on the PMR by restructuring the Politburo and expelling members who supported de-Stalinization, a rift with Moscow emerged. He rejected Khrushchev's suggestion that Romania abandon its rapid industrialization and specialize in supplying agricultural products and raw materials. During 1962–1963, Gheorghiu-Dej criticized Moscow's installation of nuclear missiles in Cuba and, despite the Sino-Soviet conflict, paid state visits to the People's Republic of China (PRC) and the Democratic People's Republic of Korea (DPRK, North Korea). Concurrently, Romania began to pursue rapprochement with the West, a tack that his successor Ceaușescu continued after Gheorghiu-Dej's death from cancer in 1965.

Gibraltar

Gibraltar, virtually a city-state, is a 2.5-square-mile rock strategically located at the entrance of the Mediterranean and attached by land to Spain. Known as “the Rock,” the British Dominion of Gibraltar has a population of some 30,000 people, no agriculture, and not even a natural supply of fresh water.

The British took Gibraltar in 1704 during the War of Spanish Succession and held against Spanish efforts to reconquer it. It passed to formal British control in the Treaty of Utrecht of 1713. Gibraltar's population is a melting pot of descendants of immigrants from all over the Mediterranean. Virtually all are bilingual in English and Spanish.

Over the centuries, Gibraltar remained an important base for Royal Navy units operating in the Mediterranean. During World War II the British evacuated its entire civilian population except for some 3,000 adult males involved in essential work. The evacuees were returned to Gibraltar during 1946–1947.

The Spanish government has repeatedly sought to secure control of the Rock, while successive British governments have vowed to retain control. Public opinion in Gibraltar has been almost unanimous in its opposition to a return to Spain. A 1967 referendum rejected such a course. To bring pressure on Britain, during 1969–1985 Spain closed its land border to the colony and carried out an economic blockade, cutting off the supply of cheap Spanish labor. This backfired, feeding Gibraltarian nationalism.

In 1969, London granted Gibraltar internal autonomy. There is an elected House of Assembly of fifteen popularly elected members. London, however, retains control over foreign affairs.

After 1985, the inhabitants of the Rock were wary over British intentions, a concern reinforced later in the decade by London's refusal to grant British citizenship to Hong Kong residents and Britain's military retrenchment around the globe. By 1991, Britain had little more than 1,000 troops stationed there.

Such British actions prompted Gibraltarians to demand greater political and economic autonomy from Britain. Any movement toward independence was tempered by the awareness that Spain would reject such an arrangement and that Britain would be unwilling to support it militarily.

Gibraltar enjoys special status in the European Community (EC) as a recognized part but not an individual member. This status has allowed it to avoid the tariffs and sales taxes of other member nations. When Britain joined the European Economic Community (EEC) in 1973, Gibraltar was

Known as “the Rock,” the British Dominion of Gibraltar has a population of some 30,000 people, no agriculture, and not even a natural supply of fresh water.

not required to make tax contributions to the EC or follow its customs regulations. Gibraltar was also allowed to write its own banking laws.

Gibraltar reorganized a money-losing shipyard inherited from Great Britain. Tourism is another major industry. Each year millions of visitors come to the Rock, many of them to buy duty-free goods without value-added taxes. A banking secrecy law guarantees confidentiality, although numbered accounts are prohibited. Rapid economic growth enabled Gibraltar to provide excellent social benefits.

By the 1990s inhabitants of the Rock saw themselves first as Gibraltarians and only secondly as Britons. Their principal political challenge remained keeping the Rock free of Spanish control.

Gierek, Edward

(1913–2001)

Polish communist politician, leader of the Polish Communist Party (PZPR), and Polish head of state (1970–1980). Edward Gierek was born to a working-class family in the village of Porąbka in Upper Silesia on 6 January 1913. Following his father's death in 1917, Gierek's mother remarried and the family immigrated to France. Gierek started work at age twelve, first as a farmhand and later as a miner. At age seventeen he joined the local trade union and the Polish division of the French Communist Party. In 1934 he returned to Poland, married, and three years later left Poland again, this time for Belgium. During World War II he was active in the Belgian resistance. He returned to Poland with his family in 1948.

Upon his return to Poland, Gierek became active in the PZPR. From 1949 to 1954 he was a secretary of the Provincial Committee of the PZPR in Katowice. In 1954 he became a member of the PZPR's Central Committee.

During 1956–1970 Gierek continued his rise in the party, holding a series of increasingly important posts. Following workers' riots in December 1970, he was appointed head of the PZPR and the Polish state.

As Poland's premier, Gierek tried to change the political and economic systems instituted by his predecessor, Władysław Gomułka. Economically, Gierek tried to emulate a Western model that emphasized increased consumption of consumer goods. To cover the cost of his program, he borrowed enormous sums of money from West European countries and private banks. By the mid-1970s, however, the Polish economy had overheated. Capital investments ebbed, leaving myriad factory projects incomplete, while consumer products became scarce. As a result, the government introduced price increases and limited consumption.

Diplomatically, Gierek sought to act as a bridge between the Soviet Union and the West. He initiated and refereed (on Moscow's directives) talks among the Soviets, Americans, French, and Germans. For a time, he had been center stage in détente, which by the mid-1970s had eased Cold War tensions and slowed the arms race. Gierek was also among the politicians who signed the Helsinki Accords, guaranteeing international human rights.

In 1976, consumer price increases precipitated strikes, riots, and demonstrations throughout Poland. They were brutally quashed, and many demonstrators were heavily fined or imprisoned. The signing of the Helsinki Accords and the 1976 riots led to the formation and growth of a strong underground opposition movement. Although Gierek tried to control the opposition, he was never completely successful.

In the summer of 1980 Poland again witnessed widespread unrest after a series of price increases. The turmoil gave rise to the independent trade union Solidarity. Gierek's policies were blamed for the latest crisis, and in September 1980 he was forced to resign. In 1981 he was expelled from the party, forcing him from politics and public life. Thereafter, he retired; however, after the momentous changes of 1989 he initiated a campaign intended to prove that his economic and political policies were misjudged. Gierek died in Warsaw on 29 July 2001.

Edward Gierek, Polish communist leader and head of state during 1970–1980, tried to emulate Western economic models. (Reuters/Corbis)

Ginsberg, Allen

(1926–1997)

American writer whose poems embodied the values and aesthetic of the Beat generation of writers in the 1950s and 1960s. Born in Newark, New Jersey, on 3 June 1926, Allen Ginsberg graduated from Columbia University in 1948. Until 1956, he worked variously as a dishwasher, a welder at the Brooklyn Navy Yard, and a merchant sailor. His association with the novelist Jack Kerouac and others of the so-called Beat generation in Greenwich Village led to appearances as a character in works of fiction by Kerouac and Lionel Trilling even before Ginsberg had earned any literary reputation of his own.

The Beats espoused voluntary poverty and general disaffiliation from society and sought illumination through release from social and literary conventions. In their works, they hoped to capture the process of experience, not just a verbal record.

Ginsberg achieved recognition as a poet with the publication of “Howl,” a Beat anthem, in 1956. Written in long lines derived stylistically from Walt Whitman, the poem is a diatribe against a society that Ginsberg saw as militaristic and materialistic. He decries the fate of “the best minds of my generation,” leading lives that are self-destructive; they are made outlaws by a false social order. The poet establishes his identification with human suffering and insists that all existence, no matter how limited, is sacred. Ironically, while the poem was carefully structured and the product of a slow gestation, it seemed almost improvisational and came to represent the notion that poetry might be spontaneous.

Ginsberg’s book *Howl and Other Poems* (1956) included three other well-known works: “America,” “A Supermarket in California,” and “Sunflower Sutra.” The sutra (Sanskrit for thread or string of precepts) opens with “I walked on the banks of the tincan banana dock / and sat down under the huge shade of a Southern / Pacific locomotive to look at the sunset over the / box house hills and cry.” Ginsberg’s poems reflect anarchic individualism and a reliance on amplified sensory experience.

After 1956, Ginsberg traveled a great deal, living in the Far East during 1962 and 1963. He became a public figure, a guru of the new generation, appearing frequently at readings and social protest rallies all over the world, and was identified with his advocacy of Zen Buddhism, gay liberation, the drug culture, and pacifism (for which he invented the phrase “flower power”). His poems grew to reflect their function as performance pieces, taking on the incantatory quality of Indian mantras.

Another celebrated Ginsberg poem is “Kaddish” (the Hebrew word for a prayer of mourning), a long prophetic poem focused on the life and death of the poet’s mother, which was collected in *Kaddish and Other Poems, 1958–1960* (1961). Sadder in tone than “Howl,” the poem is similar nonetheless in that it comprises a long, flowing rush of data, both sensory and intellectual.

Other volumes by Ginsberg include *Airplane Dreams: Compositions from Journals* (1968), *The Gates of Wrath: Rhymed Poems, 1948–1952* (1972), and *White Shroud: Poems, 1980–1985* (1986). *The Fall of America: Poems of These States, 1965–1971* (1973) won a National Book Award.

Ginsberg continued to produce poems throughout the 1980s and during the 1990s, adding to his already enormous poetic output. In 1990 he was presented an American Book Award for his contributions to literature, and in 1995 he was a finalist for the Pulitzer prize in poetry for *Cosmopolitan Greetings: Poems 1986–1992*. That same year, with musical accompaniment by Paul McCartney and Philip Glass, Ginsberg made a recording of his poem “The Ballad of the Skeletons.” Ginsberg died of liver cancer in New York City on 5 April 1997.

French politician, minister of finance (1962–1965, 1969–1974), and president of the Fifth Republic (1974–1981). Born on 2 February 1926 in Koblenz, Germany (his father was a civil servant with French occupation authorities in the Rhineland), Valéry Giscard d'Éstaing came from a background of wealth and nobility. He compiled an exceptional academic record at both the École Polytechnique and École Nationale d'Administration and then followed his father by joining the prestigious government Inspectorate of Finance.

Giscard's first posting was to the Bank of France, but in 1950 he was invited to join the Ministry of Finance. He held a succession of posts in that ministry until his appointment as minister of finance in the Edgar Faure government in 1962. Giscard simultaneously sought political office and in 1956 won election to the National Assembly from Puy-de-Dôme. He consolidated his political base by winning election to posts in that department. Giscard styled himself an “independent republican,” affiliated with the small Independent and Peasant Party (CNIP), but he voted to support the major initiatives of President Charles de Gaulle. Elegant and articulate in speech and manner, Giscard built a national following.

Giscard lost his post as minister of finance in 1965 because his austerity program hurt de Gaulle politically. Giscard then concentrated his activities in the National Assembly to prepare for a run for the presidency. Assiduously employing television to his advantage, he presented himself as a progressive. He also cultivated new President Georges Pompidou (1969–1974), who named him for a second time as minister of finance (1969–1974).

In the special elections following Pompidou's death in April 1974, Giscard won a narrow runoff victory over the leftist candidate, socialist François

**Giscard d'Éstaing,
Valéry**
(1926–)

Valéry Giscard d'Éstaing was president of France during 1974–1981. He established close ties with the Federal Republic of Germany (FRG, West Germany) but pursued an independent course for his country in foreign affairs. (Richard Melloul/Sygma/Corbis)

Mitterrand. Although Giscard had been elected by the Center and Right, he formulated a leftist agenda. In his widely read book *Démocratie française* (1976), he posited a more open, pluralistic society with opportunity for all. Among his domestic accomplishments were lowering the voting age to eighteen, liberalizing divorce laws, and instituting abortion rights. He also sought to modernize education, and he removed restrictions on programming in state-sponsored radio and television. Unfortunately for Giscard, his presidency came at a time of recession, abetted by the 1973 and 1978 oil crises, forcing him to pursue economic austerity.

In foreign affairs, Giscard was a staunch advocate of European integration and a prime mover behind the formation of the European Economic Council (EEC), an annual meeting of leaders of states in the European Common Market. He established a close working relationship with Federal Republic of Germany (FRG, West Germany) Chancellor Helmut Schmidt. At the same time, however, Giscard clung to the notion of France as an independent force in world politics, and he frequently intervened in the affairs of the former French colonies of Africa. Relations with the United States remained problematic.

Giscard ran again for the presidency in 1981. By now his political base was weakened; he had been forced to share political power with a premier from an opposition party in the so-called cohabitation. He was also handicapped by several scandals and the perception that he was an elitist. In the 1981 election Mitterrand was again Giscard's principal opponent. As in 1974, there was a runoff between the two men, but this time Mitterrand emerged the winner.

After leaving the presidency, Giscard broke with precedent and remained active in public life. In 1984 he won election to the National Assembly, and he also served as a French representative in the European Union (EU) Parliament.

An integral piece of Soviet President Mikhail Gorbachev's political and economic reform agenda of the late 1980s. The term *glasnost* is best translated as "openness in public and political affairs." It was part of Mikhail Gorbachev's 1985 perestroika program to reform the Soviet political system and Soviet society. His conceptualization of glasnost was restricted to signify a more democratic and open society and not the endangerment or abandonment of the fundamentals of Soviet communism.

In December 1986 Gorbachev personally asked the internationally known Soviet dissident-in-exile Andrei Sakharov to return to Moscow. Then, in February 1987, Gorbachev called upon the Soviet press to fill in the blind spots in Soviet history. This liberalization prompted the flowering of many new newspapers and journals that reported on previous political repressions, corruption in the Communist Party, and the failures of the Soviet economy. Furthermore, long-suppressed national movements in the Soviet Union's constituent republics used glasnost to advance their independence agendas.

Some conservative Communist Party members warned Gorbachev of the potential repercussions of glasnost, including the dissolution of the USSR. In fact, with Russian reform leader Boris Yeltsin's rise to power in 1987, Gorbachev was forced to choose between the demands of conservatives and the radical reformers' demands under Yeltsin. Glasnost spun out of control in the late 1980s, catching Gorbachev off guard. Instead of reforming the Soviet system by creating a gradual and smooth transition to a system that blended socialism, social democracy, and capitalism, glasnost went far beyond Gorbachev's intended aims and accelerated the demise of the Soviet Union.

Glassboro Summit

(23–25 June 1967)

U.S.-Soviet summit meeting held in June 1967. The Glassboro Summit took place at Glassboro State College during 23–25 June 1967 in Glassboro, New Jersey. There, U.S. President Lyndon B. Johnson and Soviet Premier Alexei Kosygin met to discuss a host of issues including Arab-Israeli relations in the immediate wake of the Six-Day War of June 1967. Johnson, who at the time was embroiled in the Vietnam War, called the summit with the intention of de-emphasizing Vietnam and focusing on other Cold War issues. The main topics of discussion included Soviet arms sales, nuclear proliferation, anti-ballistic missile (ABM) development, the Six-Day War, Vietnam, and Fidel Castro's regime.

At the time, neither Johnson nor Kosygin expected to reach any conclusive agreements. The summit's major goal was to keep dialogue open between the two superpowers and to avoid confrontations over contested issues. Johnson hoped that the Soviets would agree to step up efforts regarding nuclear nonproliferation. Kosygin, however, argued that the issue would not be resolved unless the United States ended its bombing of the Democratic Republic of Vietnam (DRV, North Vietnam). Johnson was unwilling to do so, and thus little substantive progress was made toward the control of nuclear proliferation or the limiting of ABM systems. Another important topic for discussion was the Arab-Israeli conflict in the Middle East. Kosygin demanded that Israeli forces pull out of areas formerly controlled by the Arabs. But Johnson refused to pressure Israel on the issue, so the two sides agreed to disagree.

Johnson was also keen on putting an end to Castro's support of guerrilla insurgencies in Central America, but Kosygin remained silent on the issue. Although the Glassboro Summit did not result in any major breakthroughs, it was nonetheless an important step forward in U.S.-Soviet relations. The two leaders made some headway toward arms limitation, although no real advancement occurred on the issue of ABMs. Glassboro was the last major U.S.-Soviet summit to take place between 1967 and 1972, when President Richard M. Nixon began to thaw Cold War tensions through détente. Because of Moscow's crackdown in Czechoslovakia in 1968, the United States declined to hold high-level talks with the Soviet Union until that time.

The house in which the meetings took place still stands today. After a thorough restoration, it is now open to visitors and serves as a museum and memorial to the summit. A statue of a white dove sits in the home's living room, symbolizing the meeting's generally amicable atmosphere and the "Spirit of Glassboro" during the height of the Cold War.

Polish Roman Catholic priest, bishop, and primate of Poland (1981–2006). Born on 18 December 1929 in Inowrocław, Poland, Józef Glemp and his family worked during World War II as conscripted laborers on a farm operated by occupying German forces. After the war, he became interested in the priesthood, completed his theological studies at the seminary in Poznań, and was ordained a priest in May 1956. He then went to Rome, eventually earning doctorates in both civil and canon law from the Lateran University. He served as a secretary to Primate of Poland Cardinal Stefan Wyszyński during 1967–1979.

In March 1979, Glemp was named bishop of Warmia. After Cardinal Wyszyński's death in 1981, Pope John Paul II, himself a Pole, appointed Glemp to succeed Wyszyński. Glemp thus became the archbishop of Gniezno and of Warsaw and the primate of Poland. He assumed his offices on 7 July 1981. That November, he initiated a series of meetings with Polish Communist Party (PZPR) leader Wojciech Jaruzelski and Solidarity labor leader Lech Wałęsa. These conferences were designed to unite the government, the church, and the Solidarity movement in an effort to resolve Poland's ongoing economic and political problems.

On 12 December 1981, in an effort to crush Solidarity, Jaruzelski declared martial law. Archbishop Glemp, with the support of the pope, worked to defuse the crisis and reduce the possibility of violence. His moderation and accommodation led more activist Poles, including some clergy, to refer to him as "Comrade Glemp." The pope pressured Glemp to take a more anti-government position, but the archbishop resisted, believing that a violently antigovernment movement would increase the chances of armed conflict and, ultimately, the ruination of Solidarity. More recent observers have noted that Glemp's moderation may indeed have helped the government refrain from using violence to extinguish the Solidarity movement. The Jaruzelski-Glemp-Wałęsa discussions eventually led to Poland's democratization in 1989.

Pope John Paul II elevated Glemp to cardinal in 1983. Glemp retired as president of the Polish Bishops' Conference in 2004 but retained the title of primate of Poland until December 2005.

Glenn, John Herschel, Jr. (1921–)

U.S. Air Marine Corps officer and pilot, astronaut, first American to orbit Earth, and Democratic U.S. senator from Ohio (1974–1999). Born on 18 July 1921 in Cambridge, Ohio, John Glenn attended local public schools and enrolled at Muskingum College in Ohio in 1939. In 1942 he interrupted his studies to join the Naval Aviation Cadet Program. He subsequently served in the U.S. Marine Corps, seeing action as a pilot in the Marshall Islands during World War II. During the war, he flew some fifty-nine missions. He subsequently served in the Korean War, flying an F-86 Sabre and completing ninety missions. During the conflict, he downed three Soviet-made MiGs.

Following his Korean War service, Glenn became an accomplished test pilot. On 16 July 1957 he became the first man to complete a supersonic transcontinental flight, flying from California to New York in three hours, twenty-three minutes. In 1959 he joined the fledgling U.S. National Aeronautics and Space Administration (NASA) to take part in the Mercury program. On 7 February 1962 he became the first American to orbit Earth in the *Friendship 7*. He orbited Earth three times, which bested Soviet cosmonaut Yuri Gagarin's one orbit around Earth the previous year, although Gagarin had the distinction of being the first human in space. The flight made Glenn a national hero and earned him a ticker tape parade in New York City. It also raised the stakes significantly in the Space Race.

In 1965 Glenn retired as a Marine colonel and left the space program. He joined the business world and served as the vice president and then president of Royal Crown Cola, where he stayed until winning a seat in the U.S. Senate in 1974.

Glenn enjoyed a successful senatorial career, although he was implicated but later exonerated in the so-called Keating Five scandal of the late 1980s and early 1990s. In 1984 he ran unsuccessfully for the Democratic presidential nomination. In October 1998, while still a sitting senator, he became the oldest man ever to venture into space, with the crew of the space shuttle *Discovery*. He was seventy-seven years old at the time of his flight, which was in part to test the effects of space travel on elderly people. Glenn

A former U.S. Marine Corps pilot, John Glenn in 1962 became the first American to orbit Earth. (National Aeronautics and Space Administration)

stepped down from the Senate in 1999 and enjoys an active retirement, which includes involvement in numerous causes and organizations.

U.S. senator, 1964 Republican presidential candidate, and one of the founders of the modern American conservative movement. Born on 1 January 1909 in Phoenix, Arizona, Barry Goldwater attended the University of Arizona for one year before leaving to work for his family's Phoenix department store. In 1937 he became president of the firm.

During 1941–1945 Goldwater served in the U.S. Army Air Corps (USAAC) in the Pacific theater. Leaving the army as a lieutenant colonel, he organized the Arizona National Guard and served as an air force reserve officer, attaining the rank of major general in 1962.

Meanwhile, Goldwater had become politically active. In 1949 he won a seat on the Phoenix City Council and in 1952 was elected to the U.S. Senate, representing his home state of Arizona. As a senator, Goldwater became a champion of the ascendant political views of the conservative wing of the Republican Party. He became known as a plain-spoken proponent of smaller government, a hawkish anti-communist, and an opponent of what he termed “creeping socialism” in American society.

In 1964 Goldwater won his party's presidential nomination. Lambasted as a right-wing demagogue for his strident views, he suffered a crushing defeat by the popular Democratic President Lyndon B. Johnson in the 1964 election. Goldwater's intimations that he might resort to nuclear weapons in a showdown with the Soviets frightened many moderates and led to one of the most infamous Cold War–influenced campaign commercials, the “Daisy Spot” in which a little girl plucking flower petals is overshadowed by a terrifying countdown and then a nuclear explosion.

Despite his defeat, Goldwater was credited with energizing the conservative wing of the Republican Party, which

Morris**
(1909–1998)

Leader of the conservative political forces in the Republican Party in the 1960s, Senator Barry Goldwater from Arizona won the party's nomination for president in 1964 but lost by a wide margin in the general election to Democrat Lyndon B. Johnson. (Library of Congress)

Goldwater became known as a plain-spoken proponent of smaller government, a hawkish anticommunist, and an opponent of what he termed “creeping socialism” in American society.

would eventually come to dominate the party and the nation sixteen years later upon Ronald Reagan’s election to the presidency. Goldwater’s 1964 run also marked the beginning of the end for the Democratic Party’s lock on the so-called Solid South, the voters of which increasingly moved into the Republican column over issues of race, defense, taxes, and big government.

Goldwater retired from the Senate in 1987. In his last year in office, he cosponsored the Goldwater-Nichols Military Reform Act that granted military commanders greater latitude on the battlefield and the chairman of the Joint Chiefs of Staff (JCS) more influence as the president’s primary military advisor. A conservative firebrand in the 1950s and 1960s, he ended his political career as a mediator and a stabilizing influence within the Senate, criticizing conservatives and liberals alike. Goldwater died in Paradise Valley, Arizona, on 29 May 1998.

Gomułka, Władysław (1905–1982)

Polish communist politician and head of state (1956–1970). Born to a peasant family in Białobrzegi, then Austria-Hungary, on 6 February 1905, Władysław Gomułka as a teenager began working as a journeyman locksmith. In the late 1920s he became an active trade unionist and later joined the underground Polish Communist Party. In the 1930s he worked mainly as a trade union organizer. In 1932 he was shot and wounded during a strike and after his recovery was sentenced to four years in prison. Upon his release, he went to Moscow to study at the International Lenin Institute. In 1936 his Soviet mentors sent him back to Poland, where he was again arrested; he was released at the onset of World War II.

Gomułka fought against the German invasion in September 1939 but then went into hiding in southern Poland until 1941. There he cofounded the Polska Partia Robotnicza (PPR, Polish Workers’ Party), a revived version of the Communist Party. In 1943 he became the secretary-general of the party’s Central Committee.

Following World War II, Gomułka played an active role in establishing a Soviet-style Polish government. He remained the head of the PPR and served as deputy premier of Poland from 1945 to 1949. A Polish nationalist, Gomułka did not view his colleagues who had spent the war in the Soviet

Union with much respect. He also opposed certain Stalinist policies, such as collectivization of agriculture.

Moscow considered Gomułka too independent-minded, and on 3 September 1948 he was accused of “rightist-nationalist heresy” and harboring sympathy for the Yugoslav leader Josip Broz Tito. Gomułka was promptly purged from the party. In January 1949 he was arrested and lost his position in the government. He was released from house arrest in 1954 after Josef Stalin’s death.

Two years later, following Nikita Khrushchev’s condemnation of Stalin’s crimes and growing unrest in Poland, Gomułka was readmitted to the Communist Party (PZPR) and in October 1956 was asked by the party leadership to become its first secretary. This move was an unpopular one with the Soviets, who were exceedingly reluctant to accept Gomułka as Poland’s leader. It was only after Khrushchev’s visit to Warsaw that Moscow accepted Gomułka.

From 1956 on, First Secretary Gomułka dominated the Polish political scene. He firmly controlled the government, established slightly more freedom for Poles, and moved away from Stalinist terror tactics. But Poland maintained its close ties with the USSR, as Gomułka did not favor major reform. He reintroduced tight party control over society, and workers’ councils organized in 1956 were placed under government surveillance and control. No substantive economic changes were introduced, as Gomułka regarded any major economic reform as an attempt to reintroduce capitalism in Poland.

State relations with the Roman Catholic Church improved and were generally less tense than under Gomułka’s predecessors, although secularization remained the official party policy. In March 1968 Gomułka survived a serious crisis that shook Poland and was probably aimed at removing him from leadership. The crisis, which had begun with student demonstrations, evolved into an anti-Semitic hysteria underwritten by the party and the state-controlled media. Several hundred students and professors were purged from universities, and tens of thousands of Polish Jews were forced to emigrate. In the summer of 1968 Gomułka supported the Warsaw Pact’s intervention in Czechoslovakia, and Polish tanks along with units from other countries entered Prague to bring an end to the Prague Spring.

Neither the crisis nor the Warsaw Pact intervention solved Poland’s growing economic or political problems, however. Gomułka’s position was weaker than ever, yet he continued to cling to power. He and the party had lost the confidence of the people, and the centrally run economy could not provide even basic supplies. On 13 December 1970 Gomułka was forced to act to stave off a complete economic collapse. When he ordered a wide range of price increases without prior notice, workers went on strike and began mass protests. Gomułka blamed the unrest on “capitalist agents,” and he dispatched police and army troops to Gdańsk to quell the protesters. In the

Władysław Gomułka dominated the Polish political scene from 1956 to 1970. (Library of Congress)

ensuing clash with the authorities, hundreds of demonstrating workers were killed or wounded. The party leadership, now fearing an even larger conflict, replaced Gomułka as first secretary with Edward Gierek.

In early 1971 Gomułka was suspended from the party's Central Committee and was removed from the Council of State. He then lived in relative obscurity, dying in Warsaw on 1 September 1982.

González Márquez, Felipe (1942–)

Spanish socialist politician and prime minister (1982–1996). Born on 5 March 1942 in Seville, Spain, Felipe González studied at the University of Seville. While at the university he joined the outlawed Spanish Socialist Workers' Party (PSOE). He graduated in 1966 with a law degree and afterward taught law. During 1969–1970, he served on the PSOE national committee. He was arrested in 1971 during protests against Francisco Franco's rule.

In 1975 after the death of Franco, González became one of the leaders of the legal democratic opposition as a part of the Platform for Democratic Convergence. In March 1976 this group became part of the ruling Democratic Junta of Spain. In 1977 the PSOE was legalized and ran in the June elections, Spain's first since the 1930s. The PSOE gained sufficient seats to become the principal opposition party.

In the October 1982 elections the PSOE won a plurality with 42 percent of votes cast, and González became the first socialist premier of Spain since before Franco. González played a key role in the transition to democracy. He pushed for liberal reforms and a restructuring of the economy, extended social security, and made education free to the age of sixteen. He also greatly expanded the university system. When one of Spain's largest business and banking groups, Rumasa, was threatened with bankruptcy, González authorized its nationalization. This prompted fears of a more aggressive socialist agenda, but González claimed that it was a one-time action to secure the jobs and savings of a large number of Spaniards. Indeed, he dropped the adjective of "Marxist" from the party description and adroitly moved the PSOE toward the center. He also sought membership for Spain in the European Economic Community (EEC).

In 1986 the PSOE held on to the majority in parliament, and González implemented a number of initiatives, some of which were heavily criticized by the Left of his own party. Spain joined the North Atlantic Treaty Organization (NATO) and the European Community in 1986 and sent troops to the Persian Gulf War in 1991.

González won a third election in 1989 and a fourth 1993. Despite a growing scandal in his cabinet over how Spain had dealt with Euskadi Ta Askatasuna (ETA, Basque Country and Liberty) separatists in the Basque region, González led his party in the May 1996 elections. The scandal, combined with a worsening economy, led to a PSOE loss to the rightist People's Party, and González resigned from the PSOE in 1996. He currently heads the Madrid-based Global Progress Foundation (FPG).

Last president of the Soviet Union (1988–1991) and general secretary of the Communist Party of the Soviet Union (CPSU) during 1985–1991. In office, he attempted to reform and restructure the Soviet Union, supported reform-minded leaders in Eastern Europe, abandoned the Brezhnev Doctrine, and refrained from using military force when East European communist regimes collapsed in 1989 and 1990. Under his leadership, the Soviet Union significantly improved its relations with the West, particularly with the United States. He was much more successful abroad than at home. His internal reform attempts ultimately proved futile and contributed to the dissolution of the Soviet Union in 1991.

Born on 2 March 1931 in Privolnoye, Stavropol Province, Russia, to a peasant family, Mikhail Sergeyevich Gorbachev joined the Komsomol (Communist Union of the Young) in 1946 and in the same year began driving a harvester for an agricultural cooperative. In 1951 he entered the Law Faculty of Moscow State University, where he earned a law degree in 1955.

Returning to Stavropol following his studies in Moscow, Gorbachev enjoyed a remarkably rapid rise within the ranks of the CPSU, first through various posts in the Komsomol and then in the party apparatus in Stavropol in the second half of the 1950s and the first half of the 1960s. Gorbachev became a member of the CPSU Central Committee in 1971, a candidate

Gorbachev, Mikhail
(1931–)

BREAKUP OF THE SOVIET UNION, 1989–1995

member of the Politburo in 1979, a full member in 1980, and general secretary of the CPSU Central Committee in March 1985. A keen politician, Gorbachev's political ascendancy was further promoted by Mikhail Suslov and particularly by Yuri Andropov.

Once in power, Gorbachev consolidated his position within the party and proceeded to move forward with internal reforms. He termed his reform agenda *perestroika* (restructuring) and *glasnost* (openness). What soon became called the “politics of *perestroika*” was a process of cumulative reforms, ultimately leading to results that were neither intended nor necessarily desired.

Perestroika had three distinctive phases. The first phase was aimed mainly at the acceleration of economic development and the revitalization of socialism. The second phase was marked by the notion of *glasnost*. During this period, Gorbachev emphasized the need for political and social restructuring as well as the necessity of dealing openly with the past. Media freedoms were enhanced considerably as part of this process. In the economic arena, limited market-orientated elements were introduced, and greater latitude was given to state-owned enterprises. The third and final phase of *perestroika* was aimed at democratizing the Soviet political process. Reformers created a new bicameral parliament, and new procedures allowed for the direct election of two-thirds of the members of the Congress of People's Deputies. In March 1990, the Congress abolished the CPSU's political monopoly, paving the way for the legalization of other political parties.

Perestroika's third phase was also marked by some incongruous paradoxes. While the power of the CPSU was waning, Gorbachev's power was on the increase. In October 1988, he replaced Andrey Gromyko as head of the Presidium of the Supreme Soviet. Seven months later, Gorbachev became chairman of the new Supreme Soviet. Finally, in March 1990, the Congress elected him president of the USSR, a newly established post with potent executive powers. At the same time, Gorbachev's economic reforms were yielding little fruit. Perestroika was already being overshadowed by civil unrest, interethnic strife, and national and regional independence movements, particularly in the Baltic and Caucasus regions.

Gorbachev enjoyed his most remarkable successes in foreign policy. He quickly eased tensions with the West. Two summits with U.S. President Ronald Reagan (Geneva in 1985 and Reykjavík in 1986) paved the way for historic breakthroughs in Soviet-U.S. relations and nuclear arms reductions. On 8 December 1987, the Intermediate-Range Nuclear Forces (INF) Treaty was signed by both nations, the first agreement in history that eliminated an entire class of nuclear weapons. In the succeeding years, Gorbachev's international stature continued to grow. In 1988, he ordered the withdrawal of Soviet troops from Afghanistan, ending his nation's disastrous decade-long struggle there. He also promised publicly to refrain from military intervention in Eastern Europe. In fact, Gorbachev embraced the new democratically elected leadership in the region. Especially significant was his agreement to the reunification of Germany and the inclusion of the new united Federal Republic of Germany (FRG, West Germany) in the North Atlantic Treaty Organization (NATO). Awarded the Nobel Peace Prize in 1990, Gorbachev is generally considered a driving force behind the end of the Cold War.

While Gorbachev's foreign policy was being hailed abroad, problems within the Soviet Union continued unabated. Old-line communists considered Gorbachev's policies as heresy, while economic dislocations multiplied. In 1990, several Soviet-controlled republics, including that of Russia, declared their independence. Gorbachev tried to stem this tide but was unsuccessful. Talks between Soviet authorities and the breakaway republics resulted in the creation of a new Russian federation (or confederation), slated to become law in August 1991.

Many of Gorbachev's reforms were tainted by an attempted coup of reactionary opponents of perestroika in August 1991. Led by high-ranking officials, among them the chief of the Komitet Gosudarstvennoi Bezopasnosti (KGB), the defense minister, the prime minister, and the vice president, Gorbachev was put under house arrest in his home in Foros after rejecting any negotiations with the putsch leaders. With the courageous intervention

With his policies of glasnost and perestroika, Soviet leader Mikhail Gorbachev attempted to democratize his country's political system in the 1980s. Although he was ultimately forced to resign from office, his programs led to the downfall of communism and the breakup of the Soviet Union in 1991. (Corel)

Awarded the Nobel Peace Prize in 1990, Gorbachev is generally considered a driving force behind the end of the Cold War.

of the Russian Republic leader Boris Yeltsin, the coup collapsed after two days. Gorbachev returned to Moscow but was now dependent on Yeltsin, who banned the CPSU from the Russian Republic. On 24 August 1991, Gorbachev resigned as CPSU general secretary. On 7 December 1991, the presidents of Russia, Ukraine, and Belarus created a loose confederation called the Community of Independent States (CIS). Soon afterward, eight other republics joined, and the CIS treaty was concluded on 21 December. Gorbachev resigned as Soviet president on 25 December, and the Soviet Union became extinct on 31 December 1991.

Gorshkov, Sergey Georgyevich
(1910–1988)

Admiral of the fleet of the Soviet Union and commander in chief of the Red Navy while also serving as deputy minister of defense (1956–1985). Born in Kamenets-Pedolsky, Ukraine, then part of the Russian Empire, on 26 February 1910, Sergey Gorshkov was commissioned in the Red Navy on his graduation in 1931 from the Frunze Higher Naval School. He then held a series of posts in the Black Sea and Pacific Fleets. He advanced rapidly in rank and responsibility, in part due to the openings at the top levels created by Soviet dictator Josef Stalin's purges of the Soviet military.

Gorshkov developed a strong combat record in the Black Sea Fleet during World War II, leading naval and amphibious operations against German forces and commanding the Danube Flotilla in 1944 during Soviet advances into Ukraine, Bulgaria, Romania, and Hungary. He was promoted to rear admiral.

ral in October 1941. After the war he commanded a squadron of ships and was elevated to chief of staff of the Black Sea Fleet in 1948 and then to commander of that fleet as a vice admiral in 1951.

Transferred to Moscow, Gorshkov was promoted to full admiral and became first deputy chief of the Red Navy in July 1955. Soviet leader Nikita Khrushchev appointed Gorshkov commander in chief of the Red Navy in June 1956, a position he held until 1985. He also held a dual appointment as deputy minister of defense, and in 1961 he became a full member of the Central Committee of the Communist Party of the Soviet Union (CPSU). During his long tenure as its commander, he directed the substantial growth of the Red Navy and created a guiding philosophy that was presented in numerous articles and a book, *The Seapower of the State* (1980).

Gorshkov argued that a strong navy was a necessity for a superpower. It served as a symbol of power and as a potent military and political instrument. His leadership moved the Soviet military from an army-dominated structure with a continental orientation to a global military power with a significant maritime component.

Gorshkov developed a naval force that reflected his theories and the realities of Soviet geography and politics. His navy followed the commitment to modern technologies, especially to the missiles and nuclear weapons that came to dominate Soviet military planning in the 1950s. The submarine-launched ballistic missile (SLBM) fleet was a key part of Soviet strategic nuclear forces. The Red Navy also developed an ability to protect the Soviet SLBM fleet operating in sanctuaries near Soviet home waters. This defensive posture was an extension of the traditional role of protecting the borders and coastlines of the homeland.

The Red Navy sustained the ability to support ground force operations, another traditional role of the Russian and Soviet navies. Gorshkov's greatest accomplishment was developing an oceangoing fleet that could project power around the world, showing the flag in foreign ports. He oversaw the creation of the world's second largest navy, establishing a highly visible global presence and challenging the U.S. Navy by threatening logistical routes and SLBM patrol areas. Gorshkov retired in 1985 and died in Moscow on 13 May 1988.

Gottwald, Klement

(1896–1953)

Secretary-general of the Communist Party of Czechoslovakia (CPCz) and premier of Czechoslovakia. Born the illegitimate son of a peasant in Dedice, in southern Moravia, on 23 November 1896, Klement Gottwald became the leader of communist Czechoslovakia after World War II. He joined the social democratic movement in Vienna at age sixteen. Drafted into the Habsburg armies in 1915, he deserted in 1918 but joined the Czechoslovak Army later that same year. He then joined the CPCz in 1921, working as a journalist.

Gottwald moved to Prague in 1926 and soon became a leader within the party. He was elected secretary-general of the CPCz in 1929 and became a representative in the Czechoslovak National Assembly. A staunch supporter of the Bolshevik regime in the Soviet Union, he nevertheless moved toward cooperation with the social democratic movement after Adolf Hitler came to power in Germany in 1933. When Hitler's armies occupied Czechoslovakia in 1939, Gottwald fled to the Soviet Union, where he became a national secretary in the Communist International (Comintern).

When in 1943 the Soviets recognized the Czechoslovak government-in-exile headed by Eduard Beneš, Gottwald quickly became a member of the coalition and of the interim government set up after World War II in Czechoslovakia. After elections in 1946 gave the communists 38 percent of the vote, Gottwald assumed the office of premier in another coalition government.

Relations within the coalition soon deteriorated, however. Facing new elections in 1948, Gottwald engineered a coup d'état and assumed the presidency. An ardent Stalinist, Gottwald oversaw one of the harshest regimes in Eastern Europe, executing hundreds of alleged enemies and sending thousands more to prison camps. Gottwald suffered from poor health, however, and died in Prague on 14 March 1953 just after returning from Soviet leader Josef Stalin's funeral.

Soviet intelligence operative and defector. Born in Rogachov near Moscow on 13 January 1919, Igor Gouzenko joined the Komsomol (Young Communist League) in 1935 and entered the Moscow Architectural Institute in 1938. In 1941 he transferred to the Military Engineering Academy, where he trained as a cipher specialist and was assigned to Soviet Military Intelligence (GRU) in Moscow. As a Red Army lieutenant, Gouzenko was sent to Ottawa, Canada, in 1943. There he began his perilous journey from cipher clerk to Cold War icon in the autumn of 1945 as he was about to be recalled to Moscow.

On the evening of 5 September 1945, Gouzenko stuffed 109 classified documents under his shirt and attempted to defect. It was not an easy defection. Neither the Canadian Ministry of Justice nor the *Ottawa Journal* newspaper, both of which he approached, showed much interest. It was only after a Soviet security unit responded to Gouzenko's disappearance by ransacking his apartment later that night that the Royal Canadian Mounted Police took him seriously. He was granted political asylum soon thereafter.

Gouzenko's defection had major repercussions for both Soviet and Western intelligence services. He revealed a major GRU spy ring controlled by the Soviet embassy in Ottawa and provided detailed information on the clandestine activities of the Soviet security and intelligence service. The stolen documents pointed to an elaborate network of espionage that included Canadian civil servants, politicians, and scientists. Consequently, a dozen Soviet spies were arrested, including the infamous Alan Nunn May, virtually paralyzing Soviet espionage activities in Canada. Moscow monitored Gouzenko's betrayal via Kim Philby (head of MI6's, or the external intelligence agency's, Soviet counterintelligence agency), who received regular briefings on the Gouzenko revelations. Gouzenko's evidence also led MI5, the British counterintelligence agency, to the espionage activities of British physicists, including Klaus Fuchs. The Gouzenko affair thereby became closely entwined with the politics of the atom bomb.

Gouzenko's testimony to a Canadian royal commission on espionage was the first significant inside exposure of the methods and motivations of Soviet agents and was sufficiently authoritative to convince the commissioners of the conspiratorial character of Soviet communism. By focusing international attention on issues of loyalty, subversion, national security, and atomic espionage, the Gouzenko affair helped ignite the Cold War. Until his death on 25 June 1982 in Mississauga, near Toronto, Gouzenko lived under police protection, occasionally appearing in public forums with his trademark hood to conceal his identity.

Governors Island Meeting, Gorbachev, Reagan, and Bush (7 December 1988)

Summit meeting among Soviet Premier Mikhail Gorbachev, President Ronald Reagan, and President-elect George H. W. Bush on 7 December 1988. By 1988, U.S.-Soviet relations had improved dramatically, as evidenced by the 1987 Intermediate Nuclear Forces (INF) Treaty and Reagan's visit to Moscow in May 1988. Gorbachev, ignoring political opposition and economic difficulties at home as he pushed on with his perestroika and glasnost reforms, went to New York in early December to announce a dramatic international initiative at the United Nations (UN) General Assembly. In his address, he first declared it impossible to maintain closed societies in the face of globalization. He went even further by embracing human rights and the need to free international relations from ideological constraints. Finally, he asserted the need to decrease the threat of the use of force. He then announced a unilateral 10 percent reduction in Soviet armed forces (nearly half a million men) to also include 10,000 tanks, 8,500 artillery pieces, and 800 combat aircraft, mostly stationed in Eastern Europe. In so doing, Gorbachev sought to give credibility to the idea that the Soviet Union had undertaken a fundamental change of course in the way it viewed and dealt with the world.

Following his UN speech, Gorbachev traveled to Governors Island in New York Harbor to bid farewell to Reagan and to establish a working relationship with President-elect George H. W. Bush. Gorbachev hoped to gain a commitment from Bush to build on his relationship with Reagan, but Bush remained aloof throughout the meeting. When Reagan announced his full support of Gorbachev's troop reduction initiative, Bush merely stated, "I support what the president said." Gorbachev, hoping to draw Bush out of his shell, replied, "That's one of the best answers of the year."

During the luncheon, Gorbachev directed most of his remarks toward Bush, trying to assure the president-elect that he could trust the Soviets, that he would not try to undermine or take advantage of Bush, and that his policies represented "real politics" that were necessary because of revolutionary changes in the Soviet Union. Bush asked Gorbachev what his reforms might produce in the Soviet Union over the next five years, to which Gorbachev replied, "Even Jesus Christ couldn't answer that one." Some discussion took place regarding chemical weapons, but American officials, fearful of surprises, refused to engage in serious negotiations.

In a gracious climax to their relationship, Reagan presented Gorbachev with a picture of their first walk at Geneva, stating that the two leaders had come a long way together to clear a path for peace. Reagan then offered a toast to the Soviet leader celebrating what they had accomplished and express-

ing his hope that such progress would continue once Bush assumed the presidency. Gorbachev, raising his glass toward Bush, declared, "This is our first agreement."

As the luncheon ended, Bush told Gorbachev that he looked forward to working with him "at the appropriate time." The three men then posed for pictures with the Statue of Liberty as a backdrop. Reagan viewed the meeting as a great success, writing in his diary that he believed Gorbachev viewed the United States as "a partner seeking to make a better world." Gorbachev had to rush home, canceling trips to Havana and London, in order to deal with an earthquake in Armenia that had killed 25,000 and left another half million people homeless. This crisis became a symbol of the domestic problems that preoccupied Gorbachev until the dissolution of the USSR in December 1991. Such problems made it increasingly difficult for the Soviet leader to undertake any new international initiatives and also influenced his decision not to interfere when Moscow's East European allies broke loose from their allegiance to the Soviet Union in 1989.

Upon assuming the presidency, Bush abandoned his initial caution in dealing with Gorbachev, negotiating agreements that increased Soviet-American trade, reduced chemical weapons and conventional forces in Europe, and achieved further cuts in Soviet and American nuclear arsenals.

Great Britain

Southeast European nation-state covering 50,942 square miles, about the size of the U.S. state of Alabama. Greece, with a 1945 population of 7.5 million, lies between the Ionian and Aegean Seas and is bordered by Albania, Macedonia, and Bulgaria to the north and Turkey to the east. Following its independence from the Ottoman Empire in 1829, Greece expanded territorially,

Greece

including the Ionian Islands and Thessaly by the end of nineteenth century; Epirus, Macedonia, Crete, and most of the eastern Aegean islands after 1913; Thrace after World War I; and Rhodes and the Dodecanese Islands from Italy by the Treaty of Paris in 1947.

Italy had invaded Greece in October 1940, and when the Greeks drove the Italians back into Albania, the Germans came to the rescue of their ally Italy in April 1941. In June 1941, following the defeat of Greece, the nation came under a tripartite occupation of German, Italian, and Bulgarian forces. King Paul II went into exile.

Resistance to the occupiers began early. In September 1941 Greek communist guerrillas established the National Liberation Front (EAM) with a military component, the National People's Liberation Army (ELAS); most noncommunist resistance groups organized under the National Republican Greek League (EDES). In August 1943 the guerrilla representatives met with King Paul II in Cairo to discuss the country's future. Unfortunately, their failure to reach agreement contributed to tensions between the ELAS and EDES, resulting in civil war from October 1943.

In Moscow in October 1944, Soviet leader Josef Stalin and British Prime Minister Winston Churchill agreed that Greece should be part of the British sphere in Southeastern Europe. Georgios Papandreou, a leading Greek politician in exile, formed a government and, following the withdrawal of German forces, returned to Athens on 18 October 1944. When ELAS refused to demobilize, Churchill traveled to Athens on Christmas Day 1944 with Foreign

Secretary Anthony Eden in an effort to broker a deal between the warring parties, under which Archbishop Damaskinos of Athens became regent and General Nikolaos Plastiras replaced Papandreou as prime minister.

Following a cease-fire in January 1945 and the signing of the Varkiza Agreement between the Greek government and the EAM, the government headed by Themistoklis Sophoulis called elections for 31 March 1946. Because the communists abstained on the basis that free elections were then impossible, the right-wing coalition dominated by the People's Party won 55 percent of the vote. A September 1946 plebiscite also reinstated the monarchy.

In October 1946, civil war erupted again between the communist EAM, led by General Vafiadis Markos, and Greek regular troops.

With Greece in civil war and Albania, Bulgaria, and Yugoslavia supporting the communist side, in 1947 President Harry S. Truman called for \$400 million in aid to both Greece and Turkey. Greece began to receive military and economic aid from the United States in March 1947. Changes in EAM's military tactics, the loss of Yugoslavian support in 1948, and growing U.S. military support for the regular Greek forces all brought the defeat of the communists in the summer of 1949.

In February 1950 the Greek government lifted martial law, and the next month new elections were held. The People's Party remained the largest single party, with other important centrist parties being the Liberals, the National Progressive Center Union, and the Georgios Papandreou Party. The 1951 elections were contested by two new political entities: the Greek Rally, led by Marshal Papagos, and the United Democratic Left, composed of former communists. American pressure, however, forced electoral law changes that replaced proportional representation with a majority system. As a result, the right-wing Greek Rally, which won the November 1952 elections, remained in power until 1963.

Economic conditions and unrest led to a sizable Greek migration abroad. During the period 1951–1980, approximately 12 percent of the Greek population immigrated abroad, most of them to Australia, Canada, the United States, and Germany.

Both Greece and Turkey joined the North Atlantic Treaty Organization (NATO) in 1952; however, relations between the two countries remained tense, particularly over Cyprus. There was considerable support on Cyprus from among its Greek majority population for union (enosis) with Greece, which the Turkish minority opposed. Enosis was fanned by Archbishop Makarios III and sustained through political violence coordinated by General Georgios Grivas and the National Organization of Cypriot Fighters (EOKA). Following agreements in Zurich and London in 1959 among the Greek, Turkish, and British governments, Cyprus was declared an independent republic of the British Commonwealth, with Britain maintaining sovereignty over two military bases on the island and Greece and Turkey allowed only a small military presence.

In 1955, Konstantinos Karamanlis became prime minister. He transformed the Greek Rally into the National Radical Union (ERE) and passed legislation that gave women the right to vote in the elections of February

1956. In 1961 Karamanlis secured for Greece associate status in the European Economic Community (EEC). In the Greek national elections of that same year, the centrist parties, grouped into the Center Union under the leadership of Georgios Papandreou, became the main opposition party, with third place secured by the United Democratic Left. Because of a conflict between Prime Minister Karamanlis and the monarchy, especially Queen Frederica, Karamanlis resigned and left the country in 1963, beginning what would be eleven years of exile in France.

In the November 1963 elections, Papandreou obtained a narrow victory. As the United Democratic Left influenced the balance of power, however, new elections were held in February 1964, and the Center Union won with 53 percent of the vote. Papandreou continued as prime minister for the next eighteen months.

Following the death of King Paul II in March 1964, his son Constantine II ascended the throne. Confrontation between Constantine and Papandreou (the prime minister sought to exert control over the Ministry of Defense, and the king refused him permission to do so) led Papandreou to resign in July 1965. His successor as head of the Center Union, Panayiotis Kanellopoulos, led the party into the national elections scheduled for May 1967. Before they could take place, however, in April a group of junior officers overthrew the government in a coup with the aim of preventing a victory by the Center Union. The junta was led by Colonels Georgios Papadopoulos and Nikolaos Makarezos and Brigadier General Stylianos Pattakos. Papandreou was placed under house arrest until his death in November 1968. Following an amateurish countercoup attempted by King Constantine in December 1967, the monarch fled abroad, and the colonels established a regency.

Colonel Papadopoulos became prime minister, and an authoritarian constitution was ratified in September 1968. After a student occupation of the Faculty of Law in Athens University and a mutiny in the navy, the regime established a presidential, parliamentary republic in June 1973. In July 1973 Papadopoulos was elected president as the only candidate in a plebiscite. Following a brutal repression of the student occupation of Athens Polytechnic in November 1973, the Papadopoulos regime was replaced by a junta led by Brigadier Dimitrios Ioannidis, head of the military police, while Lieutenant General Phaidon Gizikis became president.

The desire of the generals to secure popular support in Greece by consummating enosis backfired. In July 1974 President of Cyprus Archbishop Makarios III was deposed in a junta-supported coup, but this brought a Turkish invasion of Cyprus and occupation of 40 percent of the island. In Greece the Ioannidis regime collapsed, and Konstantinos Karamanlis was summoned back from exile to form a democratic government. He became prime minister on 24 July 1974.

In the elections of November 1974, Karamanlis's New Democracy Party (ND), successor to the ERE, won 54 percent of the vote. Meanwhile, Andreas Papandreou's new party, the Panhellenic Socialist Movement (PASOK), garnered 14 percent of the vote. Under a new constitution ratified in June 1975, a presidential regime came into being. Parliament then elected Kon-

Furniture, burnt-out cars, and other debris litter the square outside Athens Polytechnic following a night of street battles during demonstrations against the military regime of President Georgios Papadopoulos, 20 November 1973. (Keystone/Getty Images)

stantinos Tsatsos the president. After his five-year term, Karamanlis succeeded him in 1980.

In 1977, under the leadership of Papandreou, PASOK grew to represent 25 percent of the electorate and in 1981 won the national election outright, forming Greece's first socialist government. In January 1981 Greece became the European Community's tenth member. After the northern part of Cyprus declared itself the independent Turkish Republic of Northern Cyprus, recognized only by Turkey, Greece signed a Defense and Economic Cooperation Agreement with the United States in 1983.

In 1985, at the end of his term, Karamanlis, despite his advanced age, again stood for election. PASOK proposed its own candidate, Christos Sartzetakis, a former judge. After a constitutional crisis led to the resignation of Karamanlis as president, Sartzetakis was elected president after three rounds of voting in March 1985. In the 1989 elections, none of the parties won the majority of votes, leading to a temporary if not strange conservative-communist coalition. Elections in April 1990 represented the end of the PASOK era, bringing the ND back to power. One month later, Karamanlis was elected

president for a second term. Although much of the Cold War period had been turbulent for Greece, calm apparently returned.

Greek Civil War (1946–1949)

Conflict fought between the Greek Communist Party (KKE) and anticommunist Greek nationalists. Greece's civil war was rooted in age-old divisions within Greek society and was complicated by the rivalry between the Soviet Union and the United States. The nationalists were strongly supported by Britain and the United States. The war was one of the earliest Cold War tests of will between East and West and claimed the lives of an estimated 80,000 Greeks, a fatality rate that surpassed the suffering of that nation in World War II. Both sides committed atrocities and tried to settle old scores under the guise of conflicting ideologies. The conflict's greatest legacy was the Truman Doctrine, which committed the United States and its allies to come to the aid of any nation threatened by communist takeover. This set the stage for President Harry S. Truman's containment policy.

In the early years of the twentieth century, conservative and liberal parties in Greece struggled for power, engaging in a series of bloodless purges that heightened political instability and created great anger and bitterness. This atmosphere provided fertile ground for authoritarianism, and in 1936 General Ioannis Metaxas established a fascist-style dictatorship, further polarizing the country.

Metaxas's death in 1941 and the flight of the Greek government to Egypt after the German invasion left Greece in virtual chaos. The KKE, persecuted under Metaxas, stepped into the power vacuum by creating the National Liberation Front (EAM), dedicated to the liberation of Greece. By 1944 the EAM boasted nearly 2 million members, and its military arm, the National Liberation Army (ELAS), had enlisted 50,000 fighters.

In October 1944, British Prime Minister Winston Churchill, fearful of a communist takeover in Greece and the loss of control over the eastern

Mediterranean, met with Soviet Premier Josef Stalin in Moscow and struck a deal over control of the Balkans. In return for Soviet dominance in Bulgaria, Romania, and Poland, Stalin ceded Greece to Great Britain and vowed not to directly support the KKE after the war.

Relations between the British-backed Greek monarchy and the EAM quickly soured as the communists suppressed dissent and tried to assert control over the country. In retaliation, the British rehabilitated the collaborationist police, returned monarchist military units to the nation, and demanded that the ELAS disarm. On 2 December 1944 collaborationist police fired on antigovernment demonstrators, triggering the Battle for Athens. It resulted in a victory for the nationalists and the disarming of the ELAS. The EAM splintered as moderates and socialists abandoned it, while KKE membership plummeted from its peak of more than 400,000 to only 50,000. KKE leader Nikos Zachariades attempted to impose tighter party discipline but was stymied by the strength of the nationalist forces.

In an attempt to maintain order, the British strengthened the Greek National Guard and turned a blind eye as security forces conducted a campaign of repression against the communists. In the Greek parliamentary elections of March 1946, the rightist candidates won a landslide victory. The allegedly rigged elections prompted the KKE to declare a state of civil war and reorganize ELAS units as the Democratic Army of Greece (DSE). The DSE won notable gains in the first year of fighting due in part to support from the communist governments of Yugoslavia and Albania.

Fearing that the nationalists might indeed lose the war against the DSE, the British appealed for help from the United States. Previous British requests for American assistance in Greece had been rebuffed, but by 1947 American attitudes had begun to change. President Truman's growing antipathy toward the Soviets and their tightening of control in Eastern Europe hardened his stance. On 12 March 1947, he addressed a joint session of Congress, enunciating the Truman Doctrine and requesting a \$300 million aid package to support the Greek nationalists and anticommunists in nearby Turkey.

The KKE did not take the Truman Doctrine seriously, believing that the nationalists would capitulate even with U.S. support. By 1948, however, it was becoming clear that the DSE was in dire straits as the American-backed nationalist army grew exponentially. In January 1949, KKE leaders foolishly declared that the goal of the civil war was no longer the restoration of parliamentary democracy, as they had previously stated, but rather the establishment of a proletarian dictatorship. The DSE then shifted from a mobile war of attrition to a campaign to defend territory, a tactical miscalculation that played into the hands of the revitalized nationalist army.

Supporters of Ethnikón Apeleftherotikón Métopon (EAM), the Greek Communist Party, rally in Athens on the eve of the general elections in March 1946. The right-wing coalition won the elections, but civil war erupted by the end of the year. (Library of Congress)

In the spring of 1949, the nationalist army cleared the communist rebels out of southern Greece and launched a two-pronged offensive designed to drive them completely out of the country. As the fighting reached its climax, Yugoslavia closed its border and ended arms shipments that had kept the DSE insurgency viable. After sustaining more than 2,000 casualties in the summer of 1949, DSE fighters withdrew into Albania during the night of 29 August 1949, effectively ending the civil war. Although sporadic DSE raids continued into 1950, the victory of the nationalist forces was by then complete.

Greenland

The world's largest island, located in the Arctic Circle. Greenland covers 836,326 square miles and is bordered by the Arctic Ocean to the north, the Greenland Sea and the Atlantic Ocean to the east, and Baffin Bay to the west. It had a 1945 population of approximately 21,000 people. Greenland was first a Danish colony and then an integral part of the Kingdom of Denmark. On 1 May 1979, Greenland attained home rule under its own parliament, the Landsting, although it still falls under Danish sovereignty. In the Cold War, Greenland became vital for and integrated with American and North Atlantic Treaty Organization (NATO) military strategies because of its strategic location.

When German forces occupied Denmark in April 1940, Danish officials on Greenland turned to the United States for support. The result was a defense treaty signed by Danish ambassador to Washington Henrik Kauffmann but not by the Danish government. In the treaty, the Americans promised to defend and supply the island. In return, the Americans were granted the rights to establish military bases on the island. After 1945, the Danish government (which had finally ratified the treaty in May 1945) tried to persuade the Americans to leave Greenland. They were unsuccessful.

To the Americans, Greenland was of vital strategic importance. First, from a defensive perspective, control of the island could help deter attacks on North America. From the 1950s onward, radar systems in Greenland served as crucial elements in the American early-warning system (especially the radars established at Thule Airbase during 1958–1960 as part of the Ballistic Missile Early Warning System). Second, from an offensive perspective, Greenland might serve as a base station for launching attacks. The establishment of a polar strategy from the early 1950s gave the U.S. bases in Greenland a new central role. From at least 1961, bombers carrying nuclear weapons in Operation AIRBORNE ALERT passed through Greenlandic airspace. Thule Air Base served as an emergency landing facility for this operation.

Following lengthy negotiations, in April 1951 Denmark and the United States agreed on a new treaty regarding Greenland. The new treaty granted the Americans control of certain defense areas, the most important of which became the Thule Air Base, constructed during 1951–1952. Furthermore, the treaty gave the United States full access to Greenland's airspace. In 1957, the Americans asked the Danish government whether it would accept the storage of nuclear weapons on Greenland. Acceding to such a request, however, would be against an explicitly stated Danish policy forbidding nuclear weapons on Danish soil. Still, Prime Minister Hans Christian Hansen responded positively, albeit in a vaguely worded and confidential letter known to only a handful of Danish politicians and civil servants. Recent research has shown that the United States stored nuclear weapons at Thule Air Base during 1958–1965.

For Danish authorities, however, the use of Greenland's airspace by American bombers posed a greater problem. According to official Danish interpretations, the Danish policy of banning nuclear arms on its territory also included the airspace in Greenland. When an American bomber carrying nuclear bombs crashed on Greenland in 1968, it created domestic problems for the Danish government and a crisis in Danish-American relations. Whereas American diplomats claimed that the 1951 treaty and H. C. Hansen's 1957 letter gave them the right to overfly Greenland with nuclear weapons, the Danes insisted that this practice had to end. Ultimately, the United States yielded to Danish pressure, and research has indicated that the Americans respected Greenland territory as a nuclear-free zone.

In Danish-American relations regarding Greenland, the native Greenlanders were reduced to powerless bystanders. This was manifestly demonstrated in 1953, when some thirty Inuit families were removed from their homes close to the Thule Air Base. Their protests and demands for remuneration were unsuccessful for more than fifty years, until a Danish court granted them compensation in 1999. In general, the powerlessness of the local population was compounded by the fact that Greenland was a Danish colony until 1953, when it became fully integrated into the Danish Kingdom. After 1979, when Greenland was granted home rule, foreign and security policies still remained in the hands of the government in Copenhagen. It was only after the end of the Cold War that the local Greenland government, Grønlands Landsstyre, was granted direct input in such matters.

Grenada

English-speaking island nation located in the southern Caribbean Sea north of Trinidad. A tiny nation of just 133 square miles, Grenada had a 1945 population of approximately 76,000 people. Upon its discovery by Christopher Columbus in 1498, the island was inhabited by Carib and Arawak Indians. It was settled in 1650 by French colonists, who ceded it to the British in 1783.

Grenada gained independence in 1974 but remained a member of the British Commonwealth. On 13 March 1979, Maurice Bishop staged a bloodless coup, promising economic reform and a mildly socialist state. On 13 October 1983 Grenada's former deputy prime minister, Bernard Coard, launched a coup against Bishop's government. Bishop was killed on 19 October, and Coard proceeded to install a hard-line Marxist regime. The new government sought and received help from Cuba in building, among other projects, an airport.

During a period of significant Cold War tensions, President Ronald Reagan's administration was not keen on a hard-line communist government taking root in the region. With the backing of nearby Caribbean states, the United States launched an invasion of the island (code-named Operation URGENT FURY) on 23 October 1983. The invasion took place just two days after the lethal bombing of a U.S. Marine barracks in Lebanon. Some commentators saw URGENT FURY as a way for Reagan to divert attention from the Lebanon crisis. The Grenadian Army and a small number of Cuban forces (how many is disputed) put up some resistance, but by December 1983 U.S. forces had withdrawn, having installed an interim pro-American government.

The Grenada invasion can be seen as a successful attempt by the Reagan administration to accomplish several tasks at once: draw a line in the sand over new socialist states after failing to stop Nicaragua's Marxist revolution, strike at Fidel Castro, and provide U.S. armed forces their first clear-cut victory in the aftermath of the Vietnam War debacle.

U.S. invasion of the Caribbean island nation of Grenada on 25 October 1983, code-named Operation URGENT FURY. The assault was the culmination of increasing U.S.-Grenadian tensions that began when Maurice Bishop took power through a bloodless coup in March 1979. Bishop, a Marxist, pursued close relations with the Soviets and Cubans. President Ronald Reagan believed that Bishop’s policies marked increasing communist penetration of Latin America. A Cuban construction project in Grenada involving a 9,000-foot runway caused U.S. policymakers to worry that the island was being prepared as a base that could interdict U.S. logistical routes in the region. The Grenadian government responded to U.S. diplomatic complaints by explaining that the runway was intended for use by larger airliners in an effort to enhance the island’s tourist trade.

On 12 October 1983, a radical anti-U.S. component of the governing party staged a coup, eventually resulting in Bishop’s execution. The junta established control via a Revolutionary Military Council headed by General Hudson Austin, the commander of the armed forces.

Following the coup, U.S.-Grenadian tensions grew, and U.S. officials became concerned about the status of the more than 1,000 U.S. citizens on the island, especially some 600 students attending the St. George’s School of Medicine. On 19 October, the U.S. military began to develop formal contingency plans to conduct an evacuation of American citizens from the island, with options ranging from diplomatic overtures to a full-blown invasion. The United States was sensitive to the potential of a hostage crisis, so planners emphasized the use of a relatively large force structure to ensure a quick and decisive victory. To support the combat options, naval forces heading to the Mediterranean were diverted to Grenada, and mobile forces in the United States were alerted for a potential mission. Diplomatic efforts continued, with the objective of gaining the release of U.S. citizens or, failing that, to build an alliance that would provide international support for military action. Diplomatic overtures focused on the Organization of Eastern Caribbean States (OECS), which would provide a regional political

cover for the invasion operation and would serve as the source of a multinational peacekeeping force after a U.S. invasion.

American sea-based forces involved a battle group built around the aircraft carrier *Independence* and the 22nd Marine Amphibious Unit, supported by the amphibious assault ship *Guam*. Forces deployed from the continental United States included two Ranger battalions, a brigade from the 82nd Airborne Division, and special operations forces. Responsibility for the operation was divided between U.S. Marine forces in the north and U.S. Army forces in the south. Special operations forces were scheduled to land early in order to conduct reconnaissance missions and secure high-value targets. The Marines were tasked with an assault landing at Pearls and Grenville on the northeast side of the island. Rangers were to parachute into the Point Salinas airport, followed by the 82nd Airborne.

The assault began in the early morning hours of 25 October. Weather and mechanical difficulties disrupted some of the early operations, but the plan nonetheless generally unfolded as designed. The Marines encountered only slight resistance and pressed south past the original dividing line on the island. The Rangers and follow-on army forces faced determined opposition at the airfield but quickly overcame Cuban and Grenadian combatants and rescued the medical students from three campus locations, placing them on evacuation flights back to the United States.

Significant combat was over by 27 October, although some sniping continued to occur until 2 November 1983. The U.S. military quickly shifted control of the island to a new civilian government, backed initially by the OECS multinational security force. The American government considered the operation a complete success and used captured documents and large weapons caches to justify the intervention in the face of strong international criticism.

Casualties in Operation URGENT FURY were relatively light: the U.S. military suffered 19 deaths and 116 wounded; Cuban forces saw 25 killed, 59 wounded, and 638 captured; and the Grenadian defense forces sustained 45 deaths and 358 wounded. Postconflict analyses, however, pointed out serious problems with interservice communications and compatibility because of technological glitches and differences in doctrine and training. Combined with issues raised during the failed April 1980 Iranian hostage rescue mission, the problems that were highlighted in Operation URGENT FURY contributed directly to the reorganization of the U.S. Department of Defense under the 1986 Goldwater-Nichols Defense Reorganization Act.

Soviet diplomat, foreign minister (1957–1985), and president (1985–1988). Born on 18 July 1909 to a peasant family in Starye Gromyki, Belorussia, Andrey Andreyevich Gromyko studied agricultural economics at the Minsk School of Agricultural Technology, earning a degree in 1936. He also became active as a Komsomol (Communist Youth) official. After working as a research associate and economist at the Soviet Academy of Sciences in Moscow, he entered the Foreign Affairs Ministry, where he was named chief of the U.S. division of the People's Commissariat of Foreign Affairs in 1939. That same year he began working at the Soviet embassy in Washington, D.C. In 1943 Soviet leader Josef Stalin appointed Gromyko as Moscow's youngest-ever ambassador to the United States.

Gromyko played an important role in coordinating the wartime alliance between the Americans and Soviets and played a fairly prominent role at

Gromyko, Andrey
(1909–1989)

Soviet Foreign Minister Andrey Gromyko speaks at the United Nations, September 1984. (Jacques M. Chenet/Corbis)

diplomatic events such as the February 1945 Yalta Conference and the July–August 1945 Potsdam Conference. He also attended the conference establishing the United Nations (UN) in October 1945 and became Moscow’s UN representative in 1946. He served briefly as the ambassador to the United Kingdom during 1952–1953 and then returned to the Soviet Union.

In 1956 Gromyko attained full membership on the Central Committee of the Communist Party of the Soviet Union (CPSU). In 1957 he began his twenty-eight-year tenure as foreign minister. In 1973 he ascended to the Politburo.

During his long career, Gromyko became known as an expert and cunning negotiator. In the West he was dubbed “Mr. Nyet” (Mr. No) because of his hard bargaining and staunch communist views. At home, he exhibited a great talent for adjusting to the ruling leaders. Thus, he did not develop a characteristic line of politics of his own. Under Soviet Premier Nikita Khrushchev, Gromyko readily adapted to the leader’s erratic whims and played a key role in the Berlin and Cuban missile crises. Under Soviet leader Leonid Brezhnev, Gromyko reached the apogee of his powers. Brezhnev believed in a system of loyalty combined with freedom to rule one’s own destiny. Therefore, he gave Gromyko virtual free rein in setting Soviet foreign policy.

In the West he was dubbed “Mr. Nyet” (Mr. No) because of his hard bargaining and staunch communist views.

During 1973–1975 Gromyko negotiated on behalf of the Soviet Union during the Conference on Security and Cooperation in Europe, which led to the landmark 1975 Helsinki Final Act. This act recognized Europe's postwar borders and set a political template for further negotiations concerning human rights, science, economics, and cultural exchanges. The Helsinki Final Act marked the full flowering of East-West détente, but because it did not match expectations about liberalization in the Soviet Union and Eastern Europe, it precipitated mounting dissent at home and protest abroad.

In 1985 Soviet leader Mikhail Gorbachev appointed his own protégé, Eduard Shevardnadze, as foreign minister and named Gromyko president of the Presidium of the Supreme Soviet of the USSR, by then a purely symbolic position. He remained in this post until 1988. Gromyko died on 2 July 1989 in Moscow.

Hungarian politician, general secretary of the Hungarian Communist Party, and prime minister (1987–1988). Born on 1 August 1930 in Miskolc, Hungary, Károly Grósz worked first as a printer and then became a soldier. He had joined the Communist Party in 1945, and in 1954 he became head of the agitation and propaganda department of the local party committee. In 1961 he graduated from the Political College of the Communist Party. He rose through the ranks and in 1968 was named deputy head of the agitation and propaganda department for the Central Committee of the party; in 1974 he became head of the party's agitation and propaganda department.

From this position Grósz supervised most of the state-controlled media. During the 1970s he also served as first secretary of the party committee in two Hungarian counties. During 1984–1987, he was the first secretary of Budapest's party committee. On 25 June 1987 he was appointed prime minister. Grósz presented a frank appraisal of the deteriorating Hungarian economic situation before parliament, the first time in the communist state that any government official had publicly detailed such problems.

At a party convention on 22 May 1988, Grósz seized the reins of the party from János Kádár, who had been its leader for thirty-two years, and thus became general secretary of the Communist Party. Grósz then announced

Grósz, Károly
(1930–1996)

an austerity program. As demands for reform in Hungary mounted, he agreed to dissidents' demands that the archives be opened on the secret trial of Imre Nagy. Eventually Grósz, who allied himself with Soviet leader Mikhail Gorbachev, gave way to a growing demand for change. He authorized election reform, including a multiparty system. Hungary was the only one of the former Soviet bloc countries where the reformist revolution came from above. Grósz remained prime minister until November 1988 and leader of the party until October 1989. He died on 7 January 1996 in Gödöllő, Hungary.

Grotewohl, Otto

(1894–1964)

German Democratic Republic (GDR, East Germany) minister-president (1949–1964). Born in Braunschweig, Germany, on 11 March 1894, Otto Grotewohl trained as a letterpress printer and joined the Social Democratic Party (SPD) in 1912. During 1920–1926, he was a member of the Braunschweig Diet and served as state minister for domestic affairs and education during 1921–1922. In 1928 Grotewohl entered the Reichstag but resigned after the dissolution of the SPD by the Nationalist Socialist Party (Nazis) in 1933. Compelled by the Nazis to relinquish the presidency of Braunschweig's state insurance company in 1933, which he had held since 1925, Grotewohl moved to Hamburg and joined a resistance group. Arrested in August 1938, he was sentenced to seven months in jail.

After the defeat of Germany, on 17 June 1945 Grotewohl was elected chairman of the central committee of the newly formed SPD in Berlin. Two days later, he signed a common working agreement with the German Communist Party (KPD). However, his proposal to form a union of both parties was rejected by KPD leaders for tactical reasons. When the KPD, under intense Soviet pressure, changed its stance in September 1945 and began to effect a rapid merger, it found the SPD split on the issue. At a joint conference of thirty representatives of each party in Berlin on 20–21 December 1945, the first so-called Sixties Conference, the majority of Social Democrats, includ-

ing Grotewohl, voted for the merger but on the precondition that the fusion had to be carried out nationwide. This proposal was strongly rejected by Kurt Schumacher, leader of the western German SPD. Grotewohl, despite initial hesitation, finally agreed to the merger under enormous pressure from the Soviets, the KPD, and major elements of the eastern German SPD.

Because of Schumacher's resistance, however, the new Socialist Union Party (SED) could only be created in the Soviet zone and in East Berlin in April 1946. Both Grotewohl and Wilhelm Pieck became joint SED chairmen, an arrangement that only lasted until 1954. As a member of a subsequent Sixties Conference and of a study commission to establish the SED party program, Grotewohl soon turned into a radical critic of social-democratic ideas and a strong supporter of Soviet-style socialism. From 1946 to 1950, he was a member of the Saxon Diet. After 1947, he supported the creation of an East German state and was a member of the permanent committee of the German People's Congress, a member of the German People's Council, and finally, from 1948 until 1949, chairman of this council's constitutional committee.

After East Germany was founded in October 1949, Grotewohl joined the Volkskammer (parliament) and was elected minister-president (retitled in 1950 as chairman of the council of ministers), a position he kept until his death in September 1964. His influence steadily declined, with Walter Ulbricht becoming the prominent leader of East Germany. Beginning in September 1960, after the death of President Pieck, Grotewohl was one of the deputy chairmen of the newly created State Council. Despite a severe illness, which began in November 1960, he remained in office but was no longer actively involved in political decision making. Grotewohl died in East Berlin on 21 September 1964.

Ground Burst

Structures at or near Ground Zero (the precise spot of the detonation) are wiped out in a fraction of a second, vaporized by heat that can reach as much as 20 million degrees Fahrenheit.

A nuclear bomb detonation that occurs at or near ground level or, in some cases, a subterranean detonation. As opposed to an air burst detonation, which can be programmed to occur anywhere from a few hundred feet in the air to many thousands of feet up, a ground burst nuclear detonation is designed to inflict the maximum amount of damage on ground-level structures, military installations, bunkers, fallout shelters, and other vulnerable targets. The overall area of damage is significantly less than an air burst, which unleashes catastrophic damage over a wider area. Had a nuclear exchange occurred during the Cold War, it is quite probable that nuclear bombs and nuclear-tipped missiles aimed at enemy missile installations, air fields, military bases, and surface ships would have been programmed for ground bursts to maximize the bomb's destructive capabilities in a concentrated area. This would have also incapacitated unhardened nuclear missile silos, the missiles of which had not yet been fired.

In a ground burst explosion, the signature fireball usually has direct contact with the ground, unlike an air burst detonation. Structures at or near Ground Zero (the precise spot of the detonation) are wiped out in a fraction of a second, vaporized by heat that can reach as much as 20 million degrees Fahrenheit. A 10-kiloton (equivalent to 10,000 tons of TNT) nuclear ground burst explosion would create a crater 170 feet deep and 600 feet in diameter. While a ground burst generally causes less physical damage than an air burst, the radioactive fallout produced by a weapon detonated at ground level is more pronounced than an air burst explosion. This is because the fireball that forms the familiar mushroom cloud sucks up millions of tons of dirt and debris, which settles back to the earth as lethal fallout. Several nations also developed nuclear bombs designed to penetrate the earth, presumably to destroy underground bunkers and hardened sites. In the late 1960s, both the United States and the Soviet Union also developed retarded ground burst weapons, also called laydown bombs. These devices lay on the ground for a set period of time before they explode, thus allowing aircraft to flee the area.

Groza, Petru
(1884–1958)

Romanian premier (1945–1952) and president (1952–1958). Born in Bacia in Transylvania (then part of Hungary) on 7 December 1884, Petru Groza studied

law and economics at universities in Budapest (1903–1905), Berlin (1905), and Leipzig (1906). Awarded a doctorate in law in 1907 from the University of Budapest, he then practiced law at Deva in Transylvania and joined the Romanian National Party (PNR).

Groza served in the Austro-Hungarian Army in World War I. In December 1918 he participated in the assembly at Alba Iulia that proclaimed the union of Transylvania with Romania. Elected a deputy to the Romanian parliament in 1919, from 1920 he was a member of General Alexandru Averescu's People's Party. Groza served as minister of public works in 1921 and 1927.

In January 1933, Groza founded and became the leader of the *Frontul Plugarilor* (Ploughman's Front Party), a left-wing agrarian party that advocated land reform, reduction of peasant debt, improved social services, and heavier taxes on the wealthy. During this time the party, which did not fare well in the elections of 1935, developed close ties with the political Left, including the illegal Communist Party.

An opponent of fascism, Groza was briefly imprisoned during World War II. He revived the Ploughman's Front (abolished in 1938) in 1944, and the Soviets included it in their National Democratic Front of October 1944. Groza's impeccable left-wing credentials made him an attractive choice to be premier in Moscow's communist-dominated front, but he became vice premier in the government established in November 1944.

Appointed premier on 6 March 1945 in a government dominated by the communists, Groza assisted the communists in establishing their dictatorship. Known as the "Red Lion of Deva," he served as premier until 2 June 1952, when he became president of the Presidium of the Grand National Assembly, or chief of state, until 7 January 1958.

Groza was a complex figure who is still highly regarded by Romanians. A noncommunist, he nonetheless cooperated in the communist takeover of Romania. He strongly supported the communist land reform policies of March 1945 that limited private holdings to 50 hectares (125 acres). In all, more than 1 million hectares were expropriated and distributed to about 800,000 peasants. Groza also presided over the trial of Romania's World War II leaders; the abolition of democratic political parties (including his own Ploughman's Front) and the monarchy; the concentration on development of heavy industry; the introduction of women's suffrage; Romania's acceptance of the 1947 Paris Peace Treaty, including heavy reparations to the Soviet Union and loss of territory; and the nation's complete integration into the communist bloc.

Groza's political influence declined over time, although he was able to slow some radical measures, particularly in education and the economy, and to protect some prominent Romanian intellectuals. He sought a more conciliatory approach toward Hungary but did support the Soviet military intervention there in 1956. Beginning that same year his health rapidly declined. Groza died in Bucharest on 7 January 1958.

Gruber, Karl (1909–1995)

Austrian foreign minister (1945–1953). Born in Innsbruck on 3 May 1909, Karl Gruber received a degree in electrical engineering from Innsbruck University and then studied political science and law there. Although his parents were Social Democrats, he joined the Fatherland Front in 1936. After the German takeover in 1938, he did research on high-frequency radio in Berlin. Late in World War II, he led the anti-Nazi Tyrolean Resistance Movement.

During the Allied occupation, Gruber served as the first postwar governor of North Tyrol and was a founder of the Austrian People's Party. He served as foreign minister (1945–1953) under Karl Renner, Leopold Figl, and Julius Raab. Dismissed by some scholars as an amateur who concocted fanciful schemes and gave vitriolic, undiplomatic speeches, Gruber is credited by others with making positive contributions to the Second Republic's foreign policy.

The South Tyrol dispute, the restoration of Austrian sovereignty, and Westernization dominated Gruber's agenda. He sought revision of the St. Germain Treaty, which had awarded the South Tyrol to Italy in 1919. The Allies rejected alterations of the Italian border in Austria's favor, however. In the Gruber–De Gasperi Agreement (5 September 1946), Italy conceded limited autonomy for the South Tyroleans. Although the Italians violated its letter and spirit, the agreement acknowledged Austria's interest in the German minority, a starting point for future negotiations.

The goal of restoring full sovereignty through a state treaty proved just as elusive. The treaty's nomenclature derived from Austria's anomalous status as an occupied nonbelligerent under the theory, propounded in the Moscow Declaration, that Austria was Adolf Hitler's first territorial conquest. Under the Potsdam Declaration, the Soviets demanded the expropriation of Austria's German assets and applied a broader definition than the Allies were willing to concede. By 1950, German assets and Cold War conflicts stalled

negotiations. Gruber helped break the stalemate by securing Brazilian sponsorship of a United Nations resolution encouraging the wartime Allies to expedite an Austrian treaty. Its passage in December 1952, with strong non-Western support, persuaded the Soviets that the treaty was more than just U.S. propaganda. In early 1953, Julius Raab sponsored Austro-Soviet talks on neutralization. A scandal over publication of Gruber's memoirs led to his resignation in autumn 1953. During the first of three stints as ambassador to the United States, he helped to win U.S. support for the 1955 Austrian State Treaty.

Gruber played an important role in Austria's economic Westernization. Despite his American sympathies, he nonetheless rejected American political strings as the price for Marshall Plan assistance but served as vice president of the Organization of European Economic Cooperation (OEEC) during 1949–1954. To allay Soviet fears, he rejected Austrian participation in the European Coal and Steel Community (ECSC) in 1951.

In 1987, during the Waldheim Affair, Gruber briefly served as special ambassador to the United States. Kurt Waldheim had been Gruber's secretary in the 1940s, and he staunchly defended Waldheim's reputation. Gruber died in Innsbruck on 1 February 1995.

The only U.S. military base on communist-held territory and the site of much East-West discord during the Cold War. Located on both sides of an impressive harbor on the southwestern coast of Cuba, the Guantánamo Naval Base has been occupied by the United States since the early years of the twentieth century.

U.S. troops first landed at Guantánamo Bay in June 1898 during the Spanish-American War. In a 1903 agreement, the United States leased 28,817 acres, or about 45 square miles of land and water, around Guantánamo Bay from the new Republic of Cuba. A 1934 treaty modified the original lease, stipulating that the base would revert to Cuban sovereignty only if both nations agreed to the change.

Guantánamo Naval Base

U.S. Marine Corps Commandant General David M. Shoup looks through a set of binoculars into Cuba during his inspection tour of the base, 14 November 1967. (Bettmann/Corbis)

Cuba's post-1959 government, led by communist dictator Fidel Castro, has steadfastly refused to accept the legality of the base or the payments provided for in the lease. The Cubans argue that the original lease was forced on a weak, newly independent Cuba as part of the 1902 Platt Amendment, which gave the United States the right to intervene in Cuban affairs indefinitely.

U.S. strategic justifications for retaining the base have undergone a number of permutations. Guantánamo was initially built as a coaling station to resupply the U.S. fleet. As coal-fueled ships became obsolete, the United States sought other pretexts to keep the base. Guantánamo, it was subsequently argued, gave the United States control over Atlantic entry to the Caribbean as well as sea routes between its Atlantic coast ports and the Panama Canal. When changes in military technology and the end of the Cold War inspired a debate over the future of the base in the 1990s, Washington argued that the base was vital in U.S. efforts to interdict drug smugglers from Central and South America.

Cuban critics have pointed to the U.S. government's use of the base to interfere in the economic and political affairs of Cuba. Indeed, Guantánamo was used to stage U.S. interventions in Cuba in 1906 and 1912 and during 1917–1919, ostensibly to stabilize political disturbances and to protect U.S.-owned sugar properties in the region.

Following the 1959 Cuban Revolution, Guantánamo was at the center of the Cold War conflict between the United States and communist Cuba, sup-

ported by the Soviet Union. Defecting Cubans entering Guantánamo, a 1964 attempt by the Cuban government to cut water supplies to the base, and clashes between U.S. and Cuban troops along the fence surrounding the base all created tension. The Cubans also interpreted naval maneuvers conducted from Guantánamo during the Jimmy Carter, Ronald Reagan, and George H. W. Bush administrations as an assault on Cuban sovereignty.

In 1992, Camp X-Ray was built at the base to house Haitian refugees seeking entrance to the United States. In 1994, Guantánamo received thousands of Cubans who wished to leave the island. Eight years later, the Americans began to ferry prisoners captured in the U.S. invasion of Afghanistan to the base for indefinite detention. Evidence of Americans' ill treatment of prisoners at the base provoked a wide-ranging debate within the United States and abroad during 2002–2007.

Central American nation. Guatemala encompasses 43,042 square miles, about the size of the U.S. state of Tennessee, and had a 1945 population of approximately 2.9 million people. Guatemala borders Mexico to the west and north; Belize, the Caribbean Sea, and Honduras to the east; and El Salvador and the Pacific Ocean to the south. Guatemala's Cold War experience was characterized by frequent coups and the increasing entrenchment of the military in power with near-total control of the political scene. It was also punctuated by U.S. interference, driven by economic and ideological reasons.

On 20 October 1944 in what has come to be known as the October Revolution, armed students and workers as well as dissident military officers ousted the dictatorial Jorge Ubico regime. In its place, an interim regime led by Francisco Arana and Jacobo Arbenz held a presidential election in which Juan José Arévalo won 85 percent of the vote and became president. The revolution and subsequent elections marked the beginning of what has been termed the Ten Years of Spring, lasting from 1945 to 1954.

Arévalo immediately democratized the state by granting universal suffrage to all adults except illiterate women. He also arranged for freedom of speech and freedom of the press, and he permitted all political parties except for the Communist Party to function. He devoted large amounts of government funding to social programs and also improved labor codes, which angered

Guatemala

Guatemala's largest landholder, the American-owned United Fruit Company (UFCO). Although Arévalo was a staunch anti-Liberal individualist and anti-Marxist, the U.S. press quickly labeled him a communist. Indeed, the United States demanded that he modify the labor codes and terminate a number of his cabinet members because of their alleged communist proclivities.

In 1951, after two failed coup attempts, Defense Minister Arbenz was elected president. He proceeded to expropriate nearly 1.5 million acres of land, much of which belonged to the UFCO, and distributed it to roughly 100,000 peasant families. Even though the UFCO received what was arguably fair monetary compensation for the land, it along with Guatemala's landed oligarchy demanded an immediate reversal of the land reforms.

Early in 1953 the American Central Intelligence Agency (CIA) engineered a plan to help overthrow Arbenz. It also trained and equipped a mercenary army of mostly Guatemalan exiles. In June 1954 the self-labeled *liberacionista* (liberationist) army, consisting of between 150 and 200 men, crossed into Guatemala from neighboring Honduras. The army did not press on, however, instead allowing three U.S.-provided planes (flown by U.S. pilots) to menace Guatemala City and other urban centers. Guatemala's army high command feared the United States and forced Arbenz from power. He then went into exile in Mexico. Many of the younger soldiers and officers who were extremely loyal to Arbenz resisted, however, thus beginning a guerrilla war that lasted until 1996.

The army leadership that took power in Guatemala was firmly anti-communist and allowed American personnel to be directly involved in government decision making. In 1956 the military, now in complete control of the government, reversed Arbenz's reforms. The military continued to direct the country even in the face of many (failed) coup attempts and escalated guerrilla warfare. The Pentagon directed the counterinsurgency movement during 1966–1968, at which point almost all political offices in Guatemala were held by military personnel. Under the guise of alleged antiterrorist campaigns, the military suspended all civil rights, carried out mass assassinations and kidnappings, and prevented all opposition parties from participating in the political process. These increasingly brutal tactics led to Guatemala's increasing international isolation as well as staunch civilian resistance.

The years 1980–1983 saw the most intense fighting. Under the leadership of President-General Romeo Lucas García (1978–1983), newly formed death squads attempted to quell guerrilla forces in the cities and the countryside. In rural areas, a scorched-earth policy resulted in the destruction of entire villages—sometimes along with their inhabitants—and decimated jungles and forests. Up to 200,000 civilians may have perished during the forty years of civil war.

By 1982 there were a number of different coup plots in which the CIA was involved. Lucas, realizing that he could not remain in charge, stepped down, and General José Efraín Ríos Montt took over as head of a military junta. He was forced to resign on 8 August 1983, however, because he continued to stall democratic reforms. General Oscar Mejía Victores then took

over. He held the country's first real and free election since 1951, which was supported by the United States.

A civilian, Vinicio Cerezo, was elected president in 1985. Yet during 1983–1989 the military still held the reins of political power and fought against the guerrillas and constant coup attempts. At the end of the Cold War, despite nearly half a century of dictatorial repression, revolutionary movements continued to gain strength in Guatemala. By 1996 the government and military establishment finally realized that it could not win against the guerrilla forces, and a peace accord was signed between the two sides to end the civil war. Nevertheless, political corruption and violence continue to plague the country.

Covert U.S.-sponsored coup against the Guatemalan regime of Jacobo Arbenz, whose policies were deemed communistic and a threat to U.S. interests. The 1954 intervention in Guatemala represented a successful covert operation backed by the United States and engineered by the Central Intelligence Agency (CIA) in a region that had often witnessed direct U.S. military intervention in the early twentieth century.

At the beginning of the Cold War, Latin America ranked low on the list of U.S. priorities. In fact, when the newly created CIA evaluated Soviet aims in Latin America in late 1947, it concluded that there was almost no possibility of a communist takeover anywhere in the area. At the same time, there existed a major disagreement over hemispheric priorities between the United States and Latin America. While the United States stressed strategic concerns, Latin American nations constantly pressed the United States to help promote economic development. Although the United States was primarily concerned with promoting stability in the area, it did not automatically oppose major change, as its substantial support for revolutionary Bolivia in the 1950s demonstrated.

Guatemalan Intervention (1954)

The evolving situation in Guatemala, however, provoked a much different American response. U.S. policymakers' concerns with Guatemala began in 1944 upon the overthrow of longtime dictator General Jorge Ubico. The succeeding administrations of Juan José Arévalo (1945–1951), an educator, and Jacobo Arbenz (1951–1954), a reform-minded army colonel, implemented a nationalist, reformist program. These reforms soon led to a conflict between the government and foreign-owned companies, especially the powerful United Fruit Company (UFCO), an American-owned corporation. These companies had influential friends and lobbyists in Washington, and the U.S. government was increasingly concerned about the growing influence of communists in Guatemala, especially in the labor movement and in the agrarian reform program. Arbenz's new labor policy led the UFCO to pressure the U.S. government to impose economic sanctions, but the Truman administration refused to be drawn into the growing controversy. In June 1952 the Arbenz government implemented new agrarian legislation providing for the expropriation of uncultivated lands, with compensation in government bonds. In early 1953, the Guatemalan government used this legislation to expropriate the UFCO's unused land. The new U.S. administration of Dwight Eisenhower vigorously protested the action as discriminatory and the method of compensation as inadequate, although past American administrations had considered payment in bonds as satisfactory.

The Eisenhower administration responded with a two-track policy: a diplomatic track pursued by Secretary of State John Foster Dulles and a military track under his brother, CIA Director Allen Dulles. Both of the Dulles brothers had connections to the UFCO; John Foster Dulles had worked for a law firm representing UFCO, while brother Allen had served on the company's board of directors. At the diplomatic level, John Foster Dulles moved for action against Guatemala at the Tenth Inter-American Conference at Caracas in March 1954, where he personally headed the U.S. delegation. Dulles, however, encountered the usual Latin American desire to discuss economic problems, not the perceived communist threat to the American republics. After two weeks of negotiations, the conference unenthusiastically passed a resolution classifying international communism as a threat to the independence of American states and calling for a consultative meeting of foreign ministers to deal with specific cases. Neither Dulles nor the resolution specifically mentioned Guatemala, although Guatemala cast the only vote against the resolution.

The resolution of the Guatemalan situation ultimately reflected the second track being pursued by the United States. The CIA had already begun arming and training a group of Guatemalan exiles, led by Guatemalan Colonel Carlos Castillo Armas, in late 1953. On 18 June 1954, this force of approximately 150 men invaded Guatemala from neighboring Honduras. Supporting the invasion force were three aircraft based in Nicaragua and flown by civilian pilots, most of whom were U.S. citizens or CIA operatives. The key to the intervention's success was neither the rebel force nor the CIA but rather the attitude assumed by the regular Guatemalan Army, which refused to mount any significant opposition to the invasion. When Arbenz

took matters into his own hands and tried to arm his civilian supporters, the army prevented the move and instead forced the resignation of Arbenz on 27 June. A military junta appointed Armas provisional president on 7 July. Armas indicated the direction that his regime would take when he returned the UFCO lands expropriated under Arbenz. The U.S. government responded by recognizing the new government on 13 July and by providing military, economic, and technical aid to the new regime.

The Arbenz government had initially hoped for international support in the crisis. Guatemala twice appealed to the United Nations Security Council to end the fighting but received only a watered-down resolution calling for an end to any actions that might cause further bloodshed. The Organization of American States (OAS) responded to the Guatemalan situation on 28 June, the day after Arbenz resigned. The OAS Council called for a meeting of foreign ministers in Rio for 7 July, although the rapid consolidation of power by Armas ended the crisis, and the Rio meeting was never held.

The decision by the Eisenhower administration to intervene in Guatemala was influenced by the earlier (August–September 1953) CIA-backed coup in Iran, which had toppled a nationalist regime and restored the pro-American Shah of Iran to power. The lessons of Iran were applied to Guatemala. The lessons of Guatemala would in turn be applied to Cuba with disastrous results during the Bay of Pigs debacle in April 1961. The United States had successfully kept the Guatemalan crisis a hemispheric issue to be handled by the OAS, but the American role in Arbenz's ouster violated one of the most important provisions of the OAS Charter: the prohibition on intervention. The Eisenhower administration clearly believed that the Guatemalan operation was a major victory in the Cold War and that such covert operations offered an effective and inexpensive way of dealing with similar problems in the future. The intervention itself did little to promote peace or stability in Guatemala. Armas was assassinated in July 1957, and bitter political divisions and the socioeconomic issues behind them continue to haunt Guatemala in the twenty-first century.

**Guevara de la Serna,
Ernesto**
(1928–1967)

Argentine Marxist revolutionary and contributor to the doctrine of revolutionary warfare. Born on 14 June 1928 to a middle-class family in Rosario, Argentina, Ernesto “Che” Guevara de la Serna trained as a medical doctor at the University of Buenos Aires, graduating in 1953. That same year he traveled throughout Latin America, witnessing the early months of the Bolivian National Revolution and the last months of the October Revolution in Guatemala during the reign of Jacobo Arbenz. America’s covert 1954 opera-

Cuban revolutionary Ernesto “Che” Guevara was a key player in the overthrow of the Batista dictatorship in Cuba. Guevara was wounded and executed by the Bolivian Army while training leftist guerrillas in Bolivia in 1967. (Library of Congress)

tion that ousted the leftist Arbenz from power radicalized Guevara, as did his later encounter in Mexico with several Cuban revolutionaries, including Fidel Castro. Guevara subsequently joined Castro's expedition to Cuba in December 1956 and fought with his July 26 Movement until it triumphed in January 1959.

Guevara became Cuba's first president of the National Bank and then minister of industry in Cuba's early postrevolutionary government, where he espoused unorthodox Marxist economic ideas about the scope and timing of economic transformation. His notion of the "New Man" and his advocacy of centralized planning and the urgency of abolishing capitalist influences pitted him against more orthodox Marxist and Soviet advisors. Guevara's line won out in the early and mid-1960s, leading to a reliance on moral rather than material incentives and experiments with the abolition of currency. What was sometimes called Sino-Guevarism climaxed in the disastrous Ten-Million-Ton Sugar Harvest Campaign of 1968. Following this, Cuba's economic policy retreated from Guevarista utopianism.

Guevara left Cuba in 1965, possibly because of disagreement with its political leadership and certainly because of a long-standing commitment to promoting worldwide revolution. In his early years in Cuba, he had been a proponent of the heretical political and military ideas of what became known as *foco* theory. The *foquistas*, including the French philosopher Régis Debray, challenged the orthodox communist emphasis on parliamentary and legal struggle, advocating instead the establishment of rural, peasant-based centers (*focos*) to foment revolutionary commitments.

Guevara traveled to the Congo in 1965 and then to Bolivia in 1966. It is now believed that Guevara's project to initiate an insurrection there was prompted by a desire to use Bolivia as a focus for the transformation of neighboring countries rather than by a belief in the viability of making revolution in Bolivia itself, where a major social revolution had begun in 1952. Guevara's overwhelming goal was to provide a diversion that would weaken U.S. resolve and resources then dedicated to waging war in Vietnam.

The *foquistas* were aware that postrevolutionary Cuba would increase American efforts to prevent more revolutions by modernizing Latin American militaries and developing modernization and reform projects such as the Alliance for Progress. But they underestimated the speed with which sections of the Bolivian armed forces would be transformed by U.S. aid and training once Guevara had located to Bolivia.

Guevara's revolutionary expedition was also handicapped by tense relations with the Bolivian Communist Party and its leader, Mario Monje, who was offended by Guevara's insistence on maintaining leadership of the revolutionary *focos*. There was also little peasant support for the Guevarista force, which was made up of both Bolivian recruits and experienced Cuban revolutionaries. Difficult terrain also complicated the revolutionaries' work, and eventually they split into two groups.

The most controversial issue surrounding the collapse of Guevara's efforts in Bolivia is whether or not Cuban support for the guerrillas was satisfactory. Some Guevara biographers have suggested that Soviet and Cuban relations

Guevara's notion of the "New Man" and his advocacy of centralized planning and the urgency of abolishing capitalist influences pitted him against more orthodox Marxist and Soviet advisers.

with the revolutionaries were partly shaped by Soviet annoyance at the impact that the new revolutionary front might have on its relations with the United States. Thus far, there is no conclusive evidence to support this line of argument.

A Bolivian Army unit captured Guevara in the Yuro ravine on 8 October 1967 and summarily executed him the next day at La Higuera, Villagrande. One of his hands was removed to facilitate identification by U.S. intelligence. A copy of Guevara's diaries was smuggled to Cuba, where it was published (along with an edition brokered by the U.S. Central Intelligence Agency) as his *Bolivian Diaries*. Guevara's body was uncovered in an unmarked site in Bolivia in 1997 and, together with the remains of a number of other Cuban revolutionaries who died in Bolivia, was repatriated to Cuba for internment in a monument in Santa Clara City.

Gulags

Russian acronym for Glavnoye Upravleniye Lagerey (State Director of Camps), an agency of the Soviet secret police that administered the Soviet system of forced labor camps where political dissenters, dissidents, and other alleged enemies of the state were sent.

The first gulags were established in tsarist Russia and in the early Soviet era under Vladimir Lenin. The gulags reached their zenith in the period of Josef Stalin's rule. Unlike other labor camps before and after, people were imprisoned not just for what they had done but also for who they were in terms of class, religion, nationality, and race. The gulag was one of the means by which to implement Stalin's political purges, which cleansed the Soviet Union of real and imagined enemies.

The first gulag victims were hundreds of thousands of people caught in the collectivization campaigns in the early 1930s. After the Red Army's invasion of the Baltic states and Poland in June 1941, the secret police incarcerated potential resistors. When Adolf Hitler sent German armies into the Soviet Union in June 1941, people of German ancestry in Eastern Europe were incarcerated as well. Following the German defeat at Stalingrad, the Red Army advanced west, capturing and imprisoning enemy soldiers. Stalin also incarcerated partisan groups from all over Eastern Europe.

Barbed wire surrounds the Soviet penal colony at Minsk in the USSR, 16 February 1958. (Bettmann/Corbis)

Following World War II, the Allies agreed that all Russian citizens should be returned to the Soviet Union. This naturally included Soviet prisoners of war held by the Germans. The Western Allies also forced anti-Soviet émigrés, many of whom had fought with Hitler, to return to the Soviet Union. The vast majority of these were either shot or simply disappeared into a gulag. In March 1946, the Soviet secret police began incarcerating ethnic minorities, Soviet Jews, and youth groups for allegedly anti-Stalinist conspiracies as well as people who were viewed as a hindrance to Sovietization campaigns in Eastern Europe.

The juridical process for sentencing people to a gulag comprised a three-person panel, which could both try and sentence the accused or simply rely on Article 58 of the Soviet Criminal Code. Article 58 deprived Soviet citizens suspected of illegal activity of any rights and permitted the authorities to send anyone to the camps for any reason, justified or not. The gulag served as an institution to punish people but also was meant to fulfill an economic function, for Stalin sought to deploy workers in remote parts of Russia that had brutal climates but were rich with natural resources.

In the early 1950s, gulag authorities issued reports revealing that the camp system was unprofitable. Stalin, however, commanded further construction projects such as railways, canals, power stations, and tunnels. Thus, thousands of prisoners died, and maintenance costs skyrocketed. To an extent, the situation changed in the gulags after the war because the inmates had

changed. These new politicals were well-organized and experienced fighters who often banded together and dominated the camps. Slowly, authorities lost control.

Immediately following Stalin's death in March 1953, Lavrenty Beria briefly took charge, reorganized the gulags, and abandoned most of Stalin's construction projects. Beria granted amnesty to all prisoners sentenced to five years or less, pregnant women, and women with children under age eighteen. He also secretly abolished the use of physical force against detainees. In June 1953, he announced his decision to liquidate the gulags altogether. However, he was subsequently arrested and executed. The new Soviet leadership under Nikita Khrushchev reversed most of Beria's reforms, although it did not revoke the amnesties.

Because neither Beria nor Khrushchev rehabilitated the political prisoners, they began to fight back with their new and well-organized groups. They killed informers, staged strikes, and fomented rebellions. The biggest of these occurred in Steplag, Kazakhstan, and lasted from spring until late summer 1954. Inmates seized control, but Soviet authorities brutally quashed the revolt.

In the aftermath of the Steplag rebellion, the secret police relaxed gulag regulations, implemented an eight-hour workday, and gradually began to re-examine individual cases. This process was accelerated by Khrushchev's condemnation of Stalin's rule in February 1956. In the so-called Thaw Era, the gulags were officially dissolved, and the two biggest camp complexes in Norilsk and Dalstroi were dismantled. Despite the Thaw, certain politicals were still incarcerated.

Under Leonid Brezhnev, politicals were renamed "dissidents." In the wake of the Hungarian Revolution in October 1956, the Komitet Gosudarstvennoi Bezopasnosti (KGB) used two camps in Moldova and Perm to incarcerate dissidents. In contrast to former prisoners, these detainees consciously criticized the government and purposely invited incarceration to gain the attention of Western media. By 1966 Brezhnev, and later Yuri Andropov, then chairman of the KGB, declared these dissidents "insane" and imprisoned them in psychiatric hospitals. When Mikhail Gorbachev took power in 1985 and embarked on reform, perestroika brought a final end to the gulags in 1987, and glasnost allowed limited access to information about their history.

It is impossible to determine just how many people were imprisoned and how many died in the gulags. Conservative estimates hold that 28.7 million forced laborers passed through the gulag system. There were never more than 2 million people at a time in the system, although perhaps as many as 3 million people died during the Stalin era in the camps.

Guyana

South American nation. Formerly British Guiana, Great Britain's only colony on the South American mainland, Guyana covers 83,000 square miles and is bordered by Venezuela to the west, Brazil to the south, Suriname to the east, and the Atlantic Ocean to the north. It had a 1945 population of some 370,000 people. Guyana's major export is sugar, the cultivation of which has created a multiethnic country as African slaves and then indentured servants from Portugal, China, and India were brought to work on the sugar plantations. By 1960, East Indians made up about 45 percent of the voting age population and Afro-Guyanese a little more than a third.

Nationalism in British Guiana took firm hold shortly after the 1943 homecoming of Cheddi Jagan, an Indo-Guyanese dentist. Jagan had received his dental training in the United States, where he met and married Janet Rosenberg, a radical activist who had been a member of the Young Communist League (YCL). The Jagans immediately began organizing an anticolonial movement that became the radical and multiracial People's Progressive Party (PPP). Afro-Guyanese in the PPP were led by Forbes Burnham, a charismatic lawyer. Under their leadership, the PPP overwhelmingly won the colony's first legislative elections held under universal suffrage in 1953 and was expected to lead British Guiana to independence. Instead, the Jagans and many of the PPP's leaders acted with unexpected radicalism. Convinced that the government was communist, the British government sent a warship to Georgetown, the colony's capital, and removed the PPP from power on 9 October 1953, just 133 days after its electoral victory.

Thereafter, Burnham split with the Jagans, claiming that they were communists, and formed a predominantly Afro-Guyanese party. Jagan won the ensuing election with the support of East Indians and radical Afro-Guyanese. He was reelected in 1961, and the British implied that he would lead the colony to independence.

U.S. President John F. Kennedy did not want Jagan to lead an independent Guyana. Following the April 1961 Bay of Pigs debacle, the prospect of a "Cuba on the South American mainland" greatly worried the Kennedy administration. After an October 1961 meeting with Jagan, Kennedy concluded that Jagan was a communist (or at least a fellow traveler) under his

wife Janet's control and had to be removed from power. Under much U.S. pressure, the British reluctantly agreed.

In February 1962, Jagan proposed a bill that would raise taxes and institute compulsory savings. The bill would have its greatest impact on urban Afro-Guyanese trade unionists and Portuguese businessmen. The labor unions called a general strike centered in Georgetown, and many businesses locked out those who refused to strike. Strikers were soon joined by the opposition parties. Riots broke out on 16 February, which led to arson that burned much of Georgetown's commercial district. Jagan quickly withdrew the bill.

The following year, Jagan proposed a union recognition bill, which he claimed was based on the New Deal's Wagner Act, that would have given his government effective control over the labor movement. Labor responded with an eighty-day general strike that increased racial tensions and violence but forced Jagan to withdraw the bill.

Both strikes received assistance from the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), with the AFL-CIO providing approximately \$1 million in strike relief in 1963. It was later revealed that the Central Intelligence Agency (CIA) had provided the AFL-CIO with the strike funding. It is unclear what role, if any, the CIA played in the arson and violence and what role British intelligence played.

On 31 October 1963, the British announced that before British Guiana could receive independence, there would be a final election, this time held under proportional representation. The furious Jagan launched a sugar workers' recognition strike in February 1964 in an effort to take over that industry, which primarily employed East Indians. Jagan called off the strike after 161 increasingly violent days, which the British and U.S. governments attributed to Cuban-trained East Indian youths and an Afro-Guyanese terrorist cell.

Although the PPP received 46 percent of the vote in the 7 December 1964 election, Burnham was elected prime minister as the head of a coalition. On 26 May 1966, the British granted Guyana its independence. Burnham quickly jettisoned his coalition partner, made himself president for life in a series of rigged elections, and progressively moved to the autocratic Left. While the U.S. government was unhappy with this turnabout, it continued to support Burnham and his successor, Desmond Hoyte, to keep Jagan from power. Only with the Cold War's end did the United States pressure the Guyanese government to democratize. Jagan was elected president in 1992.

Gyatso, Tenzin

H

U.S. Army general, U.S. secretary of state during 1981–1982, army vice chief of staff during 1972–1973, and supreme commander of the North Atlantic Treaty Organization (NATO) during 1974–1979. Born on 2 December 1924 in Bala Cynwyd, a suburb of Philadelphia, Pennsylvania, Alexander Haig attended Notre Dame University and subsequently graduated from the United States Military Academy, West Point, in 1947. He served on General Douglas MacArthur's personal staff in Japan after World War II and saw combat duty during the Korean War. Haig received a master's degree in international relations from Georgetown University in 1961.

Haig then served a tour at the Pentagon. During 1965–1967, he served in the Vietnam War with the 1st Infantry Division, rising to lieutenant colonel. He returned from Vietnam to become deputy commandant at U.S. Military Academy, West Point in 1968.

In 1969 Colonel Haig became military assistant to National Security Advisor Henry Kissinger. Advanced to brigadier general in October 1969, Haig became deputy assistant for national security affairs in 1970. Haig played an important role in Vietnam War planning by participating in the decisions to carry out the secret bombing of Cambodia. He was promoted to major general in March 1972.

In September 1972 President Richard M. Nixon advanced Haig to full general and appointed him army vice chief of staff, bypassing 240 higher-ranking general officers and prompting considerable criticism by many who regarded Haig as a yes-man for the president. Haig retired from the military in 1973 to become White House chief of staff to President Nixon. As such, Haig maintained stability and helped organize a smooth transition after Nixon's August 1974 resignation.

**Haig, Alexander
Meigs, Jr.**
(1924–)

General Alexander Haig was supreme commander of NATO forces and later U.S. secretary of state. (Defense Visual Information Center)

After the 1981 assassination attempt on President Reagan, Haig infamously and erroneously claimed that he was “in command at the White House” in the absence of the vice president.

Haig resumed his military career in 1974 when President Gerald Ford appointed him supreme allied commander of NATO forces in Europe. In 1979 Haig retired from the military again after disagreeing with President Jimmy Carter’s policies toward the Soviet Union.

During the 1980 presidential campaign, Haig served as a foreign policy advisor to Ronald Reagan. Appointed secretary of state, Haig served during 1981–1982. He advocated a firm stance against perceived threats posed by the Soviet Union and was an early supporter of aid to guerrillas fighting the Soviets in Afghanistan. After the 1981 assassination attempt on President Reagan, Haig infamously and erroneously claimed that he was “in command at the White House” in the absence of the vice president.

In 1982 Haig engaged in shuttle diplomacy to mediate the growing conflict between Britain and Argentina over the Falkland Islands. It became clear, however, that Haig was more sympathetic to the British cause, which engendered bad feelings on the part of the Argentines. Haig’s abrasive manner and mismanagement of the Falklands crisis forced his resignation on 25 June 1982. He established his own consulting firm after leaving government service.

Haile Selassie, Emperor of Ethiopia (1892–1975)

Emperor of Ethiopia (also known as Abyssinia) during 1930–1974. Born at Ejersagoro on 23 July 1892 as Tafari Makonnen, Haile Selassie’s father was Ras Makonnen, a Coptic Christian and leading general and political figure. Tafari was a grandnephew of Emperor Menelik II, who ruled during 1889–1913.

Selassie ascended the throne in April 1930. His royal name means “Power of the Trinity” in Amharic. Selassie’s reign was marked by modernization programs, the growth and development of the nation’s infrastructure, and efforts at increasing the strength of the military.

Despite a valiant resistance effort, Selassie could not prevent the seven-year occupation of his country by Italy beginning in 1935, during which time

he was forced into exile in Britain. In 1942, he returned to power following the defeat of Italian forces by the British Army and the signing of the Addis Ababa Agreement, which granted Ethiopia full sovereignty and independence. Selassie forged a close relationship with the United States, which established a military command center in Ethiopia during World War II.

By the late 1940s, northern Africa and the Middle East had become a key strategic region in the growing Cold War, and the United States feared Soviet expansion in the area. This threat was magnified by the rising tide of Pan-Arabism, a movement that sought the unification of all Arab countries and an end to the West's exploitation of Middle Eastern oil resources. In May 1953, Selassie signed an economic pact with the United States designed to provide significant developmental and military assistance. This was particularly useful because of the emerging local independence movements in the rebellious provinces of Eritrea, Tigray, and Ogaden, which threatened Selassie's Pan-African vision of a grand Ethiopian union. In the early 1960s, the United States extended an aid package to Ethiopia, a development triggered partly by the burgeoning links between Eritrean Liberation Front (ELF) rebels and Pan-Arabic governments in Egypt and Syria as well as the independence of neighboring Somalia.

In 1963, war broke out between Ethiopia and Somalia, now in the Soviet orbit, over land disputes in Ogaden. The Somalians were defeated, but at a high cost. This Pyrrhic victory increased domestic discontent with Selassie's leadership. Public disaffection was further heightened by a sharp economic downturn and the advent of several major famines during the early 1970s. Many Ethiopian students and intellectuals, influenced by Marxist-Leninist models of economic development, called for the nationalization of state industry and an end to economic dependency on Western markets. Within this milieu, Selassie became increasingly viewed as an intransigent ideological reactionary, and the pomp and grandeur of his imperial court only enhanced the perception that he was unconcerned about the suffering of his people.

By the early 1970s Selassie's grip on power had sharply eroded, and he was deposed in a coup led by Haile Mariam Mengistu, a radical junior officer, on 12 September 1974. The junta pushed Ethiopia into the Soviet orbit and ended Ethiopia's alliance with the West. In terms of the Cold War, Selassie is an important figure who took advantage of Ethiopia's strategic importance in northern Africa to advance his nationalistic agenda of economic development and territorial expansion. Haile Selassie died in prison in Addis Ababa on 27 July 1975.

Haiti

Caribbean nation often the victim of internal violence and external intervention. Haiti, with a 1945 population of approximately 3 million, is located in the Caribbean Sea on the island of Hispaniola, which it shares with the Dominican Republic. Haiti occupies the western third of Hispaniola and is bordered by the Dominican Republic to its east. The remainder of the country is surrounded by the Caribbean Sea and lies immediately south and east of Cuba. A small nation, Haiti encompasses just 10,714 square miles, roughly the size of the U.S. State of Maryland. Ninety-five percent of its population is directly descended from African slaves, imported to the island in huge numbers during the seventeenth century.

Beginning in the early sixteenth century, the Spanish controlled Hispaniola and began to populate it with African slaves to work the vast sugar and later coffee plantations that prospered in the island's tropical climate. In 1697 Spain ceded the island to France, and Haiti subsequently became the wealthiest of French colonies by the end of the seventeenth century. That all changed, however, with the Great Slave Rebellion of 1791, led by the Haitian hero Toussaint L'Ouverture, who by 1800 had managed to gain control over most of the island. Although L'Ouverture was captured by French forces and sent to France in 1802, the rebellion continued, and the rebels defeated the French a year later. In 1804 Haiti declared itself an independent republic, making it the second-oldest black republic in the world.

The nineteenth century was not kind to the tiny nation, as it experienced a series of coups, revolts, and grinding poverty. After an angry mob executed Haiti's leader, the U.S. Marine Corps invaded Haiti in 1915 and occupied it until 1934, in the process establishing a tradition of undemocratic military rule and training a generation of Haitian leaders enamored with strong-arm military tactics. More instability followed the U.S. occupation. There were coups in 1946 and 1950, and in 1957 alone Haiti had six different presidents. In 1957, François "Papa Doc" Duvalier was elected president, beginning a twenty-nine-year reign of despotic terror. In 1964, he proclaimed himself president for life while ruling the nation with an iron fist. Political opponents were murdered, and the population was kept in check by his nefarious militia known as the Tontons Macoutes.

When Duvalier died on 22 April 1971, he was immediately succeeded by his son Jean-Claude "Baby Doc" Duvalier, who proved to be just as autocratic as his father. His government terrorized political opponents, quashed public criticism of his rule, was riddled with corruption and cronyism, and kept the population in abject poverty, so much so that Haiti has had the

In 1957, François ("Papa Doc") Duvalier was elected president, beginning a twenty-nine-year reign of despotic terror. In 1964, he proclaimed himself president for life while ruling the nation with an iron fist.

dubious distinction of being the Western Hemisphere's poorest nation. The United States turned a blind eye to much of the Duvaliers' tactics because they were staunchly anticommunist and kept the population in check. Baby Doc Duvalier hung on to power until February 1986 when, after three months of increasingly violent protests against the government's policies, he fled the country for France.

Between 1986 and 1990 Haiti was ruled by a series of provisional governments while prodemocracy reformers sought to overhaul the Haitian political system. After a new constitution was ratified in 1987, there was a brief glimmer of hope that democracy and stability might finally come to the embattled nation. A national election was held in December 1990 that was internationally supervised and believed to be free and fair. The winner of the presidential race was a young, charismatic Roman Catholic priest, Jean-Bertrand Aristide. Aristide, considered a progressive reformer, sought to initiate badly needed land reform and to jump-start the moribund Haitian economy. Yet violence and intimidation persisted in Haiti, much of it directed by the Tontons Macoutes and opponents of Aristide. Less than seven months into his presidency, on 30 September 1991 Aristide was overthrown in a violent coup led by Dr. Roger Lafontant and supported by the military and Haitian elites who feared Aristide's reform agenda.

In September 1994 Aristide was returned to power with American support, and a U.S.-led international peace-keeping force (MLF) was dispatched to Haiti to ensure the peaceful transfer of power. Although much hope was placed in Aristide's leadership, it soon became apparent that his administration was tolerant if not supportive of corruption and political intimidation. Nor was he able to bring about any substantive improvement to the economy. Aristide attempted to run for the presidency again in the December 1995 elections but was constitutionally forbidden. Instead, René Preval was elected, although Aristide and his supporters attempted to destabilize his government by claiming that the election results were invalid. This led to deep divisions between the executive and legislative branches and eventually to political gridlock. In December 2000 Aristide ran for president again in yet another disputed election and in February 2001 was inaugurated amid much controversy. Three years later, rebellion broke out among Aristide's opponents as tales of widespread government corruption began to circulate. In the meantime, the Aristide government had not ameliorated the abysmal economic situation. Finally, under pressure from the United States and other nations, Aristide left office on 29 February 2004, another sad story in the troubled history of Haiti. Aristide was succeeded by Boniface Alexandre, chief of the supreme court.

Hallstein, Walter (1901–1982)

Federal Republic of Germany (FRG, West Germany) academic and politician. Born in Mainz on 17 November 1901, Walter Hallstein studied law in Bonn, Munich, and Berlin, obtaining a doctorate in international law in 1925. Four years later he secured the right to lecture at the university level and taught business law at the University of Rostock (1930–1941) and then civil law at the University of Frankfurt-am-Main (1941–1945). Taken prisoner by the Americans in 1945, he founded a camp university before being released. He returned to Frankfurt-am-Main in February 1946 to help reestablish the law faculty there.

In June 1950, Chancellor Konrad Adenauer chose Hallstein to lead the West German delegation to discuss the Schumann Plan for European integration in Paris. Along with Jean Monnet, Hallstein was one of the key founders of the European Coal and Steel Community (ECSC). When this task was completed in August, Hallstein joined the Chancellor's Office as a state secretary for foreign affairs. Hallstein moved to the foreign office in 1951, and in 1955 he rose to prominence as the creator of the so-called Hallstein Doctrine, which would serve as a foundation for West German foreign policy for the next fifteen years. The Hallstein Doctrine stated that with the exception of the Soviet Union, West Germany would not establish diplomatic relations with any state that recognized the German Democratic Republic (GDR, East Germany).

Although perhaps not as well known for this as for his doctrine, Hallstein went on to win recognition for his work in the European Economic Community (EEC). He became president of the EEC Commission (EC) in 1958 and unveiled the Hallstein Plan for the EC the following year. His vision of a united Europe clashed with the emerging Gaullist notion of a "Europe of Nations." Hallstein resigned his post in 1967. He returned briefly to German politics as a representative in the Bundestag from 1969 to 1972. Hallstein died in Stuttgart on 29 March 1982.

The Hallstein Doctrine, named for Federal Republic of Germany (FRG, West Germany) official Walter Hallstein, stated that West Germany would not establish or maintain diplomatic relations with any state that established or maintained relations with the German Democratic Republic (GDR, East Germany). The West German government took the position that any attempt by a nation that already had relations with West Germany to establish ties with East Germany would be viewed as an unfriendly act against the German people. The sole exception to this policy was to be the Soviet Union, which, as a victor in World War II, had the power to approve or deny any peace treaty and any eventual German unification. This policy, which remained in effect for fifteen years, was a key part of West Germany's claim to be the sole legitimate representative of the German nation (*Alleinvertretungsanspruch*).

The doctrine emerged as policy in the aftermath of West German Chancellor Konrad Adenauer's trip to the Soviet Union in September 1955. The negotiations in Moscow brought the release of the last German prisoners of war held by the Soviet Union and established normal diplomatic relations between the two states. Adenauer, determined to build upon this success, therefore adopted the idea developed in 1951 by Walter Hallstein, a member of the German Foreign Office, to isolate East Germany diplomatically and position West Germany as the only viable option for a German state. Adenauer proclaimed this as policy during a conference of ambassadors in Bonn during December 1955.

The Hallstein Doctrine did not sit well with either the Soviets or the Allies, who viewed it as an attempt to impose conditions on Germany's unconditional surrender after the fact. West Germany nonetheless clung to the doctrine until the late 1960s. In 1957 when Yugoslavia recognized the East German government, the West German government immediately cut its ties to Belgrade; Cuba's recognition of East Germany in 1963 brought similar action. East Germany responded in kind. Under the so-called Ulbricht Doctrine, named for East German leader Walter Ulbricht, it cut relations with nations that recognized West Germany but with limited success. Adenauer's successors, Kurt-Georg Kiesinger and Ludwig Erhard, were less insistent on enforcing the Hallstein Doctrine as policy. Still, it was only in 1969, with the accession to power of Willy Brandt and the German Social Democratic Party

Hallstein Doctrine (1955–1970)

(SDC) that West Germany dropped its claim to be the sole legitimate state of the German people.

Hammar skjöld, Dag (1905–1961)

Swedish economist, bureaucrat, and United Nations (UN) secretary-general (1953–1961). Dag Hammar skjöld, the son of a Swedish prime minister, was born on 29 July 1905 in Jönköping. He held degrees in law and economics from the University of Uppsala and in 1933 earned a doctorate in economics from the University of Stockholm, where he became an adherent of the so-called Stockholm School of Economics.

In 1935 Hammar skjöld became Sweden's undersecretary of finance and in 1945 was named economic advisor to the prime minister's cabinet. Hammar skjöld joined the Swedish foreign ministry in 1949 and was appointed deputy foreign minister in 1951, choosing to remain aloof from domestic political affairs. He also served for some years as chairman of the National Bank's board, was a member of numerous delegations to international conferences, and served as acting chairman of Sweden's delegation to the seventh General Assembly Conference in 1952–1953.

Hammar skjöld was elected UN secretary-general in April 1953 as a dark-horse candidate known for his technical skills rather than his political prowess. He was unanimously reelected in September 1957. He spent his first years concentrating on strengthening and streamlining the UN's administrative staff and cultivating confidence among UN members. As such, he launched his concept of quiet diplomacy as a complement to the General Assembly's parliamentary diplomacy. His 1955 Beijing mission, which led to the release of fifteen U.S. airmen imprisoned for espionage, demonstrated the inherent efficacy of his quiet diplomacy approach to international issues. His role in defusing the 1956 Suez Crisis helped contribute to the growing prestige and authority of the UN.

During his second term, Hammarskjöld developed an even more active political profile, aimed at preventive measures to deter war and international tensions. As he saw it, one of the secretary-general's tasks was to promote Cold War rapprochement by mitigating outstanding Cold War issues and potential flash points. This implied the safeguarding of newly independent states to prevent them from being drawn into the superpower rivalry. Applying his ideas to the Congo, he came into conflict with Soviet leader Nikita Khrushchev, who in September 1960 demanded Hammarskjöld's replacement.

Hammarskjöld remained in office but met with increasing difficulties as he tried to mediate conflicts in the newly independent Congo and as he fought off criticism from some UN members, most notably the Soviet Union. He was killed on 18 September 1961 in a plane crash near the Katanga-North Rhodesia border while on a peace mission to the Congo. In late 1961, Hammarskjöld was the first person to receive the Nobel Peace Prize posthumously. His spiritual journal *Markings*, first published in Swedish in 1963, bears witness to his upstanding character and the centrality of his Christian faith to his life's work.

NORBERT GÖTZ

Swedish diplomat Dag Hammarskjöld was the secretary general of the United Nations from 1953 to 1961 and died on a mission to the Congo. Hammarskjöld was later awarded the Nobel Prize for Peace. (Corel)

Specially constructed areas, usually underground, designed to withstand nuclear attack. Hardened sites are also usually able to withstand biological and chemical attacks. Hardening is also undertaken to guard against the effects of electromagnetic pulse (EMP), a by-product of nuclear detonations that can incapacitate communications and electronic components.

Hardened sites were built with great urgency beginning in the late 1950s, upon the advent of intercontinental ballistic missiles (ICBMs). Hardened sites were also designed to protect key command and control centers. The most common hardened sites are underground silos, covered with many

Hardened Sites

feet of concrete and topped with massive steel doors. These silos contain intercontinental nuclear-tipped missiles. Command centers for the silos are also hardened. In case of a first strike by the adversary, the hardened missile silos—at least in theory—would protect the site, thereby allowing the nation under attack to launch a credible counterstrike.

Typical of hardened sites is the now-decommissioned Atlas E missile site outside Wamego, Kansas, which was constructed in the mid-1960s and designed to withstand a direct nuclear hit. Deep underground are 16,000 square feet housing the command center, several elevators, living quarters, bathrooms, a kitchen, and recreational facilities. The site contained large stores of food, water, clothing, and medical supplies so that the crew could live underground without additional assistance for a prolonged period. The site was also outfitted with its own electrical generation system and air purification apparatus designed to filter out chemical and biological agents as well as radioactive contamination.

Air bursts are ineffective against hardened sites, which may only be attacked by ground burst nuclear weapons, usually smart bombs aimed to strike the very door of the missile silo and then penetrate and explode. Some hardened sites are currently so deep underground that existing weapons cannot disturb them.

Harmel Report (December 1967)

Officially, the “Report on the Future Tasks of the Alliance,” presented at the 14 December 1967 meeting of the North Atlantic Treaty Organization’s (NATO) North Atlantic Council and authored by Belgian Foreign Minister Pierre Harmel. The basic premises of the report were predicated upon the parallel policies of maintaining adequate defenses while seeking a relaxation of tensions in East-West relations.

In the second half of the 1960s, NATO faced new and unforeseen challenges. In 1966 France withdrew from the organization’s integrated military command. Member nations’ decreased financial resources and individual interests had also put NATO’s internal cohesion in peril. At the same time,

the opportunity for East-West rapprochement seemed in the offing, as the USSR became more pliable in its foreign policies. This new atmosphere cast doubts on the necessity of NATO's costly defense expenditures and its approach to strategic defense.

The new international environment and the recent changes within NATO made essential a review of its strategic policies. Upon the initiative of Harmel, NATO's North Atlantic Council undertook to examine East-West relations, NATO's internal organizational structure, and its overall defense strategy.

In December 1966 Harmel was tasked with studying the future goals of NATO and the means by which to achieve them. In December 1967, the North Atlantic Council embraced the Harmel Report, together with NATO's new strategic concept of flexible response and a five-year plan for defense policy development. The Harmel Report proposed increased dialogue and consultation to ease East-West relations and the maintenance of NATO's basic defensive capabilities. In essence, the report embraced the concept of détente, which would soon be implemented by the United States under President Richard M. Nixon.

In spite of calls for détente, the report could not rule out the possibility of a future crisis. It therefore suggested that the Allies maintain suitable military capabilities to ensure a balanced response commensurate with the threat that it faced. Thus, the strategic concept known as flexible response was included in the report's recommendations. Flexible response would provide NATO with a variety of military options—from conventional to nuclear—in the event of a future conflict. Perhaps the Harmel Report's biggest achievement was the restoration of harmony among NATO's members.

Presidential advisor, roving ambassador, and governor of New York. Born on 15 November 1891 in New York City into a wealthy family, Averell Harriman graduated from Yale in 1913. He entered the banking and shipbuilding businesses and in 1932 became the board chairman of the Union Pacific

**Harriman, William
Averell**
(1891–1986)

Financier, industrialist, diplomat, and governor of New York, W. Averell Harriman had distinguished careers both in the private sector and in government, and was one of the nation's top diplomats. (Library of Congress)

Railroad. During President Franklin D. Roosevelt's New Deal, Harriman worked for the National Recovery Administration (1934–1935) before joining the Commerce Department in 1937. In 1941 he became a top administrator in the Lend-Lease program.

In 1943 President Roosevelt named Harriman ambassador to the Soviet Union, a post he held until 1946. Harriman saw clearly the impending conflict with the Soviets over Eastern Europe and urged a firm hand in any negotiations with Moscow. President Harry S. Truman named Harriman ambassador to the United Kingdom in April 1946, a post he held only until October, when he was named secretary of commerce. In 1948 Harriman became chief administrator of the Marshall Plan. In 1950 during the Korean War he became Truman's national security advisor. In 1951 Harriman headed the Mutual Security Agency to coordinate aid programs to Europe, a post he held until 1953.

Harriman unsuccessfully sought the Democratic Party's nomination for president in both 1952 and 1956. He was elected governor of New York in 1954, serving one term. Initially named ambassador at large by President John F. Kennedy in 1961, Harriman became assistant secretary of state for Far Eastern affairs in November 1961, where he played a key role in ending the Lao conflict. In 1963 he became undersecretary of state for political affairs, negotiating the limited nuclear test-ban treaty with the Soviets in 1963.

The expansion of the Vietnam War led to more important postings for Harriman, who was originally a hawk on Vietnam. President Lyndon B. Johnson appointed Harriman ambassador at large for Southeast Asian Affairs. He served in that post during 1965–1968, traveling extensively and working to secure support for American involvement in Vietnam. As the war turned into an American quagmire, Harriman searched globally seeking a negotiated peace settlement, becoming a dove on the war. In 1968, President Johnson dispatched Harriman as lead negotiator to the Paris peace talks. Harriman found his efforts hampered by the refusal of Moscow to rein in the Democratic Republic of Vietnam (DRV, North Vietnam), by the unwillingness of Hanoi to negotiate in good faith, by the inability of Johnson to follow through on his proposals, and by the intransigence of the South Vietnamese government. With the election of Richard Nixon as president, Henry Cabot Lodge Jr. replaced Harriman as the lead negotiator. Harriman returned to public service again in 1978 during President Jimmy Carter's administration and led the American delegation to the United Nations General Assembly's special session on disarmament.

Harriman wrote a number of books, including *Peace with Russia* (1959), *America and Russia in a Changing World* (1971), and *Special Envoy to Churchill and Stalin, 1941–1946* (1975). He continued to make official visits to the Soviet

Union, his last trip occurring in 1983. Harriman died at his home in Yorktown Heights, New York, on 26 July 1986.

See Aideed, Mohamed Farah

**Hassan, Mohammad
Farah**

King of Morocco (1961–1999). Born Moulay Hassan on 9 July 1929 in Rabat, Hassan was the first son of Sultan Mohammed V and his wife Lalla Abla. He received a classical education at the Imperial College in Rabat and later at the University of Bordeaux in France, where he obtained a law degree in 1952.

Following World War II, which had seen Morocco support the Allied cause with 350,000 troops, the movement in the French protectorate for independence gained momentum. Despite deep ties with the French and with French culture, Hassan and his father were strong nationalists who were eventually forced into exile during 1953–1956. Upon Moroccan independence in 1956 and Mohammad V's return (he began calling himself king in 1957), Hassan was named chief of staff of the royal armed forces and deputy prime minister. More important, Hassan gained the practical political experience to lead the nation through the tumultuous years following independence.

**Hassan II,
King of Morocco**
(1929–1999)

Forging a powerful role for himself and his country through a blend of Islamic traditionalism and Western pragmatism, King Hassan II ruled Morocco for thirty-eight years until his death in July 1999 at age seventy. (Embassy of the Kingdom of Morocco)

Upon the unexpected death of King Mohammed V in March 1961, Hassan became king as Hassan II. He ruled Morocco for the next thirty-eight years, surviving two coups and persistent Islamic fundamentalist insurgency. Although ostensibly a constitutional monarch, in reality King Hassan II controlled nearly all sectors of government through strong executive powers, key appointments, and command of the military. He ruled with an iron fist, and those who opposed his policies often suffered repression. In the 1960s he worked to dismantle the opposition leftist National Union Party (Union Socialiste des Forces Populaires). His heavy-handedness was especially meted out to those supporting independence for Western Sahara, which Morocco unequivocally claims as its own territory and has sought to annex since Spain abandoned the region in the mid-1970s. For these reasons, Hassan often faced international criticism for human rights abuses.

Nevertheless, Hassan increasingly instituted many democratic principles during his leadership. During his reign, literacy, women's equality, education, and economic well-being in Morocco all increased dramatically. He was a progressive leader who, despite lacking the charisma of his father, led Morocco from rural poverty to urban modernity and prosperity. Hassan's key characteristic was his ability to balance relations with both the West, whose economic and political aid helped modernize his country, and the Middle East, whose Islamic heritage was his basis for power. He was a skilled negotiator who mediated numerous contentious issues among his European and Arab neighbors. One of his most prominent accomplishments in this area was his work in the 1980s, which sought recognition for Israel and an end to the Arab-Israeli conflict. During the Persian Gulf War, he sent troops to defend Saudi Arabia despite public opposition and mass demonstrations.

Hassan II died of a heart attack on 23 July 1999 after an extended illness. At the time of his death, he was the Arab world's longest-reigning monarch. He was succeeded by his son, King Mohammed VI.

Conservative Japanese politician and prime minister (1954–1956). Born on 1 January 1883 in Ushigomeku, Tokyo, Hatoyama Ichirō was educated at the Tokyo Imperial University, from which he earned a law degree in 1907. He entered politics and was first elected to the lower house of the Japanese legislature (the Diet) in 1915.

Hatoyama was chief cabinet secretary to Prime Minister Tanaka Giichi's government from 1927 to 1929. From 1931 to 1934, Hatoyama served two successive governments as education minister and in the meantime became a leading member of the conservative Seiyukai Party. As proof of his conservative mettle, when a prominent Kyoto Imperial University professor was attacked for his liberal views by right-wing ideologues in 1932, Hatoyama forced him to resign his university position the next year. Hatoyama was also a member of the Taihei Yokusan-kai (Imperial Rule Assistance Association, IRAA) during 1942–1943.

After World War II, Hatoyama organized the conservative postwar Liberal Party and became its first president. Because of his past right-wing politics, however, he was banned from public life by order of the supreme commander for the Allied powers, General Douglas MacArthur, who controlled the postwar Japanese occupation. Hatoyama was forced to leave his newly formed party in the hands of Yoshida Shigeru. After the occupation, Hatoyama returned to politics in late 1951 and founded the Japan Democratic Party (JDP), becoming its president in 1954. After engineering his own political rehabilitation and with the aid of the JDP, Hatoyama ousted Prime Minister Shigeru's government and became prime minister in 1954.

At the time, a group of leading Liberal Democratic Party (LDP) politicians sought to revise what they considered to be the coercively imposed MacArthur Constitution. Hatoyama, no fan of MacArthur or of the U.S. occupation, became one of the leading proponents of a constitutional revision. Under Hatoyama's leadership, Japan once again established itself within the international community and in 1954 began making reparation payments to nations it had attacked or occupied prior to its 1945 surrender. In 1956 the Hatoyama government negotiated a termination of hostilities agreement with the Soviet Union, which then dropped its United Nations veto against Japan's membership in the organization.

In failing health, Hatoyama resigned from office in 1956 and was succeeded by Ishibashi Tanzan. Hatoyama died on 7 March 1959 in Bunkyo-ku, Tokyo.

Havel, Václav (1936–)

Havel's plays, which were squarely grounded in the theater of the absurd, reflected not only contemporary international trends, but also life under communist totalitarianism.

Czech writer, playwright, philosopher, prominent dissident, last president of Czechoslovakia (1989–1992), and first president of the Czech Republic (1993–2003). Václav Havel was born in Prague on 5 October 1936 to a wealthy Czechoslovakian family that had made its money in the restaurant business. Following the 1948 communist coup d'état, however, the family lost its enterprises, and Havel's educational opportunities were severely restricted. Denied the chance to study his true passions of philosophy, history, and cinema, he received a degree in economics from the Czech University of Technology.

Following military service during 1957–1959, Havel worked as a stage technician in the Prague theater on the Balustrade, which would later stage his early plays, including *The Garden Party* (1963), *The Memorandum* (1965), and *The Increased Difficulty of Concentration* (1968). These plays won him accolades both at home and abroad. Havel's plays, which were squarely grounded in the theater of the absurd, reflected not only contemporary international trends but also life under communist totalitarianism. In concert with other like-minded young intellectuals, Havel coedited Czechoslovakia's only non-communist magazine of arts and letters, *Tvář*. Following the Warsaw Pact's 1968 invasion of Czechoslovakia that quashed the Prague Spring, however, *Tvář* was closed down and Havel's plays were banned.

Havel exhorted his countrymen to resist what he termed "the occupation" and to move beyond the failed ideas of reformist communism. In 1975 he daringly authored a public letter to Czech President Gustáv Husák protesting the government's so-called normalization policies. In 1977, Havel cofounded the Charter 77 movement, which condemned the Czech government for failing to heed the 1975 Helsinki Final Act's conditions for basic human rights. He was jailed for several months after the Charter 77 recriminations were made public. In 1978 he penned his seminal essay, *The Power of the Powerless*, in which he applied phenomenology to understand how societies generate and sustain themselves through alienation and ideology, a totalitarian system that nobody desires or believes in.

The Czech regime subjected Havel to frequent arrests and imprisonment, including four years of hard labor during 1979–1983. His letters from prison to his wife Olga were published in late 1982 by the literary critic Jan Lopatka, who against Havel's initial wishes preserved the personal aspects of the letters to depict a human antithesis to the communist depiction of heroes as perfect caricatures. After his release, Havel moved to his country house in Hrádeček, where he wrote his semiautobiographical play *Largo Desolato* (1986). By the late 1980s, he was meeting frequently with foreign dignitaries and politicians, and he was allowed to address a demonstration for the first time in December

1988. But he was again jailed in January 1989 for having provoked antigovernment protests. Following international outcry over his arrest, he was released in May.

After the student demonstration of 17 November 1989 that put the Velvet Revolution into high gear, Havel returned to Prague as a founder of Civic Forum, which helped bring down Husák's government. Havel became the main speaker in the nightly demonstrations, and on 10 December 1989 he forced the communists' hand by calling for free and unfettered national elections. On 29 December the interim government elected Havel president, and he proceeded to negotiate with the communists over the transfer of power.

Havel's government quickly completed the political transfer of power and negotiated with Soviet President Mikhail Gorbachev a rapid withdrawal of Soviet troops. Havel's administration also commenced Czechoslovakia's economic transition to a market economy. The new democratic parliament reelected Havel president in July 1990. In 1992 the Slovaks elected a nationalist separatist government. Unwilling to supervise the dismantling of the Czech and Slovak Federation, Havel resigned as the last president of Czechoslovakia in July 1992. After the 1 January 1993 split of the federation, Havel became the first president of the Czech Republic later that month. He was narrowly reelected in January 1998 to another five-year term. As president, he attempted to wield power without direct involvement in party politics, which led to conflicts among himself, the legislature, and the main political parties. In declining health, Havel did not stand for another presidential term when his tenure expired in 2003.

Václav Havel is one of Europe's best-known playwrights and essayists. He was also a leading political dissident under the communist government of Czechoslovakia. During 1993–2003 he was the first president of the Czech Republic. (Embassy of the Czech Republic/Alan Pajer)

Australian Labour Party politician and prime minister (1983–1991). Born in Bordertown, Australia, on 9 December 1929 and raised in Perth, Robert Hawke completed his undergraduate degree at the University of Western

Hawke, Robert
(1929–)

Australia. He joined the Labour Party in 1947 and in 1953 was selected as a Rhodes Scholar to Oxford University, where he completed a Bachelor of Letters at University College in 1955.

Returning to Australia, in 1958 Hawke was offered a post as research officer at the Australian Council of Trade Unions (ACTU) headquarters in Melbourne. He was selected as the ACTU's president in 1959 despite the fact that he had never held office in a trade union, and in 1973 he became federal president of the Labour Party.

In March 1983 Hawke was elected Australia's twenty-third prime minister. He went on to become one of the most successful Australian leaders of the twentieth century. His policies were moderate and center-leftist, both internationally and domestically. The Hawke government reflected its leader's personal traits of moderation, consensus, and pragmatic compromise. Domestically, the Hawke government enacted several initiatives of the traditional labor Left, such as the restoration of universal health insurance, various environmental initiatives, and the continuation of the reconciliation process between the Australian government and its indigenous constituents. Yet consistent with many reforms associated with rightist governments, he also allowed the Australian dollar to float, privatized state sector industries, overhauled the tariff system, and implemented widespread industrial deregulation.

Hawke's sense for attaining the middle ground became most evident in Australia's foreign policy. Although he was elected with the support of the unionist Left, including unions controlled by the Communist Party, he did not share their anti-American views and never pursued purely socialist positions. He was a strong supporter of both Israel and the U.S.-Australian alliance, and he maintained cordial relations with U.S. Presidents Ronald Reagan and George H. W. Bush.

The demise of the Hawke government came by way of a severe economic recession in 1991. Hawke's popularity declined, and he lost a no-confidence vote on 20 December 1991. He resigned from parliament shortly thereafter and retired from public life, although he has since supported several Labour figures in federal elections.

Healey, Denis (1917–)

British Labour Party politician, defense minister (1964–1970), and chancellor of the exchequer (1974–1979). Born on 30 August 1917 in Etham, Kent, Denis

Healey moved to Keighley, Yorkshire, at age five. He studied at Oxford during 1936–1940. After a brief flirtation with communism in the 1930s, Healey took a center-rightist position in the Labour Party. He saw active service in the British Army during World War II, leaving as a major.

Having joined the Labour Party during the war, from 1945 to 1951 Healey worked as its international secretary. He opposed the spread of communism at home and abroad, and at the same time he sought to assist and encourage European social democratic movements. He was elected to Parliament on the Labour Party ticket in a by-election in 1952.

In the internecine political conflicts of the 1950s, Healey firmly supported Hugh Gaitskell, who was an opponent of the leftist faction led by Aneurin Bevan. In 1959, Healey assumed a spot in the opposition shadow cabinet, concentrating on colonial affairs and defense issues.

After thirteen years in opposition, the Labour Party achieved power in October 1964, and Healey was appointed minister of defense. Serving in that post during 1964–1970, he was compelled to institute large cuts in defense spending, which forced him to cancel the purchase of U.S. F-111 aircraft and the construction of a new aircraft carrier. Continuing economic pressures similarly prompted his July 1967 policy statement, which precipitated the withdrawal of British troops from their traditional role east of the Suez, an announcement that had been delayed by British involvement in the 1963–1966 confrontation between Indonesia and Malaysia.

In 1968 Healey, along with other Western defense ministers, agreed to the new defense doctrine of flexible response, designed to give the Allies more leeway in responding to potential confrontations. Upon the fall of the James Harold Wilson government in 1970, Healey resigned his ministry and became shadow foreign secretary during 1970–1972 and then shadow chancellor in 1972–1974.

Upon Labour's return to power in 1974, Healey was appointed chancellor of the exchequer, holding that post until the fall of the Labour government in 1979. In this role, Healey steered Britain through a period of profound economic difficulty and was obliged to accept credits from the International Monetary Fund (IMF) in late 1976. Defeated for his party's leadership by Michael Foot in 1980, Healey was deputy leader during 1980–1983. He left the House of Commons in 1992. He also wrote an amusing, if slightly pompous, memoir, *The Time of My Life*, published in 1989.

Heath, Edward

(1916–2005)

British Conservative Party leader (1965–1974) and prime minister (1970–1975). Born in Broadstairs, Kent, on 9 July 1916, Edward Heath was the son of a carpenter and local builder. Heath's intelligence and ambition earned him a spot at Balliol College, Oxford University, where he became president of the Oxford Union and was active in conservative politics. He was called to service duty in 1940, signed on with the army, and saw action in Belgium, the Netherlands, and Germany during World War II, rising to the rank of major by the end of the war.

Heath was first elected to Parliament as a Conservative in 1950, rising through the ranks to become chief Conservative whip in 1955. In 1959 he was appointed to head the Ministry of Labour. In 1960 he moved to the Foreign Office where, during 1961–1963, he led the negotiations to help secure British entry into the European Union (EU). Heath was elected to lead the Conservative Party in 1965 and won an unexpected victory in the general election of 1970, becoming prime minister.

As prime minister, one of Heath's priorities was to achieve his earlier goal of bringing Britain into the EU; Britain joined on 1 January 1973. Rather unusually, Heath did not place great importance on his nation's special relationship with the United States, although he did support the Americans in their Vietnam struggle and approved of President Richard M. Nixon's 1972 visit to China. However, Heath remained studiously neutral during the Arab-Israeli War of 1973.

Severe economic problems, greatly exacerbated by the Organization of Petroleum Exporting Countries (OPEC) oil embargo between 1973 and 1974, placed the British economy in dire straits, and Heath was less than successful in quelling the resultant dislocations. A government dispute with the coal miners' union in late 1973 led to further economic chaos, including rolling electrical blackouts and the imposition of a three-day workweek. These emergencies ultimately led to the Conservative defeat in a 1974 election. The following year, Heath was ousted from the party leadership by Margaret Thatcher. He remained in the House of Commons until 2001. Much to his chagrin, he was not offered ministerial office by Thatcher or her successors. Heath died in Salisbury, Wiltshire, England, on 17 July 2005.

Federal Republic of Germany (FRG, West Germany) politician, minister of justice (1949–1950, 1966–1969), and president (1969–1974). Born in Schwelm, Germany, on 23 July 1899, Gustav Heinemann studied law, political economy, and history at the universities of Münster, Munich, Göttingen, and Berlin. He received a doctorate in political science from Marburg University in 1921 and a doctorate in law from Münster University in 1929. During 1928–1945, he served as a legal advisor to and director of a steel company. During the Nazi years, Heinemann became an orthodox Protestant and committed himself to the church's struggle against that regime.

A member of the Christian Democratic Union (CDU), Heinemann entered the Diet of North Rhine-Westphalia in 1947 and was its minister of justice during 1947–1948. Although not a member of the Bundestag, he was nevertheless appointed federal minister of the interior in Chancellor Konrad Adenauer's government in September 1949, a tactical move to include the Protestant wing of the CDU in the cabinet. Heinemann resigned from office in October 1950 after a dispute with Adenauer over the chancellor's plan to rearm West Germany. Heinemann left the CDU in 1952 and founded the All-German Peoples' Party, which suffered a major electoral defeat in 1957.

After the defeat, Heinemann joined the Social Democratic Party (SPD) and entered the Bundestag in 1957. He subsequently served as federal minister of justice in the coalition cabinet of Kurt-Georg Kiesinger from 1966 until his election as president in March 1969; he remained in that office until June 1974. As the so-called citizen president, Heinemann, in his public speeches, repeatedly sought to further develop values such as democracy and individual freedom in West Germany. During several state visits to neighboring countries, he strove to convey the image of a peace-loving and internationally modest new Germany. Heinemann died in Essen on 7 July 1976.

**Helms, Richard
McGarrah**
(1913–2002)

Career U.S. intelligence officer and director of the Central Intelligence Agency (CIA) during 1966–1973. Born in St. Davids, Pennsylvania, on 30 March 1913, Richard Helms graduated from Williams College in 1935 and worked for the United Press in Europe during 1935–1937. Returning to the United States, he became director of advertising for the Indianapolis Times Publishing Company.

In 1942 Helms resigned from this position and enlisted in the U.S. Navy. Owing to his fluency in German, he was invited to join the Office of Strategic Services (OSS) in 1943, where he worked with future CIA director Allen W. Dulles. Helms remained with the OSS in Germany after the war and became part of the CIA when it was established in 1947.

During the late 1940s and 1950s, Helms was stationed in Germany, Austria, and Switzerland. He also served several years at CIA headquarters in Langley, Virginia. As his influence and stature grew during the 1960s, he became involved in CIA activities that were at least questionably unethical; these included planning assassination attempts on Cuban leader Fidel Castro and the overthrow of Republic of Vietnam (RVN, South Vietnam) President Ngo Dinh Diem, who was subsequently murdered in a generals' putsch in 1963.

After a stint as CIA deputy director during 1965–1966, Helms was appointed director of the CIA in 1966 by President Lyndon Johnson. As such, Helms continued to engage in questionable endeavors. Under his direction, the CIA supported more than one hundred research projects focused on mind control, including experimentation involving illegal drugs on human subjects. He also supported aggressive CIA activities in Vietnam. Under Helms, the CIA engaged in domestic surveillance operations. He launched operations designed to investigate the relationships between American dissidents and foreign governments and to target peace movements and radical college organizations, although these operations were a serious violation of the CIA charter. These lasted until the U.S. withdrawal from Vietnam in 1973.

Helms also became increasingly concerned over the emergence of left-wing movements in Latin America. In 1973 he directed the CIA-sponsored coup d'état against Salvador Allende, the popularly elected president of Chile. Allende was assassinated, and Chile came to be governed by a rightist military junta under General Augusto Pinochet.

President Richard M. Nixon, under fire for the Watergate scandal, refused to reappoint Helms as CIA director in 1973, allegedly because Helms refused to involve the CIA in Watergate. Helms then became U.S. ambassador to Iran, a post he held until 1976. In 1977, Congress investigated Helms's part in the fall of the Allende regime and determined that he was guilty of perjury for failing to truthfully answer questions posed by Congress. He was fined \$2,000 and given a two-year suspended sentence. He then became a consultant for international business. Helms died in Washington, D.C., on 23 October 2002.

Concluding document of the multilateral Conference on Security and Cooperation in Europe (CSCE), held during 1972–1975. The Helsinki Final Act was signed by representatives of thirty-five European and North American states on 1 August 1975 in Helsinki, Finland, and was the summation agreement of the CSCE. The act bridged significant differences between Western and Eastern Europe through far-reaching concurrences on political borders, trade and, most notably, human rights. The accord is often described as the high point of détente and was a key diplomatic turning point in the Cold War.

The Helsinki Final Act was not a formal treaty. It was an international agreement to which countries were bound politically but not legally. The act was the result of years of negotiations, first proposed by the Soviets in Geneva in 1954. Discussions commenced in earnest with the Helsinki Consultations of 22 November 1972 and the formal opening of the CSCE on 3 July 1973. The Consultations and talks that followed focused on four baskets of issues. The first dealt with ten principles guiding relations in Europe, including the inviolability of frontiers, the territorial integrity of states, and the peaceful settlement of disputes. The first basket also incorporated confidence-building measures such as advanced notification of military troop maneuvers. The second basket addressed economic, scientific, and technological cooperation among CSCE states, and the third basket concentrated on such humanitarian issues as the reunification of families, improved working conditions for journalists, and increased cultural exchanges. The fourth basket focused on follow-up procedures.

The signing of the Helsinki Final Act was initially unpopular in many Western countries because it conceded Soviet domination of Eastern Europe and formally recognized the Soviet Union's annexation of Estonia, Latvia, and Lithuania. Yet the publication of the Helsinki Final Act in Eastern Europe spurred the formation of Helsinki Monitoring Groups, the most prominent of which was founded in Moscow by Yuri Orlov, Yelena Bonner, and nine other Soviet human rights activists. These monitoring groups called upon Eastern bloc nations to uphold their Helsinki commitments and drew international

attention to their reports of human rights abuses. These groups became part of a larger political and social movement that ultimately prefigured the end of the Cold War.

The Helsinki Final Act marked the beginning of an ongoing process, known as the Helsinki Process, in which CSCE states convened periodically to review the implementation of the act and initiate further efforts to decrease East-West tensions. In 1989, as the Berlin Wall came down and the Czechoslovakian Velvet Revolution moved into high gear, many East European reformers, including Czechoslovakia's Václav Havel, cited the Helsinki Process as a key part of their success in throwing off the yoke of communist totalitarianism.

Herter, Christian Archibald (1895–1966)

U.S. secretary of state (1959–1961). Born in Paris, France, on 28 March 1895, the son of Boston Brahmin parents who were expatriate artists, Christian Herter was educated at the Browning School in New York and at Harvard University. He spent a year studying architecture at Columbia University but left in 1916 to join the Foreign Service, serving on the U.S. delegation to the 1919 Paris Peace Conference.

Herter next worked for Herbert Hoover in the American Relief Association. When Hoover became secretary of commerce in 1921, Herter spent three years as his assistant before returning to Boston. In 1931 Herter began twelve years—four as Speaker—in the Massachusetts House of Representatives, followed by five terms (1943–1953) as U.S. congressman for Massachusetts and two terms (1953–1957) as governor of Massachusetts. An internationalist Republican, Herter strongly supported the creation of the United Nations (UN) and the Marshall Plan.

Named undersecretary of state in 1957 on the recommendation of Vice President Richard M. Nixon, Herter worked well with the formidable secretary, John Foster Dulles, who died of cancer in May 1959 and designated Herter as his successor. Although Herter soon won President Dwight Eisenhower's confidence, his influence never approached that of Dulles. As relations with Cuba deteriorated after Fidel Castro took power in 1959, Herter

counseled restraint but persuaded the Organization of American States (OAS) to pass a censure resolution against Castro.

Herter's most crucial efforts involved Soviet-American relations. Seeking to resolve the crisis that began in November 1958 when Soviet leader Nikita Khrushchev demanded that Western forces leave West Berlin, at a summer 1959 Geneva conference Herter unsuccessfully put forward proposals to unite both Berlin and eventually Germany under democratically elected governments. Efforts in 1960 to negotiate a Soviet-American arms control and reduction agreement proved equally fruitless, foundering on inspection provisions. When Soviet anti-aircraft batteries downed an American U-2 spy plane on 1 May 1960 and the Soviets captured pilot Francis Gary Powers, Herter recommended that Eisenhower accept responsibility for the flights and publicly defended the missions. Khrushchev nonetheless aborted the impending May 1960 summit meeting between himself, Eisenhower, and British Prime Minister Harold Macmillan.

When President John F. Kennedy took office in 1961, Herter retired from public life. In November 1962 Kennedy appointed Herter his chief foreign trade negotiator, a post he retained until his death in Washington, D.C., on 30 December 1966.

Christian A. Herter was secretary of state in the Eisenhower administration during 1959–1961. (Dwight D. Eisenhower Library)

British Conservative Party politician, cabinet secretary in various posts, and deputy prime minister (1995–1997). Born in Swansea, Wales, on 21 March 1933, Michael Heseltine graduated from Pembroke College, Oxford University,

Heseltine, Michael
(1933–)

where he was president of the Oxford Union. He then worked in a number of fields, including property management and publishing. He became a multimillionaire with his Haymarket Press, which publishes news and trade magazines.

Heseltine was first elected to Parliament in 1966. Over the next decade he advanced in the Conservative Party, and when Margaret Thatcher became prime minister in 1979 she appointed him secretary of state for the environment. In 1983 he became secretary of state for defense.

During the Thatcher years, Heseltine generally supported the government's military buildup and a tough stance toward the Soviet Union. He abruptly left the cabinet in 1986, however, when he found himself at odds with Thatcher for his role in the Westland Helicopter Affair. Heseltine preferred a European merger of the failing Westland firm with Italian and French aerospace companies, while Thatcher sought to join Westland with U.S.-based Sikorsky. Heseltine was also at odds with the Thatcher government on other matters.

Heseltine remained in the House of Commons, and in November 1990 he engineered a challenge to Thatcher's leadership. After one ballot Thatcher stepped aside, but Heseltine still faced two opponents for the party's leadership. Eventually John Major, chancellor of the exchequer, won the party election and became prime minister.

As a consolation, Major named Heseltine environment secretary, a post he held until 1992. Heseltine also served Major as industry secretary during 1992–1995 and deputy prime minister in 1993, a post he held until 1997. After the 1997 Labour victory, Heseltine left the government. He remained in Parliament until 2001, when he was given a life peerage as Baron Heseltine.

Heuss, Theodor

(1884–1963)

Federal Republic of Germany (FRG, West Germany) politician and its first president (1949–1959). Born on 31 January 1884 in Brackenheim, Germany, Theodor Heuss was educated in cultural and economic studies at universities in Munich and Berlin. He received his doctorate in economics from Munich University in 1905 and taught political science during 1920–1933. He held a Reichstag seat for the leftist-liberal German Democratic Party (DDP) during 1924–1928 and again during 1930–1933. Highly critical of German Chancellor

Adolf Hitler, Heuss was dismissed from his lectureship in 1933 and retreated into retirement in 1936, spending his time writing biographies.

In September 1945 Heuss became minister of cultural affairs in Württemberg-Baden but resigned after the November 1946 elections. A cofounder of a new liberal party in Württemberg, he was elected chairman of the regional Democratic People's Party (DVP) in 1946. At the national level, he became cochairman of the Democratic Party of Germany (DPD) in 1947, the major forerunner of the Free Democratic Party (FDP). A member of the Württemberg Diet during 1946–1949, he helped draft the new federal constitution. He also became a member of the Bundestag in August 1949 but resigned in September 1949 when the Federal Council elected him president of West Germany.

During his first term, Heuss was mainly concerned with domestic affairs. Although the office of federal president had minimal political power, he engaged himself in promoting democratic values and in reconciling different groups of German society. Following his 1954 reelection, he turned to foreign affairs and paid state visits to a number of Western nations. His major intentions were to draw a clear distinction between the Nazi state and West Germany and to enhance West Germany's international reputation. His generally cordial relationship with Chancellor Konrad Adenauer was shattered in 1959 when Adenauer, wishing to become the next president, indicated his intention to enhance the political power of the office. At the end of his second term in 1959, Heuss retired from politics and resumed writing. He died in Stuttgart on 12 December 1963.

American midlevel State Department official and alleged Cold War spy. Born on 11 November 1904 in Baltimore, Maryland, Alger Hiss was educated at Johns Hopkins and Harvard universities. He joined the U.S. State Department in 1936. Among several important assignments, he was private secretary to U.S. Supreme Court Justice Oliver Wendell Holmes, secretary to the Dumbarton Oaks Conference (1944), and among the U.S. delegation to the 1945 Yalta Conference. Hiss also served as secretary-general of the United

Hiss, Alger
(1904–1996)

U.S. citizen Alger Hiss was convicted of perjury in 1950 as part of an investigation into an alleged spy ring. Hiss was accused of being a communist and of sharing state secrets with the Soviet Union. The matter of his guilt or innocence is still debated today. (Library of Congress)

Nations' (UN) organizing conference in San Francisco (1945–1946). In February 1947, with support from John Foster Dulles, Hiss became head of the Carnegie Endowment for International Peace.

In August 1948 Whittaker Chambers, a self-confessed ex-communist, accused Hiss of having been a member of the Communist Party in the 1930s and of having betrayed State Department secrets to the Soviets. Hiss strenuously denied the charges under oath. He was subsequently indicted by a grand jury for perjury, as the statute of limitations for treason had expired, and was bound over for trial, which resulted in a hung jury in July 1949. Then, in a highly publicized retrial in January 1950, Hiss was found guilty and served forty-four months in the Lewisburg Federal Penitentiary. He continued to assert his innocence and so too did a large and influential body of supporters, which precipitated one of the most intense and enigmatic debates of the entire Cold War.

Archival revelations in the 1990s, including those from Russian sources, vindicated neither Hiss nor his defenders. Historical evidence now seems to suggest that Hiss was indeed guilty of treason. The strange case of Alger Hiss was a defining episode not only in the Cold War but also in modern American politics. It rallied conservatives, gave birth to the excesses of McCarthyism, and spotlighted Hiss's nemesis, the little-known California Congressman Richard M. Nixon, who would later go on to become a U.S. senator, vice president, and president. Hiss died on 15 November 1996 in New York City.

Ho Chi Minh

(1890–1969)

Vietnamese nationalist, founder of the Vietnamese Communist Party (1930), and first president of the Democratic Republic of Vietnam (1946–1969). Ho

is considered the most influential political figure of modern Vietnam. Born Nguyen Sinh Cung on 19 May 1890 in Kimlien, Annam, Vietnam, his father was a Confucian scholar who had served in the Vietnamese imperial bureaucracy but resigned to protest the French occupation of his country. Nguyen received his secondary education at the prestigious National Academy, a French-style lycée in Hue. In 1911 he hired on as a merchant ship cook, traveling to the United States, Africa, and Europe. He then became first a photography assistant and then an assistant pastry chef in London. With the beginning of World War I, Nguyen moved to Paris, where he became active in the French Socialist Party. Changing his name to Nguyen Ai Quoc (Nguyen the Patriot), he became a leader in the large Indo-Chinese community in France. After the war, he helped draft a petition to the Allied leaders at the Paris Peace Conference demanding self-determination for colonial peoples; the petition was ignored.

When the Socialist Party split in 1920, Nguyen became one of the founders of the new French Communist Party. He spent the early 1920s in Moscow at the headquarters of the Communist International (Comintern). In 1924 he went to Guangzhou (Canton), China, and during the next two years worked to form a Marxist-Leninist revolutionary organization in French Indochina. In 1925 he organized the Vietnamese Revolutionary Youth League as a training ground for the future Vietnamese Communist Party. In 1929 he presided over a meeting in Hong Kong that brought several communist factions together, forming a single Vietnamese Communist Party, later renamed the Indochinese Communist Party (ICP).

By the early 1940s Nguyen had taken the name Ho Chi Minh (Bearer of Light). He left Hong Kong and returned to Vietnam in early 1941, where he formed a broad nationalist alliance, the League for the Independence of Vietnam (Viet Minh), to combat both the French and Japanese occupations. The Viet Minh generally downplayed orthodox communist ideology and emphasized anti-imperialism and land reform, although it was dominated by the ICP.

During World War II Ho shuttled between Vietnam and China to build support for his movement. He was held in detention for a year in China by the anticommunist Chinese Guomindang (GMD, Nationalists), who released him in 1944. He had also worked with the U.S. Office of Strategic Services (OSS). When Japan surrendered in August 1945, the Viet Minh occupied Hanoi, and Ho established the Democratic Republic of Vietnam (DRV, North Vietnam). He became president of the newly formed nation on 2 March 1946. Ho sought to avoid hostilities with France, but differences between the Viet Minh nationalists and the French, who steadfastly refused to give up

Pictured here in 1954, Vietnamese communist and nationalist Ho Chi Minh founded the Indochina Communist Party in 1930 and was president of the Democratic Republic of Vietnam (DRV, North Vietnam) from 1945 to 1969. (Library of Congress)

Minh (Bearer of
Light).

their hold on Vietnam, led to fighting and the beginning of the Indochina War in December 1946.

During the eight-year conflict against the French, Ho played an active part in policy formulation, while Viet Minh General Vo Nguyen Giap was chief military strategist. Following the defeat of the French at the Battle of Dien Bien Phu in 1954, Vietnam was divided along the 17th Parallel, with elections in North Vietnam and the Republic of Vietnam (RVN, South Vietnam) scheduled for 1956. When South Vietnamese President Ngo Dinh Diem refused to accede to the elections, with the blessing of U.S. President Dwight D. Eisenhower's administration, fighting resumed in the south and in 1960 Ho and the North Vietnamese leadership decided to support it. Although Ho was certainly a staunch communist, he was first and foremost a Vietnamese nationalist, determined to see his nation unified no matter the cost.

During the subsequent long war with the United States, Ho remained an important symbol of nationalist resistance and played an active part in formulating North Vietnamese policy. He was primarily responsible for North Vietnamese dealings with both the Soviet Union and the People's Republic of China (PRC). Ho did not live to see his dream of a united Vietnam realized. He died in Hanoi on 3 September 1969. In 1975, when North Vietnamese troops were victorious, the South Vietnamese capital of Saigon was renamed Ho Chi Minh City in his honor. Today, Ho's body is on public display in a mausoleum in Hanoi.

Hoffman, Paul Gray
(1891–1974)

Head of the Economic Cooperation Administration (ECA) during 1948–1950 and first president of the Ford Foundation during 1950–1953. Born on 26 April 1891 in Chicago, Illinois, Paul Hoffman studied one year at the University of

Chicago but left to work in a car dealership, where he prospered. After eighteen months in the U.S. Army during World War I, he bought a Studebaker dealership in southern California, eventually serving as president of that company from 1935 until 1948. A socially conscious businessman, he worked well with labor representatives and instituted social welfare and consumer safety policies.

During World War II, as the first chairman of the Committee for Economic Development (CED), a progressive business organization founded in 1942, Hoffman came to believe that continued postwar economic prosperity depended on the expansion of international trade. Although a Republican, he supported President Harry S. Truman's policies of foreign aid to war-devastated countries. With the passage of the Marshall Plan in 1948, Hoffman somewhat reluctantly agreed to become the first head of its administering body, the ECA. As administrator, Hoffman ran an honest and efficient organization, proved highly effective in providing public justifications of the program, and persuaded European aid recipients to coordinate their recovery efforts.

After leaving the ECA in 1950, Hoffman became the first president of the Ford Foundation, the wealthiest philanthropic organization in America. By now a strong internationalist, he was among those instrumental in persuading General Dwight D. Eisenhower to seek the Republican presidential nomination in 1952. Attacked by political conservatives as unduly liberal, in 1953 Hoffman resigned his Ford position and returned to Studebaker.

Over conservative opposition, in 1956 Eisenhower appointed Hoffman a delegate to the United Nations (UN) General Assembly, and from then on Hoffman focused on facilitating economic progress in developing nations. In December 1958 UN Secretary-General Dag Hammarskjöld appointed Hoffman to head a new UN Special Fund for this purpose, later renamed the UN Development Program, which he led until 1971. The program eventually raised and distributed about \$3.4 billion in seed money. Hoffman died in New York City on 8 October 1974, leaving an outstanding humanitarian record.

Hoffmann, Heinz

(1910–1985)

Communist politician and minister of national defense in the German Democratic Republic (GDR, East Germany) during 1960–1985. Born in Mannheim, Germany, on 28 November 1910 into a working-class family, Heinz Hoffmann became a mechanic, joined the Communist Party's youth section, and was involved in party activities at a young age. In 1935 he immigrated to the Soviet Union. In the late 1930s he fought in the Spanish Civil War, was wounded, and returned to the USSR. Following the June 1941 German invasion of the Soviet Union, Hoffman was trained by the Soviet intelligence organization (NKVD) in partisan warfare and was subsequently employed in the indoctrination of German prisoners of war.

In January 1946 Hoffmann returned to Germany, where he worked as an assistant to several communist leaders. After the formation of East Germany, he was appointed deputy minister of interior in 1950. In 1955 he entered the Academy of the Soviet General Military Staff in Moscow and graduated in 1957. Appointed deputy minister for national defense in 1958, he advanced to the ministry's top position in 1960 and remained there until his death in 1985.

Hoffmann was a standing member of the East German politburo during 1973–1985. During his last years, alcoholism and charges of corruption diminished his status, and he eventually became only a figurehead. Hoffman died in Berlin on 2 December 1985.

Hollywood Ten

Ten Hollywood scriptwriters and directors jailed because of their alleged affiliations with the Communist Party and for their refusal to provide information to the House Un-American Activities Committee (HUAC) during the 1950s McCarthy era in the United States.

American films in the post–World War II era had begun to grow increasingly bold, both in their sociopolitical messages and in their depictions of sexuality. Summoned to speak before HUAC, Hollywood artists of all kinds (directors, actors, writers) who had ties to the Communist Party or had simply been leftists or progressives were faced with a daunting challenge: they were

Hollywood writers and producers, known as the Hollywood Ten, stand with their lawyers before their arraignment in U.S. District Court. (Bettmann/Corbis)

expected to admit their guilt but also had to give up names of other Hollywood types who had allegedly participated in communist activities. If they chose not to do so, they faced jail time and banishment from Hollywood through a blacklist generated by frightened movie producers.

Many “friendlies,” as friendly witnesses were dubbed, capitulated to save their own careers, among them director Elia Kazan, an ex-communist who benefited greatly from his cowardice before HUAC. But a few defied the McCarthyist witch-hunt at great cost to their lives and careers. The most famous of these became known as the Hollywood Ten. They were Alvah Bessie, Herbert Biberman, Lester Cole, Edward Dmytryk, Ring Lardner Jr., John Howard Lawson, Albert Maltz, Sam Ornitz, Robert Adrian Scott, and Dalton Trumbo. Most were screenwriters whose scripts had dealt with anti-fascist topics.

The Hollywood Ten were accused of writing and producing films that advanced procommunist propaganda. They argued in return that their First Amendment rights were being violated by being forced to speak when their conscience prevented them from doing so. The courts did not agree, and they were subsequently sentenced to prison.

The careers of these men were either ruined or painfully diminished. The solidarity of the Hollywood Ten also crumbled when Dmytryk, a director, turned on his friends and claimed that they forced him to include communist elements in his films. Forgiven by Hollywood, his career actually improved.

Much has been made of the other nine members avoiding the blacklist by writing under pseudonyms. It is often pointed out that Trumbo was able to write Stanley Kubrick's *Spartacus* under his own name in 1960. Nevertheless, the number of scripts they could write and the compensation they received were greatly reduced compared to their pre-HUAC indictments. When contrasted with Dmytryk's career, they undoubtedly suffered for their position.

The Hollywood Ten were among many whose lives were ruined by HUAC's Hollywood witch-hunt. Actors and actresses branded as communists saw their lives destroyed to a greater extent than other HUAC targets. Legendary actor Sam Jaffe, who played such roles as Gunga Din, died in penurious obscurity. Other performers whose livelihoods were virtually wiped out include Zero Mostel, Burl Ives, and Dorothy Parker.

The Hollywood Ten remained in the public eye long after McCarthyism came to an end. In 1970 Trumbo gave a speech when presented with a lifetime award by the Screen Writer's Guild proclaiming that young screenwriters, when looking back upon that time, should not "search for villains or heroes or saints or devils because there were none; there were only victims."

Hollywood's reasons for keeping the blacklist in the public eye have less to do with history and justice than with profiting from a sensational topic. At least ten feature films have been produced dealing with the subject. In the 1970s, *The Front*, a comedy starring Woody Allen, represented the hands-off approach that Hollywood was taking toward the era. The early 1990s produced *Guilty by Suspicion*, a dark drama starring Robert De Niro that portrayed the Hollywood Ten as nothing less than saints. But perhaps the finest balance is struck in the *The Majestic* (2001) that combines the comedy of *The Front* with the drama of *Guilty By Suspicion*, with Jim Carrey playing a blacklisted screenwriter.

Australian Liberal Party politician and prime minister (1966–1967). Born on 5 August 1908 in Sydney, Harold Holt, the son of a well-known theater director, graduated with a law degree from the University of Melbourne and worked for a short time as a solicitor before being elected to the federal parliament in 1935, where he became a protégé of Liberal Party leader Robert Gordon Menzies. Holt briefly served in the Australian Army during World War II.

After eight years in opposition during 1941–1949, the new Menzies government of 1949 named Holt minister for labor and national service. He held this post until 1958. He also served as minister of immigration during 1949–1956. He became deputy leader of the Liberal Party in 1956 and was appointed finance minister (treasurer) in 1958, a post he held until he succeeded Menzies as prime minister in 1966.

The major issue that confronted the Holt government was the Vietnam War. Consistent with the conservative Liberal Party's policies, Holt held fast to the U.S.-Australian alliance and increased troop deployments to Vietnam, which was very controversial. By tapping into the traditional American affinity among the Australian populace, the Holt government continued to maintain its popularity.

On 17 December 1967, Holt drowned while swimming at a resort in Portsea, Victoria. His remains were never found, and he was officially presumed dead on 19 December.

Holt, Harold Edward
(1908–1967)

Spanish-speaking nation in the north-central portion of Central America. Honduras, with a 1945 population of 1.37 million people, covers 43,278 square miles and is bordered by Guatemala and the Caribbean Sea to the north and east, Nicaragua to the south, and El Salvador and the Pacific Ocean to the south-southwest. Honduras became a key Cold War ally of the United States, serving as a staging area from which insurrections were launched against Guatemala in 1954 and Nicaragua during the 1980s. Despite its close

Honduras

By the start of the Cold War, Honduras was the archetypal “banana republic,” the entire economy of which was controlled by large American fruit companies.

relationship with Washington, Honduras has remained one of the poorest countries in Latin America.

By 1907, Honduras had endured seven revolutions in fifteen years and was stricken with a foreign debt of \$124 million. By the 1920s the all-powerful United Fruit Company (UFCO) had begun to exert strong influence in Honduras and by 1924 owned 88,000 acres of land. In 1929, UFCO paid \$32 million to buy out its Honduran competitor, thus completing its takeover of fruit production in Honduras.

By the start of the Cold War, Honduras was the archetypal banana republic, the entire economy of which was controlled by large American fruit companies. In 1954, however, the political landscape in Honduras began to change. UFCO’s workers went on strike, marking a significant change in Honduran labor practices. The series of coups and countercoups that followed the strike led to the rise to power of Dr. Villeda Morales in 1957. Modeling himself on Guatemalan President Jacobo Arbenz and Costa Rican leader José Figueres Ferrer, Morales introduced a labor code, social security, and agrarian reforms. However, the high level of control that U.S. investors held in Honduras stymied many of his reforms.

Honduras was critical to the United States in both geostrategic and financial terms, as its location served as an ideal base from which to influence other Central American nations. As such, Honduras was used as a base for the U.S.-armed and -trained forces that would march into Guatemala and overthrow the leftist Arbenz in 1954.

By the time President John F. Kennedy introduced the Alliance for Progress in 1961, Honduras was a key strategic U.S. ally. In 1963 Morales was overthrown and replaced by an army junta, causing great consternation in Washington. Kennedy severed all ties with Honduras, seeking to deter other ambitious militaries in Latin America. Ironically, however, Washington was largely responsible for creating the Honduran Army through a 1954 agreement and was forced to recognize that without the support of the Honduran junta, the Alliance for Progress had little chance of success. The net result in Honduras was to instigate a class war, which was further compounded in 1969 when El Salvador invaded Honduras in the infamous Soccer War, which broke out during a soccer match between the two countries.

By the end of the 1970s, Honduras had become a vast U.S. military base. Consequentially, the Honduran Army became even more powerful, while mounting social and economic ills were overlooked. Honduras had its place in the U.S. world order spelled out when President Gerald Ford’s administration offered little help to Hondurans after a 1975 hurricane in retaliation for a proposed land redistribution policy. By the end of the decade, as Washington’s policies in Central American began to disintegrate, Honduras again became a critical U.S. ally.

Deteriorating U.S.-Nicaraguan relations only heightened the importance of Honduras in Central America, especially during Ronald Reagan’s presidency. During 1980–1984, U.S. military aid to Honduras jumped from \$4 million annually to \$77.5 million. Washington’s focus on short-term strategic and military objectives backfired, however, when political instability in

Honduras threatened to plunge the nation into a civil conflict. By the mid-1980s, Honduras was struck by an economic depression, with some observers fearing that Hondurans were being pushed toward leftist radicalization, similar to what had transpired in neighboring El Salvador.

Nevertheless, Hondurans were compelled to stay loyal to the United States because of its overwhelming dependence on American aid. Throughout the 1980s, the American military presence in Honduras grew exponentially, as Honduras had become a key component in Washington's efforts to overthrow the Nicaraguan Sandinistas. By the early 1990s and the end of the Cold War, with the Sandinista regime gone, U.S. aid to Honduras dropped dramatically, leaving the nation again in precarious economic straits.

Chairman of the Council of State of the German Democratic Republic (GDR, East Germany) during 1976–1989. Born in Neunkirchen, Saar, on 25 August 1912, Erich Honecker was exposed to socialist politics at an early age. He joined the youth section of the German Communist Party (DKP) in 1926 and became a full-fledged party member in 1929. He studied in Moscow for two years and returned to Germany in 1931. He was arrested by the Nazi regime in 1935 and held for two years before being tried and convicted of communist activities.

Released in 1945, Honecker immediately resumed his communist political activity. He was one of the initial members of the Socialist Unity Party (SED) of Germany and established a working relationship with Walter Ulbricht, the Moscow-trained leader of the communists in eastern Germany. Honecker had charge of the Freie Deutsche Jugend, the youth section of the SED, and became a candidate member of the party's secretariat in 1950. Elevated to full-member status in 1958, he was charged with the construction of the Berlin Wall in August 1961 and established himself firmly as a rising star of the communist elite.

Honecker traded on his support in hard-line circles to organize the ouster of Ulbricht in 1971. Willi Stoph became the titular leader of the East

Honecker, Erich
(1912–1994)

Erich Honecker, the leader of the German Democratic Republic (GDR, East Germany) and a staunch Stalinist, pursued hard-line communist policies during the years he was in power (1976–1989). (Peter Turnley/Corbis)

Germany, but Honecker was the real power behind the scenes. He successfully led a drive to win international diplomatic recognition for the East German state and established East Germany as an Olympics powerhouse. Honecker emerged in 1976 to assume Stoph's title as chairman of the Council of State, which he would hold until October 1989.

The East German economy stagnated under Honecker, but he remained committed to hard-line, inflexible communist policies even when Soviet leader Mikhail Gorbachev pressed for reforms in the mid-1980s. The withdrawal of Soviet support, however, proved fatal to Honecker's regime. When public protests emerged in East Germany during 1988 and 1989, Honecker was unwilling to suppress them by force without the support of Soviet forces, and he was forced to resign his offices on 18 October 1989. His successors, Egon Krenz and Hans Modrow, were unable to sustain East Germany as a viable independent state.

With German authorities trying to prosecute him for crimes committed during his reign—charges mainly related to the deaths of persons trying to escape over the Berlin Wall—Honecker sought refuge first in a Soviet military hospital and then in Moscow. He returned to Berlin in 1992 after the collapse of the Soviet Union and was arrested. Ill health led to his release before he could be tried in 1993, however, and he moved to Chile. Honecker died there on 29 May 1994.

Hong Kong

British colonial port city that functioned as a key strategic Cold War outpost as well as an ideological battleground between Western-style capitalism and communism. Bordering southeastern China and the South China Sea, Hong

Kong is roughly six times the size of Washington, D.C., and was acquired by the British in 1841. The British long considered Hong Kong a logical stepping stone in developing Chinese trade ties and as an entrée to markets throughout Southeast Asia. After World War II, Britain recovered control of Hong Kong from the Japanese and was determined to retain it for commercial as well as strategic reasons. Its population at the time was about 600,000 people.

The establishment of the communist People's Republic of China (PRC) in October 1949, which extended Cold War rivalries in Asia, hardened British intentions to retain the colony. Hong Kong's value to Britain's Asian policies was twofold. First, it was the starting point in an effort to contain communism and protect British interests, which ran from Hong Kong through Indochina, Thailand, Burma, Malaya, Singapore, India, and Sri Lanka. Second, the British hoped that retaining Hong Kong would perhaps facilitate Anglo-Chinese trade.

From a broader point of view, Britain entertained the idea that a prosperous and stable Hong Kong might dissuade the PRC from leaning toward the Soviet Union or promoting an Asian-style Titoism. To accomplish this, Britain took great efforts to develop Hong Kong.

The PRC also seemed to realize that a foreign-run Hong Kong would best serve their interests. Despite their one-nation cause, the Chinese communists had no plans to retake Hong Kong. Their policy was summarized as "long-term planning, full exploitation," meaning that there was no urgency to retake Hong Kong, whose colonial status should be utilized to maximize national interests. By 1997, when the British returned the colony to the PRC, Hong Kong had been transformed into an ultramodern city, an international financial center, and a vital seaport.

Hong Kong's value to the PRC was multifaceted. Economically, Hong Kong served as one of the few trading channels for the PRC to buy Western materials and earn coveted Western currencies. This thinking was soon justified when both the United States and the United Nations (UN) imposed sanctions on China during the Korean War and when the Soviet Union stopped assisting the PRC in the late 1950s. Diplomatically, Hong Kong helped the PRC gain diplomatic recognition from Britain, the first Western country to do so. From a strategic vantage point, by tolerating British control of Hong Kong the PRC hoped to drive a wedge in the Anglo-American alliance, which was at least partially achieved when Britain demonstrated reservations and sometimes opposition to U.S. efforts to place embargoes on Hong Kong and the PRC during the Taiwan Strait crises of the 1950s. As the only port along the Chinese coast remaining in foreign hands, Hong Kong also became a vital window and observation post for the PRC, allowing it to contact overseas Chinese, promote the PRC's cause, continue the civil war against the Republic of China (Taiwan), and counter American containment efforts.

The United States also found Hong Kong strategically useful. Given the absence of a diplomatic relationship with the PRC, Hong Kong served as the Americans' primary contact point with Mainland China, from which

intelligence gathering could take place with relative ease. Moreover, Hong Kong's port facilities provided the U.S. Navy with a convenient fueling station during military expeditions, especially during the Vietnam War. In view of these advantages, America supported Britain's retention of Hong Kong and encouraged the British to improve the colony's economic and social conditions in hopes of making Hong Kong a free-world outpost that would stand in sharp contrast to conditions on the mainland.

Hong Kong's strategic importance began to recede in the early 1970s when the PRC and the United States normalized diplomatic relations. Hong Kong's diminished value was confirmed in 1984 when the PRC and Britain agreed on the return of the colony to Chinese control in 1997. Hong Kong's Cold War value was briefly revived after the PRC's Tiananmen Square crackdown on 4 June 1989, when Hong Kong's future sovereignty became contingent upon the PRC's international conduct and human rights record. In the end, it is hard to overstate Hong Kong's importance in the waging of the Cold War.

Hoover, John Edgar 1895–1972)

Director of the Federal Bureau of Investigation (FBI) during 1924–1972. Born on 1 January 1895 in Washington, D.C., J. Edgar Hoover studied law at George Washington University and earned an LLB in 1916 and a master of law degree the next year. He went to work for the Department of Justice in 1917.

Beginning in 1919, Hoover spent two years as a special assistant to Attorney General A. Mitchell Palmer. Hoover's anticommunist crusade began under Palmer when he assisted in the arrests of more than 4,000 suspected radicals and resident aliens, a number of whom were deported. Following this First Red Scare, the Palmer Raids, and the financial scandals of President Warren Harding's administration, on 10 May 1924 Hoover was appointed director of the Bureau of Investigation (soon to become known as the Federal Bureau of Investigation). He turned his attention to reforming the agency, increasing its professionalism, and, above all, crafting an image of himself as a tough, progressive, and scientific crime fighter.

By the late 1930s Hoover was convinced that communism threatened social values and posed a significant threat to the United States. This attitude hardened in the postwar period when the FBI liaison to the highly secret Venona project, an army intelligence effort to decode thousands of Soviet diplomatic cables, reported the discovery of a Soviet spy ring within the U.S. government.

Hoover's fear that the hidden apparatus of the Communist Party had permeated American liberal organizations set much of the domestic tone of the early Cold War in the United States. His belief that President Harry S. Truman's loyalty program had not gone far enough to stanch the communist threat prompted his testimony in 1947 before the House Committee on Un-American Activities (HUAC). Hoover also elaborated on the dangers posed by communism in such books as *Masters of Deceit* (1958) and *A Study of Communism* (1962). Under his direction, the FBI arrested the leaders of the Communist Party of the United States of America (CPUSA) utilizing provisions of the anticommunist Smith Act; tracked down secret communists in government, such as Alger Hiss, a former State Department official accused of espionage; and arrested and interrogated Julius and Ethel Rosenberg, who were accused of betraying the secret of the atom bomb to the Soviet Union.

The 1950s perhaps marked the height of Hoover's influence, as he enjoyed the trust of President Dwight D. Eisenhower and lived a privileged life that included the company of millionaires and Hollywood celebrities. By the end of the decade the FBI had broken the back of the CPUSA, which forced the Soviet Union to replace its network of ideologically motivated spies with professionals and paid informants. Hoover nonetheless refused to acknowledge his anticommunist successes and continued to devote FBI resources to fight the CPUSA and other radical groups, often at the expense of emerging hot-button issues such as growing violence against civil rights workers in the South and the continued rise of organized crime.

Hoover had a strained relationship with President John F. Kennedy, but President Lyndon B. Johnson understood Hoover's clout and used the FBI much as President Franklin Roosevelt had, as a tool to advance his political agenda. Johnson pushed Hoover to destroy the network of violent Ku Klux Klan organizations in the South through use of the FBI's counterintelligence program (COINTELPRO). It combined wiretapping with the use of informants and disinformation campaigns designed to disrupt target groups. However, the presence of former and current Communist Party members in civil rights and antiwar groups inspired Hoover to direct COINTELPRO operations against civil rights leader Reverend Martin Luther King Jr., the Black Panthers, the tiny Socialist Workers' Party, and many others groups and individuals who attracted the FBI's attention.

Hoover's fear that the hidden apparatus of the Communist Party had permeated American liberal organizations set much of the domestic tone of the early Cold War in the United States.

J. Edgar Hoover was the long-serving and controversial director of the Federal Bureau of Investigation (FBI) during 1924–1975. (Yoichi R. Okamoto/Lyndon B. Johnson Library)

Hoover, the longest-serving FBI director in history, died of a heart attack on 2 May 1972 in Washington, D.C. Although still respected at the time of his death, revelations about the extent of his domestic spying and the FBI's illegal activities as well as about the details of his personal life greatly tarnished his reputation.

Hotline

An instantaneous, point-to-point, secure link between the president of the United States and the leader of the Soviet Union, established in 1963. Sometimes referred to as the "red phone," the direct White House–Kremlin hotline was set up in the immediate aftermath of the 1962 Cuban Missile Crisis. The most dangerous confrontation of the entire Cold War, the Cuban Missile Crisis demonstrated how a simple misunderstanding or delay in communication might result in an accidental nuclear exchange. The hotline was designed to establish instant communications between the leaders of the two superpowers. Actually, the hotline was not a telephone at all but rather a series of quick-printing teletype machines.

At the height of the Cuban Missile Crisis, it took nearly twelve hours for Washington to receive Soviet Premier Nikita Khrushchev's initial 3,000-word response to President John F. Kennedy's ultimatum. By the time the White House had written a response, it had received a second, much tougher response. Convinced that faster, more direct communication might have ended the showdown earlier, Kennedy administration officials proposed the hotline to Moscow, which readily embraced the concept. Although few particulars of the hotline are known, it is believed to have been encrypted with a virtually fool-proof system. The hotline was first used during the 1967 Arab-Israeli War to be sure that each side was aware of the other's military moves in response to the crisis.

House Un-American Activities Committee

Founder of the Albanian Communist Party and Albanian head of state (1944–1985). Born on 16 October 1908 in Gjinokaster, Albania, Enver Hoxha studied at a French secondary school in Korce, Albania, and then at the University of Montpellier in France. While in France, he began writing for a communist newspaper. In 1934 he became a secretary in the Albanian consulate in Brussels, but his consular appointment was canceled in 1936 because of articles he wrote criticizing the Albanian monarchy. He then returned to Albania to teach French in Korce.

In 1939 the Italian Army invaded Albania, ousted the monarchy, and established a puppet regime. Hoxha was fired from his teaching position for refusing to join the Albanian Fascist Party. He opened a retail tobacco store in Tirana that also served as a front for his communist activities. In 1940 he became the founder and head of the Albanian Communist Party, also serving as editor of the party's newspaper.

During World War II, Hoxha assembled a guerrilla force of 70,000 men that fought the occupying Italian Army and then the Germans who arrived to assist their ally. In 1944, the Italians withdrew their forces from Albania. Soon thereafter, the communists established a provisional Albanian government in October 1944 with Hoxha as prime minister and defense minister.

The Western Allies recognized this government in 1945, expecting that Albania would later hold free elections. When elections were held and the communists were the only candidates, Great Britain and the United States rescinded their recognition. The country's leaders proclaimed a People's Republic in Albania in January 1946.

Yugoslav communists had assisted their Albanian comrades during the war, and the two states engaged in a monetary and customs union after World War II. Suspicious of his neighbor's desires to make Albania a province of Yugoslavia, however, Hoxha cut all ties with Yugoslavia in 1948. That same year, he renamed the Albanian Communist Party the Workers' Party. He

Hoxha, Enver
(1908–1985)

Hard-line communist leader Enver Hoxha, who held power in Albania from 1944 to 1985, shown here voting in a 1967 national election. (Bettmann/Corbis)

relinquished the premiership to Mehmet Shehu in 1954 but remained in control as head of the party with the title of first secretary.

In 1961 Hoxha cut his nation's ties with the Soviet Union in response to Soviet leader Nikita Khrushchev's de-Stalinization campaign. At about the same time, the Soviet Union severed relations with the People's Republic of China (PRC). Hoxha then began relying on the PRC for economic support, viewing Mao Zedong as the only true Stalinist remaining in power. Shortly after Mao's death in 1976, relations between China and Albania began to cool as Hoxha criticized the new Chinese leadership. The PRC ended all assistance programs to Albania in 1978.

As Hoxha's health declined in the late 1970s, preparations began for a succession of leadership. In 1980 he appointed Ramiz Alia as the party's first secretary, bypassing longtime Premier Mehmet Shehu. Hoxha tried to persuade Shehu to step aside voluntarily. When this failed, he had the Politburo publicly rebuke Shehu, who allegedly committed suicide in 1981. Hoxha died in Tirana on 11 April 1985, his nation the most cut-off from the outside world in all Europe.

Premier and chairman of the People's Republic of China (PRC). Born in Jiaocheng, Shanxi, in 1921, Hua Guofeng grew up in North Shaanxi, receiving only a rudimentary education. In late 1935 he joined the Chinese Communist Party (CCP) and served in the Red Army throughout the Sino-Japanese War (1937–1945) and the Chinese Civil War (1947–1949).

After the PRC's birth in October 1949, Hua was assigned to Hunan, the native province of Mao Zedong, then chairman of both the PRC and the CCP. As the party's secretary from 1949 to 1956, Hua was responsible for land reform and the establishment of rural cooperatives. Among his greatest achievements was the monumental irrigation project in Shaoshan (Mao's birthplace), which later facilitated his ascension to power. In 1958, Hua became Hunan's vice governor.

The Cultural Revolution (1966–1976) marked a distinct turning point in Hua's political career. In May 1971, he was transferred to Beijing to investigate the fall of Lin Biao, Mao's heir apparent who was also a prime target of the Cultural Revolution. Hua's pro-Maoist sympathies earned him membership in the Politburo in August 1973 and the vice premiership in January 1975. In April 1976, he became premier upon Zhou Enlai's death. In October 1976, shortly after Mao's death, Hua seized power, ending the Cultural Revolution and assuming the chairmanships of the CCP's Central Committee and Central Military Commission. Together with his premiership, this made him the most powerful political leader in China. During his tenure, Hua completed the normalization of Sino-American relations in 1978 and invigorated the PRC's relationship with the West. To restore socioeconomic order after the excesses of the Cultural Revolution, Hua restored the purged Deng Xiaoping as vice premier. Hua resigned the premiership and the party chairmanship in 1980 and 1981, respectively. He retained only the Central Committee membership, which was terminated in 2002. Since then, Hua has disappeared from public life.

Huang Hua (1913–)

Diplomat, foreign minister during 1976–1982, and vice premier of the People's Republic of China (PRC) during 1979–1982. Born in Cixian, Hebei Province, on 25 January 1913, Huang Hua enrolled at the Yanjing University in 1935 and then in 1936 joined the Chinese Communist Party (CCP), engaging in its student movement.

During the Sino-Japanese War, Huang served in Yan'an, Shaanxi Province, where he was involved in organizational and educational affairs. After the war, he concentrated on the party's external affairs. When the CCP's victory in the Chinese Civil War appeared certain by May 1949, he became director of the Nanjing Alien Affairs Office in Jiangsu, taking over the Guomindang's former Foreign Ministry and informing foreign envoys of the CCP's diplomatic principles.

After the establishment of the PRC in October 1949, Huang became director of the Foreign Residence Affairs Department. In January 1953 he was transferred to the Foreign Ministry, where his first task was to participate in the peace talks to conclude the Korean War. He attended the Panmunjom peace negotiations in October 1953 and the Geneva Conference in April 1954. In October 1954 he became director of the West European department of the Foreign Ministry, in which capacity he attended the 1955 Bandung Conference and the Sino-American ambassadorial talks in Warsaw in 1958. From 1960 to 1976 he served as the Chinese ambassador to Ghana, the United Arab Republic, and Canada successively. Returning to China in late 1976, he became foreign minister and in September 1979 also vice premier. He held both posts until 1982, during which time he led numerous Chinese delegations to United Nations (UN) meetings. His most notable achievement was the establishment of a formal Sino-American diplomatic relationship, when he represented the PRC in signing the Sino-American Communiqué of 17 August 1982.

Beginning in 1982, Huang left the public eye, serving the State Council as councillor, retaining membership in the CCP Central Committee, and occasionally leading Chinese delegations abroad. He is now head of several international friendship and welfare organizations.

Acronym for the Hukbo ng Bayan Laban sa Hapon (People's Anti-Japanese Army) whose members were called Huks. The Communist Party of the Philippines (PKP) formed the Hukbalahap on 29 March 1942, although it had its origins in the Filipino peasant movements of the 1930s.

While ostensibly organized to fight the Japanese occupiers, the movement also had a strong socioeconomic program. The Huks gave voice to the grievances of tenant farmers and landless laborers on the sugar plantations of central and southern Luzon. They resented the iniquitous crop sharing, growing indebtedness, and forced labor inherent in the exploitative landholding system of the Philippines. During World War II Huk guerrillas succeeded in killing many Japanese and Filipino collaborators and established their own governments in many barrios (villages) and towns.

In the immediate postwar period, the situation reverted to the status quo ante for the Hukbalahap. The landed elite who had collaborated with the Japanese now turned to the Americans for support. The Americans, because of their antipathy to communism and sporadic but negative wartime experiences with the Huks, backed the landlords and turned against the Huks. Many Hukbalahap squadrons were disarmed, and their contribution to the war effort was denigrated. Local Huk governments were also removed from power, while Huk leaders, including Luis Taruc, were imprisoned.

The Huks nonetheless participated in the April 1946 elections that were held prior to Philippine independence on 4 July 1946. The Huks ran under the banner of the Democratic Alliance Party, which had been formed in July 1945 and combined the peasant movement with the urban Left. However, it was the Liberal Party that emerged victorious. The Democratic Alliance won six seats in Congress representing Central Luzon, but President Manuel Roxas denied the duly elected representatives their seats on charges that they had employed terror tactics during the elections. Hukbalahap leader Taruc was among the six prevented from being seated in Congress.

Finding the constitutional-political channel to realize their aims blocked, the Huks reverted to guerrilla activity. The priority issue was no longer collaboration but rather agrarian reform. There were many reasons for the popularity of the Hukbalahap among peasants, intellectuals, and nationalists. Discontent had been brewing in the countryside for many decades. The peasants rebelled primarily because of repression by both government officials and the landed elite. They viewed their actions as entirely defensive in nature. Taruc demanded immediate enforcement of the bill of rights and revocation

Hukbalahap

of all criminal charges against the Huks. The Huks also sought agrarian reform, including a more equitable crop-sharing arrangement, and representation in the Philippine Congress.

President Roxas unveiled his iron fist policy in August 1946 by proclaiming his intention to crush the Hukbalahap revolt within sixty days. The resultant repression only fueled peasant anger and further bolstered the Huks' popularity. In March 1948, as the Huk rebellion continued, the Roxas administration outlawed the Hukbalahap. Its leaders responded by changing its name to the Hukbong Mapagpalaya ng Bayan (HMB, People's Liberation Army) in November 1948.

In 1950, during the Elpidio Quirino administration, the Huks threatened Manila itself and the stability of the government. In September 1950, Ramon Magsaysay became secretary of national defense, and U.S. President Harry S. Truman responded to Quirino's appeal for help by dispatching the Bell Mission (headed by Daniel W. Bell) and extending military aid. Meanwhile, Magsaysay's unorthodox methods and experience as a former guerrilla helped check the Huk rebellion. He devised a clever reward system for the identification of Huks and a system for their rehabilitation. In a single raid conducted in October 1950 in Manila, the entire communist-Huk politburo was arrested. Magsaysay also developed a Huk resettlement program in which he used the army under the Economic Development Corporation (EDCOR) to resettle the Huks in Mindanao.

In December 1953 Magsaysay became president of the Philippines. His personal charisma and folksy demeanor appealed to rural Filipinos, helping to short-circuit the Huks' popularity. Magsaysay also introduced agricultural reforms to raise productivity, which helped mollify the peasants. By the mid-1950s, Huk activity had been significantly decreased.

Hull, Cordell (1871–1955)

U.S. secretary of state (1933–1944). Born in a log cabin in Overton (later Pickett) County, Texas, on 2 October 1871, Cordell Hull studied law at National Normal University in Lebanon, Ohio, and the Cumberland Law

School in Lebanon, Texas. In 1892 he entered Tennessee state politics as a Democrat. During the Spanish-American War of 1898, he volunteered for service and spent several months in the army. Elected to Congress in 1903, in 1930 he became senator for Tennessee, a position he resigned in 1933 when President Franklin D. Roosevelt appointed him secretary of state.

An old-fashioned Jeffersonian Democrat and progressive, Hull admired President Woodrow Wilson and after World War I supported American membership in the League of Nations. As secretary, Hull favored free trade, peace agreements, international conferences, and reliance upon legal principles and institutions. During the 1930s he negotiated numerous reciprocal trade agreements with other states. He also devoted particular attention to revitalizing U.S. relations with Latin America through the Good Neighbor policy, whereby his country renounced the right to intervene in Latin America, and related hemispheric security agreements.

President Roosevelt, who preferred to retain personal control of American foreign policy, frequently bypassed Hull, a tendency that became more pronounced as World War II approached and that Hull found both irritating and frustrating. Even so, since the two men fundamentally shared the same perspective on international affairs, Hull chose not to resign. He believed that the European dictators posed a dangerous threat to all free nations. He also believed that arms embargoes were ineffective and generally favored aggressors, and thus he opposed the various American neutrality acts passed between 1935 and 1939. Inclined to be slightly less conciliatory than Roosevelt, Hull was unenthusiastic toward Roosevelt's 1938–1939 peace messages to European powers.

Once war began in Europe, however, Hull staunchly supported Great Britain and France against Germany and Italy, but he was virtually excluded from the Anglo-American destroyers-for-bases deal of summer 1940 and the drafting of Lend-Lease legislation some months later. He also did not attend either the Anglo-American military staff conversations held in Washington early in 1941 or the mid-August 1941 Argentina Conference that drafted the Atlantic Charter.

Preoccupied with European affairs, from April to December 1941 Roosevelt delegated to Hull responsibility for protracted American negotiations with Japan, their objective being to reach a *modus vivendi* in Asia, where Japan had since 1937 been at war with China, and sought further territorial gains from British, French, and Dutch territorial possessions. Despite the expressed concern of American military leaders that the United States was unprepared for a Pacific war, by late November 1941 Hull—who was privy to intercepted Japanese cable traffic—believed that war was inevitable and refused to contemplate further American concessions to Japanese demands.

Cordell Hull, U.S. secretary of state under Franklin D. Roosevelt from 1933 to 1944 and winner of the Nobel Peace Prize in 1945. (Library of Congress)

After the Japanese attack on Pearl Harbor in December 1941, as before Hull was often excluded from major meetings, including the 1942 Casablanca conference, the 1943 Cairo and Tehran conferences, and the 1944 Quebec summit meeting of Allied leaders. He opposed the Casablanca decision to demand the unconditional surrender of the Axis nations, believing that this would encourage them to continue the war. He also opposed the 1944 Morgenthau Plan to partition a defeated Germany and eradicate its industrial capacity and, with the assistance of Secretary of War Henry L. Stimson, succeeded in obtaining the scheme's ultimate rejection.

Hull put great effort into establishing the 1942 United Nations (UN) alliance of anti-Axis nations. Following his Wilsonian instincts, he then concentrated on planning for the postwar UN international security organization that would replace the defunct League of Nations. Under his guidance, the State Department drafted the proposals for the UN Charter accepted at the 1944 Dumbarton Oaks Conference and adroitly won bipartisan congressional support for these. Addressing Congress in late 1943, Hull overoptimistically stated that the projected new organization would eliminate spheres of influence, the balance of power, and international alliances and rivalries. He shared Roosevelt's anticolonial outlook and also his belief that the United States should treat China as a great power and thereby encourage it to become one.

Increasingly poor health led Hull to resign after the November 1944 presidential election. Consulted on the terms of the July 1945 Potsdam Declaration urging Japan to surrender, he insisted that it include no promise to retain the emperor. Awarded the Nobel Peace Prize in 1945, he lived quietly in retirement, producing lengthy memoirs. Suffering from strokes and heart problems, Hull died at Bethesda Naval Hospital in Maryland on 23 July 1955.

Human Rights

Rights are rule-governed powers of some people to activate duties that others owe them but cannot extinguish unilaterally. Duties may be to act or refrain

from acting. For example, the right to free speech confers the duty on people to refrain from interfering with each other's expression of opinion according to rules that exclude, say, speech that constitutes a clear and present danger.

Some philosophers posit that rights must protect legitimate interests and create an inviolable, morally justified cordon around a person. For example, each person has a legitimate interest in receiving due process; it is morally justified. The right to due process creates a protective cordon around each one of us. By contrast, an effort to silence all people who happen to disagree with a particular person is illegitimate. It is not morally justified, and so there is no protective cordon around that person.

Human rights are those that each person possesses by virtue of his or her humanity; for example, the right to life or free expression. By contrast, civil rights are those that some people retain by virtue of being citizens; for example, the right to vote freely in an election. Special rights are ones that we enjoy because of our particular situation in the world; for example, a right to inherit from our particular parents or wear the specific shirt we bought.

The idea of universal human rights that are equally applicable to all human beings without distinction of citizenship, culture, geographical location, or historical context has been philosophically and politically controversial. The Westphalian Order that ended the Thirty Years' War in Europe in 1648 gave extensive powers to sovereign rulers, most notably to determine the state's religion. Modern state sovereignty resolved the religious conflicts in Europe but also removed the legal grounds for the intervention of one state in the internal affairs of another, particularly in the case of human rights abuses.

The Anglo-American tradition of political philosophy connects the legitimacy of the sovereign state with its duty to guarantee rights. Thomas Hobbes suggested that the state is based on a social contract wherein the sovereign state guarantees to its subjects a right to life in return for all their other native natural rights. John Locke assigned to the state the duty of guaranteeing the rights of its citizens. When the American colonists set out to justify their claim for independence, they formulated their arguments in Lockean terms as a reaction to the king's violation of their rights, the same rights that he was supposed to guarantee. Shortly thereafter, the French Revolution codified human rights for the first time in a political document, the *Declaration of the Rights of Man and Citizen* (1793). However, this declaration was issued during the Reign of Terror (1793–1794), which witnessed the worst excesses of the French Revolution. For the next century and a half, the concept of human rights hardly played a role in international politics, with the possible exception of certain aspects of the struggle against slavery and the slave trade. Still, the democratic emphasis on rights within the context of the Cold War was a natural development of tradition that did not quite exist in Eastern Europe.

World War II brought human rights to the forefront of international politics. On the one hand, the unique wickedness of Nazism made the war against it a moral one rather than just a clash of nations and their interests. The positive content of that moral struggle was couched, especially by Americans, in terms of universal human rights. On the other hand, the tentative

The Nuremberg War Crimes Tribunals of 1945–1946, presided over by American, British, French, and Soviet judges, introduced the concept of “crimes against humanity” into international law.

and ideologically awkward alliance between Western democracies and the Soviet Union required some positive common denominator—good versus evil—that transcended a common enemy. These two trends were further strengthened after the war, when the true scale of Nazi atrocities and the Holocaust became apparent and World War II acquired its established character as a war of good against evil. This good was interpreted by many as human rights. The Nuremberg War Crimes Tribunals of 1945–1946, presided over by American, British, French, and Soviet judges, introduced the concept of crimes against humanity into international law. Although formulated and applied after the fact, the construct of crimes against humanity set standards of human rights according to which Nazi leaders could be tried and punished not just for atrocities committed in occupied territories but also for those against German citizens on German territory.

The United Nations (UN) went even further to promote the rhetoric, if not the practice, of human rights in its founding Charter and in the December 1948 Convention on the Prevention and Punishment of the Crime of Genocide and the Universal Declaration of Human Rights. The significance of these documents was declarative rather than normative, because no enforcement mechanisms with appropriate powers were created following these declarations. As noted above, there are no rights for some without duties for others. For humans to have rights, some institution must be entrusted with enforcing them; otherwise, declarations remain just that. Since the Universal Declaration of Human Rights was a compromise between communist and democratic representatives, it included economic rights clauses that clearly make no normative sense in a universal context; for example, the right of every human to enjoy a paid vacation.

The onset of the Cold War stifled attempts to enforce a universal regime of human rights because communist totalitarianism was inherently founded on the state's right to violate any right of its subjects, while Western democracies protected its client states that abused human rights in the developing world, from Iran to Haiti to Latin America. The so-called realist approach to international relations promoted by Henry Kissinger, for example, dictates nonintervention in the internal human rights policies of other countries and the determination of U.S. foreign policy based exclusively on its geopolitical interests. For example, in 1973 the United States supported the Chilean military in deposing leftist President Salvador Allende and instituting a regime that exhibited worse human rights violations than its predecessor. For political expediency, it also engaged in an alliance with Maoist China, although China's Cultural Revolution violated human rights on a scale far greater than in the Soviet Union.

A variety of UN-sponsored human rights covenants and agreements from the 1960s further broadened the rhetorical connotations of human rights to encompass social, economic, and ethnic issues but also deepened the divide between the public rhetoric and actual practices of signatory nations to these covenants. Both sides in the Cold War used human rights rhetoric as a tool in their ideological war. The West lambasted communist states for allegedly violating the liberties of their subjects, while the communists harped on the

A Chinese peasant, bound for execution, kneeling before a tribunal of local communists at an outdoor court at Fukang, Guangdong Province, China, in 1953. The man's crime was owning a small parcel of land. (Library of Congress)

alleged violation of the right to work of the unemployed in free market economies.

The policing of human rights became more effective by the mid-1970s through the introduction of various new methods for enforcement. The United States attempted to use its economic might to pressure human rights violators. In 1973, the U.S. Congress linked foreign aid to the human rights record of recipient countries. The Jackson-Vanik Amendment to the U.S. Trade Act of 1974 attempted to use the Soviets' reliance upon American wheat to pressure the Soviet Union to increase Jewish, Baltic, and Baptist emigration by linking free emigration with a most-favored nation (MFN) trade status. However, the generally low volume of trade between the two blocs limited the effectiveness of this kind of leverage. The Soviets reacted by linking emigration to the state of their negotiations with the United States over disarmament and other political issues.

The 1975 Helsinki Final Act Covenant on Human Rights was probably viewed by the Soviet leadership as yet another declarative statement of little lasting effect. It included safety clauses that precluded intervention in the internal affairs of Soviet-bloc countries. Yet its ratification by Soviet-bloc

nations provided international legal grounds for East European dissidents to assist their governments in its implementation. The Helsinki Process provided a legal basis for the resurrection of civil society in Eastern Europe, especially through the Charter 77 dissident movement in Czechoslovakia and the Soviet Human Rights Committee of Andrei Sakharov and Sergei Kovaljov. Dissident groups were able to pressure their governments to respect human rights through exposure of their violations in the Western media, which were then broadcast back beyond the Iron Curtain via Radio Liberty. Dissidents pressed on to assert their rights to express their opinions in samizdat publications (typed carbon copies that circulated among friends) and in informal gatherings where banned music and theater could be performed and critical lectures could be delivered. The dissidents were supported most effectively by nongovernmental organizations (NGOs) in the West, which put greater pressure on the Soviet regimes than governments ever could.

A somewhat parallel development took place west of the Iron Curtain, where NGOs such as Amnesty International became significant in enforcing human rights through monitoring and reporting and by embarrassing the perpetrating governments in the forum of world public opinion. When U.S. President Jimmy Carter took office in 1977, he refocused his nation's foreign policy to promote global human rights, although he continued to support some traditional U.S. allies, such as Shah Mohammad Reza Pahlavi of Iran, despite their dismal human rights records. Still, the idealistic shift in policy persisted through the presidency of Ronald Reagan. The Reagan administration attempted to improve the human rights situation in nations in Latin America, Indonesia, and East Asia, albeit through private channels rather than public diplomacy and sometimes by utilizing illegal means. In 1985, human rights were one of four items on the agenda of Soviet and American negotiators as the Cold War began to wind down.

In 1987 the Soviet Union moved to improve its human rights record by releasing political prisoners and granting freedom of speech, the press, assembly, and travel, which ultimately led to political freedom and, after 1991, to national self-determination. Soviet leader Mikhail Gorbachev's perestroika and glasnost policies were in large measure responsible for these momentous turns of events. The problem then, as now, has been the lack of institutional guarantees of human rights in the former Soviet states that would systematically enforce rights.

Gorbachev's attempt to reform communism proved that totalitarian communist regimes could not easily introduce human rights into their system. Totalitarianism is, in essence, an all-or-nothing proposition. Once it allows its people to possess rudimentary human rights, it loses its claim to power; the people demand greater distribution of rights from the rulers to the ruled, and totalitarianism ends. This process had already been predicted by Czech dissident Václav Benda in his 1978 essay "A Parallel Polis."

In the closing years of the Cold War, as international tensions subsided, the U.S. interest in supporting regimes that violated human rights for the sake of political expediency waned. Consequently, a wave of democratization

swept Latin America and South Africa. Yet the end of the Cold War also exposed the inability of the international community to enforce human rights even in the most extreme cases of genocide, such as in Rwanda, the Sudan, and the former Yugoslavia.

Hungarian anticommunist uprising (23 October–4 November 1956) brutally suppressed by Soviet military intervention.

By the spring of 1953 the Hungarian economy was in deep crisis. The economic policies of the Communist Party, under the leadership of Ernő Gerő, president of the National Economic Council, were proving unsuccessful. The farms produced by land reform were too small for Hungary's economy, and the government had emphasized heavy industry despite a lack of natural resources to sustain it. Neither Prime Minister Mátyás Rákosi nor the top leadership of the Communist Party dealt effectively with the difficulties. On 4 July 1953 Imre Nagy, with Soviet support, replaced Rákosi as prime minister. Nagy introduced a reform program dubbed the New Course. It included reformation of the administration, an end to or reduction in forced labor, an accommodation with religion, an end to police brutality, curtailment of the power of the secret police, amnesty for political prisoners, allowing peasants to end the collective farms, and relaxation of economic controls and the pace of industrialization. These were also the demands of the rebels in 1956.

Soviet leader Nikita Khrushchev became concerned about these reforms. When the political climate in Moscow changed in favor of the hard-liner Rákosi in the spring of 1955, Nagy was forced to resign. Rákosi's

Hungarian Revolution (1956)

HUNGARIAN REVOLUTION, 1956

reappointment and the suspension of Nagy's reform program were badly received in Hungary.

The Poznań riots in Poland in June 1956 and Władysław Gomułka's return to power there encouraged the Hungarian reformers. With the situation in Hungary fast deteriorating, Khrushchev ordered Rákosi to resign as party secretary on 18 July 1956. But Rákosi's Stalinist replacement, Ernő Gerő, was not acceptable to party moderates, who favored greater liberalization. Gerő proved just as unpopular as Rákosi.

By 1956 there was widespread dissatisfaction in Hungary. Under Rákosi the economy had deteriorated. A poor harvest and a fuel shortage in the fall of 1956 coupled with events in Poland added to the already serious situation.

At the same time there was rising discontent among Hungary's intellectuals, who had come to enjoy limited freedom in the thaw following the March 1953 death of Josef Stalin. In 1955 nearly sixty of them signed a memorandum that called for an end to rigid state regimentation of Hungarian cultural life. Although most were forced to retract this daring measure, by spring and summer of 1956 there was a rising chorus of protest. The principal outlet for the intellectuals was a debating society known as the Petőfi Club, named for Sándor Petőfi, the young nationalist poet who had died in the Hungarian War of Independence (1848–1849). The dissidents were not anticommunists; rather, they demanded that the government bring its policies and practices into line with stated communist ideals.

All the while, Nagy's popularity was on the increase, and intellectuals and journalists were demanding reinstitution of his reform program. Reformers within the party warned that if he did not return and the government was not reorganized under his leadership, there would be an explosion. The party leadership, however, resisted such steps.

College and university students were now committed to political change. Students from the Technical University founded a new independent youth organization, convening an assembly on 22 October 1956 to finalize their main demands for political and social change. The demands included the withdrawal of Soviet troops, appointment of a new government with Nagy as prime minister, political pluralism, new economic policies, and trials for Rákosi and his fellow communists. The minister of interior authorized the student-led demonstration scheduled for 23 October.

The demonstration began peacefully at the statue of Petőfi. The protesters' next stop was the statue of József Bem, hero of the Polish Revolution of 1830 and of the Hungarian War of Independence. Originally planned as an expression of sympathy for the Polish movement, the march reflected acute dissatisfaction with the Hungarian government. The students then laid a wreath at the Bem statue and read out their list of demands. Emboldened by the growing crowd, the students instead of disbanding moved to Kossuth Square in front of the Parliament building. A series of events that evening transformed the reform movement into rebellion.

In front of the Parliament building, more than 200,000 people listened to Nagy's speech. In it he agreed to most of the demands, but as a moderate reformer he refused to institute radical changes. Disappointed, the crowd moved on to the building housing the National Radio Network with the objective of announcing their demands on the air. A speech made by Gerő, general secretary of the Communist Party, was broadcast instead. In the speech, Gerő made arrogant and incendiary remarks that enraged the demonstrators and led to an escalation of tensions. Fighting then broke out between the demonstrators and police defending the National Radio complex. When police tried to disperse the crowd with tear gas first and then opened fire, the crowd stormed the radio building and occupied it. On 24 October, Hungarian military officers and soldiers joined the demonstrators. The demonstrators toppled a large statue of Stalin, chanting "Russians go home," "Away with Gerő," and "Long live Nagy."

In an emergency meeting on the evening of 23 October, the party's Central Committee voted to bring back Nagy as prime minister. The appointment was announced the next day, and Nagy delivered a radio speech announcing amnesty for the protesters if they stopped the fighting. Also that day, Soviet troops began moving into Budapest and taking up positions in the city.

The demonstration consequently assumed an anti-Soviet, nationalist character. Over the next four days sporadic fighting occurred between the Soviet troops and the so-called Freedom Fighters, groups of students, workers, and former prisoners. On 25 October in the course of a huge demonstration in front of the Parliament building, Soviet tanks opened fire on the crowd.

Instead of
disbanding, the
students moved

parliament building.

Hungarians burn a picture of Soviet leader Josef Stalin during the anticommunist revolution in Budapest in 1956. (Hulton-Deutsch Collection/Corbis)

Meanwhile, Soviet leaders Anastas I. Mikoyan and Mikhail A. Suslov arrived in Budapest from Moscow and decided that Gerő would have to go. He was replaced by János Kádár, neither a reformer nor a Stalinist, as general secretary of the party. The Soviet leadership plainly hoped that Nagy and Kádár would be able to control the situation.

The uprising, however, was rapidly spreading throughout Hungary. Nagy announced that negotiations were under way for the withdrawal of Soviet troops once law and order had been restored. On 27 October Nagy finalized his new government, which included noncommunist politicians such as Zoltán Tildy and Béla Kovács. Nagy and Kádár then commenced negotiations with the Soviets on a cease-fire agreement.

During his brief tenure as prime minister, Nagy attempted to bring events under control. He proposed only limited reforms as a start. His ultimate intention, however, was to implement the political program of his first premiership in 1953. He offered a general amnesty to the protesters and promised the withdrawal of Soviet troops from Hungary. He soon realized, however, that his 1953 program was out of step when the revolution spread to the rest of the country. Therefore, he acceded to most of the population's wishes, namely the introduction of political pluralism and Hungarian withdrawal from the Warsaw Pact.

On 28 October the new government convened for the first time in the Parliament building. The government then ordered the dissolution of the secret police. Meanwhile, the Political Committee of the party agreed to the cease-fire. Nagy also announced that Soviet troops would soon withdraw from Budapest, and on 29 October Soviet troops began to leave the city.

A four-party coalition government was founded on 30 October. As such, the Smallholders' Party, the Social Democratic Party, and the National Peasants Party were all reconstituted. At the same time, the communist Hungarian Workers' Party was dissolved. Nagy freed political prisoners including Cardinal József Mindszenty, who had been sentenced to life imprisonment by Rákosi in 1948. Nagy also informed the people of his government's intention to permanently abolish the one-party system.

This marked a decisive turning point in Nagy's policy. He abandoned his moderate reform agenda and became fully committed to the more radical demands of the population. On 31 October, in a speech on Parliament Square, he announced that Hungary would begin negotiating its withdrawal from the Warsaw Pact. On 1 November Nagy formally declared his intention to leave the Warsaw Pact, proclaimed Hungarian neutrality, and asked the United Nations (UN) to mediate his nation's dispute with the Soviet Union. At the same time, a new communist party, the Hungarian Socialist Workers' Party, was founded. On the evening of 1 November, the general secretary of the

new party, János Kádár, went to the Soviet embassy to begin negotiations with Soviet authorities. He was then secretly flown to Moscow, where he met with Khrushchev.

On 3 November the new government began negotiations for the final withdrawal of Soviet troops, and a new coalition was founded that included communists, three members of the Smallholders' Party, three Social Democrats, and two representatives from the National Peasants' Party. General Pál Maléter, the new minister of defense and one of the heroes of the revolution, visited Soviet Army headquarters on the evening of 3 November under a pledge of safe conduct to negotiate for Soviet withdrawal and Hungarian departure from the Warsaw Pact. He was not allowed to leave the headquarters and was kept under house arrest until the end of January 1957, when he was handed over to the new Hungarian authorities. Maléter was tried and executed in the summer of 1958.

Meanwhile, Khrushchev and the Soviet leadership had become increasingly alarmed with the developments in Hungary. While Moscow was willing to make some concessions, a multiparty cabinet and free elections plainly threatened Soviet control over all of Central Europe. Soviet leaders may also have believed, as they charged, that Western agents had been at work stirring up revolt. Military leaders also demanded action to reverse the humiliation suffered by the Red Army in withdrawing its tanks earlier. Nagy's announcement on 1 November 1956 of Hungary's intention to withdraw from the Warsaw Pact was the straw that broke the camel's back and triggered Soviet military intervention.

At dawn on Sunday, 4 November, Khrushchev sent 200,000 Soviet troops and 2,000 tanks into Hungary. The troops immediately secured Hungary's airfields, highway junctions, and bridges and laid siege to the major cities. Nagy called for resistance to the Soviets. Fighting broke out across Hungary, but the center was in Budapest. Unaided from the outside, the fight lasted only a week. Nagy and some of his associates sought and obtained asylum at the Yugoslavian embassy. Cardinal Mindszenty sought refuge in the U.S. legation, where he remained until 1971.

Kádár immediately denounced Hungary's withdrawal from the Warsaw Pact and, with Soviet military backing, took control of the government. On 8 November he announced the formation of the Revolutionary Worker-Peasant Government and its Fifteen-Point Program. The latter included the protection of the socialist system from all attacks, an increase in living standards, the streamlining of bureaucracy, the augmentation of agricultural production, a justification for the Red Army's intervention, and the withdrawal of troops from Hungary. The last point was rescinded following pressure from the Warsaw Pact.

Thousands of Hungarians were arrested, and an estimated 200,000 others fled the country—many of them young and well-educated—most of them across the western border into Austria. Nagy, promised safe passage from the Yugoslavian embassy, was arrested by the Soviets on 22 November and imprisoned. He was subsequently tried and executed on 16 June 1958. Some 70 other people were also executed.

Hungarian refugees leave Budapest following the failed 1956 Revolution. (National Archives and Records Administration)

One effect of the failure of the Hungarian Revolution was a loss of faith in the West. Hungarians genuinely thought that they had been promised assistance, and many Hungarians and Western observers believed that the United States prolonged the fighting because Hungarian-language broadcasts over Radio Free Europe, then covertly financed by the U.S. government, encouraged Hungarians to believe that either the United States or the UN would send troops to safeguard their proclaimed neutrality. Hungarians repeatedly asked Western journalists covering the revolution when UN troops would be arriving. President Dwight Eisenhower and Secretary of State John Foster Dulles had talked about “liberating” Eastern Europe and “rolling back communism,” but this had been intended largely for domestic U.S. political consumption rather than for the East Europeans. U.S. inactivity over the Hungarian situation, however, indicated tacit acceptance of the Soviet domination of their part of the world.

The UN Security Council discussed the Hungarian situation but adjourned the meeting because the Soviets appeared to be withdrawing. Then, in a matter of a few hours, the UN was faced with the fait accompli of 4 November. At the same time, however, UN attention was focused on the Anglo-French Suez invasion. This and the split between the United States and its two major allies effectively prevented any concrete action against the invasion of Hungary. In December 1956 the UN censured the Kádár regime, but this did not in any way change the situation in Hungary.

There was another point worth considering. No matter how the West might have felt about intervening in Hungary, there was no way to get to that country militarily without violating Austrian neutrality. Nonetheless, the West did not come off well in Hungary.

The effects of the Hungarian Revolution were particularly pronounced in Eastern Europe. Any thought that the people of the region might have had of escaping Moscow’s grip by violent revolution was discouraged by the example of Soviet willingness to use force in defiance of world opinion. Nevertheless, open rebellion by the very groups upon which the communists were supposedly building their new society was shattering from a propaganda standpoint, as was the crushing of free workers’ councils (soviets) that had sprung up in Hungary during the 1956 revolution nearly four decades after the victory of Russian soviets in the Bolshevik Revolution of 1917. The Soviet military intervention did have a considerable impact on West European communist parties. They suffered mass resignations, including some illustrious intellectuals.

The Hungarian Revolution ultimately led to changes in Soviet policy toward Eastern Europe. Moscow allowed some modifications in economic

planning within the East European bloc to meet the needs of individual countries, including more attention to consumer goods and agriculture and a slowed pace of industrialization. For the time being, however, an opportunity to begin the liberation of Eastern Europe had led to a heavy-handed reassertion of Soviet mastery.

By June 1957 Kádár had stabilized the situation and secured his position as the most prominent Hungarian political leader of the Cold War era. For the next thirty-two years in Hungary, the 1956 revolution was officially referred to as a counterrevolution. It was not until 1989, after the Velvet Revolution began in Czechoslovakia, that it was officially called an uprising. On 23 October 1989 the Hungarian Republic was formally declared. That same year witnessed the withdrawal of the Soviet troops from Hungary. In 1991 the Hungarian Parliament declared 23 October a national holiday.

Central European nation with a 1945 population of approximately 9 million people. Hungary covers 35,919 square miles, about the size of the U.S. state of Indiana. It is bordered by Slovakia to the north, Croatia and Serbia to the south, Austria to the west, and Romania and Ukraine to the east.

In April 1945, the Soviet Army liberated Hungary from German occupation. As Hungary was on the side of the vanquished powers, its future depended on the terms of the cease-fire agreement as well as the peace treaty negotiated among the victorious powers. In an October 1944 meeting in Moscow between British Prime Minister Winston Churchill and Soviet leader Josef Stalin, the two men had agreed over spheres of influence, with Hungary split 50/50 between the Western powers and the Soviet Union. But the Red Army occupied Hungary, and the political, economic, social, and military development of Hungary in the postwar era was to be largely influenced by the Soviet Union.

Hungary

The Communist Party in Hungary had been illegal between the two world wars; thus, many party activists spent these years in Soviet exile. When they returned to Hungary with the Red Army at the end of World War II, their chief mission was to grasp political power and introduce a Soviet-style political-economic system. The communist takeover did not occur immediately, however.

In November 1944, Hungarian General Miklós Béla Dálnoki and the Hungarian communists in exile negotiated a cease-fire agreement in Moscow. In return, the Soviets offered Dálnoki the post of premier in the immediate postwar Hungarian government. This Provisional National Government was formed on 22 December 1944 in Debrecen in eastern Hungary, which had already been liberated from German occupation.

As premier, Dálnoki reorganized the public sector, signed the cease-fire agreement with the Red Army, began land reform, modernized elementary education, and called for elections. These elections were held six months after the end of the war, in November 1945. Four major parties participated: the Smallholders' Party, the Social Democrat Party, the Hungarian Peasant Union, and the Communist Party. Of these, the Smallholders' Party was the most popular as well as the most conservative. Subverting the Smallholders' Party was one of the main Communist Party goals.

Although the Smallholders' Party won the November elections with 57 percent of the vote, under Soviet pressure a four-party coalition government was formed with Zoltán Tildy as premier. He held this position until 1 February 1946, when Hungary was declared a republic, whereupon he became its president.

The new premier, Ferenc Nagy, also from the Smallholders' Party, faced three big challenges in inflation, nationalization, and growing pressure from the Communist Party. A new currency was introduced in August 1946, which helped stem inflation, but the other two problems defied solution. The communists, meanwhile, held key positions in the government and used these to undermine the democratic process. Secretary of the Hungarian Communist Party and Vice Premier Mátyás Rákosi controlled the police, and Soviet troops remained in occupation. Soviet expropriation of the German monetary assets in Hungary was also a strong economic lever, and the communists claimed credit for restoring the economy and the transportation system.

László Rajk, minister of the interior and head of police, directed a reign of terror, while Rákosi embarked on what he called salami tactics, slicing off one segment of the opposition after another. The communists also moved against the Smallholders' Party. Its leader, Béla Kovacs, was arrested and accused of plotting to restore the Habsburgs. In May, Premier Nagy, on vacation in Switzerland, was forced by threats from Moscow to resign by telephone. The August 1947 parliamentary election, tainted by communist fraud, reduced the strength of the Smallholders, and in March 1948 the socialists were forced to merge with the communists into the Hungarian Workers' Party (MDP). In August 1948 President Tildy was also forced to resign and was placed under house arrest. In 1949 Hungary became a People's Republic.

Soviet tanks parading through the streets of Budapest, Hungary, in 1952. (Library of Congress)

The MDP soon nationalized the banks, factories, private schools, businesses, land, and other properties. Farmers were forced to join collective farms. Resisters were promptly arrested by the State Protection Authority. The party also maintained strict control over education and cultural life. Rákosi, party general secretary and premier during 1952–1953, was the main proponent of these policies.

The Roman Catholic Church opposed the communists. Primate of the Hungarian church Archbishop József Mindszenty refused to recognize the confiscation of Church lands and nationalization of its schools, and he also refused to hide his conservative social and political views. Accused of being a monarchist, he was arrested in December 1948, tortured, tried and found guilty, and sentenced to life in prison.

Within a few months Rajk found himself on trial. A nationalist revolutionary who enjoyed genuine popularity and was not beholden to Moscow, he was found guilty of treason and spying and was executed in October 1949. Rákosi, a pure Stalinist and the most unsavory of communist East European leaders, now assumed formal control of the Hungarian Workers' Party and was the effective power broker until 1953.

Many Hungarians fell victim to Rákosi's excesses, enforced by the dreaded Államvédelmi Hivatal (AVH, State Security Authority) secret police. By the

summer of 1953, the Hungarian economy was in deep crisis. The party's economic policies carried out under the leadership of Ernő Gerő, president of the National Economic Council, had proven unsuccessful. Forced industrialization and agricultural collectivization combined with unrealistic goals all took a heavy toll. Rákosi, however, failed to deal with the growing problems, and on July 1953 Imre Nagy, now favored by the new Soviet leadership in place following Stalin's death, replaced Rákosi as premier.

Nagy soon introduced a reform program known as the New Course that relaxed the pace of industrialization, allowed peasants to leave collective farms, eased police terror tactics, reformed the bureaucracy, and improved the standard of living. Soviet leader Nikita Khrushchev became concerned about these reforms, however. When the political climate in Moscow changed in favor of the hard-liner Rákosi, Nagy was forced to resign in the spring of 1955. Rákosi's reappointment and the suspension of Nagy's reforms were greeted with great hostility in Hungary. To stave off widespread general discontent, Rákosi was replaced as general secretary of the party in July 1956 by another hard-liner, Gerő. This was not the best of decisions, as Gerő was just as unpopular as Rákosi. To add to the discontent, the reburial in early October of victims of the earlier purges led to widespread unrest.

All the while, Nagy's popularity was increasing. Intellectuals and journalists demanded the implementation of his reform program. University students were also committed to political change. On 23 October 1956, they scheduled a peaceful demonstration that soon turned violent when shooting erupted between police and the demonstrators. After an emergency meeting of the party Central Committee on the night of 23 October, Nagy was appointed premier. He held this position until 4 November.

During his brief tenure, Nagy attempted to bring events under control, but at first he advocated only moderate reforms. His intention was to implement the political program of his first premiership in 1953. During the first days of the 1956 Hungarian Revolution, he offered amnesty to the demonstrators and promised the withdrawal of the Soviet troops from Hungary.

Nagy soon realized that his program had been superseded by events when the revolution spread to the rest of the country, with more demands. He therefore agreed to the primary popular demands: the introduction of political pluralism and Hungary's withdrawal from the Warsaw Pact. On 1 November he announced that Hungary intended to withdraw from the Warsaw Pact and proclaimed Hungarian neutrality. These developments angered Moscow and ultimately provoked a Soviet military intervention. Soviet forces invaded the country on 4 November, following meetings two days earlier between Soviet authorities and János Kádár, the newly appointed general secretary of the Hungarian Communist Party. Meanwhile, Nagy sought asylum in the Yugoslavian embassy in Budapest.

Kádár immediately denounced the plan for Hungary to withdraw from the Warsaw Pact and, with Soviet military support, took control of the government. On 8 November he announced the formation of a Revolutionary Worker-Peasant Government and its Fifteen-Point Program. The latter included protection of the "people's democratic and socialist system" from

attack, an increase in living standards, reduction of the state bureaucracy, increases in agricultural production, and justification for the Red Army's intervention. Nagy, promised free passage out of the country from the Yugoslavian embassy, was arrested on 22 November and imprisoned in Romania.

By June 1957, Kádár had fully stabilized the situation and secured his position as the most prominent Hungarian political leader for the next thirty-two years. He instituted severely repressive countermeasures against the revolution's leaders. Nagy and his fellow reform communists, including Pál Maléter, the minister of defense in the revolutionary government, were tried and executed on 16 June 1958. This caused an international outcry and resulted in several years of political isolation for Kádár's government.

By the late 1960s, however, Kádár began to implement his so-called Goulash Communism. Begun in 1966, this program of economic liberalism allowed some degree of free enterprise in order to bring about a higher standard of living and improved relations with the West. Everyday life became safer and more pleasant. Of all the postwar-era East European communist leaders, Kádár retained power the longest. During the 1960s and 1970s, he quietly implemented most of the reforms that the revolutionists of 1956 had fought for without evoking a backlash from Moscow. During his reign, Hungary was considered the "happiest barracks" in Eastern Europe. In 1977, Pope Paul VI granted Kádár an audience at the Vatican, which symbolically marked the end of Hungary's moral isolation.

In the late 1980s, however, Kádár found it difficult to adapt to Soviet leader Mikhail Gorbachev's reform initiatives. Indeed, Kádár's presence in the party became an obstacle to reform. Thus, in May 1988 Károly Grósz, a moderate party reformist and Hungary's premier, ousted Kádár and became party general secretary. Kádár was shifted to the ceremonial post of party president.

During his short term in office, Grósz contributed significantly to the transformation of Hungary to a Western-style democracy. In November 1988, Miklós Németh succeeded Grósz as premier. After Gorbachev signaled greater independence for Eastern Europe, Németh began implementing fundamental reforms. His objective was to reintegrate Hungary and the entire region into the world economy and the free market system. He agreed to a state reburial of Imre Nagy and opened the border to East German refugees, triggering a sequence of fundamental international political changes that would bring an end to the division of Germany and an end the Cold War. Németh also decided to order the removal of the barbed-wire fence on Hungary's western border, and he and other party reformers refounded the Hungarian Socialist Party. Németh also signed an agreement for the withdrawal of Soviet troops from Hungary. During his tenure, a new constitution came into being, Hungary was declared a republic, and a new election system based on political pluralism was implemented. In the spring of 1990, József Antall, whose Hungarian Democratic Forum party won Hungary's first post-Cold War free election, succeeded Németh as premier.

Hurd, Douglas Richard (1930–)

British Conservative Party politician and foreign secretary (1989–1995). Born on 8 March 1930 in Marlborough, Wiltshire, southern England, Douglas Hurd was the son of Sir Anthony Richard, a member of Parliament. Hurd attended Eton College and Trinity College, Cambridge University, receiving his MA in 1952 with first-class honors in history.

During 1948–1949, Hurd was a second-lieutenant in the British Army Royal Horse Artillery. In 1952 he joined the diplomatic service and for the next fourteen years worked in the Diplomatic Corps. He served in various posts, including Beijing, New York, and Rome.

An astute politician, Hurd was known for his skill in strategy, his tolerance, and his self-discipline, although much of the British public perceived him as aristocratic, old-fashioned, and rather aloof. He served as political secretary to Prime Minister Edward Heath during 1970–1974. In 1974 Hurd was elected to Parliament as a Conservative, representing Mid-Oxfordshire.

In 1984 Hurd was Northern Ireland secretary under Prime Minister Margaret Thatcher. From 1989 to 1995 Hurd was foreign secretary. During these six years, he was a major figure in historic Cold War events, from the fall of the Berlin Wall to the Dayton Peace Agreement. In November 1990, when Thatcher suddenly withdrew from the Conservative Party, Hurd was nominated to replace her but was defeated by John Major. In 1996 Hurd was made a Companion of Honor and the following year was given a life peerage as Baron Hurd of Westwall in the House of Lords.

Since 1997 Hurd has been the chairman of several British firms, and he remains active in Conservative Party causes. A prolific writer of history and political thrillers, he had published ten books by 2002. In addition, Hurd's diary, kept since he was nine years old, provides valuable insights into his long and illustrious political life.

-

U.S. general and diplomat and ambassador to the Republic of China (1944–1945). Born in the Choctaw Nation, Indian Territory, on 8 January 1883, Patrick J. Hurley graduated from Indian University (now Bacone College) in 1905. He earned a law degree from the National University of Law in Washington, D.C., in 1908 and from George Washington University in 1913. Admitted to the bar, he practiced law in Tulsa, Oklahoma, and was national attorney for the Choctaw Nation during 1913–1917.

Hurley served in the Indian Territorial Volunteer Militia during 1902–1907 and in the Oklahoma National Guard during 1914–1917. He fought in France in the American Expeditionary Forces during World War I, rising to the rank of lieutenant colonel. He then returned to Oklahoma, where investments in oil and banking made him one of the wealthiest men in the state.

Following donations to Herbert Hoover's presidential campaign in 1928, Hurley joined the new Hoover administration first as assistant secretary of war in 1929 and then as secretary of war during 1929–1933. Hurley issued the order to General Douglas MacArthur to evict the Bonus Army from Washington, D.C., in 1932. When Hoover was defeated for reelection, Hurley returned to his business interests in Oklahoma.

When President Franklin Roosevelt sought to broaden his administration with Republicans following U.S. entry into World War II, Hurley was recalled to active duty as an army brigadier general. He served as special emissary to Australia, where he attempted unsuccessfully to secure the relief of U.S. troops besieged in the Philippines. He then held a succession of special assignments for President Roosevelt, including minister to New Zealand (1942) and special emissary to the Soviet Union (1942) and the Near East and Middle East (1943).

In August 1944 Roosevelt named Hurley as his personal representative to China, and three months later he became ambassador. Directed by Roosevelt to secure Nationalist leader Jiang Jieshi's cooperation with the communists to form a united front in fighting the Japanese, the uninformed Hurley instead fell under Jiang's sway and became an ardent champion of the Nationalist position of noncooperation with the communists. This put Hurley on a collision course with State Department "China Hands" John Paton Davies and John Stewart Service, who believed that China would fall

Hurley, Patrick Jay
(1883–1963)

to the communists unless Jiang's government underwent major reform and was purged of corruption. Hurley held that only communists could take such a stance.

Promoted to major general in 1944, Hurley returned to the United States in September 1945 and declared in the course of a speech that U.S. diplomats in China were refusing to carry out American policy, while in fact it was Hurley himself who was contravening it. Under mounting criticism he offered his resignation, which to his surprise President Harry S. Truman accepted in November 1945. In his resignation letter, Hurley made the outrageous charge that State Department officials had aided the communists and had prevented him from saving the Nationalist government.

Hurley then returned to New Mexico. An unsuccessful candidate for the U.S. Senate from his native state in 1946, 1948, and 1952, he remained a leading figure in the right-wing China lobby. In June 1950 Hurley accused both Service and Davies of secretly passing information to the Chinese communists that enabled them to subvert the Nationalists. Although both men were cleared of this charge by the State Department, anticommunist crusader Senator Joseph McCarthy picked it up, and both men were driven from the State Department in 1953. Hurley died in Santa Fe, New Mexico, on 30 July 1963.

Husák, Gustáv

(1913–1991)

Slovak Communist Party official and president of Czechoslovakia (1975–1989). Born on 10 January 1913 in Dúbravka, now part of Bratislava, Slovakia, Gustáv Husák studied law at Comenius University and joined the Communist Party of Czechoslovakia (CPCz) in 1933. During World War II the Slovak fascist government jailed him several times for communist activities. Upon his release in 1943, he supported the resistance movement and became a member of the Central Committee of the Slovak Communist Party (SCP). In 1944 he became a leader of the Slovak national uprising, fleeing to the Soviet Union when it failed.

After the war, Husák returned to Czechoslovakia and joined the Central Committees of the CPCz and the SCP while heading the Slovak regional government. He was also instrumental in the communist seizure of power in Czechoslovakia. In 1951, Stalinist purges removed him from his positions. In 1954 Husák was arrested on charges of treason and bourgeois nationalism and was sentenced to life imprisonment. The government pardoned him in 1960, and his SCP and CPCz memberships were fully restored in 1963.

During the 1968 Prague Spring, Husák became deputy prime minister and head of the SCP, supporting the reforms of Alexander Dubček. Husák worked to federalize the country and urged caution with the reforms in regard to the Soviet Union. He suddenly turned against the reforms when the Soviets invaded Czechoslovakia in August 1968, and he then participated in negotiations with Soviet leaders. Duly impressed, the Soviets installed Husák as first secretary of the CPCz in April 1969, replacing Dubček. Husák then pursued a policy of so-called normalization by sweeping away most of the Dubček reforms, purging the CPCz and SCP, and increasing political and social repression throughout Czechoslovakia. He became general secretary of the CPCz in 1971 and president of Czechoslovakia in 1975.

After Soviet leader Mikhail Gorbachev came to power in 1985, criticism of Husák's regime increased. In part because of a declining economy, Husák resigned as general secretary in December 1987 but remained president. The Velvet Revolution in November 1989 witnessed the collapse of communism in Eastern Europe, and when a new Czechoslovak government, the majority of which was noncommunist, was sworn in, Husák resigned the presidency on 10 December 1989. He was replaced by Václav Havel. Husák retired from politics and returned to his hometown. In February 1990 the CPCz expelled him. Husák died in Dúbravka on 18 November 1991.

Gustáv Husák, from Slovakia, was president of Czechoslovakia during 1975–1989. (Miroslav Zajíč/Corbis)

Hussein, Saddam

(1937–2006)

President and dictator of Iraq (1979–2003). Born on 28 April 1937 in the village of Al-Awja, near Tikrit, to a family of shepherders, Saddam Hussein attended a secular school in Baghdad and in 1957 joined the Baath Party, a radical secular-socialist party that embraced Pan-Arabism. Although revolutionists, Iraqi Baathists did not support General Abdul Karim Qassim's ouster of the Iraqi monarchy in 1958.

Wounded in an unsuccessful attempt to assassinate Qassim in 1959, Hussein subsequently fled the country but returned after the 1963 Baathist coup and began his rise in the party, although he was again imprisoned in 1964. Escaping in 1966, Hussein continued to ascend through the party's ranks, becoming second in authority when the party took full and uncontested control of Iraq in 1968 under the leadership of General Ahmed Hassan al-Bakr, a relative of Hussein. The elderly al-Bakr gradually relinquished power to Hussein so that he eventually controlled most of the government.

Hussein became president when al-Bakr resigned, allegedly because of illness, in July 1979. A week after taking power, Hussein led a meeting of Baath leaders during which the names of his potential challengers were read aloud. They were then escorted from the room and shot. Because Iraq was rent by ethnic and religious divisions, Hussein ruled through a tight web of relatives and associates from Tikrit, backed by the Sunni Muslim minority. He promoted economic development through Iraqi oil production, which

accounted for 10 percent of known world reserves. His modernization was along Western lines, with limited roles for women and a secular legal system. He also promoted the idea of Iraqi nationalism, emphasizing the roles of Kings Hammurabi and Nebuchadnezzar.

Before assuming the presidency, Hussein had courted both the West and the Soviet Union, resulting in arms deals with the Soviets and close relations with that country and France. He was also instrumental in convincing the shah of Iran, Reza Pahlavi, to curb his support of Iraqi Kurds. Hussein's efforts to take advantage of the superpowers' Cold War rivalry, including rapprochement with Iran, fell apart with the overthrow of the shah in 1979. The shah's successor, the Ayatollah Ruhollah Khomeini, a radical, fundamentalist Muslim, bitterly opposed Hussein because of his Sunni background and secularism.

After a period of repeated border skirmishes, Iraq declared war on Iran in September 1980. Hussein's ostensible dispute concerned a contested border, but he also feared Iran's fundamentalism and its support for the Iraqi Shia Muslim majority. Initial success gave way to Iraqi defeats in the face of human-wave attacks and, ultimately, a stalemate. By 1982 Hussein was ready to end the war, but fighting continued. In 1988 the United Nations (UN) finally

Saddam Hussein initiated the long Iraq-Iran War (1980–1988) and invaded Kuwait in 1990. He was the dictator of Iraq from 1979 until he was overthrown by the U.S.-led invasion of his country in 2003. (Pavlovsky/Sygma/Corbis)

brokered a cease-fire, but not before the war had devastated both nations. The war left Iraq heavily in debt, and Hussein requested relief from his major creditors, including the United States, Kuwait, and Saudi Arabia. He also sought to maintain high oil prices. His efforts were in vain. Creditors refused to write off their debts, and Kuwait maintained a high oil output, forcing OPEC to follow suit.

Hussein responded by declaring Kuwait a rogue province of Iraq. He was also enraged by Kuwaiti slant-drilling into Iraqi oil fields. His demands became more strident, and after securing what he believed to be U.S. acquiescence, he attacked Kuwait on 2 August 1990. However, he miscalculated the U.S. reaction. President George H. W. Bush assembled an international military coalition, built up forces in Saudi Arabia (Operation DESERT SHIELD), and then commenced a relentless bombing campaign against Iraq in January 1991. The ground war of 24–28 February resulted in a crushing defeat of Iraqi forces. Although Hussein withdrew from Kuwait, coalition forces did not seek his overthrow. He remained in power, ruling a nation devastated by two recent wars.

Hussein retained control of Iraq for another decade, during which he brutally suppressed Kurdish and Shia revolts, relinquished limited autonomy to the Kurds, acquiesced to the destruction of stockpiles of chemical weapons, and pursued a dilatory response to UN efforts to monitor his weapons programs. Convinced—wrongly as it turned out—that Hussein had been building and stockpiling weapons of mass destruction, President George W. Bush asked for and received authorization from Congress to wage war against Iraq. U.S. and allied forces invaded Iraq in March 2003. Coalition forces took Baghdad on 9 April 2003 and captured Hussein on 14 December 2003 to be brought to trial on charges of war crimes and crimes against humanity.

On 5 November 2006, the Iraqi Special Tribunal found Hussein guilty in the deaths of 148 Shiite Muslims in 1982 whose murders he had ordered. That same day, he was sentenced to hang. On 21 August 2006, a second trial had begun on charges that Hussein had committed genocide and other atrocities by ordering the systematic extermination of northern Iraqi Kurds during 1987–1988, resulting in as many as 180,000 deaths. Before the second trial moved into high gear, however, Hussein filed an appeal, which was rejected by the Iraqi Court on 26 December 2006. Four days later, on 30 December 2006, Hussein was executed by hanging in Baghdad.

Hussein I, King of Jordan (1935–1999)

King of Jordan (1952–1999). Born Hussein bin Talal on 14 November 1935 in Amman, Transjordan (now Jordan), Hussein was the son of Prince Talal ibn Abdullah. Hussein received his elementary education in Jordan before attending Victoria College in Alexandria, Egypt. From there he transferred to the Harrow School in Great Britain. He finished his education at the elite Royal Military Academy at Sandhurst (also in Britain). In July 1951 Hussein's grandfather, King Abdullah, was assassinated. In September, Hussein's father, Talal, became king. However, Talal suffered from a serious mental illness—probably schizophrenia—and was soon deemed incapable of carrying out his duties. Thus, on 11 August 1952 Hussein was proclaimed king at age sixteen. He formally ascended the throne in May 1953.

When Hussein began his long reign, Jordan was in desperate need of modernization and economic revitalization. In the early 1950s, only 10 percent of Jordan's population had access to running water, modern sanitation, or electricity. By the late 1990s, 99 percent of the population enjoyed these amenities. From the start of his reign, Hussein worked diligently to build a modern economy and industrial infrastructure. In the 1960s a modern highway system was constructed as were many of Jordan's major industries, including phosphate, cement, and potash. Not content with economic advancements alone, Hussein sought to improve the everyday lives of his subjects. The literacy rate increased dramatically beginning in the 1960s, while the infant mortality rate plummeted. Hussein managed to achieve stability and a modicum of prosperity at home without resorting to repression or heavy-handed rule. Indeed, Jordan under Hussein was one of the freest nations in the region and is still considered a model for human rights throughout the Middle East.

In the international area, Hussein was a moderating force in Middle Eastern politics. He had the uncanny ability to maintain generally cordial relations with fellow Arab leaders while at the same time keeping strong ties to most Western nations. Jordanian-American relations were quite cordial for much of the Cold War. Hussein's politics were not without controversy, however. In 1970 he ordered the Jordanian Army to forcefully expel the Palestine Liberation Organization (PLO) from Jordan, where it had set up its headquarters some years earlier. This resulted in considerable violence and the killing of scores of Palestinians. Hussein's aggressive actions against the PLO were deemed necessary because it had begun to cause significant disruptions in the country. Nevertheless, some Arab leaders took a dim view of the forced expulsion.

Hussein hesitated to get involved in the 1967 Arab-Israeli War, and the Israelis sent word that they themselves had no wish to open another front. But emotions swept pragmatism aside. The opening of Jordanian artillery and mortar fire into the Jewish areas of Jerusalem with heavy loss of life and the use of long-range artillery fire that reached the suburbs of Tel Aviv brought Israeli air strikes and the seizure from Jordan of the entire West Bank of the Jordan River and all of Jerusalem.

King Hussein of Jordan shown speaking to journalists during a visit to France. Hussein was king of Jordan during 1952–1999. (Richard Melloul/Sygma/Corbis)

Hussein was, however, a proponent of a permanent Arab-Israeli peace settlement. After the 1967 War, he played a significant role in the drafting of United Nations (UN) Security Council Resolution 242. It essentially called upon the Israelis to withdraw from the occupied territories in exchange for peace. The resolution and Hussein's vision became the basis for all future Arab-Israeli peace negotiations.

During the 1990–1991 Gulf Crisis, Hussein worked tirelessly to avoid war and persuade Iraq's Saddam Hussein to withdraw from Kuwait. The king's efforts ultimately failed, however, and he defied both the West and many Arab states by staying out of the Persian Gulf War and essentially backing Saddam Hussein. This obviously put Jordanian-Americans relations on ice. But the freeze was short-lived. In 1994, King Hussein had signed the landmark Israel-Jordan Treaty of Peace. This made Jordan only the second Arab nation (Egypt was the first) to normalize relations with Israel. Throughout the 1990s, Hussein worked to broker the ever-elusive peace between the Palestinians and Israelis. He was stricken with lymphatic cancer and died in Amman on 7 February 1999. He was succeeded by his eldest son Abdullah.

Hu Yaobang
(1915–1989)

Chairman and secretary-general of the Chinese Communist Party (CCP). Born in Liuyang, Hunan Province, on 20 August 1915, Hu Yaobang attended school only to age fourteen and then joined the Chinese communists' Youth Works. In 1933 he became a member of the CCP. During the Sino-Japanese War and the Chinese Civil War he was assigned to party work in central and southwestern China under the tutelage of future PRC leader Deng Xiaoping, which greatly facilitated Hu's later rise to power.

After the PRC's birth in October 1949, Hu followed Deng to southwestern China, heading the North Sichuan People's Administrative Office. In 1952, he transferred to Beijing as director of the New Democratic Youth League. He held this post until 1966, during which time he led several youth delegations abroad to promote the PRC's ties with the socialist bloc. Hu's administrative and diplomatic talents earned him membership in the Congress Presidium, making him the youngest leader in the CCP hierarchy.

As Deng's longtime associate, Hu was purged during the Cultural Revolution. When Deng returned to power in 1977, Hu emerged from political exile as director of both the CCP's Organization Department and the Propaganda Department. He also became a member of the Politburo. In 1980, Hu succeeded Deng as secretary-general of the CCP and was elected CCP chairman the following year. Real power, however, remained in Deng's hands as the chairman of the Central Military Commission. His sole responsibility was to implement Deng's directives, including launching the Four Modernizations policy, restructuring the party apparatus with collective leadership, and promoting the PRC's international reputation. In 1987, Hu was forced to resign over his failure to control prodemocracy student demonstrations in April 1986. Hu's death in Beijing on 15 April 1989 sparked a massive student protest in Tiananmen Square, which ultimately led to the Tiananmen Square incident on 4 June 1989.

A thermonuclear weapon that unleashes far more devastating power than an atomic bomb. Hydrogen bombs (also known as H-bombs) rely on the fusion of hydrogen isotopes, unlike an atom bomb that relies on the fission (or splitting) of radioactive isotopes. Fusion occurs when neutrons collide with an unstable hydrogen isotope, causing two lighter isotopes to join together to make a heavier element. During the fusion process, some of the mass of the original isotopes is released as energy, resulting in a powerful explosion. Because of the loss of mass, the end product, or element, weighs less than the total of the original isotopes. H-bombs are referred to as thermonuclear devices because temperatures of 400 million degrees Celsius are required for the fusion process to begin. In order to produce these temperatures, an H-bomb has an atomic bomb at its core. The explosion of the atomic device and the fission process in turn leads to the fusion process in hydrogen isotopes that surround the atomic core.

An H-bomb, depending on its size, can produce an explosion powerful enough to devastate an area of approximately 150 square miles, while the searing heat and toxic radioactive fallout from such devices can impact an area of more than 800 square miles. The explosion of an atomic bomb by the Soviet Union in September 1949 ended the U.S. atomic monopoly and led to a nuclear arms race. The development of more powerful weapons such as the H-bomb and of new methods of delivering nuclear bombs, such as ballistic missiles, were primarily a result of the Cold War conflict and concomitant arms race.

In 1946 the U.S. Atomic Energy Act created the Atomic Energy Commission (USAEC). The USAEC was responsible for the development and control of the U.S. atomic energy program after World War II. The commission consisted of five members appointed by the president. A civilian advisory committee was also created, and Robert Oppenheimer, scientific head of the atomic bomb project, served as its chairman. The USAEC also worked with a military liaison with whom it consulted on all atomic energy issues that had military applications. By 1949, the year the Soviets exploded their first atomic bomb, Cold War tensions were running high. Nuclear physicist Edward Teller, USAEC Commissioner Lewis Strauss, and other scientists formed a coalition together with military officials to urge President Harry Truman to initiate a program to construct a superweapon, or H-bomb. This new weapon would be measured in megatons instead of kilotons and could yield an explosion equivalent to millions of tons of TNT. Despite opposition from Oppenheimer and several other nuclear scientists, Truman, under siege

Hydrogen Bomb

Hydrogen bomb test IVY MIKE, 31 October 1952 (1 November 1952 local time). This photo was taken 50 miles from the detonation site and at a height of approximately 12,000 feet. Two minutes after Zero Hour, the cloud rose to 40,000 feet. Ten minutes later, as it neared its maximum, the cloud stem had pushed upward about 25 miles, deep into the stratosphere. The mushroom portion went up to 10 miles and spread for 100 miles. (U.S. Air Force)

for being soft on communism, authorized an H-bomb program in January 1950.

It took the combined efforts of a number of scientists as well as Stanislaw Ulam, a mathematician, to solve the theoretical and technical problems related to building a hydrogen weapon. They carried out their work at Los Alamos, New Mexico, the same facility that had helped produce the atomic bomb. The prototype H-bomb was first detonated on 1 November 1952 on Enewetak Atoll in the South Pacific. The explosion virtually obliterated the island, creating a crater a mile wide and 175 feet deep. After the detonation of the prototype, scientists constructed an H-bomb that could be dropped by aircraft. That weapon was tested successfully in 1954. The Soviet Union tested its own H-bomb on 12 August 1953. The British also developed a hydrogen weapon, which they tested on 15 May 1957.

Unable to maintain a monopoly on nuclear weapons or to force the Soviet Union to alter its policies through either deterrence or the threat represented by nuclear arms, the United States instead found itself engaged in a nuclear arms race. Despite collective security agreements and pacts such as

the North Atlantic Treaty Organization (NATO), the United States maintained that only nuclear superiority would guarantee the security of the United States and its allies. The launching of the first satellite to orbit Earth, the Soviet-built *Sputnik 1* in 1957, represented a dual threat to the West. It seemed to suggest that Soviet scientists had pulled ahead of their American counterparts. More critically, it also posed the high probability of delivering nuclear weapons with missiles rather than by planes. As a result, the United States increased funding for its space program and redoubled its efforts to fully develop and deploy intercontinental ballistic missiles (ICBMs) and, later, submarine-launched ballistic missiles (SLBMs).

The rapid proliferation of nuclear weapons, of course, increased the threat of nuclear war, whether by accident or by choice. With the advent of H-bombs and ballistic missile systems that could hurl bombs at an adversary in a matter of minutes, most civil defense preparations became exercises in futility. The Soviet Union's installation of nuclear-tipped missiles in Cuba led to the Cuban Missile Crisis of October 1962. President John F. Kennedy imposed a naval quarantine around Cuba and refused to allow Soviet ships through the blockade. Faced with the real possibility of a catastrophic thermonuclear war, both sides engaged in a flurry of diplomacy. The Soviets backed down, dismantling the missiles by the end of the year. The Cuban Missile Crisis, one of the few direct confrontations between the Americans and Soviets, showed the potential peril of the nuclear arms race. After the crisis passed, both U.S. and Soviet officials sought new ways to avoid the unthinkable consequences of a nuclear exchange. In 1963, the Partial Test Ban Treaty had been agreed to by both sides, the first small step toward eventual nuclear arms reductions. The threat posed by nuclear weapons did not end with the collapse of the Soviet Union in 1991, although reduced tensions have lessened the potential for a full-scale nuclear conflict.

I

Iceland

Island nation in the north-central Atlantic Ocean covering 39,768 square miles, approximately the size of the U.S. state of Kentucky. Iceland is surrounded by the Atlantic Ocean to the south, the Greenland Sea to the north, the Norwegian Sea to the east, and the Strait of Denmark to the west. Iceland had a 1945 population of 130,350 people. Until it declared its independence in 1944 during World War II, Iceland was an integral part of Denmark.

Until the early twentieth century, Iceland was poor, isolated, and of little concern to European powers. That changed with the two world wars. In 1918, Icelanders gained full autonomy within the Danish Kingdom. World War II brought yet more change. On 9 May 1940, British forces occupied the island, primarily in order to keep Germany from seizing it and to protect shipping routes in the North Atlantic. Although Icelanders protested this action, they preferred a British presence to that of Nazi Germany. U.S. President Franklin Roosevelt considered Iceland of vital importance to the security of the United States. Thus, on 7 July 1941, U.S. forces landed in the island Iceland, gradually taking over defense duties. This was done with the full agreement of British and Icelandic authorities, who welcomed the change from occupation to a mutually agreed-upon protectorate. During the war, up to 45,000 American servicemen were stationed on the island. The locals enjoyed an economic boom, but social tensions were also evident.

During the Cold War, Iceland came to occupy an important strategic position. For the West, it was a vital stepping stone for both defensive and offensive military operations. Icelanders, however, were always a reluctant ally. Having so recently gained independence, they were loath to have foreign troops on their soil. When they deemed this to be virtually inevitable, however, they were determined to make the most of the foreign presence materially and politically, sometimes to the chagrin of their allies.

The United States sought to maintain its presence in Iceland following World War II by requesting the right to lease military bases for ninety-nine years. Icelanders flatly rejected the request and sought protection in neutrality. In 1946, a compromise was reached that allowed a U.S. civilian contractor to continue to operate the large airfield at Keflavík, deemed vital for

Herring oil factory in Iceland built with Marshall Plan aid. The factory processed the herring into oil and meal, an important source of foreign revenue for Iceland. (National Archives and Records Administration)

reconnaissance purposes. The following year, Iceland participated in the Marshall Plan.

At this time (and especially after the communist coup in Prague in early 1948), many pro-Western politicians in Iceland began to fear that the security of the island could not be protected by a pledge of neutrality. When the North Atlantic Treaty Organization (NATO) was formed in 1949, Iceland decided to join on the condition that foreign troops would not be stationed in Iceland during peacetime. Pro-Moscow Icelandic socialists, who regularly garnered up to 20 percent of the general election vote, condemned the move, and riots broke out when the parliament agreed on Iceland's NATO membership.

In 1950, increased tensions because of the Korean War convinced Icelandic pro-Western politicians that the country could no longer afford to be without military protection. On 5 May 1951 Iceland and the United States signed a defense pact, and two days later U.S. servicemen returned to the island.

In 1956, a left-wing coalition in Iceland declared that the world situation had so improved that American forces could leave. This declaration, which was never codified, was reversed after the Soviets invaded Hungary to quash the Hungarian Revolution. Western loans also helped to bring the Icelanders around. During 1958–1961, a major fishing limits dispute between Iceland and Britain, the first of the Cod Wars, temporarily upset Iceland's relations with its Western allies.

In 1960 all U.S. Army units were withdrawn from Iceland, and the following year the U.S. Navy replaced the U.S. Air Force as the host military service in Iceland. Although the country was no longer as important for offensive and defensive purposes as it had been in the early Cold War, it remained a key stepping stone in communications between the United States and Western Europe and a vital link in the North American Early Warning System (NORAD) and the GIUK (Greenland, Iceland, UK) sea-air surveillance barrier.

During 1971–1974, a new left-wing Icelandic regime again declared its intention to expel American forces. As before, however, the effort was half-hearted, and the majority of Icelanders would not have supported it because of both their pro-Western orientation and the economic benefits that sprang from the U.S. base at Keflavík. Still, two further Cod Wars with Britain in the 1970s created strains in the alliance. As in the first conflict, Icelanders made good use of their nation's strategic importance to extract concessions. After the last Cod War in 1976, Iceland's relations with its Western allies were generally trouble-free. An increase in Soviet naval activity ensured the importance of surveillance facilities in Iceland.

The end of the Cold War, however, dramatically reduced Iceland's strategic role. Since the early 1990s, the United States has systematically reduced

its presence in Iceland. By 2004, only some 2,000 U.S. servicemen were based there. Radar stations had been dismantled, reconnaissance aircraft were no longer based permanently at Keflavík, and only four fighter jets were stationed there. In the words of a NATO official, in strategic terms Iceland had moved “to the edge of nowhere.”

Japanese Liberal Democratic Party politician and prime minister (1960–1964). Born in Hiroshima Prefecture on 3 December 1899, Ikeda Hayato graduated from Kyoto Imperial University in 1925 with a degree in law. He joined the Finance Ministry and served as deputy finance minister during 1947–1948.

In the 1949 general election Ikeda won election to the Diet from Hiroshima Prefecture as a Democratic Liberal. He was a protégé of Prime Minister Yoshida Shigeru. Ikeda served twice as finance minister (1949–1952, 1956–1957) and as minister for international trade and industry (1952, 1959–1960). During the Allied occupation of Japan (1945–1952), he was responsible for implementing the Dodge Plan, an economic stabilization program. In 1951 he was a member of the Japanese delegation to the San Francisco Peace Conference, and from 1956 he formed his own faction within the ruling Liberal Democratic Party.

In July 1960 Ikeda assumed the premiership, taking over from Kishi Nobusuke, who had split public opinion over revision of the United States–Japan Security Treaty. In contrast, Ikeda pursued a low-profile foreign policy, preferring to focus on domestic issues, above all the economy.

Aiming to turn Japan into an economic great power, Ikeda launched a plan to double Japan’s gross national product within a decade. This enjoyed strong support from across the political spectrum. During his premiership, Japan joined the Organization for Economic Cooperation and Development

Ikeda Hayato
(1899–1965)

(OECD) and secured full membership in the General Agreement on Tariffs and Trade (GATT) and the International Monetary Fund (IMF). Politically, Ikeda continued the policy of close cooperation with the United States. He saw Japan as constituting one of the so-called three pillars of the free world, alongside the United States and Western Europe. Ikeda also sought to improve relations with the People's Republic of China (PRC). Economic ties were strengthened, but diplomatic relations were not established.

Poor health forced Ikeda to resign in October 1964. He died in Tokyo on 13 August 1965.

Iliescu, Ion (1930–)

Romanian political leader and president (1989–1996, 2000–2004). Ion Iliescu was born on 3 March 1930 in the small town of Oltenița, Călărași County, southern Romania. His father was a railway worker, trade union activist, and leader of the illegal Communist Party. Iliescu attended high school in Bucharest and then studied electric technology of the Polytechnic Institute of Bucharest (1949–1950) and at the Energy Institute in Moscow (1950–1954), specializing in hydroelectric power systems and water management.

Iliescu began his professional career in 1955 as a design engineer at the Energy Institute of Bucharest, but his chief interest was politics. He had joined the Union of Communist Youth in 1944 and then the Progressive Youth Association. In March 1949 he became a member of the Central Committee of the Union of Communist Youth, and during his years in Moscow he was secretary of the Romanian Students Committee. A candidate member of the Romanian Communist Party (RCP) in 1953, he became a full member in 1955.

Iliescu was one of the founders of and then headed the Communist Federation of Romanian University Students during 1956–1959, participating in many activities of the International Union of Students. In 1960 he was elected to the Grand National Assembly (Romanian parliament). During 1960–1967

he served in the Central Committee's Department for Ideology and Propaganda, and he was minister for Youth Affairs during 1967–1971. He was closely identified with Romanian dictator Nicolae Ceaușescu.

In 1971 Iliescu's close relationship with Ceaușescu ended when he criticized the latter for his "Cultural Revolution," a reference to Mao Zedong's policies in the People's Republic of China (PRC). Ceaușescu stripped Iliescu of his major party posts and exiled him to western Romania, where he served on the Timiș County Council (1971–1974). Because he was a critic rather than an opponent of the regime, he was soon back in favor as president of the Iași County Council (1974–1979). He was then a candidate member of the Executive Committee of the RCP. Iliescu's continued criticism of Ceaușescu's cult of personality, however, led to his removal by 1984 from all his party posts.

Shunted into the position of director of the Technical Publishing House in Bucharest, Iliescu came to be regarded as a communist reformer. He played no role in active plots to overthrow the increasingly dictatorial Ceaușescu but did take part in planning for a governmental structure should the Ceaușescu regime end.

In late December 1989, upon the overthrow of Ceaușescu, Iliescu emerged as the leader of the hastily formed National Salvation Front Council. As a communist reformer, he was acceptable to the various elites in the country. To win over the people who had carried out the revolution, he ended most of the former regime's repressive policies. During this period, he maintained a delicate balance between still-powerful former regime's elites and those desiring complete change.

In May 1990 Iliescu was elected president of Romania with 85 percent of the vote, but he came under considerable criticism in the West for Romanian repression of Roma (Gypsies) and the Hungarian minority and for the violent suppression of demonstrations in Bucharest by Jiu Valley miners. Iliescu won reelection as president in 1992 with 61 percent of the vote, but his party failed to win a majority of seats in parliament. In 1996 he failed to win another presidential term but continued his political career in the Romanian senate (1996–2000).

Iliescu was again president of Romania during 2000–2004, winning election with 67 percent of the vote. He moved Romania increasingly closer to Western Europe and the United States. In 2002 Romania joined the North Atlantic Treaty Organization (NATO). Fluent in French, English, and Russian, Iliescu has written many books and articles.

Inchon Landing

(15 September 1950)

U.S. amphibious assault during the Korean War (1950–1953). Code-named Operation CHROMITE, the Inchon Landing turned the tide of the conflict. By mid-July 1950, even as Republic of Korea Army (ROKA, South Korean) and U.S. troops were fighting in southwestern Korea to defend the vital port of Pusan from Korean People's Army (KPA, North Korean) attacks, General Douglas MacArthur, U.S. Far East and United Nations Command (UNC) commander, prepared to present the North Koreans with a two-front war. Confident that his Eighth Army could hold the Pusan Perimeter, he began diverting resources for an invasion force in the North Korean rear.

U.S. Marines of the 1st Division scale a seawall during the Inchon invasion on 15 September 1950. The Inchon Landing was a brilliant strategic coup that turned the tide of the war against the Democratic Republic of Korea (DPRK, North Korea). (National Archives and Records Administration)

MacArthur selected Inchon. Korea's second largest port, it was only 15 miles from the South Korean capital of Seoul. This area was the most important road and rail hub in Korea and a vital link in the main North Korean supply line south. Cutting it would starve KPA forces facing the Eighth Army. Also, Kimp'o airfield near Inchon was one of the few hard-surface airfields in Korea, and the capture of Seoul would be a serious psychological blow for the North Koreans.

Planning for CHROMITE began on 12 August. Only MacArthur favored Inchon. The U.S. Joint Chiefs of Staff (JCS) and most of MacArthur's subordinate commanders opposed it. Tidal shifts there were among the highest in the world. At ebb tide the harbor turned into mudflats, and the navy would have only a three-hour period on each tide to enter or leave the port. The channel was narrow and winding, and one sunken ship would block all traffic. There were no beaches, only twelve-foot seawalls that would have to be scaled.

MacArthur overrode suggestions for other sites, and on 28 August he received formal JCS approval for the landing, to be carried out by X Corps. Activated on 26 August and commanded by Major General Edward M. Almond, it consisted principally of Major General Oliver P. Smith's 1st Marine Division and Major General David G. Barr's 7th Army Division. Vice Admiral A. D. Struble commanded Joint Task Force Seven for the landing; Rear Admiral James Doyle developed the landing plan and was second in command.

More than 230 ships took part in the operation. The armada of vessels, carrying nearly 70,000 men, included ships from many countries. Thirty-seven of 47 tank-landing ships (LSTs) in the invasion were hastily recalled from Japanese merchant service and manned by Japanese crews. Planes from 4 aircraft carriers provided air support.

Although loading was delayed by Typhoon Jane on 3 September, deadlines were met. On 13 September the task force was hit at sea by Typhoon Kezia, although no serious damage resulted. The task force reached the Inchon Narrows just before dawn on 15 September, the fifth day of air and naval bombardment by four cruisers and six destroyers.

At 6:33 A.M., as MacArthur observed events from the bridge of the *Mount McKinley*, the 5th Marines went ashore to capture Wolmi-do, the island controlling access to the harbor. Resistance was light. At 2:30 P.M. cruisers and destroyers began a shore bombardment of Inchon, and at 5:31 P.M. the first Americans climbed up ladders onto the seawall. Fortune had smiled on MacArthur, as the Marines discovered numerous mines at the port waiting to be laid in the water.

The Marines sustained casualties on D-Day of 20 dead, 1 missing, and 174 wounded. The next day as they drove on toward Seoul, Eighth Army began a breakout along the Pusan Perimeter. On 18 September the 7th Infantry Division began landing at Inchon, and on 21 September a remaining Marine regiment disembarked. The Inchon and Pusan forces made contact on 26 September at Osan. Seoul fell on the afternoon of 27 September.

Victory in the Inchon-Seoul campaign greatly increased MacArthur's self-confidence. He believed that the KPA was so badly beaten that the war

for Korea had been all but won and was just a matter of mopping up, an assessment that proved grossly incorrect.

India

South Asian nation with an area of 1.269 million square miles, roughly one-third the size of the United States. The Republic of India, when it received independence in 1947, had a population of some 350 million. It is bordered by Bangladesh and Myanmar (Burma) to the east; Pakistan to the west; Bhutan, the People's Republic of China (PRC), and Nepal to the north; and the Arabian Sea and Bay of Bengal to the south. Predominantly Hindu, India is a secular, federal republic with a parliamentary form of government. The prime minister, as leader of the majority party in parliament, wields real executive power. Since independence, the Congress Party has been the country's dominant political force.

Indian civilization traces its origins to the ancient Indus Valley settlements around Harappa and Mohenjo-daro (modern-day Pakistan) that flourished more than 4,000 years ago. Successive waves of invaders, from the Indo-Europeans to the Turko-Afghans, added linguistic and religious influences to Indian culture. The Portuguese were the first Europeans to arrive on the coastal regions of India in the late fifteenth century. By the nineteenth century, the British had become the dominant power in India, although their control over the large landmass remained tenuous and uneven. The 1857 Sepoy Revolt prompted the British Crown to take over responsibility for administering British India from the British East India Company.

Resistance to British rule took root among the Western-educated Indian elite in the 1870s. The Indian National Congress, established in 1885, quickly became the voice of Indian nationalism. After World War I, this elite-based nationalism blossomed into a mass movement through the efforts of Mohandas Gandhi and Jawaharlal Nehru. Muslim leaders, especially Muhammad Ali Jinnah of the All-India Muslim League, questioned whether a Hindu-majority state would protect the rights of the Muslim minority. Such doubts led the way to the division of India at independence, creating India on 15 August 1947 and Pakistan on 14 August 1947.

Partition was accompanied by widespread communal and sectarian violence that left many dead. Gandhi was assassinated by fanatical Hindus on 30 January 1948. Moreover, the subcontinent witnessed massive population relocations as Hindus and Muslims scrambled to be on the right side of the partition lines. The Partition Plan allowed rulers of princely states to decide whether to be incorporated into India or Pakistan. The dispute over the accession to India by the Hindu ruler of Jammu and Kashmir (commonly known as Kashmir), a predominantly Muslim territory, led to the first war between India and Pakistan in 1947. A cease-fire supervised by the United Nations (UN) took effect in January 1949, but the dispute would continue to bedevil Indo-Pakistani relations, leading to another outbreak of hostilities in 1965. Indeed, the Kashmir dispute remains unresolved today.

During 1947–1964, Nehru remained at the helm of Indian politics as the first prime minister. Beginning in 1951, the Nehru government launched the first of a series of Five-Year Plans to steer national economic development, increase food production, and alleviate rural isolation and poverty. India received capital and technical assistance from countries such as Great Britain, Japan, the Soviet Union, and the United States.

Nehru sought to maintain a nonaligned position in the Cold War and envisioned Indian leadership of an emerging bloc of newly independent Asian and African nations. In 1955, India cosponsored the Bandung Conference. Nehru also cultivated cordial relations with the PRC but received a rude shock when border disputes led to a Chinese invasion of the Northeast Frontier territory in 1962. His neutralist foreign policy found little favor with the United States.

In 1966 Nehru's daughter, Indira Gandhi, emerged victorious from the battle between the conservative and radical wings of the Congress Party to assume the premiership (1966–1979, 1980–1984). Throughout the remainder of her political career, she continued to battle the party's old guard. In 1969 she led a reconfigured Congress (Requisition) Party, and in 1980 she made her political comeback leading the Congress (Indira) Party.

In the area of economic development, Gandhi continued to travel the same socialist path that Nehru had. Government Five-Year Plans continued to guide national economic development. Gandhi's government pushed for land reform, nationalized key economic institutions such as the banking industry, and established control of the wholesale food grain market. In many ways, she relied on this socialist/populist program to win support in her ongoing struggle against opposition within her own party.

In 1971, hostilities once again erupted with neighboring Pakistan. Secessionist pressure in East Pakistan had devolved into civil war, creating a refugee problem for India as Bengalis streamed across the border into the Indian state of West Bengal. Gandhi followed the Indian legislature's declaration of support for the new state of Bangladesh with an invasion of East Pakistan. The war ended quickly in India's favor. To counter any negative reaction from the United States and the PRC, both of which maintained close relations with Pakistan, Gandhi astutely signed a Twenty-Year Treaty of Peace and Friendship with the Soviet Union once the war ended.

Indian Prime Minister Jawaharlal Nehru (*left*) and his daughter Indira Gandhi welcome Nikita Khrushchev and Nikolai Bulganin (*right*) during the Soviet leaders' visit to India in the 1950s. (Bettmann/Corbis)

In the early 1970s, Gandhi, riding a wave of popularity, became increasingly concerned with safeguarding her own power, and her rule grew increasingly personalized. Charges of corruption and favoritism surfaced, and the prime minister was charged with illegal practices during the 1971 elections. At the same time, weather-related crop failures and resulting food shortages and spiraling inflation fueled popular discontent. An increasingly dictatorial Gandhi responded by having President Jayaprakash Narayan declare a state of national emergency, during which opposition leaders were arrested and civil liberties suspended.

In the nationwide elections that followed in April 1977, after the state of emergency had been lifted in January, Gandhi and her Congress Party suffered defeat at the hands of the Janata Party (a coalition of opposition forces),

which won a plurality of the votes. Gandhi's defeat was short-lived. Factional infighting weakened the coalition government that emerged, and the next election in January 1980 returned her to power.

After her political comeback, Gandhi found herself confronted with serious cases of provincial unrest. Such problems were not new, but the outbursts in Assam, calling for greater autonomy vis-à-vis the central government, and in Punjab, which grew into a separatist movement, appeared more organized and involved huge territories. The militant Sikh movement, demanding the creation of a separate Punjabi nation, touched off a series of events that led to bloodshed and a violent end to the Gandhi era. In early 1984, militant Sikhs took over the Golden Temple at Amritsar. Communal violence soon erupted, leaving many dead. In May 1984, Gandhi made the fateful decision to have army troops storm the compound of the temple and impose martial law in Punjab. Thousands of Sikhs perished in the affair. Within months, Gandhi was assassinated by two of her Sikh bodyguards. This in turn provoked another round of anti-Sikh violence.

Rajiv Gandhi assumed leadership of the Congress Party and succeeded his mother as prime minister. He maintained India's nonaligned position in foreign relations while expanding efforts to rebuild cordial relations with the United States, which his mother had initiated in the early 1980s. Nevertheless, he also continued to benefit from Soviet technical and military assistance.

Gandhi began his tenure with well-intentioned plans to clean up government and hold it accountable for its actions. He and his economic advisors also began to shift away from the socialist model of economic development favored by his grandfather and mother. Tax cuts for the wealthy and a relaxation of government regulations in order to encourage private entrepreneurship reflected a new economic philosophy. Such measures, however, did not produce quick results, and the populace lost faith in Gandhi's ability to meet their needs. His problems were compounded by charges of corruption against his government. The pace of economic liberalization, however, continued through the decade of the 1990s.

While Gandhi worked to reach uneasy accord with Assam and Punjab and hold the nation together, he nonetheless involved the country in the ethnic conflict unfolding in Sri Lanka. Tension between the Sinhalese majority and the Tamil minority resulted in fierce fighting as militant Tamil separatists, organized as the Liberation Tigers of Tamil Eelam (LTTE), battled the Sri Lankan government. Many Indians in the southern Indian state of Tamil Nadu expressed sympathy for their Tamil brothers in Sri Lanka. In 1986, Gandhi's offer to mediate the dispute ended with India being entrusted with the responsibility of disarming the LTTE. The roughly 45,000 Indian troops sent to Sri Lanka to oversee this process were withdrawn only in 1990, a year after Gandhi and the Congress Party were defeated at the polls. In 1991, while campaigning in Tamil Nadu, Gandhi was killed by a suicide bomber affiliated with the LTTE.

The post-Cold War period has witnessed the rise of Hindu nationalism in Indian politics. India's territorial dispute with Pakistan, moreover, remains unresolved. The emergence of a Kashmiri independence movement

complicates the situation, while the nuclear capabilities of both India and Pakistan have added a potentially catastrophic dimension to the conflict.

India, Armed Forces

Following Indian independence in August 1947, partition split the military, as it did other institutions, into forces controlled by India and Pakistan. Under terms of the partition, India retained two-thirds of the former Empire of India military assets, although the bulk of preindependence sailors were Muslims and Pakistan secured a majority of the naval vessels. Because all sixteen prepartition armament factories were located in Indian territory and remained under India's control, the agreement provided for India to make a lump sum financial payment to Pakistan so that India might establish its own armament production facilities.

Shortly after independence, fighting broke out with Pakistan over Kashmir at the end of 1947. It was ended by a cease-fire in January 1949. War between India and Pakistan occurred again in 1965 and in 1971. India also fought a war with the People's Republic of China (PRC) in 1962, when the PRC disputed India's claim to Aksai Chin in northeastern Jammu and to Kashmir and Arunachal Pradesh in the east. PRC forces invaded, defeated the Indians, and secured the disputed territory. The Indian military also participated in a number of peacekeeping operations during the Cold War, including in Sri Lanka during 1987–1990 and the Maldives in 1988.

Following independence, the Indian military carried out major reforms with only mixed success. Prime Minister Jawaharlal Nehru, worried about a threat from the military, insisted on strengthening civilian control. Minister of

Defense V. K. Krishna Menon (1957–1962) oversaw the construction of tank production facilities and the manufacture of the Ichapore semiautomatic rifle. India also acquired the light fleet carrier *Hercules* from Britain, which India rebuilt and renamed the *Vikrant*. Nonetheless, the Indian military was largely caught off guard and did not perform well in the 1962 war with the PRC, for which Menon was widely blamed.

The poor showing of the Indian military in the fighting with the PRC led Nehru to push military expansion. Between 1966 and 1970 India built six British Leander-class frigates at the Mazagon shipyard in Bombay. India also produced other Western ship types as well as Soviet Union types and its own indigenous designs. In addition, India built under license Soviet MiG-23 fighter aircraft. Such programs gave India the edge in the 1971 war with Pakistan. The creation of Bangladesh from the former East Pakistan was a strategic boost to Indian defense planning, allowing India to concentrate the bulk of its military resources against Pakistan. Nonetheless, continuing tensions with both China and the United States led Indian leaders to significantly strengthen the national military establishment. Although India was officially nonaligned, much of this buildup occurred with assistance from the Soviet Union.

By the end of the Cold War, the Indian military was counted as one of the top ten in the world. At the close of the twentieth century, it numbered some 1.173 million men, with an additional 528,000 men in the reserves. The army consisted of 980,000 men organized in three armored divisions, four rapid response divisions, and eighteen infantry divisions as well as in artillery and other support units. Indian main battle tanks (MBT) included the Russian T-72 and the domestically produced Vijayanta, manufactured at great expense for questionable return. Numbering 55,000 men in 1995, the navy was the principal regional sea power. It operated 86 ships and 30 auxiliaries, centered on the former British fleet aircraft carrier *Hermes*, acquired in 1986 and renamed the *Viraat*. The fleet air arm flew 35 combat aircraft, including Sea Harriers obtained from Britain, and 36 helicopters. Its air force of 140,000 men operated 808 airplanes and helicopters. Most of the jet aircraft were Soviet types, a number of them produced under license and including the MiG-21, MiG-23, MiG-27, and MiG-29.

India also joined the nuclear club. It first tested a nuclear device in 1974 at Pokharan and then developed atomic bombs in the late 1980s. Indian ballistic missiles allow delivery of nuclear weapons within the region. Overall, at the end of the Cold War India's military establishment was the most powerful in South Asia.

India-Pakistan Wars

(1947–1949, 1965, 1971)

A series of wars between India and Pakistan, fought for a number of reasons but principally over control of Kashmir. The India-Pakistan wars occurred during 1947–1949 and in 1965 and 1971. There were also a number of smaller border clashes in this period.

India and Pakistan were antagonistic dating from their independence from Britain. Religion was the paramount issue in separation of the two states. The Hindu leaders of India wanted to keep India united, but Muslim leader Mohammed Ali Jinnah insisted on independence and ultimately got his way. On 14 August 1947, the Empire of India was divided into independent India and Pakistan. With a hasty British departure, millions of Hindus and Muslims endeavored to reach their chosen state's territory. Chaos ensued in which perhaps 800,000 Muslims and 200,000 Hindus died.

Indian refugees crowd onto trains. Following the creation of two independent states, India and Pakistan, Muslims fled to Pakistan and Hindus fled to India in one of the largest population transfers in history. Amritsar, India, 17 October 1947. (Bettmann/Corbis)

In addition to this vast sectarian violence, tensions developed over India's blocking of payments that were to be made to Pakistan from joint assets left by the British. Another pressing issue was the future disposition of several disputed territories. The latter included Junagadh, Hyderabad, and Jammu and Kashmir. Junagadh and Hyderabad were predominantly Hindu states with Muslim leaders. They were quickly absorbed by India. The dispute over Jammu and Kashmir was not so easily resolved, however. There, the Hindu Maharajah Hari Singh ruled a largely Muslim nation. He vacillated between India and Pakistan before signing the Instrument of Accession on 26 October 1947 by which he agreed to join Kashmir to India. Indian Prime Minister Jawaharlal Nehru accepted this arrangement, while Pakistani Governor-General Ali Jinnah refused to do so.

The partition agreement called for the division of military assets on the subcontinent between India and Pakistan. India was to receive two-thirds and Pakistan one-third of these resources. It did not work out that way. India received the vast bulk of the armor and aircraft assets, and Pakistan secured most of the larger naval vessels. The military officers of both states had all been trained by the British, but few had experience at higher command. Technically, British Field Marshal Sir Claude Auchinleck commanded both armies.

Fighting began with an uprising in Kashmir, supported by Pakistani Azad Kashmiri tribesmen. India quickly airlifted troops to Kashmir. At first the Indians were successful, securing the provincial capital of Srinagar at Shalateg on 7 November, but with Indian forces overextended, the Pakistanis triumphed at Jhangar on 24 December. By the beginning of 1948 and with the war stalemated, India asked for United Nations (UN) mediation.

As the UN-brokered talks slowly went forward, India made military progress against both the irregulars and increasing numbers of Pakistani regular forces who crossed into Kashmir to take part in the fighting. The Indian Army was victorious at Naushera on 6 February, Gurais on 22–27 May, and Zojila on 19 October. Nonetheless, about 30 percent of Kashmir—some 5,000 square miles—remained in Pakistani hands at the time the cease-fire went into effect on 1 January 1949.

The UN had called for a plebiscite over Kashmir. However, India refused to hold this vote, and tensions over Kashmir continued. Indeed, Kashmir remained the principal cause of animosity between India and Pakistan throughout the Cold War.

The second war broke out in 1965. In April of that year, Pakistan's president and military ruler, General Muhammad Ayub Khan, began military operations in the Rann of Kutch where the frontier was poorly defined. Within several weeks the fighting had escalated into full-scale hostilities in which the Pakistanis appeared to have the upper hand until monsoon rains suspended the fighting. Indian Prime Minister Lal Shastri then agreed to a mediated settlement. Emboldened by this, President Ayub Khan planned Operation GRAND SLAM, an operation to cut the road linking India to Kashmir and isolate two Indian Army corps in the Ravi-Sutley corridor. In August border clashes occurred in both Kashmir and Punjab as both sides violated

the Kashmir cease-fire line. On 24 August, Indian forces launched a major raid across the cease-fire line.

In retaliation for the Indian raid, Ayub Khan launched Operation GRAND SLAM on 1 September 1965. Both sides carried out air attacks against the other, not only in the Punjab but in Indian raids on Karachi and Pakistani attacks on New Delhi. Indian forces soon took the offensive, invading Pakistan. The Indians won a major armored battle at Sialkot and reached Lahore, in the process destroying 300 tanks. There was no fighting at sea during the war.

On 27 September, with the British and U.S. governments undertaking diplomatic efforts and the People's Republic of China (PRC) threatening military attacks on India, both sides agreed to a cease-fire in which Indian forces occupied large stretches of Pakistani territory. In January 1966, both sides agreed to a peace settlement at Tashkent in the Soviet Union that reestablished the cease-fire line as it had been in 1949. However, Pakistan was forced to sign an agreement never to use force against India.

The third war occurred in 1971. Since independence, the more numerous Bengali people of East Pakistan had been dominated by West Pakistan. Increasing violence and unrest in Pakistan led Ayub Khan to resign in March 1969 and turn over power to another general, Agha Mohammad Yahya Khan.

In 1970 Sheikh Mujibur Rahman formed the Awami League, which sought autonomy for East Pakistan. In December 1970, the Awami League won an absolute majority in general elections for a Pakistani National Assembly called to draft a new constitution. Instead of allowing Sheikh Rahman to take power, the Pakistani government of President Yahya Khan jailed him. Rioting broke out in East Pakistan. Yahya Khan declared martial law on 24 March 1971 and began major repression in East Pakistan that, in the view of some observers, amounted to genocide. Perhaps 10 million refugees fled into India.

With Indians demanding that their armed forces intervene, Prime Minister Indira Gandhi appealed unsuccessfully to world leaders to end the repression in East Pakistan. During June–November 1971, India and Pakistan exchanged artillery fire and conducted small raids across the border against each other. Meanwhile, on 9 August 1971, India concluded a Treaty of Friendship with the Soviet Union. Alarmed by the West Pakistani actions in East Pakistan, the United States terminated arms shipments to Pakistan on 8 November.

Meanwhile, East Pakistani refugees calling themselves the Mukti Bahini and supported by India engaged the West Pakistani forces. This goaded Pakistan into taking the first hostile action against India, a Pakistani Air Force strike against eastern India on 22 November, followed by major air attacks from West Pakistan against the principal Indian air bases on 3 December. The Pakistanis hoped thereby to achieve the same surprise garnered by the Israeli Air Force against Egypt in the 1967 War, but the Indians were well aware that they were goading the Pakistanis to war and were well prepared, with the result that the air strikes were largely unsuccessful.

The Pakistani air attacks on 3 December marked the official beginning of the war. India was concerned that the PRC, with which it had fought a border war in 1962, might seek to take advantage of the situation to invade northern

India. Indian forces were ready and had at least three times the strength of the 90,000 West Pakistani forces in East Pakistan. Moving swiftly and well-supported by air force and naval units, the Indians launched an invasion from the north and west. During 14–16 December, Indian forces captured Dhaka (Dacca).

On the western front, on 4 December Pakistani forces invaded Jammu and Kashmir and registered gains of up to 10 miles into Indian territory until they were halted. During 5–6 December the Soviet Union supported its Indian ally by vetoing UN Security Council resolutions calling for a cease-fire and forcing Pakistani Foreign Minister Zulfikar Ali Bhutto to work through the dilatory UN General Assembly. On 6 December India officially recognized the independence of East Pakistan as Bangladesh. On 15 December, with the fighting in East Pakistan all but over, the UN General Assembly demanded a cease-fire there. An embittered Bhutto left the UN and returned to Pakistan. Indian troops also recaptured some of the territory in Kashmir and the Punjab lost to the Pakistanis earlier, and they invaded West Pakistan in some places in Hyderabad and the Punjab.

Meanwhile, the Indian Navy neutralized Pakistani naval units on the first day of the war. The Indian Eastern Fleet completely controlled the Bay of Bengal, blockading East Pakistan. Indian antisubmarine warfare units sank the Pakistani submarine *Ghazi*, which tried to ambush the Indian aircraft carrier *Vikrant*. The Indian Western Fleet sank the Pakistani destroyer *Khaibar* and a minesweeper off Karachi, in the largest surface action in the Indian Ocean since 1945. Indian surface units then shelled and rocketed the naval base at Karachi. Pakistan's only naval success in the war came when the submarine *Hangor* torpedoed and sank the Indian frigate *Khukri*.

In Dhaka on 16 December Pakistani commander Lieutenant General A. A. K. Niazi officially surrendered to Indian commander General S. H. F. J. Manekshaw, effectively ending the war. On 17 December both sides accepted a cease-fire agreement. In the war, Indian losses were some 2,400 killed, 6,200 wounded, and 2,100 taken prisoner. India also admitted that it had lost seventy-three tanks and forty-five aircraft. Pakistan, however, lost more than 4,000 dead and 10,000 wounded, along with 93,000 prisoners (the latter figure included some of the wounded). On 20 December Yahya Khan resigned, and Bhutto replaced him as president. Bhutto promptly placed Yahya Khan and senior Pakistani generals under arrest.

The last Indian troops were withdrawn from Bangladesh in March 1972, and on 19 March India and Bangladesh concluded a Treaty of Friendship. On 3 July 1972, India and Pakistan formally concluded peace at Simla, India. President Bhutto signed for Pakistan and Indira Gandhi for India. Both sides agreed to a general troop withdrawal and restoration of the prewar western border but postponed action on settlement of the dispute over Kashmir and the return of Pakistani prisoners of war (POWs). India did not agree to the release of the POWs until August 1973, with the last of them returning to Pakistan in April 1974.

Other crises also threatened to produce wider conflicts. In 1984, war nearly broke out over India's belief that Pakistan was involved in the Sikh

insurgency. This crisis was headed off by diplomacy. Fighting initiated by a local Indian commander also occurred in 1987 but was contained. However, tensions over violence in Kashmir have continued into the twenty-first century.

Indochina War (1946–1954)

Fought during 1946–1954 between the French and Vietnamese nationalists, the Indochina War was the first phase of what might be called the Second Thirty Years' War and the longest war of the twentieth century. The French had established themselves in Indochina in the 1840s, and by 1887 they had formed French Indochina, made up of the three divisions of Vietnam (Tonkin, Annam, and Cochin China) and the kingdoms of Cambodia and Laos. The cause of the war was the French refusal to recognize that the days of colonialism were over. In the aftermath of World War II, a weakened France was determined to hold on to its richest colony.

In 1941 veteran Vietnamese communist leader Ho Chi Minh had formed the Viet Minh to fight the Japanese, then in military occupation of Vietnam, and the French. A fusion of communists and nationalists, the Viet Minh had by 1944 liberated most of the northern provinces of Vietnam. The defeat of Japan in August 1945 created a power vacuum (all French troops were in prison camps) into which Ho moved. At the end of August 1945, Ho established in Hanoi the provisional government of the Democratic Republic of Vietnam (DRV, North Vietnam), and on 2 September 1945 he proclaimed Vietnamese independence.

With no support from either the Soviet Union or the United States, Ho was forced to deal with France. He and French diplomat Jean Sainteny concluded an agreement in March 1946 to allow 15,000 French troops into North Vietnam, with the understanding that 3,000 would leave each year and all would be gone by the end of 1951. In return, France recognized North Vietnam as a free state within the French Union. France also promised to abide by the results of a referendum in Cochin China to determine if it would be reunited with Annam and Tonkin.

INDOCHINA WAR, 1946 – 1954

The Ho-Sainteny Agreement fell apart with the failure of talks, the Fontainebleau Conference in the summer of 1946, to resolve outstanding substantive issues and with the decision of new French governor-general of Indochina Admiral Georges Thierry d'Argenlieu to proclaim on his own initiative the independence of a republic of Cochin China. Paris officials were not worried. They believed that the Vietnamese nationalists would not go to war against France and that if they did they would be easily crushed. Violence broke out in Hanoi in November 1946, whereupon d'Argenlieu ordered the shelling of the port of Haiphong, and the war was on.

The French motives were primarily political and psychological. Perhaps only with its empire could France be counted as a great power. Colonial advocates also argued that concessions in Indochina would adversely impact other French overseas possessions, especially in North Africa, and that further losses would surely follow.

The North Vietnamese leadership planned for a protracted struggle. Former history teacher Vo Nguyen Giap commanded its military forces, formed in May 1945 into the People's Army of Vietnam (PAVN). Giap modeled his strategy upon that of Chinese communist leader Mao Zedong. Giap's chief contribution came in his recognition of the political and psychological difficulties for a democracy waging a protracted and inconclusive war. He believed that French public opinion would at some point demand an end to the bloodshed. In the populous rice-producing areas, the Viet Minh would

Barefoot villagers wearing shorts perform training drills using bamboo rifles, Batri, Indochina, 1951. (Library of Congress)

employ guerrilla tactics and ambushes. In the less populated mountain and jungle regions, the Viet Minh would engage in large-scale operations.

For eight years the French fought unsuccessfully to defeat the Viet Minh, with a steady succession of French generals directing operations. One French tactical innovation was the riverine division composed of naval and army forces, the Divisions Navales D'assaut, abbreviated as Dinassaut. By 1950 the French had six permanent Dinassauts in Indochina. The French also developed commando formations, the Groupement des Commandos Mixtes Aéroportés (GCMA, Composite Airborne Commando Groups), later known as the Groupement Mixte d'Intervention (GMI). Essentially guerrilla formations of about 400 men each, these operated behind enemy lines, sometimes in conjunction with friendly Montagnard tribesmen or Vietnamese. By mid-1954 the French had 15,000 men in such formations, but they placed a heavy strain on the badly stretched French airlift capacity.

Sometimes the French cut deeply into Viet Minh-controlled areas, but as soon as the French regrouped to attack elsewhere the Viet Minh reasserted its authority. With their superior firepower the French held the cities and the majority of the towns, while the Viet Minh managed to dominate most of the

countryside, more of it as the years went by. French commanders never did have sufficient manpower to carry out effective pacification. The war was increasingly unpopular in France, and no conscripts were ever sent there, although a quarter of all of France's officers and more than 40 percent of its noncommissioned officers were in Indochina.

With Ho and the Viet Minh registering increasing success, Paris tried to appease nationalist sentiment by setting up a pliable indigenous Vietnamese regime as a competitor to the Viet Minh. In the March 1949 Elysée Agreements, Paris worked out an arrangement with former emperor Bao Dai to create the State of Vietnam (SV). Incorporating Cochinchina, Annam, and Tonkin, it was to be independent within the French Union. France never did give the SV genuine independence, however. Paris retained actual control of its foreign relations and armed forces. The result was that it was never able to attract meaningful nationalist support. There were in effect but two alternatives: the Viet Minh, now labeled by the French as communists, or the French.

Meanwhile, the military situation continued to deteriorate for the French. PAVN forces achieved their successes with arms inferior in both quantity and quality to those of the French. Disparities in military equipment were offset by the Viet Minh's popular backing.

Until the end of 1949, Washington showed little interest in Indochina, apart from urging Paris to take concrete steps toward granting independence. Washington did not press too much on this issue, however, fearful that it might adversely affect France's attitude toward cooperation in the formation of North Atlantic Treaty Organization (NATO) and the European Defense Community (EDC). France was then virtually the only armed continental West European power left to stand against the Soviet Union. In effect, Washington supported France's Indochina policy in order to ensure French support in containing the Soviet Union in Europe. The United States underwrote the French military effort in Vietnam indirectly, but leaders in Washington expressed confidence based on assurances from Paris that France was granting Vietnam its independence.

The U.S. policy of indirect aid to the French effort in Indochina changed after October 1949 and the communist victory in China. This and the beginning of the Korean War in June 1950 shifted U.S. interest to the containment of communism in Asia. Zealous anticommunism now drove U.S. policy and prevented Washington from seeing the nationalist roots of the problem. With the communist victory in China, in effect the war was lost for the French. China had a long common frontier with Tonkin, and the Viet Minh could now receive large shipments of modern weapons, including artillery captured by the Chinese communists from the nationalists. In 1950, in a series of costly defeats, the French were forced to abandon a string of fortresses in far northern Tonkin along Route Coloniale 4. In these battles, the Viet Minh captured French arms sufficient to equip an entire division. Then in 1951 Giap launched a series of attacks in the Red River Delta area that turned into hard-fought and costly battles during 1951–1952. In these, Giap tried but failed to capture Hanoi and end the war. But as the French concentrated resources in

France and that if
they did they would
be easily crushed.

the north of the country, the Viet Minh registered impressive gains in central and southern Vietnam.

From June 1950 the United States became a major military support for the French in Indochina. This was reinforced by the communist Chinese decision to enter the Korean War. Paris convinced Washington that the war in Indochina was a major element in the worldwide containment of communism. Washington now saw the French effort no longer as a case of colonialism versus nationalism but rather as a free world stand against communist expansionism.

In January 1950 both the People's Republic of China (PRC) and the Soviet Union recognized the North Vietnamese government. The next month, the United States extended diplomatic recognition to the SV. U.S. military aid to the French in Indochina now grew dramatically, from approximately \$150 million in 1950 to more than \$1 billion in 1954. By 1954, the United States was also paying 80 percent of the cost of the war. The French insisted that all aid to Bao Dai's government be channeled through them, frustrating American hopes of bolstering Bao Dai's independence. Even though a Vietnamese National Army was established in 1951, it remained effectively under French control. Meanwhile, the administrations of both President Harry S. Truman and President Dwight D. Eisenhower assured the American public that actual authority in Vietnam had been transferred to Bao Dai.

By mid-1953, despite substantial aid from the United States, France had lost authority over all but a minor portion of the country. In September, with strong American encouragement, France entered into one final and disastrous effort to achieve a position of strength from which to negotiate with the Viet Minh. Under Lieutenant General Henri Navarre, the new commander in Indochina, France now had 517,000 men, 360,000 of whom were Indochinese.

The Battle of Dien Bien Phu from April to May 1954 was the culminating and most dramatic battle of the war. At this remote location in north-western Tonkin, the French constructed a complex of supporting fortresses, defended by artillery. Navarre's strategy was to entice the Viet Minh to attack this supposedly impregnable position and there destroy them. At best he expected one or two Viet Minh divisions. Giap accepted the challenge but committed four divisions. The French mistakenly assumed that the Viet Minh could not get artillery to this remote location, but eventually the Viet Minh outgunned the French. French air assets also proved insufficient. The surrender of Dien Bien Phu on 7 May enabled the French politicians to shift the blame to the army and withdraw France from the war.

Not coincidental to the battle, a conference had already opened in Geneva to discuss Asian problems. It now took up the issue of Indochina. The 26 April–21 July Geneva Conference provided for independence for Cambodia, Laos, and North Vietnam. Vietnam was to be temporarily divided at the 17th Parallel, pending national elections in 1956. In the meantime, Viet Minh forces were to withdraw north of that line and French forces south of it.

In the war, the French and their allies sustained 172,708 casualties: 94,581 dead or missing and 78,127 wounded. These break down as 140,992 French

Union casualties (75,867 dead or missing and 65,125 wounded) with the allied Indochina states losing 31,716 (18,714 dead or missing and 13,002 wounded). French dead or missing numbered some 20,000; Legionnaires, 11,000; Africans, 15,000; and Indo-Chinese, 46,000. The war took a particularly heavy toll among the officers, 1,900 of whom died. Viet Minh losses were probably three times those of the French and their allies, and perhaps 150,000 Vietnamese civilians also perished. One major issue was that of prisoners, both soldiers and civilians, held by the Viet Minh in barbarous conditions. Only 10,754 of the 36,979 reported missing during the war returned, and some were not released until years afterward.

The Indochina War had been three wars in one. Begun as a conflict between Vietnamese nationalists and France, it became a civil war between Vietnamese, and it was also part of the larger Cold War. As it turned out, in 1954 the civil war and the East-West conflict were only suspended. Ten years later a new war broke out in which the Americans replaced the French.

Predominantly Muslim nation straddling the equator in Southeast Asia. Indonesia is an archipelago of 17,000 islands (of which only 6,000 are inhabited) and covers 741,096 square miles, slightly less than three times the size of the U.S. state of Texas. With a 1945 population of approximately 72 million, it sits amid the Indian Ocean, the South China Sea, and the Pacific Ocean, south of the Philippines and the Indochinese peninsula, and north of Australia. Indonesia's unique position in terms of its size, population, and location gave it a special role in Southeast Asia. It is the largest state in the region in terms of both territory and population, and it borders on many straits (the Malacca, Lombok, Sunda, and Ombai-Wetar), which are vitally important for commercial and strategic reasons.

A principal Japanese goal in World War II was to secure resource-rich Indonesia and especially its oil. Japan's 1942 invasion of Indonesia dealt a blow to white colonial rule there and, in fact, fired the aspirations of nationalists who

Indonesia

would eventually fight against the return of Dutch control during 1945–1949. The Japanese surrender in August 1945 prompted Indonesia to proclaim its independence on 17 August 1945. At that point Indonesia's process of constitutional government began, corresponding with three provisional constitutions prepared in 1945, 1949, and 1950. The Pancasila-based 1945 provisional constitution, reflecting President Sukarno's (1945–1967) political philosophy, was promulgated the day after independence and provided for a strong presidency. However, a shift in the direction of parliamentary government began to occur. Pragmatic considerations, such as the need to cultivate the support of antifascist leaders, prevented Sukarno, who was accused of collaboration with the Japanese, from exercising his full constitutional powers. Initially, however, members of parliament were appointed by the president and were not popularly elected, and thus a full-fledged parliamentary system was not yet in place.

After the war, the Dutch immediately sought to restore colonial rule with the help of the British. The Battle of Surabaya, between British troops and Indonesian nationalists, took place on 10 November 1945. The Dutch launched their first police action in July 1947, which ended with the signing of the Renville Agreement on 17 January 1948 under United Nations (UN) auspices. This agreement established a military truce between the Dutch and the republican government, thus strengthening the Dutch position. On 17 December 1948, a second Dutch police action ensued in utter disregard of the Renville Agreement. Senior republican leaders such as Sukarno and Mohammed Hatta were arrested.

At the same time, nationalist leaders were also confronted by threats from within. The first of these was the 1948 Madiun rebellion in East Java, during which the Indonesian Communist Party (PKI) proclaimed a People's Republic, which had to be reversed by force. The Darul Islam movement, a militant movement based in Java that sought the establishment of an Islamic state in southern Celebes (Sulawesi), Java, and Sumatra, was another internal threat that distracted the nationalist/republican forces as they fought the Dutch.

International opinion rendered valuable support to the nationalist cause in Indonesia. An international conference on the Indonesian problem held in New Delhi in January 1949 demanded an end to Dutch colonial rule by 1 January 1950. The UN Security Council, via its 28 January 1949 resolution, had already demanded a cease-fire. The Dutch formally transferred sovereignty on 27 December 1949.

The first two decades of Indonesian independence saw economic stagnation, despite initial optimism over a democratic constitution and a brief climb in exports during the Korean War. Sukarno followed a policy of economic nationalism tinged with socialist Marxism and anti-imperialism.

Before departing, the Dutch imposed a federal structure on the republic when they promulgated the second provisional constitution on 2 November 1949. This structure was short-lived, however, as Indonesia reverted to a unitary system under a third provisional constitution enacted on 17 August

1950. Indonesia held its first general elections on 29 September 1955 and assembled its first-ever cabinet on an elected basis. Because no single party secured a majority, a coalition of the Nationalist Party (PNI), Masjumi, Nahdatul Ulama, and other smaller parties was formed. The last parliamentary cabinet fell in December 1956 because the coalition splintered, Vice President Hatta resigned, and rebellion loomed on the outer islands. Sukarno promptly denounced the party system and proclaimed martial law in 1957. In July 1959, he dissolved the Constituent Assembly when it failed to approve his proposal to revive the 1945 constitution. He reinstated this constitution that provided for a strong presidency and introduced his so-called guided democracy policy, which gave to him virtually unlimited power.

On the foreign policy front, Indonesia became part of the Colombo Plan (1950), and Sukarno organized the Afro-Asian Conference at Bandung (Java) in April 1955. Sukarno's antipathy toward colonialism was expressed in the 1960s through his idea of *Nekolim* (neocolonialism, colonialism, and imperialism). He also developed the concept of *Oldefos* (old established forces) versus *Nefos* (new emerging forces), defining the *Oldefos-Nefos* antithesis not in Cold War terms but rather in terms of the continued domination of the emergent nations by the former colonial powers.

Sukarno's reliance on the PKI at the domestic level was reflected at the international level when he moved from Cold War neutrality to the formation of a Peking-Jakarta axis by 1965. Indonesia stayed out of the Southeast Asia Treaty Organization (SEATO) and the Association of Southeast Asia (ASA), although it initially endorsed the idea of *Maphilindo*, a regional grouping of Malaya, the Philippines, and Indonesia formed to reconcile differences over the proposed formation of the Federation of Malaysia. Sukarno's conception of *konfrontasi* (confrontation) was devised to repudiate the Netherlands' claim over Irian Jaya and was later used by Foreign Minister Subandrio to challenge the legitimacy of the new Federation of Malaysia, provoking Indonesia's withdrawal from the UN in 1964.

On 6 March 1960, Sukarno dissolved the elected parliament provided for under the 1945 constitution and replaced it in June 1960 with one that had appointed members. The Indonesian Army came to play an important role in internal affairs, being co-opted for an administrative role. Sukarno sought to balance the army's support with dependence on the PKI for mass support. But the contradictions between the two organizations became obvious during the abortive coup of 30 September 1965.

The attempted coup, involving leftist junior army officers, resulted in the murder of six right-wing generals. In the anticommunist pogrom that followed, an estimated 500,000 communists and communist sympathizers were killed. Suharto, tasked with suppressing the revolt, quietly utilized the opportunity to push Sukarno aside. Suharto did this first by usurping executive control in March 1966 and then by deposing Sukarno and installing himself as acting president in March 1967. Suharto installed himself as president in March 1968 for a five-year term. He stayed in power until 1998, getting himself reelected by fraud and rigged elections.

Under Suharto's New Order policy, political activity was severely restricted. Political parties were forced to reorganize into three major political parties: the Golongan Karya (Golkar), Partai Demokrasi Indonesia (PDI), and Partai Persatuan Pembangunan (PPP). The government-sponsored Golkar effectively manipulated votes in its favor for more than two decades, while parliament was weakened and the People's Consultative Assembly (MPR) became a virtual rubber stamp for Suharto. Suharto derived his strength from the military, which in turn derived its power from the doctrine of *dwifungsi* (dual function) that extended the military's influence over the socioeconomic and political spheres. In 1987, political parties were forced to accept the state ideology, *Pancasila*, as their sole guiding principle.

Suharto imposed strict controls on the media and banned the publication of news magazines that did not toe the line. This authoritarianism asserted itself most aggressively in 1975, when Indonesian troops landed in East Timor and later incorporated it as the twenty-seventh province of Indonesia. Suharto faced serious allegations of human rights abuses in putting down the independence movement in East Timor and in suppressing a separatist movement in the northern Sumatran province of Aceh.

Suharto's foreign policy was calculated to be low profile and pragmatic. He abandoned confrontation with Malaysia, helped found the Association of Southeast Asian Nations (ASEAN) in 1967, and in 1976 established ASEAN's permanent secretariat in Jakarta. Indonesia became a leader of the Non-Aligned Movement in 1991 just as the Cold War came to an end. Following Vietnamese intervention in Cambodia, Indonesia agreed to play the role of mediator in the crisis. Diplomatic relations with the People's Republic of China (PRC) were restored in August 1990 after having been severed in 1965 because of Chinese support for the PKI.

Indonesia's military, which played a central role in Indonesia's freedom struggle, steadily gained influence during the Cold War. It has continued to grow in prominence. This enhanced status is clearly visible in Indonesia's relatively steep defense expenditures (estimated at \$6.6 billion in 2002) and its substantial arms acquisitions (including fighter aircraft and submarines). The Indonesian Armed Forces (TNI), known as ABRI during the Suharto era, enjoy a sacrosanct status inherent in the dual-role policy.

Suharto was dubbed the "father of development" as Indonesia's yearly economic growth rate skyrocketed to 7.8 percent in 1996. With the help of U.S.-trained economists, Suharto made Indonesia a welcome destination for foreign capital, and the World Bank held it up as a model borrowing nation. During the 1980s and 1990s, the number of Indonesians living below the poverty line declined substantially. With the demise of the Soviet Union and the end of the Cold War, Indonesia could no longer isolate itself from the forces of political change, which were sweeping away outmoded political and social thinking elsewhere. Soon, new demands for political reforms began to gain momentum. Bachruddin Jusuf Habibie, buoyed by popular support, succeeded Suharto, forced from office in March 1998. Once this initial enthusiasm had subsided, however, Habibie no longer felt pressured to introduce

market reforms or initiate measures to stop government corruption. His immediate successors did not live up to popular expectations.

Turkish general, prime minister, and second president of the Turkish Republic. Born on 24 September 1884 in İzmir (Smyrna), İsmet İnönü graduated from the Ottoman Military Academy in 1903 and served in Thrace and Syria as a member of the Second Army. After the Ottoman Empire's defeat in World War I, he commanded the independence forces in the western Anatolia. His military victories quickly ended the armed conflict there, and he was promoted to brigadier general in 1922. His diplomatic skills helped guarantee Turkey's contemporary political boundaries at the Lausanne Peace Conference of 1922–1923.

When Turkey became a republic in 1923, İnönü served as its first prime minister until 1937 except for a brief period from November 1924 to March 1925. He was also the closest confidante of President Mustafa Kemal Atatürk (known as the “father of the Turks”). İnönü's policies sought to solidify Turkey as a modern nation but also included ruthless suppression of ethnic and religious rebellions. His economic vision endorsed state-sponsored development, which kept Turkey financially stable during the 1930s and early 1940s.

Upon Atatürk's death in 1938, İnönü led the Republican People's Party (RPP) and was elected Turkey's second president. He maintained Turkey's neutrality until the last days of World War II and also secured U.S. assistance in keeping the Soviets at bay during the early Cold War. In the domestic sphere, İnönü supported, albeit reluctantly, the introduction of free, competitive elections and the establishment of multiparty politics. When the new Democrat Party (DP) won the 1950 elections, İnönü stepped down as president and continued his political career in the RPP.

In the late 1950s, İnönü spearheaded the RPP's opposition to the DP's repressive policies. After the 1960 military coup d'état, which overthrew the DP government, İnönü was again elected prime minister and formed three

(1884–1973)

İsmet İnönü, president of Turkey (1938–1950).
(Bettmann/Corbis)

coalition governments from 1961 to 1965. As the coalitions gradually weakened the RPP's strength, however, he came under increasing criticism by the RPP's center-leftist factions.

When the RPP lost the 1965 elections to the Justice Party, İnönü crafted, with assistance from the RPP's secretary-general, a new action program called the Left of Center. Instead of rejuvenating the party's strength, however, the new platform further alienated party centrists, who later left the RPP to form the Reliance Party in 1967. İnönü remained the major opposition leader until 1972, when he lost control of the RPP. After what he considered to be his final defeat, İnönü retired from politics.

İnönü's life witnessed Turkey's remarkable transformation from a multiethnic empire to a secular nation-state, from an authoritarian polity to a multiparty regime, and from a state-controlled agrarian economy to a liberal industrialized economy. During his presidency in the late 1940s, Turkey joined the United Nations (UN), moved closer to the Allies, and secured U.S. financial aid through the Marshall Plan. İnönü's pro-Western policies paved the way for Turkey's deployment of a 5,000-man brigade to Korea in 1950 and its admittance to the North Atlantic Treaty Organization (NATO) in 1952. İnönü died in Ankara, Turkey, on 25 December 1973.

Intelligence Collection

The Cold War era saw revolutionary developments in both the technology and methodology of intelligence collection on both sides of the Iron Curtain. At the end of World War II, the United States and Britain dismantled part of their wartime intelligence operations, including the U.S. Office of Strategic Services (OSS) and the British Special Operations Executive (SOE). The U.S. government created its first permanent peacetime intelligence organi-

zation in 1947 with the establishment of the Central Intelligence Agency (CIA), part of the sweeping 1947 National Security Act. The Soviets restructured their intelligence agencies as well, but it was not until March 1954 that they consolidated all foreign intelligence into one agency, the *Komitet Gosudarstvennoi Bezopasnosti* (KGB).

During the late 1940s and into the 1950s, U.S. and British intelligence were able to make use of a project that originated during World War II, known as Venona in the United States and Bride in Great Britain. These joint operations targeted encoded Soviet communications to and from the West, and beginning in 1948 a very few of these messages began to be deciphered by the West. These efforts led to the unmasking of numerous Soviet spies and operatives, including the notorious Cambridge Five who had infiltrated the highest levels of British intelligence and the atomic spies Klaus Fuchs in Britain and Julius and Ethel Rosenberg in America.

Aerial reconnaissance became very important to the Western powers early on in the Cold War, particularly along the periphery of the communist bloc. Reconnaissance flights searched for electronic intelligence (ELINT) on radar sites, missile tests, and various other activities. The Soviets focused more on naval platforms for espionage, establishing an entire fleet of so-called spy trawlers that they deployed within a few miles of their adversaries' coastlines.

In the 1950s, numerous ground stations were built worldwide to monitor communist bloc communications (signals intelligence, or SIGINT), and aerial reconnaissance (using existing aircraft such as converted cargo planes) was stepped up, which led to several deadly clashes with Soviet air forces. A U.S. project that enjoyed great success for a time was the advanced U-2 spy plane, developed by Lockheed under the code name of Aquatone and first used in June 1956. The U-2 was able to fly directly over the Soviet Union and other communist nations at some 68,000 feet, beyond the range of most anti-aircraft weapons or fighter aircraft of the time. The U-2 was equipped with advanced photoreconnaissance capabilities as well as collection devices for atmospheric nuclear debris. Aquatone flights over the Soviet Union came to a dramatic halt on 1 May 1960 when a U-2 piloted by Francis Gary Powers was shot down deep inside Soviet territory. However, the venerable spy plane stayed in service into the twenty-first century over various parts of the world, most famously during the Cuban Missile Crisis of 1962 and during the Persian Gulf War and its aftermath.

The 1960s saw the creation of the next generation of aerial espionage platforms: Earth-orbiting satellites. The first American reconnaissance satellites (CORONA Program) went into operation in August 1960. CORONA photographs showed that the much-feared missile gap between America and the Soviet Union was grossly inaccurate; in fact, CORONA's camera systems in the first-generation Keyhole satellites proved that the United States had a decisive edge in numbers of missiles. Although the Soviets also deployed reconnaissance satellites beginning in the early 1960s, continued improvements in the Keyhole system are believed to have provided a decisive edge in satellite capabilities to the United States throughout the Cold War.

The onset of satellites did not eliminate the role of more traditional aerial platforms, however. In May 1967, the advanced American spy plane code-named OXCART, better known as the Lockheed SR-71 Blackbird, went into operation for the CIA over North Vietnam. Capable of flying at tremendous speeds (up to Mach 3.6 or 2,400 mph) and heights (up to 92,000 feet), OXCART was used extensively throughout the world. Over the next thirty years, more than 1,000 surface-to-air missiles were fired at the SR-71 without a single hit.

In the mid-1960s, the little-known and highly secretive National Security Agency (NSA) took over control of U.S. ground stations around the Soviet periphery and greatly expanded their numbers, most significantly in northern Iran. These assets became the main source of information on Soviet missile tests in Kazakhstan but were lost following the Iranian Revolution of 1979. At about the same time that the NSA was building more observation posts, it was developing (along with the U.S. Navy) its own fleet of spy trawlers similar to the Soviet models.

Beginning with President Dwight D. Eisenhower's administration, U.S. Navy submarines were deployed deep in Soviet waters to collect information, sometimes even venturing into Russian ports. One such operation, code-named IVY BELLS, placed a pod of recording equipment on a Soviet undersea communications cable and collected vast quantities of valuable intelligence before an American spy exposed the operation in 1981.

The 1970s witnessed perhaps the last great innovations of intelligence collection during the Cold War. The first was the development of geosynchronous orbital satellites under the code-name RHYOLITE. The first RHYOLITE platform was put into orbit in June 1970. The advantage that RHYOLITE provided was constant, around-the-clock coverage of the desired target. Perhaps most significant, however, was the December 1976 deployment of the KH-11 geosynchronous satellite. Marking a revolution in photoreconnaissance technology, the KH-11 (unlike all previous spy satellites) could transmit images back Earth as it was collecting them, or in real time.

Intermediate-Range Ballistic Missiles

Nuclear arms reduction treaty that eliminated an entire class of intermediate-range ballistic missiles (IRBMs) and short-range, ground-launched nuclear missiles. On 8 December 1987, U.S. President Ronald Reagan and Soviet General Secretary Mikhail Gorbachev signed a treaty that, for the first time in history, ordered the destruction of entire classes of nuclear-capable missiles. The systems involved were primarily Soviet SS-18, SS-20, and SS-21 missiles and American Pershing-class missiles. The USSR also entered into agreements with the Federal Republic of Germany (FRG, West Germany) to destroy Pershing systems under German control. The Soviets guaranteed the destruction of treaty-related items in use by their Warsaw Pact allies.

Intermediate-Range Nuclear Forces Treaty (8 December 1987)

Unlike earlier Cold War arms control agreements, the Intermediate-Range Nuclear Forces (INF) Treaty stipulated on-site inspection and verification procedures. This breakthrough removed a perennial sticking point in arms control efforts between the two superpowers. As such, the INF Treaty was viewed as a benchmark for all future arms-reduction treaties in regard to inspection and verification protocols.

On 15 January 1988 the United States established the On-Site Inspection Agency (OSIA), which was responsible for conducting inspections of Soviet missile sites and escorting Russian inspectors to U.S. and European sites. The initial staffing of the agency was comprised mainly of well-seasoned military officers, although some civilians were also detailed to the OSIA. After the treaty's ratification by the respective governments, it entered into force on 1 June 1988.

Arms Limitation Treaties

<i>Treaty</i>	<i>Year</i>	<i>Current Signatories</i>	<i>Function</i>
Antarctic Treaty	1959	12	Prohibits military bases and nuclear tests and disposal in Antarctica
Limited Test Ban Treaty	1963	116	Prohibits nuclear testing in the atmosphere, outer space, and underwater
Outer Space Treaty	1967	89	Prohibits placement of nuclear weapons in space
Latin American Nuclear-Free Test Zone Treaty	1967	24	Prohibits manufacture, deployment, and use of nuclear weapons in Central and South America
Nuclear Non-Proliferation Treaty	1968	136	Prohibits spread of nuclear weapons to countries that do not already possess nuclear weapons
Seabed Treaty	1971	87	Prohibits placement of nuclear weapons on the seabed beyond 12-mile coastal region
Anti-Ballistic Missile Treaty	1972	2	Limits number of antiballistic missiles and their locations
Strategic Arms Limitation Treaty I Interim Agreement	1972	2	Froze number of U.S. and Soviet ballistic missiles for five years
Threshold Test Ban Treaty	1974	2	(Unratified) prohibits certain underground peaceful nuclear explosions
Peaceful Nuclear Explosions Treaty	1976	2	(Unratified) prohibits certain peaceful nuclear explosions
Strategic Arms Limitation Treaty II	1979	2	(Unratified) places caps on number of nuclear weapons and qualitative restraints on future production
South Pacific Nuclear Free Zone Treaty	1985	13	Prohibits manufacture, deployment, use, and disposal of nuclear weapons in the South Pacific region
Intermediate-Range Nuclear Forces Treaty	1987	2	Eliminates all intermediate-range missiles (IRMs), shorter-range missiles (SRMs), and associated launchers and equipment
Ballistic Missile Launch Notification Agreement	1988	2	Requires the U.S. and Soviet Union to notify each other at least 24 hours before launch of a strategic ballistic missile
Strategic Arms Reduction Treaty	1991	2	(Unratified) places caps on number of nuclear warheads and delivery vehicles

The Soviets permitted inspections of approximately 130 sites in Eastern Europe and the Soviet Union, while the Americans guaranteed access to 31 sites in Western Europe and the United States. The inspection protocols stipulated that there would be both announced and unannounced inspections. When inspectors arrived at a designated location, they would be escorted to verify the type and number of treaty items. At the conclusion of the inspection, the monitors would write a draft report and present it prior to departure. If the inspectors discovered illicit activity or perceived discrepancies in the type and amount of INF items, the treaty called for an immediate resolution.

The INF Treaty also mandated the observable destruction of all applicable missiles. When systems were reported destroyed, close-out inspections of the facilities would be conducted. This was perhaps the most unique feature of the treaty. The treaty was scheduled to be in effect for an initial period of thirteen years. In 2001 both nations were to either renew or renegotiate the treaty or specific provisions contained therein. After the dissolution of the Soviet Union in 1991, interest in the treaty's inspection provisions waned, however. The INF Treaty stands today as a singular achievement of

the Cold War, which ultimately helped to bring about the end of the forty-five-year struggle.

Legislation designed to limit the activities and movement of suspected communists and communist sympathizers in the United States. The U.S. Congress passed the Internal Security Act, sometimes called the McCarran Act, on 23 September 1950. Indeed, the assembly overrode President Harry S. Truman's veto of the bill. Truman termed it "the greatest danger to the freedom of press, speech, and assembly since the Sedition Act of 1789." The act was sponsored by Nevada's Democratic Senator Patrick A. McCarran, who by 1950 was already well known for his rabid anticommunism. The Internal Security Act fired the opening legislative salvo of McCarthyism, which had begun in earnest in February 1950 when Senator Joseph R. McCarthy accused the U.S. State Department of harboring communist employees. It is noteworthy—and indicative of the tenor of the times—that both houses of Congress overrode Truman's veto by overwhelming margins, even though Truman was a Democrat and the Democrats controlled Congress.

Among its many terms, the McCarran Act required that the American Communist Party and any organization affiliated with it register with the U.S. attorney general. The bill also made it illegal to establish a totalitarian dictatorship or to conceal membership in a communist organization when applying for government employment or using a passport. In addition, the act stipulated that communists or other people deemed subversive or a danger to the public welfare could be detained or deported. Naturalized citizens who fell into the last category could face denaturalization and, ultimately, deportation. Finally, the legislation established the Subversive Activities Control Board, which was empowered to investigate any person suspected of engaging in un-American activities.

Internal Security Act (1950)

The implications of the act for civil liberties were obviously great. But this was just the beginning of the excesses of McCarthyism. In June 1952, McCarran and Senator Francis Walter introduced the McCarran-Walter Act, which imposed stricter regulations on immigration and tightened laws relating to the admission and deportation of “dangerous aliens” as defined by the Internal Security Act. In August 1954 Congress passed the Communist Control Act, which among other things stiffened the penalties against those who failed to register with the attorney general and deprived the Communist Party of due process of law. Over time and bit by bit, portions of the Internal Security Act were ruled unconstitutional by the U.S. Supreme Court. The act was entirely repealed by Congress in 1990.

International Monetary Fund

The International Monetary Fund (IMF), an arm of the United Nations (UN), aims at global economic prosperity through multinational cooperation in monetary policy, the avoidance of competitive devaluations, and the orderly correction of balance of payments problems. The IMF was conceived at the July 1944 Bretton Woods Conference in New Hampshire and came into formal existence on 27 December 1945, when 29 nations signed its charter. As of 2006, 184 countries were IMF members.

Participating nations in the Bretton Woods talks discussed ways to avoid repeating the disastrous economic policies adopted after World War I, including competitive devaluations, punitive tariffs, and unrealistic war reparation payments, which contributed to the Great Depression of the 1930s. The conference representatives discussed three pillars of economic cooperation, namely monetary cooperation through the IMF, economic development through the International Bank of Reconstruction and Development (IBRD or World Bank), and trade cooperation through the World Trade Organization (WTO). Only the IMF and the World Bank ultimately came into being; the third pillar, the WTO, was postponed for another five decades.

Countries joining the IMF originally agreed to keep their exchange rates pegged to the U.S. dollar, which itself was pegged to gold at a fixed rate. This rate could be adjusted only by multilateral agreement. This system con-

tributed to exchange rate stability for almost three decades; however, it also led to constant political pressure for adjustment in the case of nations that entered the so-called Bretton Woods System either with overvalued currencies (such as the United Kingdom and France) or undervalued currencies (such as West Germany). The Bretton Woods System additionally placed a considerable burden on America to synchronize its domestic economic policies with the goal of exchange rate stability vis-à-vis gold. When the U.S. economy began to flounder due to increasing budget deficits and the Vietnam War, President Richard M. Nixon suspended the convertibility of the U.S. dollar to gold in 1971. The unified world monetary system broke down, allowing states to let their currency float, peg it to another currency, or participate in a currency bloc.

In the beginning, the IMF was aimed mainly at cooperation among industrialized nations, but soon other priorities began to take root. Newly independent states, especially those in Africa, required the IMF to play a new role, focusing on structural assistance and later even poverty reduction, tasks that also increasingly preoccupied the World Bank.

The debt crisis of the 1980s, which affected not only Africa and Latin America but also Hungary, Poland, and Yugoslavia, was resolved by involving the private sector in debt repayment plans as well as imposing economic policy guidelines on member nations. The end of the Cold War witnessed a rise in IMF membership; from 1989 to 1991 alone, membership increased from 152 to 172 countries. In the successor states of the Soviet Union as well as in Eastern Europe, the IMF played an important role in easing the transition to market economies, many of which had been hit by hyperinflation.

The IMF faced other challenges as well, most notably the East Asian crisis of 1997 and the 1998 Russian crisis. Critiques from the Left have often held the IMF responsible for poverty and economic inequality, as it often prescribed austerity programs to counter government overspending and inflation. Rightist critics have charged the IMF with distorting financial markets through large-scale bailouts of both countries and creditors. Be that as it may, the overall track record of the IMF has been a positive one, and the absence of 1930s-style economic chaos in the postwar period speaks to the true efficacy of the IMF.

Iran

Middle Eastern nation of 636,293 square miles, slightly larger than the U.S. state of Alaska. Iran is bordered by the Persian Gulf and the Gulf of Oman to the south; Turkey, Azerbaijan, the Caspian Sea, and Armenia to the north; Afghanistan and Pakistan to the east; and Iraq to the west. Iran, with a 1945 population of some 15.6 million, has long been important because of its strategic location at the geographic nexus of the Middle East, Europe, and Southwest Asia. Iran's location captured the attention of both Britain and Russia in the nineteenth century, each of which sought to control the area and its access to the Persian Gulf. Rivalry over Iran continued in the early years of the Cold War as the United States and the Soviet Union vied for control of the country's valuable resources (the most important of which was oil) and geostrategic location.

Reza Shah, the founder of the modern Iranian state, resisted Allied influence at the beginning of World War II. Because of this, Iran was invaded and occupied by British and Soviet forces. Iran subsequently became a chief conduit for U.S. Lend-Lease assistance to the Soviet Union. Reza Shah abdicated and his son, Mohammad Reza Pahlavi, became the new shah.

In 1943 the three principal Allied leaders—U.S. President Franklin D. Roosevelt, British Prime Minister Winston Churchill, and Soviet leader Josef Stalin—met in the Iranian capital of Tehran to discuss military strategy. In addition, they issued the Tehran Declaration, by which they committed their three governments to restore full sovereignty and territorial integrity to Iran after the war. Nonetheless, with the end of the war, both Britain and the Soviet Union were reluctant to withdraw. The Soviet Union established two nominally independent communist states in areas that it occupied. These were the People's Republic of Azerbaijan and the Kurdish People's Republic. Iran, backed by the United States, protested to the United Nations (UN) Security Council, citing the Tehran Declaration.

In May 1946 the Soviet Union withdrew its troops, following a pledge by the Iranian government to consider oil concessions. After the Soviet withdrawal, the Iranian Army reestablished full Iranian central government control over the northern provinces, and the Iranian parliament rejected oil concessions to the Soviets. This confrontation with the Soviet Union was the catalyst for the strong U.S.-Iranian relationship that lasted until 1979.

Following the war, Iranian nationalism asserted itself, and two rival factions challenged the supremacy of the shah, who was pro-Western. The first was the Thul Party, which was procommunist and backed by the Soviets. The second was the National Front Party (NFP), based on a nationalist-democratic platform and relatively independent of foreign influence. The NFP, led by its eccentric but popular leader Mohammed Mossadegh, dominated Iranian politics through the early 1950s.

When Mossadegh became prime minister in 1951, he nationalized the British-owned Anglo-Iranian Oil Company. Britain responded by imposing an embargo on Iranian oil and blocking the export of products from the formerly British properties. Because Britain was Iran's primary oil consumer, the

British blockade made Iran's already weak economy even weaker. As one consequence of the crisis, Mossadegh asked the shah to grant him emergency powers that included direct control of the military. The shah resisted the request, which precipitated a domestic political crisis.

Mossadegh, however, well understood the power of his popularity. He promptly resigned his position in 1952, causing widespread protests and demands that he be returned to power. Now unnerved, the shah reappointed Mossadegh, who then took steps to consolidate his power. This included the implementation of land reform and other measures that to the West seemed socialist. Although Mossadegh had not had any direct contact with the Soviets, the events in Iran were nevertheless of great concern to the United States, which feared a Soviet move on Iran.

As the Anglo-Iran Oil Crisis deepened and Mossadegh implemented more internal reforms while pushing the shah to the sidelines, the United States and Britain decided to take action. The result was the Central Intelligence Agency's (CIA) Operation AJAX. This covert operation employed propaganda, protests, and disinformation to discredit Mossadegh, who responded by seeking greater personal power as prime minister. When the shah attempted to fire Mossadegh in 1953 and he refused to step down, the shah fled abroad.

Riots soon broke out in Iran's major urban centers as pro- and anti-monarchy forces mobilized popular support. The communists as well as the religious leadership chose to oppose Mossadegh. With both the CIA and British intelligence funding and advising promonarchy leaders of all stripes, the Iranian Army took control of Tehran in August 1953 and arrested Mossadegh. The shah returned to Iran and appointed a loyalist army officer as prime minister. Some maintain that the CIA's role in the coup was inappropriate and illegal and that U.S. involvement alienated large segments of Iranian society, ultimately fueling virulent anti-Americanism that pervaded Iran by the mid-1970s. The end result, these observers assert, was the 1979 Iranian Revolution and the taking of American hostages from the U.S. embassy in Tehran in November 1979. Other analysts, however, have viewed the U.S. effort as an effective means by which to keep Soviet influence out of Iran, which was of vital importance to Western interests. Following the events of 1953, the shah became the staunchest U.S. ally in the Middle East, apart from Israel. Indeed, until 1979 the shah acted as a powerful stabilizing force in the Persian Gulf region and a solid bulwark against Soviet influence extending south out of the Caucasus.

While the return of the shah may have been beneficial to Western Cold War interests, his rule alienated many Iranians. His pro-Western foreign policy irked Iranian nationalists, who were fed up with domination by the great powers. His lavish lifestyle and Westernized dress and manner were also an affront to many Iranian clerics, particularly the more conservative. His autocratic rule and limp efforts to improve the lot of Iranians economically and socially won him few new adherents. By the early 1970s, many Iranians remained poor and underemployed, despite the fact that the country sat atop one of the richest oil and gas fields in the world.

The roots of the 1979 Iranian Revolution lay in domestic unrest and violence that began in 1963. At the time, the leader of the most powerful antimonarchy movement was the Ayatollah Ruhollah Khomeini, a fundamentalist Muslim cleric. The shah responded to the opposition with arrests and sometimes brutal interrogations by the secret police. The army was often used to crush protests by force. Khomeini fled to Iraq in 1964, and government forces crushed public protests, resulting in thousands of deaths. Khomeini continued to agitate against the shah from Iraq and later from France as the symbolic leader of the growing opposition to the shah's religious and economic policies.

In 1977, President Jimmy Carter's administration put pressure on the shah to ease his repressive policies, but as the shah loosened his grip, a broad spectrum of Iranian society began to protest against a variety of grievances. At the core of the antishah forces were the religious student community and its clerical leadership. When the shah declared martial law in September 1978, resistance to his regime culminated in a general strike in October 1978. Under great pressure at home and abroad and in failing health, the shah fled Iran in January 1979.

The departure of the shah precipitated a power struggle that was quickly won by Khomeini and his Islamic fundamentalist followers. Their new government consolidated its power through intimidation and violence. Khomeini was not only an ardent opponent of the shah but was also extremely anti-American, and his youthful followers reflected that. On 4 November 1979, Iranian students stormed the U.S. embassy in Tehran and took seventy Americans hostage. Over the next fourteen months, the United States applied sanctions against Iran, froze Iranian assets, and attempted a military rescue, all to secure the hostages. All these efforts failed.

In July 1980, the shah died of cancer in Egypt, opening a diplomatic opportunity to resolve the hostage crisis. The hostages were finally released on 21 January 1981. In the meantime, war had begun between Iran and Iraq.

Neighboring Iraq saw in the 1979 Iranian Revolution a chance to rekindle a long-standing border dispute with Iran over the Shatt al-Arab, the waterway providing Iraq access to the Persian Gulf. On 22 September 1980, Iraq invaded Iran, beginning an eight-year-long war, one of the bloodiest struggles of modern history. Initially, the Iraqi Army had great success against the disorganized, surprised, and poorly led Iranians. However, Iranian zeal led to counteroffensives in 1982 that pushed the Iraqis back. The war then settled into a bloody stalemate during which the Iraqis for the most part fought from prepared defensive positions in the fashion of World War I and the Iranians endured huge casualties while attempting unsophisticated human wave attacks against prepared enemy positions. Khomeini viewed the war as a jihad, or holy war, and rejected any end to the fighting before the destruction of Saddam Hussein's secular government.

In 1987, with the Cold War winding down, both the Soviet Union and the United States became more involved in brokering an end to the conflict, even as both favored Iraq. The Soviets focused on building up Iraq's conventional military capabilities. The United States provided diplomatic sup-

port and satellite intelligence. It also protected Persian Gulf shipping. In 1988, Iraqi military successes and increasing diplomatic isolation finally convinced Khomeini to agree to a cease-fire.

Since the end of the Iran-Iraq War in 1988 and the death of Khomeini in 1989, more moderate forces in Iran have attempted to assert influence on the clerical regime. In general, however, Khomeini's Islamic Religious Party continues to dominate the government bureaucracy and the major institutions of state control. In addition, Iran's sponsorship of terrorist activities in Lebanon and against Israel ensured its continued diplomatic isolation.

Iran's armed forces, which during much of the Cold War were heavily equipped with U.S. weaponry and hardware, served as a symbol of modernism until the 1979 Iranian Revolution. After that, they tended to reflect the new clerical regime's inability, and even unwillingness, to maintain and upgrade technical capabilities as well as the state's emphasis on the personal zeal of military personnel rather than their training and leadership abilities.

From the earliest days of Shah Mohammad Reza Pahlavi's reign, as early as 1941, Iran's armed forces were vitally important to his rule. Iran's strategic geographical position and the shah's constitutional authority giving him direct control over the armed forces (but not over other matters of state) made military expansion and modernization his single most important program. After the 1953 CIA-led coup that solidified his position, the shah increasingly turned to the Americans for matériel and technical support.

Although the shah was a much-welcomed customer, U.S. presidential administrations up until 1969 expressed concerns that he should channel more efforts toward internal reforms. Washington often did not have complete confidence in the shah's ability to retain control over his nation, and his placing of military objectives above other national interests did not ease apprehensions.

There were caps on both the quantity and types of weapons systems available to Iran, but that changed during President Richard Nixon's administration beginning in 1969. By 1972, the shah could order virtually any type of military technology in whatever quantities he wished. This set a significant

Iran, Armed Forces

new precedent, as both the U.S. Defense Department and the U.S. State Department had previously sought to limit Iranian weapons purchases. The results were immediate and dramatic. Iranian military purchases from the United States skyrocketed from \$500 million per year in 1972 to \$2.5 billion in 1973. By 1976, Iran had purchased \$11 billion in new weaponry from American suppliers. Weapons acquisitions included helicopters, jet fighters, antiaircraft missiles, submarines, and destroyers. These acquisitions continued until 1977, when President Jimmy Carter's administration reimposed limits on such sales.

The 1970s also marked significant importations of Western technical assistance. Large numbers of military advisors, technicians, and logistics and maintenance personnel arrived in Iran, primarily from the United States. As long as military matériel and spare parts arrived from the West, to be used by nonnative technicians, the military functioned smoothly. If that flow of goods and expertise were to be halted, as it was after 1979, the Iranian military's ability to function would be seriously compromised.

In early 1979 the shah was forced to abdicate and depart the country. The monarchy was replaced by a conservative, Islamic republic. Less than two years later, in September 1980, Iraq attacked Iran. It was a diminished

military, augmented by and sometimes competing with nonprofessional Revolutionary Guard units, that met the first assaults. They performed poorly.

In terms of personnel, upon the creation of the Islamic republic the officer corps of all three Iranian armed services had been purged, followed by a rash of desertions. One estimate holds that 60 percent of the army deserted in 1979 alone. The numbers of qualified pilots and technicians in the air force plummeted, as did the number of naval personnel. One significant exception was an increase in the number of marines, at least until the mid-1980s.

The departure of foreign advisors and technicians who had serviced aircraft, radar, missile, and ground systems had a dramatic effect on the Iranian armed forces. One example of the dangers of relying on technology created and supported by outsiders was the air force's computer-based logistics system. Without the proper technical support, the system was unusable. Procuring spare parts, which grew increasingly scarce, was a slow and laborious process.

At the beginning of the Iran-Iraq War, Iran could still field an army possessing tanks, aircraft, and the mobility they conferred against an often inept foe. As the war progressed, however, the boycott on Iranian oil, which depleted government funds, forced the Iranians to continually cannibalize their own equipment. This took a heavy toll.

During the 1980–1988 war with Iraq, Iran was forced to seek weapons from sources other than the United States and Western Europe. Iran received war matériel from the People's Republic of China (PRC), Brazil, the Democratic People's Republic of Korea (DPRK, North Korea), and Israel. It also secured some Soviet equipment, usually purchased through third parties. Most bizarre was the supply of American equipment, especially air-to-ground and antitank missiles. These weapons systems were furnished by the United States in return for cash used to finance U.S. government actions against the Sandinistas in Nicaragua in what came to be known as the Iran-Contra Affair.

At the end of the war with Iraq, Iran sought to both rebuild its military arsenal and correct problems of standardization that had arisen because of its variegated sources of supply. Iran subsequently purchased substantial quantities of weapons from Russia and manufactured its own armored weapons systems and, according to some sources, sought to develop nuclear weapons.

Iran-Contra Affair

Reagan continued to endorse arms shipments throughout 1986, and in all more than 100 tons of missiles and spare parts were exported to Iran by the end of the year.

Political scandal in President Ronald Reagan's administration involving the illegal sale of weapons to Iran, the proceeds of which were used to illegally fund Nicaraguan Contra rebels. As its name implies, Iran-Contra was the linkage of two otherwise vastly different foreign policy problems that bedeviled the Reagan administration at the beginning of its second term in 1985: how to secure the release of American hostages held by Iranian-backed kidnapers in Lebanon and how to support the Contra rebels fighting against Nicaragua's Cuban-style Sandinista government. In both cases Reagan's public options were limited, for he had explicitly ruled out the possibility of negotiating with hostage takers, and Congress refused to allow military aid to be sent to the Contras.

In August 1985 Reagan approved a plan by Robert McFarlane, National Security Agency (NSA) advisor, to sell more than 500 TOW antitank missiles to Iran, via the Israelis, in exchange for the release of Americans held by terrorists in Lebanon. (Reagan later denied that he was aware of an explicit link between the sale and the hostage crisis.) The deal went through, and as a follow-up, in November 1985, there was a proposal to sell HAWK antiaircraft missiles to Iran. Colonel Oliver North, a decorated Marine attached to the NSA's staff, was put in charge of these and subsequent negotiations. A number of Reagan's senior cabinet members, including Secretary of State George Shultz, Secretary of Defense Caspar Weinberger, and White House Chief of Staff Donald Regan, began to express reservations about this trade with Iran, for it was not only diametrically opposed to the administration's stated policy but was also illegal under U.S. and international law.

Nonetheless, Reagan continued to endorse arms shipments throughout 1986, and in all more than one hundred tons of missiles and spare parts were exported to Iran by the end of the year. The policy's success in hostage releases proved limited, however, because while some Americans were set free as acts of quid pro quo, others were quickly taken captive in their turn.

Meanwhile, North had begun secretly funneling the funds from the missile sales to Swiss bank accounts owned by the Nicaraguan Contra rebels, who used the money in part to set up guerrilla training camps run by agents of the Central Intelligence Agency (CIA). All this was in direct violation of the Second Boland Amendment, a congressional law passed in October 1984 that specifically forbade the U.S. government from supporting any paramilitary group in Nicaragua. To what extent North's superiors knew of the Contra connection at this stage remains unclear, as is the final amount of money supplied to the Nicaraguans, although it is thought to have been on the order of tens of millions of dollars. Later investigations suggested numerous accounting irregularities by North, but these were never proven.

On 3 November 1986, the affair became public when a Lebanese magazine, *Ash-Shiraa*, revealed that the Americans had been selling missiles to the Iranians. Reagan responded with a televised statement in which he denied any arms-for-hostages deal, and U.S. Attorney General Edwin Meese was ordered to conduct an internal inquiry. North and his secretary, Fawn Hall,

immediately began shredding incriminating documents, but on 22 November Meese's staff discovered material in North's office that linked the Iranian shipments directly to the Contras. Meese informed Reagan, and on 25 November the U.S. Justice Department announced its preliminary findings to the press. North was fired, and National Security Advisor John Poindexter, who had replaced McFarlane, promptly resigned.

The following month, Reagan appointed an independent commission to investigate the affair, chaired by former Texas Senator John Tower. The commission's March 1987 report severely criticized the White House for failing to control its NSA subordinates, which led to the resignation of Regan. An apparently contrite President Reagan admitted to having misled the public in his earlier statements, although he pled sins of ignorance rather than design. A subsequent congressional inquiry lambasted the president for failings of leadership but decided that he had not known about the transfers of money to the Contras.

In 1988 independent prosecutor Lawrence Walsh indicted North, Poindexter, and twelve other persons on a variety of felony counts. Eleven were convicted, but North and Poindexter were later acquitted on Fifth Amendment technicalities. At the end of his term in office in December 1992, President George H. W. Bush pardoned six other persons implicated in the Iran-Contra scandal, including Weinberger and McFarlane.

Diplomatic confrontation between Iran and the United States that lasted 444 days (4 November 1979–20 January 1981) and involved the seizure and captivity of U.S. embassy personnel in Tehran by radical Iranian students. The Iran Hostage Crisis was perhaps the gravest diplomatic standoff of the 1970s. It crippled President Jimmy Carter's administration, led to a second energy crisis (the first having occurred in 1973–1974), and contributed to the election of Ronald Reagan as U.S. president in 1980. The genesis of the crisis was internal turmoil in Iran and a popular backlash against the regime of Shah

Iran Hostage Crisis

Muhammad Reza Pahlavi, which began in earnest in 1978. By January 1979, mass protests and violence threatened to plunge the country into chaos.

In 1953, Shah Pahlavi (who had ruled from 1941 to 1952) had been returned to power by the U.S. Central Intelligence Agency (CIA) in a bloodless coup against nationalist Prime Minister Mohammed Mossadegh. Mossadegh had sought to end foreign control of Iranian oil. Ever since, U.S. policy-makers viewed the shah as their greatest ally in the Middle East. Accordingly, the United States sold the shah's government billions of dollars of weaponry in return for an Iranian pledge to keep its oil flowing and to prevent destabilization in the region. But the shah's regime was riddled with cronyism and corruption. In spite of his repeated promises to reform Iranian society, government, and politics, little changed in Iran between 1953 and 1979. While the shah purchased billions of dollars worth of military weaponry and lived in luxury, many Iranians were destitute. Opposition encountered a heavy-handed response, as in 1963 when the shah's forces cracked down against protesters, resulting in scores of deaths and deportations. The shah's secular regime was also bent on Westernizing Iran, an Islamic nation. Such efforts did not sit well with conservative Islamic opponents.

In early January 1979, nationwide protests against the shah forced him to flee the country. He departed Iran on 16 January, never to return. A new interim government was established, but it did not win the support of rightist Islamic leaders who hoped to establish an Islamic regime in Iran. Among the most popular of the Islamic fundamentalists was the Ayatollah Ruhollah Khomeini, who had spent many years in exile in France.

In February 1979, Khomeini returned to Iran. He refused to cooperate with the interim government and began to stir up popular resentment against the United States. The situation in Iran continued to deteriorate as anti-Western demonstrations—encouraged by Khomeini and his supporters—convulsed the country and rendered the interim government impotent. Gradually, Khomeini's supporters began to act as the *de facto* government, giving him the power to engage in major policy decisions.

In October 1979, the Carter administration permitted the gravely ill shah to come to the United States for medical treatment. Carter's decision to let the shah enter the country sparked renewed anti-American protests in Iran. Declaring the United States as the "Great Satan," Khomeini incited his followers and other protesters to demonstrate their antipathy toward American interests. On 4 November 1979, a mob of angry protesters, many of them young college students, stormed the U.S. embassy in Tehran, took control of it, and held some seventy embassy workers hostage. The seizure of the embassy and the taking of hostages were deemed a gross violation of international law, as it is understood that a nation's foreign embassies are extensions of its national sovereignty.

Although Khomeini probably did not order the taking of the embassy, he clearly supported the action as it unfolded and refused to negotiate in good faith with the United States. Thirteen women and nonwhite hostages were released during 19–20 November, and one more was released in July 1980 for health reasons. In return for the release of the remaining hostages, the Iranians demanded that the shah be returned to Iran for trial, that the assets he took with him be immediately returned, and that the United States apologize for its meddling in Iranian affairs. The Carter administration refused the conditions, and a long stalemate ensued. Carter incited more anti-American protests in Iran when he froze several billion dollars of Iranian assets and halted the importation of Iranian oil to the United States. The moratorium on Iranian oil precipitated a full-blown oil crisis in the United States that drove gasoline and fuel oil prices to historic highs and wrecked an economy that was already teetering on the edge of a meltdown. When Carter left office in January 1981, inflation was 13-plus percent, and interest rates on certain consumer loans had skyrocketed to 18 percent or more. Further complicating the Iran hostage crisis was the Soviets' December 1979 invasion of Afghanistan, which put Soviet-American relations on hold and upped the ante in superpower control over the Middle East.

Many Americans were deeply frustrated with the hostage crisis, which seemed to showcase American weakness despite its mighty military resources. They were also chagrined at the resultant energy crisis and deep economic

recession. Carter spent much of his time trying to defuse and resolve the crisis, but to no avail. Given the world situation and the worsening relations with the Soviet Union, the United States could ill afford to prompt a war in the Middle East. Indeed, to do so might have resulted in a confrontation with the USSR. In April 1980, a secret operation to free the American hostages ended in disaster when a helicopter developed engine problems in the Iranian desert and two military planes collided in the ensuing chaos, killing eight servicemen.

The aborted mission was made public and served only to deepen U.S. pessimism toward the Carter administration and the ongoing crisis. As Americans placed yellow ribbons around trees in remembrance of the hostages, the 1980 presidential election swung into high gear. Republican nominee Ronald Reagan lambasted Carter's handling of the crisis and his foreign and domestic policies in general. Many Americans, fed up with the long hostage crisis, saw in Reagan an answer to the nation's emasculation. To his considerable credit, Carter chose to greatly limit his campaign appearances to give his undivided attention to the unfolding crisis. Reagan went on to win a relatively narrow victory in November 1980, due in no small measure to the Iran Hostage Crisis.

The shah died in July 1980 in Egypt. That September, Iran invaded Iraq, touching off the Iran-Iraq War. These two events may have been enough to nudge the Iranians into serious negotiations. But the advent of the Reagan administration also helped. Perhaps fearful of what a new administration might do, the students seemed willing to bargain for the hostages' freedom. By early January 1981, Carter had reached an agreement whereby the U.S. hostages would be freed. The United States promised to return some \$8 billion in frozen Iranian assets and to lift trade sanctions against the country. Approximately twenty minutes after Reagan was sworn in as president, he announced that the hostages were free and on their way to a U.S. military base in the Federal Republic of Germany (FRG, West Germany). The long affair was over, but its impact on American and international politics continues to play out to the present.

The Iran-Iraq War began with the invasion of Iran by Iraqi forces on 22 September 1980 and lasted until a United Nations (UN) brokered cease-fire on 20 August 1988 that restored the status quo ante bellum. The issues involved extended back centuries to struggles between the Sunni Ottoman Empire and the Shiite Safavid Empire of Persia. The conflicts were territorial, ethnic, and religious. The territorial issue involved a dispute over the Shatt al-Arab, the waterway that delivers the waters of the Tigris and Euphrates Rivers. Ethnic controversies included the large Arab and Kurdish populations on both sides of the border. The religious conundrum centered on the fact that there are Shia Muslim Arabs in both nations.

By the 1970s both sides were locked in a dispute over the Shatt al-Arab boundary between the two nations. Iraq was also angry over Iranian support for a revolt by Kurds in northern Iraq against Baghdad. Finally, although the Shia population in southern Iraq constituted a majority of the national population, the minority Sunni Arabs controlled the life of the country. The Shia were restive and hoped for support from fellow Shias in Iran.

Tensions between Iraq and Iran led to the Algiers Accord of 1975 by which Shah Reza Pahlavi II of Iran agreed to end support for Kurdish dissidents in Iraq in return for establishing the navigational center of the Shatt al-Arab as the international border between the two nations. Before this the Iraqi border was the eastern shore, which complicated trade from the Persian port of Abadan on the Shatt to the Gulf. At the same time, Iraq secured control of the waterway from its port of Basra farther up the Shatt. The United States backed Iran, while the Soviet Union had become a major supporter of Iraq.

Any hopes that the Algiers Accord might stabilize the region were soon dashed. Saddam Hussein was expanding his power in Iraq while, despite U.S. support, the shah's hold over Iran was weakening. In 1978 at the request of the shah, Iraq agreed to expel his most fervent opponent, the Ayatollah Ruhollah Khomeini (who had been living in exile in Iraq since 1964). Khomeini moved to France, from where he orchestrated a rebellion against the shah that was successful only a year later. Now dominating Iran, Khomeini nursed deep grievances against Iraq not only for his expulsion but because of the secular nature of the Iraqi regime. The 1975 agreements became moot.

Hussein also believed that he saw an opportunity to regain complete control of the Shatt as well as the Arab portions of Iran, increasing his oil reserves and ending any possibility of Iranian disruption of the transport of oil to the Gulf. He believed that the decimation of the Iranian

Iran-Iraq War

(22 September 1980–
20 August 1988)

military following the 1979 revolution and the termination of American military aid as a consequence of the recent Iranian Hostage Crisis with the United States would bring easy victory. On 18 September 1980, Iraq abrogated the Algiers Accord.

At the outset of the war, Iran had 240,000 men under arms, of whom 150,000 were ground forces. Iraq matched this with 243,000 men, of whom 200,000 were ground forces. Iraq had 2,750 tanks to Iran's 1,735. Iraq also had a slight advantage in artillery pieces (1,240 to 1,000) but about 100 fewer aircraft (332 to 445 for Iran).

Iraq began military operations with four divisions totaling about 45,000 men. The Iraqi Army invaded Iran on three fronts, ranging from the Shatt al-Arab in the south to points east and northeast of Baghdad in order to provide cover for

the capital and approaches to Kirkuk. Hussein expected a quick, decisive victory. Although the Iraqis seized some territory east of the Shatt, the Iranian Army simply withdrew into urban areas. Iraq's navy was of little importance and could do little to contest an Iranian naval blockade of the limited Iraqi access to the Gulf; nor could the Iraqi Navy do much offensively against Iranian offshore oil installations. The Iraqi Air Force's attempted preemptive strike was unsuccessful, and Iran retained a credible air capability.

Although Hussein expected to avoid heavy casualties, this was not the case. Taking Khorramshar in the early part of the war cost the Iraqis 7,000 men and 100 tanks. Declining to directly assault Abadan, Hussein decided to lay siege to that important Iranian oil-producing area.

Iran refused to capitulate, and the war settled into a conflict of attrition. This should have been to the benefit of Iran, which was much larger in territory and had three times the population, sizable oil reserves, and an extensive frontage on the Gulf. Iran, however, suffered from poor leadership resulting from ideological purges, serious logistics problems from its international isolation, and a poorly trained if fanatical army.

The attrition phase of the war began in late 1980 and persisted until 1987. During this phase, both sides employed chemical weapons, including both World War I-era mustard gas and post-World War II blood and nerve agents. They were only marginally effective but elicited much condemnation internationally.

This phase also saw improvement in Iraqi military capabilities, especially in the air, where it often achieved superiority at critical times. Hussein also raised the number of his army divisions from twelve to more than forty. On the other hand, Iran was successful in mobilizing and motivating massive numbers of young men in human wave attacks. Iran also had considerable success in reconstituting an effective command structure and securing weapons from abroad, including spare parts to revitalize its U.S.-supplied arsenal. The Iran-Contra Affair was a small part of this, as the administration of President Ronald Reagan secretly diverted Iranian oil money to the U.S.-backed insurgency in Nicaragua in return for critical U.S.-made equipment.

The war also saw two other incidents involving the United States. In the first, on 17 May 1987, Iraqi aircraft attacked in the Persian Gulf the U.S. Navy frigate *Stark*, evidently by mistake, resulting in 37 U.S. dead. In the second, on 3 July 1988, the crew of the U.S. cruiser *Vincennes* mistook an Iranian airliner for an attacking military aircraft and shot it down with a missile, killing all 290 people aboard.

The attrition phase ended in early 1988 with an Iraqi offensive designed to force Iran into negotiations. It included a naval and air attack on Iranian oil transportation facilities and missile attacks on such targets as Tehran, Isfahan, and Qum. A concentrated offensive on the al-Faw Peninsula at the mouth of the Shatt al-Arab also included the use of chemical weapons. Hussein was less motivated by decisive victory than by preservation of his rule after years of war and sacrifice. He succeeded, and both sides accepted a UN-negotiated cease-fire on 20 August 1988. The long war brought exhaustion to both sides and finally resulted in the realization that further military action was not likely to turn the tide for either side. No peace treaty has ever been signed.

Casualties were high on both sides, including large numbers of civilians. Even approximate numbers are difficult to come by, but estimates place the number of military and civilian dead at around 300,000. Wounded and captured bring the number of casualties to between 1 and 2 million. Apart from this vast human cost, the war wreaked havoc on the economies of both nations. Some estimates place the total cost of the war at about \$1 trillion.

In 1991, the UN Security Council declared Iraq to have been the aggressor in the war, something the Iraqi government publicly admitted only in May 2005.

Middle Eastern nation covering 168,753 square miles, slightly smaller than the U.S. state of California, with a 1945 population of some 4.6 million people. Iraq borders on Saudi Arabia to the west and south, Kuwait and the Persian Gulf to the south, Iran to the east, and Syria and Turkey to the north. Iraq's geographic position in the Middle East and its large reserves of oil made it a

Iraq

vital strategic interest for both the United States and the Soviet Union during the Cold War. However, volatile domestic politics made it an unreliable ally.

The British received a mandate over Iraq following World War I, working through King Faisal ibn Husayn, one of the key leaders of the Arab revolt against the Ottomans during the war. Faisal established a Westward-focused Iraqi government that dominated Iraqi politics until 1958. This orientation to the West was in conflict with strong Iraqi nationalism beneath the surface, generating constant friction between the government and its opposition.

Iraq achieved independence from Britain in 1932. Faisal's Sunni Muslim-dominated government, backed by the British-trained and -equipped Sunni-dominated military, maintained order. The large Kurdish minority and Shia Muslim majority were, however, sufficiently powerful to threaten the government. Unfortunately for national stability, Faisal, an adroit politician who understood well the challenges of ruling Iraq, died of a heart attack in September 1933. His twenty-one-year-old son, Ghazi, succeeded him. In the first three years of Ghazi's rule the government changed three times: a powerful civilian prime minister was replaced by a Western-oriented military leadership, which in turn was replaced by an Arab nationalist military leadership. When Ghazi died suddenly in April 1939, there was another power struggle between nationalistic military officers and a civilian faction led by the appointed royal regent, Abd al-Ilah. Efforts by the military to wrest control from the regent resulted in Britain's reoccupation of Iraq in 1940, which lasted until 1945.

Iraq emerged from World War II led by the pro-British al-Ilah and Prime Minister Nuri al-Said. Despite economic strides made in the immediate post-World War II period, the political climate in Iraq remained as unstable as ever. The 1948 defeat of Arab forces by Israel, the overthrow of the pro-Western Egyptian King Fahd in 1952, and the rise of the anti-Western Mohammed Mossadegh government in Iran all encouraged anti-Western factions in Iraq. In 1955, Iraq joined the pro-Western Baghdad Pact, allying itself with Turkey, Iran, and Pakistan in a mutual defense agreement sponsored by the United States.

The Baghdad Pact was one factor setting in motion the forces that drove Cairo and Moscow closer together. More important for Iraqi history, the pact was a direct affront to the long-simmering nationalist sentiments within the Iraqi Army officer corps. It became the catalyst that ignited the 1958 revolution—the first in a string of coups and countercoups that would plague Iraq until the Baathists consolidated power in 1968.

The 1958 coup was led by a secret nationalist organization known as the Free Officers Movement. On 14 July 1958 its members seized control of Baghdad and executed King Faisal II and al-Said. The revolutionaries then abolished the monarchy, proclaimed Iraq a republic, and sought closer ties to the Soviet Union.

Colonel Abd al-Karim Qasim had led the coup, but his policies created a great many internal and external enemies, and in February 1963 a faction of army officers allied with the Baath Party overthrew Qasim. He was replaced

Vice Premier Abd al-Salam Arif addresses a crowd in An Najaf, Iraq, explaining the objectives and reforms of the new government on 9 August 1958. Colonel Arif and General Abd al-Karim Qasim overthrew the ruling monarchy in a coup d'état and took control of the new Iraqi republic. (Bettmann/Corbis)

by his former partner, Abd al-Salam Arif, as president. A Baathist officer, Colonel Ahmad Hassan al-Bakr, became premier.

Again, internal dissension among the revolutionaries prevailed. By 1964, Arif had removed the Baathists from positions of authority and had many of them arrested. In September 1965 he appointed as premier the distinguished civilian diplomat and lawyer Abd al-Rahman al-Bazzaz, who formed a new government. His reformist policies were short-lived, however. When Arif was killed in a helicopter crash in 1966, army leaders quickly forced the new president, Arif's elder brother Abd al-Rahman Arif, to oust al-Bazzaz.

In July 1968, a final coup occurred in Iraq. The Baath Party, resurgent after being brushed aside by Arif, joined with a small group of key army officers and laid siege to the Arif regime. Arif was allowed to leave the country in exile. The Baath Party then took over, led by al-Bakr, who had briefly been premier in 1963. His ruthless lieutenant, Saddam Hussein, assisted him. After establishing control of the country, the Baathists eliminated their army rivals by posting them outside of Iraq and threatening their lives. Challenges from the Shia and the Kurds precluded the party from aggressively pursuing domestic social reforms, although it did not stop the leaders from continuing the strong friendship with the Soviet Union. In 1972 the relationship with the Soviets culminated in a treaty of friendship.

In 1979, Iraq underwent the first change of leadership in two decades that was not directly associated with a coup or revolution. Al-Bakr retired and was replaced by Hussein. Hussein's assumption of power was accompanied by a purge of dozens of top party officials; twenty-two members of the leadership were summarily executed. Although the structure of the Baath Party did not fundamentally change, after the events of July 1979 the Baathist rule of Iraq became much more the personal rule of Hussein. The party was reduced to being an extension of his personal power.

The first major test of Hussein's leadership was Iraq's relations with Iran. The new Iranian revolutionary government had become a major source of anti-Baathist agitation and propaganda. The propaganda was particularly effective among Iraq's Shia majority. Border clashes between the two countries increased, and on 17 September 1980 Hussein announced that he was reassuming control of the Shatt al-Arab and abrogating the 1975 agreement with Mohammad Reza Pahlavi, the shah of Iran. On 21 September, Iraqi forces invaded Iran. Iran's fundamentalist leader, the Ayatollah Ruhollah Khomeini, viewed the war in theological and personal terms and was therefore unwilling to compromise. This intransigence resulted in a prolonged war with immense costs in terms of capital and casualties on both sides. An Iranian counteroffensive eventually won back most of the invaded territory, and Iranian forces made significant gains into Iraq. The Iraqis, however, were successful on the diplomatic front. In addition to continued and strong support from their Soviet allies, the Iraqis also managed to build support among the other Persian Gulf states as well as in Western Europe and the United States. The United States and other nations contributed intelligence support, weapons, financing, and technology to the Iraqi war effort.

In 1988, allied help, Iraqi battlefield success, and the deepening isolation of Iran forced the Iranians to agree to a cease-fire. The war effectively ended with a return to the borders and conditions of the 1975 treaty with the shah of Iran. With the conclusion of the war, Iraqi prestige was running high. Its military was formidable, but its economy had been severely damaged by the war, and the country was deeply in debt to many of its Arab neighbors.

Hussein's decision in 1990 to invade Kuwait would lead to appalling living conditions in Iraq and ultimately to the destruction of his regime thirteen years later. He used several pretexts for going to war. The return of the Shatt al-Arab to dual ownership after the Iran-Iraq War effectively denied its use by Iraq. This in turn caused Iraq to renew the traditional dispute over borders and access to the Persian Gulf with Kuwait. In addition, Iraq was facing huge financial deficits, as Hussein's economic and military programs plus the war debt cost much more than Iraqi oil revenue brought in. These conditions caused the Hussein regime to develop an elaborate theory that connected Israel, the United States, and Kuwait in a scheme to thwart Iraq's ability to achieve its goal of economic prosperity and regional military dominance. The solution to this conspiracy was to use Iraq's military capabilities to remove the alleged source of its economic woes by invading and occupying Kuwait. Iraq also accused Kuwait of driving down the price of oil by excessive pro-

duction and of slant-drilling into Iraqi fields. In addition, Iraq claimed Kuwait as a runaway province.

Iraqi forces invaded Kuwait on 2 August 1990. The invasion was a demonstration of Hussein's fundamental misunderstanding of the basic changes that had recently occurred internationally. The Cold War was ending and with it the ability of a regional power such as Iraq, with close ties to the Soviet Union, to act with some expectation of protection from its ally. In the face of Iraqi ignorance and intransigence, U.S. President George H. W. Bush obtained United Nations (UN) support, forged an international coalition, and deployed an unprecedented multilateral military force to the region. In January 1991, the U.S.-led force launched a comprehensive military effort with a strategic air campaign that targeted Iraq's command and control, infrastructure, and ground forces. The air campaign was followed by a short and decisive one hundred-hour ground war that not only liberated Kuwait but destroyed the bulk of Hussein's military capability.

Subsequent to the war, Hussein sought to reestablish Iraq as a regional power. This required that he subvert and avoid UN sanctions placed on Iraq as a result of the war. He also ruthlessly suppressed uprisings by both the Kurds and Shiite Muslims. Ultimately, Hussein's miscalculations, disingenuous relations with the United States and the UN, and another change in the international situation caused by the 11 September 2001 terrorist attacks in the United States resulted in a second U.S.-led invasion, the destruction of the Baathist regime in March 2003, and the execution of Hussein in December 2006.

Iraqi armed forces at the beginning of the Cold War were equipped and organized on the British model. In the years following, especially from the late 1950s on, other influences shaped their equipage, organization, and doctrine. In addition to external supply and doctrinal influences, Iraq's participation in several wars during 1948–1988 and internal politics profoundly affected military operations, planning, and leadership. While the Iraqi forces were generally well equipped, they displayed serious flaws in all of their performances, even in those instances in which they emerged victorious.

Iraq, Armed Forces

Iraqi soldiers head to the Abadan front during the Iran-Iraq War (1980–1988), Basra, Iraq, October 1980. (Francoise de Mulder/Corbis)

Iraq's first conflict in the Cold War era was the 1948 Arab-Israeli War. Deployed in western Jordan and fighting in Palestine alongside Jordanians whose training and organization were similar, Iraqi troops did not fare well. The Iraqi force, which eventually grew to about 15,000 men, proved adequate in defensive situations but performed poorly otherwise. One strength was a high standard of unit cohesion that served it well when it was under attack but that it could not translate into efficacious offensive action.

Following the 1948 conflict, the Iraqi government, then still a kingdom, signed the 1955 anticommunist Baghdad Pact, a military alliance that included the United States, the United Kingdom, Turkey, Pakistan, and Iran. Iraq assumed an active role in this organization until its departure in 1959.

In 1958 all British forces left Iraq (although they had effectively ceded their air bases in the country in 1955 with the signing of the Baghdad Pact). This departure marked the end of British involvement and influence in Iraqi military affairs, a relationship dating back to 1919. That same year, a military coup resulted in the overthrow of the monarchy, a change in government, and a significant shift in foreign policy that now tilted heavily toward the Soviet Union. Not long after the change in government, new defensive arrangements resulted in the Iraqis receiving military equipment, including tanks and airplanes, and advisors from the Soviet Union.

During 1961–1970, the Iraqi military was engaged in the suppression of Kurdish rebels in what has been referred to as the First Kurdish War. There was no Iraqi participation in the 1967 Six-Day War. The Iraqis did, however, participate in the October 1973 Yom Kippur War. Fighting mainly on the Golan Heights, their performance has been cited as the worst of any of Israel's opponents in that conflict.

In the 1980s the Iraqi military fought two wars. The first began in September 1980 when Iraqi forces attacked Iran. In the same decade, Iraqi government forces fought an internal war in which they brutally suppressed the Kurds in what has been called the Second Kurdish War. Both wars were notable for the extensive use of chemical weapons, in one case against an external enemy and in another case against a domestic civilian population.

In terms of equipment and basic military doctrine, the Iraqis were obviously tied to the Soviets, their mentors and suppliers. During the war with Iran, however, they were aided significantly by American intelligence (mostly through aerial reconnaissance photos) that supported strategic planning and target identification. In 1988, after eight long years of fighting, the Iraqis restored the status quo ante bellum with Iran, although this result can be attributed more to Iranian exhaustion rather than Iraqi brilliance. Even though the Iran-Iraq War wrought significant destruction on Iraqi infrastructure and civilian centers, Iraqi leader Saddam Hussein believed that his forces had been battle-hardened and were quite formidable at war's end.

On the eve of the Persian Gulf War, Iraq's armed forces were quite large and, on paper, very impressive. Only two years away from its war with Iran, the Iraqi Army boasted approximately 900,000 soldiers, almost 6,000 tanks, 5,000 armored personnel carriers, and nearly 4,000 pieces of artillery. This force was, however, easily and decisively defeated in a one hundred-hour ground offensive during Operation DESERT STORM in February 1991. Despite its impressive numbers going into the war, the Iraqi military establishment performed very poorly. It was plagued by outdated and substandard equipment, generally poor leadership, low morale, and little unit cohesiveness. In fact, many Iraqi soldiers chose to desert or surrender rather than face the brunt of a massive, well-trained, and technologically advanced American-led multinational contingent of 500,000 soldiers.

Only two years away from its war with Iran, the Iraqi Army boasted approximately 900,000 soldiers, almost 6,000 tanks, 5,000 armored personnel carriers, and nearly 4,000 pieces of artillery.

Ireland, Northern

A part of the United Kingdom, Northern Ireland comprises six counties in the northern part of Ireland. The six counties that make up Northern Ireland, also referred to as Ulster, include Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone and cover 5,452 square miles—about the size of the U.S. state of Connecticut. The 1945 population of Northern Ireland was 1.3 million people. More than 60 percent of those inhabitants were Protestant, with a majority being Presbyterian. Throughout much of the twentieth century, Northern Ireland witnessed violence between its Protestant and Catholic populations, especially after 1968 when the Irish Republican Army (IRA), a militant group of Catholics advocating a union with the Republic of Ireland, launched a terror campaign in Ulster.

The conflict between the Catholics and Protestants stretches back for centuries. In the early seventeenth century the British effectively conquered Ireland and began sending mainly Scottish Protestants to settle in Ulster. For the next three centuries, Catholics in Ireland agitated for independence. In the twentieth century the British began the process of allowing a modicum of home rule for some of Ireland. When the British partitioned Ireland in 1920 under the Government of Ireland Act, six of the nine Ulster counties in the northeastern section were made a separate political entity, with a parliament at Stormont. During 1921–1939 Northern Ireland struggled economically, and unresolved tensions between Catholics and Protestants continued to plague the region.

Northern Ireland became important to the Allied cause during World War II. When hostilities began, the Irish Free State, under the leadership of Prime Minister Eamon De Valera, announced that it would be a neutral power and denied the British the right to use its ports. In Ulster, however, Britain and the United States established bases for the transport of troops and war matériel. Beginning on 15 April 1941 the Germans launched an attack on Belfast. This aircraft bombing campaign extended over several months, killing more than 1,000 people and destroying significant amounts of property.

When the Irish Free State declared itself a republic in 1949, the British responded by passing the Ireland Act, stipulating that Northern Ireland would only leave the United Kingdom by consent. This act also guaranteed the Irish in Ulster the social benefits enjoyed by people in England, Scotland, and Wales. The majority of Northern Ireland's population was Unionist and wished to remain part of the United Kingdom. The opponents, the Republicans, desired the unity of Ireland under one government. This political division was abetted by the Protestant-Catholic feud and economic tensions (Protestants tended to be better off economically).

Tensions between the two sides continued, but in the two decades following World War II there was little violence. During the same period, Northern Ireland experienced unrest because of a stagnant economy and persistently high unemployment. Problems also arose with London over the

cost of social legislation and fears that the British government might agree to Ireland's unification (in which the majority Protestants of Ulster would be subsumed by a largely Catholic Ireland) if the Irish Republic agreed to join the North Atlantic Treaty Organization (NATO).

During the 1960s civil rights groups, in particular the Northern Ireland Civil Rights Associations (NICRA), began to demonstrate in Northern Ireland for equal rights for Roman Catholics. Discrimination there against Catholics was widespread, and many professions were closed to them. Modeling their effort after the American civil rights movement, these protestors adopted nonviolent means to achieve their goal of equality for all.

Prime Minister Harold Wilson's Labour government (1964–1970, 1974–1976) in Britain favored improvements for the Catholic population of Ulster, which put pressure on the government at Stormont to establish measures to alleviate the discrimination and poverty faced by many Catholics. Terence O'Neill, Northern Ireland's prime minister during 1963–1969, introduced several measures to aid the Catholic population. These were insufficient to satisfy the Catholics and went too far for many Protestants. Soon, Catholics and Protestants were fighting one another, especially in Londonderry and in the streets of Belfast, Northern Ireland's capital. The bloodshed reached its zenith in 1969, and the Ulster government requested that the British send troops to augment its police forces.

In 1969 Catholic extremists formed the Provisional IRA. Pledged to uniting Ireland by force, the Provisional IRA waged a terror campaign in Ulster. Militant Protestants, the Ulster Volunteer Force (UVF) and the Ulster Defense Association, fought back against the IRA.

During 1969–1972 violence in Northern Ireland escalated, culminating in an event that became known as Bloody Sunday. On 30 January 1972, members of NICRA planned to march in the city of Derry to protest the arrest of hundreds of Republicans who were being held without trial. However, authorities banned the march. When the protestors went ahead with their plans, British paratroopers opened fire on the crowd, killing thirteen and wounding fourteen others.

The British government responded to the massacre by closing down the Northern Ireland government and assuming control of Ulster. In 1973 the Provisional IRA began launching terrorist attacks in England. In the ensuing violence during the next twenty years, thousands of people were killed and tens of thousands wounded. The British maintained a military presence in Northern Ireland during the 1970s and 1980s and found strong support from the United States, particularly during President Ronald Reagan's administration (1981–1989), which supported the British hard line against the IRA.

In the 1990s peace talks between the warring parties yielded some results, and in 1998 the IRA issued a declaration renouncing violence. On 10 April 1998, all parties signed the Good Friday Agreement, establishing a Northern Ireland Assembly and opening up the possibility for a peaceful solution to the sectarian problems of Ulster.

Ireland, Republic of

Island nation in the northern Atlantic. Separated from England by the Irish Sea to the east, the Republic of Ireland comprises twenty-six counties and covers 27,135 square miles. It had a 1945 population of approximately 2.9 million people. Ireland was a neutral nation during the Cold War and never joined any military alliances.

From the time of the Great Potato Famine of 1845–1849, which decimated Ireland, the country's population remained below 5 million people. That figure declined throughout the nineteenth and twentieth centuries as many Irish left the country for England and the United States. For centuries the British had controlled Ireland, but in the nineteenth century Irish nationalist groups fought for independence. The conflict between the Irish and the British, often a very deadly one, not only focused on the control of the island but also involved religion. The overwhelming majority of the Irish population was Roman Catholic, while the British population was largely Protestant united under the Church of England. One of the dilemmas confronting the British concerned the Irish Protestants, who lived mostly in the northern part of the island. The Protestants did not wish to live in a united Ireland with a Catholic majority. Thus, by the summer of 1914 civil war loomed, but the outbreak of World War I temporarily halted any further violence.

In 1916 Irish nationalists launched the Easter Rebellion in Dublin, an attempt to overthrow English rule by armed force. The revolt was quickly crushed. Following World War I, however, violence resumed as Catholics and Protestants battled each other, primarily in the north. In an effort to help stem the violence, the British Parliament passed the 1920 Home Rule Bill granting separate legislatures to the southern twenty-six counties and the six northern counties. But the Irish Republicans rejected the bill, and the fighting continued. A year later, in December 1921, the British government signed a treaty with Irish representatives that resulted in the creation of the Irish Free State. As part of the agreement, however, the six counties in the north with Protestant majorities could opt out of home rule. They eventually became part of the United Kingdom.

During World War II Ireland remained neutral. Prime Minister Eamon De Valera announced the government's position early in 1940. Irish neutral-

ity sparked a great deal of controversy, but De Valera maintained this policy, arguing that Ireland was best served by staying out of the conflict. In 1949, Irish Prime Minister John Costello withdrew from the British Commonwealth and declared Ireland a republic. The United Nations (UN) formally granted the Republic of Ireland membership in 1955.

During the Cold War the Republic of Ireland maintained its traditional neutrality. In 1949 the founding members of the North Atlantic Treaty Organization (NATO) invited Ireland to join the organization. The invitation touched off a fierce debate in the country over whether joining NATO should be linked to an end of the partition of Ireland. The Irish Republicans, or those who supported a united Ireland, believed that an appeal could be made to the United States that might lead to a unification of the six northern Irish counties with the Republic. However, the U.S. State Department informed the Irish government that the dispute was not a matter for the collective security pact. The Americans were worried about offending the British, and President Harry Truman's administration also expressed concern about the Irish government's refusal to allow the Allies to use its ports during World War II. Nevertheless, the United States considered Irish membership in the collective security agreement important because of Ireland's strategic location and the potential of locating military bases there. Ultimately, Ireland elected not to join NATO.

Although the Irish Republic did not formally join the defense pact, Ireland for the most part sympathized with the West in its struggle against the Soviet Union. The people of Ireland, an overwhelmingly Roman Catholic nation, looked unfavorably upon the antichurch policies of the communist governments in Eastern Europe. The U.S. Central Intelligence Agency (CIA) established a liaison with Irish intelligence networks in the mid-1950s, and Irish governments supplied the United States with intelligence information throughout the Cold War. In the UN, the Irish delegation generally voted with the United States and the rest of the Western bloc. Ireland also received financial assistance totaling nearly \$150 million from the United States through the Marshall Plan.

Because Ireland did not join NATO, defense of the nation fell solely to its own army. Sean MacBride, the minister of external affairs, visited both Great Britain and the United States in 1950 in hopes of gaining some military assistance, but his efforts were rebuffed. The armed forces of Ireland were relatively small because the government could not afford to pay for a large military establishment. Government expenditures were modest, as Ireland was one of the poorest nations in Europe. The nation had never industrialized and lacked many key natural resources, leaving its economy stagnant until the 1970s. Ireland joined the European Union (EU) in 1973 and thereafter began receiving subsidies from the EU, which helped expand its economy.

Irish support of U.S. policies toward the Soviet Union helped Ireland secure from Washington a commitment in the late 1970s that the United States would ensure Ireland's central role in the peace talks concerning Northern Ireland. As the Cold War wound down in the late 1980s, Ireland

began to prosper economically and also took on a greater role in international affairs.

Irish Republican Army

Die-hard republicans, however, led by Sinn Féin leader Eamon De Valera, rejected the treaty as a surrender of republican principles and declared themselves Ireland's only legitimate government.

Irish paramilitary organization whose aim was to force home rule and national unity, often linked with Sinn Féin. The Irish Republican Army (IRA) descends from the Irish Volunteers, a militia group founded by Irish nationalists during the Home Rule Crisis of 1912–1914. In 1914, the nationalists and the Irish Volunteers split over the issue of the recruitment of Irishmen for the British Army. A small group of Volunteers, who had strong ties to the radical Irish Republican Brotherhood, rejected cooperation with Britain and, in 1916, organized the Easter Rebellion. The rebellion failed, but Britain's heavy-handed reaction and, later, its plans to introduce conscription in Ireland eventually gained for republicanism and its political and military institutions—Sinn Féin and the Irish Republican Army—the popular support that the revolt did not generate.

By 1919, Sinn Féin claimed to be Ireland's legitimate government, while the IRA openly challenged the forces of the British Crown. In 1921, the war-weary British began negotiations with Sinn Féin that produced the 1921 Anglo-Irish Treaty, granting dominion status to an Irish Free State that would govern Ireland except for six Ulster counties. Die-hard republicans, however, led by Sinn Féin leader Eamon De Valera, rejected the treaty as a surrender of republican principles and declared themselves Ireland's only legitimate government. In the consequent civil war (1922–1923) the IRA, loyal to De Valera, was defeated but nonetheless refused to surrender.

The IRA's fortunes then began a precipitous decline. De Valera abandoned Sinn Féin in 1926 to form Fianna Fail (Soldiers of Destiny), a political party dedicated to advancing republicanism through conventional political arrangements. In 1932 Fianna Fail formed a government under De Valera, who rewarded republicans who accepted his constitutionalism and punished those who did not. He banned the IRA in 1936, and two years later the moribund Sinn Féin ceded its political authority to the IRA leadership. Responding to IRA actions in 1939, governments in Dublin, Belfast, and London

A group of young Irish Republican Army Catholic supporters attack British Army patrol vehicles on a street in the Catholic area of Belfast, Northern Ireland, 1972. (Leif Skoogfors/Corbis)

adopted strong security measures that, by 1945, had pushed the IRA to the verge of extinction.

Over the next decade, strong leadership revived the IRA, but the offensive launched in Northern Ireland in 1956, the so-called Border Campaign, ended ignominiously in 1962. Afterward, a coterie of IRA leaders steeped in revolutionary Marxist theory and attracted to political, not military, action took control of the organization and ousted many of those responsible for the Border Campaign.

The outbreak of sectarian violence in Northern Ireland during the summer of 1969 created another breach in Irish republicanism, yet the IRA's leadership chose to continue in their political direction. In response, those favoring the IRA's traditional military approach—the majority of the IRA, as it turned out—formed the Provisional IRA and Provisional Sinn Féin in December 1969. The Provos, as they came to be called, almost immediately came to dominate republicanism; for its part, the official IRA dumped its arms in 1972 and faded into relative obscurity by the decade's end. After the split, the term "IRA" actually referred to the Provos.

The Provisional IRA launched a far-reaching campaign of violence in the hopes of forcing a British withdrawal from Northern Ireland, although a lack of modern weapons and a strong British response hampered this effort. Consequently, the IRA adopted the long-war strategy in the mid-1970s;

thereafter, The Troubles, as the conflict in Ireland and Britain was known, settled into a dispiriting pattern of terrorism, failed negotiations, military operations, and reprisals. In the early 1980s, the IRA adopted a bullet-and-ballot strategy, thrusting Sinn Féin into conventional politics in Ireland and Northern Ireland while continuing its military operations. This shift eventually caused another split in the republican movement, with the Continuity IRA and Republican Sinn Féin breaking away in 1986.

By the early 1990s, the IRA–Sinn Féin leadership acknowledged that a military victory was unattainable. Encouraged by Sinn Féin’s political successes on both sides of the border, the leadership announced a formal cessation of military operations in 1994. In February 1997, the IRA broke the cease-fire but resumed it after only five months. The 1998 Belfast Agreement guaranteed Sinn Féin a place in Northern Ireland’s government and provided for numerous governmental reforms. The IRA, however, refuses to disarm completely, and thus the shadow of the gunman still falls across Irish politics as it has for more than ninety years.

Ishibashi Tanzan (1884–1973)

Japanese journalist, editor, Liberal Democratic Party politician, and prime minister of Japan (December 1956–February 1957). Born in Tokyo on 25 September 1884, Ishibashi Tanzan studied philosophy at Waseda University. He became an editor of the *Tōyō Keizai Shinpō* (Oriental Economic Journal) in 1911 and eventually president of the publishing house of Tōyō Keizai Shinpō. As a journalist deeply committed to liberalism and influenced by Keynesian economic theory, he steadfastly opposed Japan’s expansionism and its growing militarism.

In May 1946 Ishibashi became finance minister in the first Yoshida Shigeru cabinet. During his tenure Ishibashi promoted expansionary fiscal policies, which were consequently criticized by the Allied occupation General Headquarters (GHQ) as promoting inflation. Conflict with the GHQ led to his absence from public office during May 1947–June 1951.

Meanwhile, in the face of the 1950–1953 Korean War, Ishibashi advanced the idea of limited Japanese military rearmament. While out of office, his opposition to Yoshida brought him into close association with Hatoyama Ichirō, and in December 1954 Ishibashi was appointed minister of international trade and industry in the Hatoyama cabinet. In this capacity, Ishibashi promoted trade expansion with the People's Republic of China (PRC) by encouraging private trade relations.

After Hatoyama's 1956 retirement, Ishibashi was elected president of the Liberal Democratic Party and formed his own cabinet in December 1956. As prime minister, he proposed further trade with the PRC, with the ultimate aim of normalizing bilateral relations. After only two months in office, however, he resigned because of illness.

Ishibashi continued to maintain his interest in improving Japan's relations with the PRC and the Soviet Union. He visited Beijing in 1959 and 1963 and traveled to the USSR in 1964. In his later years, he advocated a peace alliance that would include China, Japan, the Soviet Union, and the United States. Ishibashi died in Tokyo on 25 April 1973.

Middle Eastern state covering 8,019 square miles, slightly larger than the U.S. state of Massachusetts. With a 1948 (the year of its founding) population of approximately 1.2 million people, Israel borders on Egypt and the Mediterranean Sea to the west, Syria and Jordan to the east, and Lebanon to the north.

Modern Israel dates from the end of World War I and the resulting defeat of the Ottoman Empire. Based on the secret wartime Sykes-Picot Agreement between Britain and France to partition Turkish Middle Eastern territory, France was to secure control of Lebanon and Syria, with Britain receiving Palestine and Iraq. Following the Allied victory, the Paris Peace

Israel

SIX-DAY WAR, 1967

Conference awarded these areas as mandates under the new League of Nations, envisioning their ultimate independence.

The war also prompted the Zionist movement of Jews seeking a nation-state in Palestine. In order to enlist the support of international Jewry during the war effort, the British government issued the Balfour Declaration in 1917. The declaration announced London's support for the creation of a "national home for the Jewish people" in Palestine. The parameters of this home were not spelled out. In 1922 Britain split Palestine into Transjordan east of the Jordan River and Palestine to the west. The Jewish homeland would be in Palestine. There were several schemes for achieving this while balancing the interests of the Arab population with those of the Jewish minority and the goals of the Zionist movement. Contradictory British assurances to both sides failed to satisfy either the Zionists or the Arabs, however. Meanwhile, increasing numbers of European Jews arrived in Palestine and purchased land there, leading to Arab-Jewish rioting that the British authorities were not always able to control.

Events immediately before and during World War II accelerated the Jewish migration to Palestine. Adolf Hitler's persecution of the Jews in Germany as well as anti-Semitism in Poland and elsewhere led to increasing Jewish migration and interest in a Jewish state. Once the war began, Hitler embarked on a conscientious effort to exterminate world Jewry. During the Nazi-inspired Holocaust an estimated 6 million Jews perished. Late in the war and afterward, many of the survivors sought to immigrate to Israel. The great lesson of World War II for Jews was that they could not rely on other nations; they would require their own independent state. The Holocaust also created in the West a sense of moral obligation for the creation of such a state. At the same time, however, the Arabs of Palestine were adamantly opposed to the implantation of a large foreign population in their midst.

After World War II, Jewish refugees and displaced persons streamed into Palestine, many of them only to be turned away by British naval ships patrolling Palestine's Mediterranean coast just for this purpose. At the same time, the British authorities wrestled with partitioning Palestine into Arab and Jewish states. Jews and Arabs proved intransigent, and in February 1947 after both rejected a final proposal for partition, Britain turned the problem over to the United Nations (UN). In November the UN General Assembly passed its own resolution to partition Palestine, with Jerusalem to be under a UN trusteeship. While the Jews accepted this arrangement, the Arabs rejected it.

In December 1945 the Arab League council announced that it would halt the creation of a Jewish state by force. The Arabs then began raids against Jewish communities in Palestine. The United States, with the world's largest and wealthiest Jewish population, became the chief champion and most reliable ally of the Jews. This position would, however, cost the United States dearly in its relations with the Arab world and would also influence Cold War geopolitics.

In January 1948 London announced its intention to withdraw from Palestine. This precipitous British policy led to war. The British completed the

A mother flees with her family from a destroyed block of buildings in the Jewish section of Jerusalem during the Israeli War for Independence in 1948. (Library of Congress)

pullout on 14 May 1948, and that same day David Ben-Gurion, executive chairman and defense minister of the Jewish Agency, declared the existence of the independent Jewish state of Israel. Ben-Gurion became the first prime minister, a post he held during 1948–1953 and 1955–1963.

At first, the interests of the United States and those of the Soviet Union regarding the Jewish state converged. U.S. recognition of Israel came only shortly before that of the Soviet Union. Officials in Moscow found common ground with the Jews in their suffering at the hands of the Nazis in the war and also identified with the socialism espoused by the early Jewish settlers in Palestine as well as with their anti-British stance. The Cold War, the re-emergence of official anti-Semitism in the Soviet Union, and Moscow's desire to court the Arab states by supporting Arab nationalism against the West would soon change all that.

The Israeli independence proclamation led immediately to fighting. In the first Arab-Israeli War of 1948–1949, hard-pressed Israeli forces managed to stave off the far more numerous and better-equipped but poorly organized and inadequately trained Arab forces. In the process, many Palestinians living in Israel either fled or were forced out of the territory.

Soviet military support for Egypt and Syria led to increased U.S. military support for Israel. The rise of Egypt's President Gamal Abdel Nasser only exacerbated the situation. Trumpeting Arab nationalism, Nasser blockaded Israeli ships in the Gulf of Aqaba and Israel's access to the Indian Ocean. Egypt also supported cross-border raids into Israeli territory by *fedayeen*, or guerrilla fighters. Nasser's turn to the Soviet Union for arms led to the withdrawal of U.S. support for his pet project of constructing a high dam at Aswan on the Nile. This led him to nationalize the Suez Canal. British Prime Minister Anthony Eden was determined to topple Nasser, and a coalition of Britain, France, and Israel then formed. Leaders of the three states developed secret plans whereby Israel would invade Egypt's Sinai Peninsula and move to the canal. Britain and France would then use this as an excuse to introduce military forces into the canal zone.

At the end of October 1956, Israeli forces swept into the Sinai, easily destroying Egyptian forces there. When Nasser's response to French and British demands proved unsatisfactory, their forces also invaded Egypt from Cyprus. Although the Soviet Union threatened to send volunteers, it was the strong opposition of the United States and heavy economic pressure brought to bear on Britain that proved decisive. All three powers subsequently withdrew their forces, greatly strengthening Nasser despite the abysmal showing of his armed forces. Israel was one of the chief winners of the 1956 war. It had cleaned out the *fedayeen* bases and secured a buffer of UN observers in the Sinai. It also ended the blockade of the Gulf of Aqaba.

The Soviet Union made good on Egyptian material losses from the war and, over the next decade, sent considerable quantities of additional arms to the Arab states, including Egypt, Syria, and Iraq. In May 1967, Nasser moved Egyptian troops into the Sinai and ordered out the UN observers who served as a buffer with Israel. Believing that they would soon be attacked, Israeli leaders ordered a preemptive strike. On 5 June 1967, the Israeli Air Force wiped out most of the Egyptian Air Force on the ground and then struck the Syrians. Although Israel made a bid for Jordan to stay out of the war, that country joined the fighting against Israel and paid a heavy price for it. The Israelis won the so-called Six-Day War and, in the process, seized the Sinai Peninsula from Egypt, the West Bank of the Jordan River along with Jerusalem from Jordan, and the Golan Heights from Syria.

On 6 October 1973, at the start of the Jewish holy days of Yom Kippur, Egypt, now led by Anwar Sadat, launched a surprise attack on Israel. Joined by Syrian forces, the Egyptians caught the Israeli government of Prime Minister Golda Meier (1969–1974) by surprise and crossed over the Suez Canal, then took up defensive positions to destroy

A modern view of Jerusalem including the Western Wall, a site holy to Jews as the last remaining wall of the Second Temple, and the Dome of the Rock, a site holy to Muslims as part of the Al-Aqsa Mosque complex. (Corel)

much of the counterattacking Israeli armor with Soviet-supplied antitank missiles. Ultimately, however, the Israelis beat back the Arab attacks. Having recrossed the canal, the Israelis were in position to drive on to Cairo. Both sides then agreed to a cease-fire.

Israel appeared menaced on all flanks except the Mediterranean. But in 1979 Sadat, dismayed by the inability of Washington to pressure Israel into concessions, took the unprecedented step of traveling to Israel in November 1977, eventually leading to the Camp David Agreement of September 1978 and a peace settlement between Egypt and Israel. Begun in 1979, Israel completed a withdrawal of the Sinai Peninsula in 1982. Syria, meanwhile, had moved closer to the Soviet Union, and the Syrians then moved into Lebanon in support of Palestinians there and the Lebanese Muslims. This produced civil war in Lebanon, and following the shelling of Israeli settlements from southern Lebanon, Israeli forces invaded Lebanon in 1982. In September 1983, Israeli forces withdrew to the Awali River. During 1987–1991, Israeli security forces had to deal with a wide-scale uprising by Palestinians known as the Intifada within Israeli-occupied territory in the West Bank and Gaza. The end of the Cold War brought a large influx of hundreds of thousands of Jews from the Soviet Union. Despite peace between Egypt and Israel, at the end of the Cold War a general Middle Eastern peace agreement remained illusive.

Domestically, the Israeli state was organized along the British parliamentary model, with the executive (cabinet) selected by the Knesset (parliament) and subject to it. Israel also had a system of proportional representation in which seats in the Knesset were based on the percentage of votes received. Even parties receiving relatively few votes had representatives in the Knesset. Such parties included those representing the Arab population, those espousing various degrees of Jewish orthodoxy, the communists, and Revisionist Zionist groups.

Until 1977 the Mapai-Labor Party controlled the Knesset. It had deep roots in the socialist movements in Eastern Europe. Mapai-Labor assumed that the party and state were coterminous. Through control of the kibbutz movement of socialist communes, the massive social welfare system of the Histadrut, the powerful military and paramilitary organizations that became the Israel Defense Forces (IDF), the leadership of the Jewish Agency before independence, and sufficient seats in the Knesset, Mapai-Labor leaders such as Ben-Gurion, Meir, and Moshe Dayan dominated Israeli politics for three decades after independence. The party was strongly secular in orientation. IDF chiefs of staff often became prime ministers, and it was common for Mapai-Labor leaders to rotate from military command to seats in the Knesset, leadership posts in the Histadrut, and cabinet ministries.

The chief opposition party in these years was the Likud. It supported a Greater Israel and had strong roots in Zionists opposed to the British mandate. It also espoused capitalism over socialism and was a voice for the growing Jewish immigrant population, including those from the Soviet Union. The religious Jewish parties were the wild cards in Israeli politics. Their agendas included introduction of orthodox Jewish traditions as the basis for Israeli law. These ranged from determinations of who could be defined as Jewish

and thus were entitled to settle in the state, the strict observation of the Sabbath, and such issues as marriage and divorce and exemption from military service. Such parties exercised undue influence because proportional representation required any party with a plurality of seats in the Knesset to obtain the support of smaller parties. Until 1977 Mapai-Labor was able to form governments by making concessions to the religious parties and those farther to the Left. When the Likud Party took control in 1977, it had to form coalitions with minority parties in much the same fashion as had Mapai-Labor. This allowed the religious parties to continue to influence policy. Mapai-Labor continued to be a force as, at times, the Likud had to include Mapai-Labor in its coalition governments.

Israel's international relations did not change much when power passed from Mapai-Labor to Likud to coalition governments. Israel consistently relied on the United States, which regularly made the Jewish state its largest foreign aid recipient. Ironically, the Federal Republic of Germany (FRG, West Germany) was an important support for Israel in its early years. Chancellor Konrad Adenauer's government extended billions of dollars in assistance in recognition of the crimes that Nazi Germany had committed against world Jewry during World War II. France, which had been a chief supporter and arms supplier to the Jewish state, became estranged from Israel following the 1967 War when an angry President Charles de Gaulle withdrew French military assistance as a consequence of the preemptive Israeli attack.

From an internal perspective, the chief issues for Israel have been disputes over whether Israel should be a secular or religious state (in the West Bank, Jews may soon well be a minority) and over the makeup of Israeli territory. There has also been a continuing war against terrorism and suicide bombers. The 2005 Israeli withdrawal from the Gaza Strip by a government led by the expansionist Likud Party reflects these ongoing debates and concerns. Israeli voters remained keenly interested in such issues as the role of the Orthodox minority, the rights of Israeli Arabs, the fate of Israeli settlements in Gaza and the West Bank, and the ups and downs of the economy.

Israel, Armed Forces

Since 1948, the Israel Defense Forces (IDF) has become one of the most effective and respected military forces in the world. Israel claimed to have no territorial ambitions, and its military strategy during the Cold War was essentially defensive, supported by offensive tactics. The IDF consisted of a regular tactical air force, a regular coastal navy, and a small standing army with a large and well-trained reserve, an early warning capability, and efficient mobilization and transportation systems.

The IDF's approach to war-fighting was based on the premise that Israel could not lose a single war. Given Israel's experience and the intentions of its more hostile neighbors, there can be little doubt of the validity of that assumption. Israel tried to avoid war through a combination of political engagements and the maintenance of a powerful military deterrent.

In six major wars beginning with the 1948 War of Independence and during seemingly never-ending occupation duty and counterterrorist actions into 2005, 21,951 Israeli military personnel have been killed in the line of duty. During that same time period the IDF, always fighting outnumbered, inflicted many times more that number of casualties on its enemies. The IDF continually strove to maintain an advantage in advanced weapons systems, many of which were developed and manufactured in Israel. The IDF's major strategic advantage, however, has always been the quality and discipline of its soldiers.

The IDF was the backbone institution of Israel. Most Israelis were inducted into the IDF at age eighteen. Unmarried women served for two years, while men served for three years. Following initial service, men remained in the reserves until age fifty-one and single women until age twenty-four. Most reservists served for thirty-nine days a year, except during emergencies. More than 10 percent of Israel's gross domestic product (GDP) went to military expenditures.

IDF officers who retired or otherwise left active duty retained reserve commissions and were subject to recall in time of war. Ariel Sharon, for example, commanded a division in the 1967 Six-Day War, retired as a major general in 1973, and was recalled only a few months later and put in command of a division in the Yom Kippur War. IDF general officers were a major force in Israeli society. Many went into politics after retirement. Indeed, several Israeli prime ministers have been IDF generals.

Although Israel never formally admitted to having nuclear weapons, most of the world assumed that it did. With French support, Israel constructed its first nuclear reactor in 1960. The IDF probably acquired nuclear weapons capability in the late 1960s. Most estimates place Israel's nuclear stockpile at between 100 and 200 weapons, including warheads for the Jericho-1 and

Israeli troops withdrawing from the Suez Canal area of Egypt in 1974 in accordance with an agreement reached by the United Nations Disengagement Observer Force. (Corel)

Jericho-2 mobile missiles and bombs for longer-range delivery by Israeli aircraft.

Immediately following the establishment of the State of Israel on 28 May 1948, the government issued the Defense Army of Israel Ordinance No. 4, establishing the IDF and merging all Jewish fighting organizations under it. Immediately thereafter, David Marcus, a U.S. Army Reserve colonel and World War II veteran, received a commission as Israel's first *aluf* (general).

Although the IDF essentially absorbed the General Staff and combat units of the Haganah (the self-defense militia of the Jews in Palestine), the integration of other more radical militias was difficult and protracted. The Stern Gang, also known as Lehi, dissolved itself, and its members joined the IDF individually. Some battalions of the Irgun (also called the IZL) joined the IDF, while others fought on independently. The turning point came when Prime Minister David Ben-Gurion ordered the IDF to sink the IZL's arms ship *Altalena* as it approached Tel Aviv in June 1948. It was a defining moment for the new State of Israel and established the authority of the central government. The remaining IZL battalions finally disbanded in September 1948.

The IDF recognizes six major wars for which it awards campaign ribbons. The 1948 War of Independence started immediately after the declaration of statehood, as Egypt attacked from the south, Syria and Lebanon attacked

OCTOBER WAR, 1973

from the north, and Jordan—backed by Iraqi and Saudi troops—attacked from the east. Outnumbered almost sixty to one in population, Israel's prospects looked bleak. By the time of the cease-fire in July 1949, however, the IDF had managed to secure all of its major objectives, with the exception of East Jerusalem.

In 1956 the second of Israel's major wars began when the IDF launched a full-scale attack into the Sinai Peninsula. French and British forces then invaded Egypt, having secretly planned the operation with the Israelis to take back control of the Suez Canal from Egypt and topple Egyptian President Gamal Abdel Nasser. In the operation, the IDF captured Gaza and the entire Sinai Peninsula but later withdrew under international pressure.

In 1967 Egypt massed 100,000 troops in the Sinai and closed the Straits of Tiran to Israeli ships. In response, the IDF launched a preemptive strike on 5 June, virtually destroying the Egyptian Air Force on the ground. The Israeli Air Force then attacked Syria and Jordan. During the Six-Day War, the IDF again captured the Sinai and Gaza. The Egyptians lost some 15,000 soldiers, while only 338 Israelis died. The IDF also captured the strategic Golan Heights from Syria and captured East Jerusalem and the rest of the West Bank from Jordan. Following the Six-Day War, the war of attrition ground on with the Egyptians along the Suez Canal and with the Syrians along the northern borders.

The Yom Kippur War began on 6 October 1973 when Egypt and Syria launched a surprise attack on the eve of the most important Jewish religious day. Just prior to the start of the war, the active IDF numbered some 75,000 troops, with one-third being regulars and the rest conscripts and reservists undergoing training. The ground forces could field fifteen brigades, but not all were at full operational strength.

Upon mobilization, total IDF strength grew to 310,000, with the army capable of fielding more than thirty brigades, which were combined into divisional task forces for combat. In the Golan Heights, the IDF deployed three divisions consisting of eleven brigades. In the Sinai, it fielded four divisions with seventeen brigades. The combined force of the attacking Arab armies totaled more than 820,000 troops.

The IDF's mixture of major weapons systems was a logistician's nightmare. Almost half of its 2,000 tanks were British Centurions. Another 600 were a combination of more modern American M-60s and older M-48s that had been locally modified and up-gunned. Another 250 were old World War II-era American M-4 Shermans that the Israelis had completely rebuilt and up-gunned to create the Super-Sherman. The IDF also fielded some 250 Soviet T-54s and T-55s, captured from the Arab armies in 1967. The IDF had only 100 antitank guided missiles. The Arab armies had almost 2,100, including the Soviet AT-3 Sagger.

The IDF's 4,000 armored personnel carriers were a mixture of World War II-era half-tracks, modern American M-113s, and various Soviet APCs captured in 1967. The IDF's weakest link was its artillery, which consisted of only 575 tubes (as opposed to 6,700 Arab guns). The IDF mainstay was the 155mm howitzer, either the American self-propelled M-109 or the locally

On the Golan Heights, some 150 Israeli tanks stopped more than 1,400 Syrian armored vehicles.

produced Soltam, mounted on a Sherman tank chassis. The IDF also had captured Soviet pieces plus a few American-built self-propelled, long-range 175mm M-107s.

The IDF had 1,000 air defense guns against 6,000 for the Arab armies. More significantly, the Arabs had almost 5,000 Soviet shoulder-fired SA-7 antiaircraft missiles, while the IDF had no equivalent weapon system. The Israeli Air Force possessed about 500 combat aircraft, including 130 American-built F-4 Phantoms, 170 A-4 Skyhawks, and an assortment of older French Mirages. The Arabs had more than 1,600 combat aircraft. The Israeli Navy at the start of the Yom Kippur War had 5 submarines, 21 coastal patrol boats, and 10 heavy landing craft.

Initially the IDF took heavy losses, but after U.S.-airlifted weapons and supplies started arriving on 14 October, the tide turned. The IDF pushed the Egyptians and Syrians back to their original lines. On the Golan Heights, some 150 Israeli tanks stopped more than 1,400 Syrian armored vehicles. By the time the war stopped under international pressure, the IDF had suffered 2,700 dead while inflicting more than 15,000 deaths on its enemies.

The IDF's most famous special operation came on 3–4 July 1976 when the elite Sayeret Matkal (also known as General Staff Reconnaissance Unit 269) rescued Israeli passengers held hostage at the Entebbe airport in Uganda after their plane was hijacked by Palestinian terrorists. The complex operation managed to save eighty of the eighty-three passengers. The only IDF casualty was the operational commander, Colonel Jonathan Netanyahu, whose brother Benjamin Netanyahu later became prime minister.

On 7 June 1981 the Israeli Air Force destroyed Iraq's Osirak nuclear reactor. Although almost universally condemned in international circles at the time, this preemptive strike almost certainly neutralized Saddam Hussein's nuclear weapons program.

The IDF's most recent major war during the Cold War era came in 1982 when, in Operation PEACE FOR GALILEE, the IDF invaded southern Lebanon on 6 June in retaliation for Palestinian terrorist and rocket attacks launched from Lebanon's territory against Israeli civilian targets in the north. Although the IDF neutralized the Palestinian threat, it became bogged down in a long and grinding occupation of southern Lebanon that only ended in September 2000. The reputation of the IDF also suffered severely from the 16 September 1982 massacre at the Sabra and Shatilia refugee camps, which many international figures branded as war crimes. During 1987–1993 the IDF also performed stability operations during the first Palestinian Intifada (uprising).

The Israeli Air Force (IAF) was one of the strongest in the Middle East, and with much justification its pilots have been considered the best in the world. Since the IAF began in 1948, its pilots have shot down 687 enemy aircraft in air-to-air combat. Only 23 Israeli aircraft have been shot down in air-to-air combat, giving the IAF an incredible 30:1 victory ratio.

The Israeli Navy, also formed in 1948, operated in two unconnected bodies of water. Its main base on the Mediterranean was Haifa, while its main base on the Red Sea was at Eilat. Its three principal operating units were

the Missile Boats Flotilla, the Submarine Flotilla, and Shayetet 13, a naval special operations force similar to the U.S. Navy's SEALs.

Southern European nation. A long, boot-shaped peninsula, Italy covers 116,305 square miles, about the size of the U.S. state of Arizona, and includes the islands of Sicily and Sardinia. It is bordered by the Tyrrhenian Sea to the west, the Adriatic Sea to the east, the Ionian Sea to the south, and by France, Switzerland, Austria, and Slovenia to the north. Its 1945 population was approximately 45 million people.

At the end of World War II Italy found itself in political limbo, having entered the war as a German ally in 1940 but having switched sides after signing an armistice with the Allies in September 1943. The collapse of fascism and the chaos and civil war that followed the armistice shattered the already fragile fabric of the Italian political system, strengthening those forces that called for its complete overhaul. With an antiquated economic system still heavily reliant on its agricultural sector, Italy also suffered from a number of structural problems that the war had only compounded. In short, at the end of the war the country was ripe for a major transformation of its economic, political, and social institutions.

The Italian Communist Party (PCI) benefited from this situation and by 1948 had become Italy's second largest political party. For the remainder of the Cold War it continued to occupy an important political place, remaining a constant source of weakness in the nation's otherwise Western orientation. Italy's experience in the Cold War can thus be described as an uneasy effort of its ruling class to make up for the defeat in World War II and restore the country's international status, while keeping at bay the PCI's attempt to influence the country's political orientation. As in France, the communist vote

Italy

in Italy was more a declaration of dissatisfaction with economic conditions and endemic political instability and corruption than a statement against Italy's Western orientation.

In the immediate postwar years, Italy's primary goals were to redefine its political system and to avoid a punitive peace treaty. The first objective was accomplished with the June 1946 referendum abolishing the monarchy and introducing the republic. The second goal was only partially achieved, as the 1947 Paris Conference produced a treaty that Italians believed too harsh for the nation that after September 1943 had been at war against Germany and whose population, at least in the north, had suffered under the brutality of Nazi occupation.

Until early 1947, the country was run by a government that rested upon a tentative truce between centrist and left-wing political parties—almost a small-scale replica of the antifascist alliance among the great powers. The coalition labored to restore a shattered economy and heal the social and political wounds of the war. By early 1947, however, Italy's Christian Democratic (DC) Premier Alcide De Gasperi believed that his cabinet could not fully tackle the tasks of reconstruction without a clear redefinition of its political orientation, and by May he formed a new government without the communist and socialist parties. His initiative, which almost overlapped the launching of the U.S. Marshall Plan, coincided with the deepening of the Cold War and ushered in a most serious debate over the country's future, which lasted until the crucial elections of April 1948.

Under pressure from Moscow, which had formed the Cominform to galvanize resistance against the Marshall Plan, the PCI launched a wave of protests in the fall of 1947. Rumors of a potential coup began to circulate, and the run-up to the elections took place in a tense climate. Both Moscow and Washington were heavily involved in the electoral campaign, providing covert financial assistance to their Italian allies and also assisting them with propaganda and disinformation campaigns. The 1948 elections therefore became one of the main battles of the early Cold War, and the stunning success of the DC came to be regarded in Washington as a demonstration that covert operations were a successful tool for fighting internal Soviet subversion.

The DC victory at the polls stabilized the domestic front for a few years but above all set the pattern of Italian relations with Washington for much of the Cold War. The Americans came to be seen as an indispensable ally for containing the PCI on the domestic front, providing a military guarantee against the Soviet Union, and balancing Italian power vis-à-vis other West European countries. Concern over a possible increase of communist influence, on the other hand, spurred Washington to retain a deep interest in Italian politics and to provide assistance to the Italian government on both the international and the domestic levels.

After signing on to the Marshall Plan in 1948, Italy was able to enter the North Atlantic Treaty Organization (NATO) in April 1949, thanks to American and French support and in spite of serious skepticism among the other members. Shortly afterward, Italy also joined the Council of Europe and the European Coal and Steel Community, and in spring 1951 De Gasperi gave

his support to the French initiative for a European Defense Community. NATO and European integration became the two pillars of Italy's Cold War foreign policy, part of an effort to establish an overall Western identity for a country whose society remained deeply divided. Thus, throughout the Cold War domestic and international politics would remain deeply intertwined, and many foreign policy initiatives were conceived with a keen eye toward stabilizing the domestic scene.

In the 1950s a strong, sometimes virulent, anticommunism on the domestic front was coupled with a high-profile foreign policy that strove to reassert the country's full legitimacy as a Western power. This led to the decisions to join the European Economic Community and the European Atomic Energy Community in March 1957 as well as to the deployment of the NATO Southern European Task Force (SETAF) in 1955 and to the acceptance of the Jupiter intermediate-range ballistic missiles (IRBMs) in July 1958. These last two choices became the basis for Italy's nuclear policy. Faced with the challenge to its status posed by the diffusion of nuclear weapons, Italy shunned a possible national option and focused on acquiring some form of control over the new weapons in the multilateral context of the Atlantic Alliance.

Following a decade of sweeping economic growth that turned Italy into a fully industrialized economy, in the early 1960s the domestic scenario began to change when the DC resolved to accept the Socialist Party (PSI) as a coalition partner. This occurred, however, only after a prolonged debate about the reliability of the socialists because of their previous cooperation with the communists. The new coalition was meant to isolate the PCI by draining it of most of its support through the implementation of much-needed political and social reforms, which would complete the modernization of the country brought about by its stunning economic transformation.

The new center-leftist coalition, however, failed to enact many of the reforms that it had been planning, and by the end of the decade the PCI was stronger than it had been at the beginning. Besides, the new PSI-DC alliance found it hard to adapt to the contradictions of the new international climate of détente: the socialists were critical of the U.S. escalation of the war in Vietnam, while the DCs and other moderates found it difficult to accept those aspects of détente that, like the 1968 Nuclear Non-Proliferation Treaty, implied a second-rank status for Italy in the international system.

In the 1970s the old, rigid certainties of the Cold War gave way to a much more uncertain geopolitical situation. Détente between the superpowers was mirrored by a guarded dialogue between the DC and the PCI, which searched for a political formula to go beyond the shortcomings of the center-leftist faction. They also sought to stabilize a disastrous economic situation and to fight a wave of left- and right-wing terrorism that threatened to break

Fiat Motor Works automotive production in Italy. Postwar manufacturing, including that of the Fiat company, was aided by the Marshall Plan, which helped finance economic restoration in Europe after World War II. (National Archives and Records Administration)

the foundations of Italian democracy. The PCI strove to present itself as a legitimate Western political force, but the deeply ingrained suspicions—both domestic and international—of its intentions could not be overcome. The so-called historical compromise between the two largest Italian political forces never went beyond its infant stage, and with the refueling of the Cold War in the late 1970s, Italy once again had to adapt its domestic politics to the new exigencies of the international system. A renewed center-leftist coalition based on a DC-PSI alliance and on the exclusion of the PCI as well as a return to a high-profile foreign policy opened a new era of Italian politics. This development was best symbolized by the decision of the Bettino Craxi government to go ahead with the highly contentious deployment of U.S. cruise missiles in Italy in December 1983.

Italy remained a political battleground between East and West throughout most of the Cold War. Although its Western orientation was probably no longer in doubt after the elections of 1948, its reliability often came under close scrutiny because of the presence of the strongest communist party in Western Europe and because of the government's incapacity to reduce communist influence and stabilize the political system. The difficult democracy, however, survived most of its challenges.

Italy, Armed Forces

The Italian military situation following World War II was problematic. The nation had initiated hostilities in June 1940 as a member of the Axis along with Germany and Japan, but upon signing an armistice in September 1943 Italy joined the Allies in the capacity of cobelligerent. Great Britain and the

United States soon sought to reequip the Italian armed forces—hitherto supplied by an extensive national armaments industry—with matériel largely from Allied sources while undertaking an ambitious restructuring of their former enemy's army, air force, and navy based on their own respective military cultures.

Italy's postwar control over its armed forces, now limited to defending national borders and maintaining internal security, was reestablished in November 1945. As the Allies' ensuing troop reductions led to an increase of their surplus stores depots in the country, some of this matériel, in turn, supplied the now smaller (held to a maximum of 185,000 troops and 200 tanks) Italian Army. The Carabinieri (the state military police corps), still outfitted with Italian equipment, increased its ranks to 65,000 (doubling its 1938 numbers) in anticipation of the task of maintaining civil order. The Italian Air Force (IAF) had received obsolete Allied aircraft as early as April 1944, and by April 1947 it was permitted to maintain a strength of no more than 25,000 men operating 200 fighter planes and 150 unarmed aircraft of British and U.S. manufacture.

The Italian Navy, despite its considerable wartime losses, was still regarded by some Allies as a potential regional threat, so its fleet was subsequently reduced to a total of 67,000 tons (and 25,000 men) by provisions of the February 1947 Paris Peace Treaty, which also called for the transfer of Italian warships as reparations to France, Greece, Yugoslavia, and the Soviet Union, plus the disposal of all Italian submarines. Its two newest remaining battleships, the *Italia* (ex-*Littorio*) and the *Vittorio Veneto*, were transferred to Great Britain and the United States, respectively, which sold them forthwith for scrapping, carried out in Italian yards.

During 1948–1954, the Italian armed forces underwent a modest rearmament, facilitated by the Mutual Defense Assistance Program (MDAP) after Italy's 1949 inclusion as a charter member of the North Atlantic Treaty Organization (NATO). The Italian Army replaced its obsolete U.S. M-4 tanks with the M-47 model, and British Vampire jets in 1950 replaced the Spitfires, P-51s, P-47s, and P-38s in the air force. In 1951–1952 the United States began supplying Italy with F-84 and F-86 fighters as well as C-119 transports. From 1948, the navy was ceded British and U.S. minesweepers and patrol craft to augment its posttreaty leavings, and in 1952 the Americans transferred to the Italians two destroyers, three destroyer escorts, and an assortment of amphibious vessels.

After 1955 the Italian armaments industry began augmenting U.S.-supplied and -shared NATO military hardware with such products as the FIAT G 91 jet fighter and several license-built versions of the F-104 Starfighter, which would see frontline service with the IAF until joined in 1983 by the Tornado multirole combat aircraft. Italian shipyards by the late 1950s once again built new submarines, destroyers, frigates, and corvettes (also supplying some to NATO and other navies), while converting some older indigenous warships for modern roles as antisubmarine or antiaircraft vessels armed with U.S. launchers and missiles. By 1965 the 40,000-strong navy comprised some 150 units in five divisions.

In 1958 the Italian Army joined the United States in manning Jupiter missile emplacements in Italy, initiating a brief nuclear weapons-sharing arrangement that ended with the withdrawal in 1962 by the United States of the Jupiters from Italian soil. Through 1974 Italy fielded two battalions of Honest John surface-to-surface missiles (SSMs), whose nuclear warheads remained under U.S. control, superseded by the Lance SSM. The navy's Alfa Project, begun in 1971 to develop an independent nuclear ship-launched ballistic missile (SLBM), had reached the test phase by 1973–1974, but further development was canceled upon Italy's 1975 signing of the Nuclear Non-Proliferation Treaty.

By 1985 the army had reached a strength of 270,000 personnel, operating some 1,770 tanks (500 M-47s, 300 M-60s, and 970 Leopards), and in the same year the navy commissioned the aircraft carrier *Giuseppe Garibaldi*, but negotiations to overcome erstwhile IAF proscriptions regarding shipboard fixed-wing naval aviation delayed delivery of its complement of Harrier jets until 1992. During the 1980s Italian warships maintained their NATO tasks of joint operations, patrolling Mediterranean shipping lanes and escorting the U.S. Sixth Fleet in and beyond the area.

Despite its internal political vicissitudes during the period of the Cold War, Italy showed consistent support of U.S. policies and sustained a high level of participation in NATO in spite of its modest defense expenditures relative to other member nations. Italian military support for emergency relief and international peacekeeping included airlift activities during the 1956 Suez Crisis as well as in the 1960–1964 Congo Civil War (where thirteen IAF C-119 crew members were massacred in 1961). Since 1978 Italian troops have been a component of the United Nations Interim Force in Lebanon (UNIFIL), and in 1990, for the first time in forty-five years, IAF aircraft and pilots deployed in military operations, joining coalition forces after the August 1990 Iraqi invasion of Kuwait.

Guyanese nationalist politician, founder of the People's Progressive Party (PPP), premier of British Guiana (1953, 1951–1964), and president of the independent nation of Guyana (1992–1997). Born at Port Mourant Estate, Berbice County, British Guiana, on 22 March 1918, Cheddi Jagan was the child of sugar estate workers. Humble origins notwithstanding, his family sought higher education for their son. He attended Queen's College, Georgetown, during 1933–1935; received a bachelor's degree from Howard University in Washington, D.C., in 1938; and earned a doctorate in dentistry from Northwestern University in 1942.

Jagan, Cheddi
(1918–1997)

While attending dental school in Chicago, Jagan met and married Janet Rosenberg, a leftist activist with ties to the Communist Party. Rosenberg introduced Jagan to Marxism, which gave him a global context for his hatred of the exploitative Guianese sugar economy. After returning to British Guiana in 1943, the Jagans immersed themselves in politics. In June 1948 they took the lead in organizing a mass protest against the police, who had shot and killed five striking sugar workers. For most Indo-Guianese, this solidified Jagan's position as their spiritual and political leader.

In 1950 the Jagans founded the PPP. Led by Cheddi Jagan and Forbes Burnham, a charismatic Afro-Guianese barrister, the PPP came to power in the 1953 legislative elections, the first held under universal suffrage. As premier, Jagan acted with unexpected radicalism and immaturity. Other PPP leaders followed suit. The British government sent a warship to Georgetown and removed the government after only 133 days in power.

By the time the 1957 elections were held, Burnham and many other Afro-Guianese had split from the PPP, claiming that Jagan was a communist. Nevertheless, Jagan won the election in a vote that broke down roughly along racial lines. This time, he governed more responsibly and was reelected in 1961, and the British hinted that he would be the one to lead the colony to independence.

President John F. Kennedy, however, suspected that Jagan harbored communist sympathies. After having failed to persuade the British to prevent Jagan's reelection, Kennedy met with him in person. Jagan made a terrible

impression, and Kennedy believed that his fears had been confirmed. Under tremendous U.S. pressure, the British reluctantly agreed to consider the possibility of removing Jagan from power.

In 1962 and 1963, Jagan's government was hobbled by violent general strikes, funded by secret payments of approximately \$1 million from the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO). Financial support also came from the U.S. Central Intelligence Agency (CIA). In the strikes' aftermath, the British declared that there would be a final preindependence election in 1964, conducted under proportional representation rather than the traditional constituency-based system. Jagan responded by launching a sugar workers' strike that lasted 161 days, turned violent, and was riven by racial tensions. Thereafter he desperately sought to compromise with the United States but was rebuffed.

Burnham won the 1964 election as the head of a coalition, even though the PPP received almost half the vote. Following independence, he grew increasingly autocratic and made himself president-for-life through a series of rigged elections. Jagan continued as leader of the opposition and took the PPP into the Soviet orbit via the communist movement in July 1969.

At the Cold War's end, the United States pressured Burnham's successor, Desmond Hoyte, to democratize, and on 5 October 1992 Jagan was elected president in the country's first free election in twenty-eight years. In the new international climate, he moved quickly from communism to capitalism. Jagan died on 6 March 1997 in Washington, D.C., after suffering a massive heart attack.

Jakeš, Miloš

(1922–)

Czechoslovakian communist politician and general secretary of the Communist Party of Czechoslovakia (CPCz) from 1987 to 1989. Born on 12 August 1922 in České Chalupy in southern Bohemia to a peasant family, Miloš Jakeš worked from 1937 to 1950 at the Bat'a factory in Zlín. At the same time he studied electrical engineering at the state trade school. He joined the CPCz in 1945 and subsequently advanced through its ranks, holding various party positions.

During 1955–1958 Jakeš attended the Communist Party Higher School in Moscow, after which he became a member of the CPCz Central Commit-

tee. He served in a number of Czechoslovakian government posts, including deputy chair of local economic development and deputy minister of the interior. During the 1968 Prague Spring, he remained staunchly pro-Soviet and resisted reforms. According to some reports, which Jakeš would deny, he was in the Soviet embassy trying to rally Czech supporters for intervention when the Warsaw Pact armies invaded in August 1968. He was among a small number of CPCz members who immediately embraced the Soviet actions.

After the invasion, Jakeš became chairman of the CPCz Central Control and Auditing Commission. During his tenure (1968–1977), he purged about 500,000 party members who had backed the 1968 reforms. In 1977 he assumed a leadership role in the Central Committee and became chair of its agriculture and food committee, which, under his guidance, increased productivity and the export of agricultural products. Consequently, he became an economic specialist for the Central Committee and, in 1981, chair of the Central Committee's National Economic Commission. That same year he became a full member of the Presidium.

Seen as an economic pragmatist who could introduce Gorbachev-style reforms in Czechoslovakia, Jakeš was elected general secretary of the CPCz on 17 December 1987, replacing Gustáv Husák, who remained president of Czechoslovakia. Despite having implemented a few minor economic reforms, Jakeš essentially maintained strict communist control of the country.

In October 1988 Jakeš forced the resignation of Prime Minister Lubomír Štrougal and other officials who advocated the quick introduction of Gorbachev-style reforms. Jakeš replaced Štrougal with Ladislav Adamec, who favored gradual change. In November 1989 police brutally beat student demonstrators in Prague who were demanding free elections and democracy. This precipitated further mass prodemocracy demonstrations throughout Czechoslovakia, leading ultimately to the Velvet Revolution. A group of pragmatic communists, hoping to remain in control of the country, forced Jakeš to resign his post on 24 November 1989, which brought about the end of communism in Czechoslovakia.

The CPCz held an emergency session that expelled Jakeš from its ranks in early December 1989. He subsequently resigned from the Federal Assembly and retired from public life. During the summer of 1995, he was arrested on charges of treason for collaborating with Soviet invaders in 1968. After several trials, he was acquitted in 2001 for lack of evidence. Jakeš currently lives in seclusion in Prague.

Japan

East Asian nation with a 1945 population of approximately 82 million people. Japan encompasses 145,882 square miles, about the size of the U.S. state of Montana. Japan is actually an archipelago separated from the east coast of Asia by the Sea of Japan. The island nation also borders the Pacific Ocean to the east and the Philippine and East China Seas to the south and southwest.

On 15 August 1945, Emperor Hirohito announced Japan's unconditional surrender to a physically devastated and psychologically exhausted nation. The Allied leaders had earlier reached substantial agreement on the postwar division of the Japanese Empire at the Yalta Conference (February 1945). The Soviets would gain the Kurile Islands, Southern Sakhalin, and a sphere of interest in Manchuria; Outer Mongolian autonomy was recognized; China would receive Taiwan; and the Korean Peninsula would be subjected to a four-power joint trusteeship. Wartime planning had also envisaged applying the German model to the Japanese home islands, but in mid-August 1945 when Soviet leader Josef Stalin requested a separate Soviet occupation zone in Hokkaido, President Harry S. Truman rebuffed him. Despite the subsequent establishment of a multilateral framework to advise the occupation (Far Eastern Commission and Allied Council for Japan) and the significant contribution of British Commonwealth forces, the policymaking process was dominated by the United States and in particular by Supreme Commander for the Allied Powers (SCAP) General Douglas MacArthur.

The U.S.-led Allied occupation set out to transform Japan from a militaristic imperial power to a peace-loving, stable, democratic nation stripped of armed forces and colonies. Within months, Japan was totally disarmed, top military and civilian leaders were purged (some were later put on trial), political prisoners were freed, left-wing political parties and trade unions were legalized, and the emperor renounced his divinity. With the exception of the civilian bureaucracy, which remained largely intact, virtually every aspect of Japanese politics, society, economy, and culture was subjected to fundamental reform. This experimentation reached its high point in 1947 with the implementation of the so-called Peace Constitution, in which the Japanese people forever renounced war as a sovereign right of the nation and the threat or use of force as a means of settling international disputes (Article 9).

After 1947, Japan experienced a reverse course when American emphasis gradually switched from democratization to economic reconstruction, from ensuring that Japan would never again represent a threat to regional peace and security to building a bulwark against the spread of communism in East Asia. Many of the earlier radical policies were toned down or abandoned altogether, and left-wing sympathizers were suppressed in the Red Purge. Japanese society was marked by a rigid ideological schism, a domestic Cold War.

These developments coincided with heightened Cold War tensions in Europe, major communist advances on the Chinese mainland, and the emergence of communist and noncommunist states on the Korean Peninsula. The vast majority of Japanese people still hoped for a neutral role in international affairs, but external events dragged Japan into the bipolar Cold War

framework, although its absorption was never complete. The founding of the People's Republic of China (PRC) on 1 October 1949, the cementing of the Sino-Soviet alliance specifically targeting Japan on 14 February 1950, the outbreak of the Korean War on 25 June 1950, and, most important, Chinese intervention therein forced a major reassessment of Washington's policy toward Japan.

Prime Minister Yoshida Shigeru continued to downplay the seriousness of international communist threats to Japan and tried unsuccessfully to persuade the Americans to allow Tokyo to maintain a channel to Beijing to accelerate its disenchantment with Moscow. In late 1950, U.S. Special Representative John Foster Dulles embarked on a globe-trotting shuttle diplomacy, preaching a doctrine that exaggerated the communist threat to induce the Allies to accept the generous U.S. version of the peace treaty with Japan.

When the Japanese Peace Conference convened in San Francisco on 4 September 1951, festering Anglo-American differences meant that neither the nationalist nor communist Chinese regime was represented. After the Soviet delegation refused to sign the treaty, forty-eight Western nations signed a separate peace treaty four days later. In return for regaining its sovereignty, Japan renounced claims to 40 percent of its pre-1937 territory (although the disposition of these areas remained unspecified) and promised to pay limited reparations to victims of its wartime aggression. The United States was granted administrative rights over the Ryukyu and Bonin Islands under a United Nations (UN) trusteeship.

The United States and Japan also concluded a security treaty on 8 September 1951. In essence, it granted the Americans continued access to military bases in postoccupation Japan and, with Tokyo's consent, included the right to suppress domestic opposition. However, lingering fear of Japanese aggression among Japan's neighbors meant that the United States would have to pursue a strategy of dual containment, offering security for Japan as well as security from Japan.

The economic impact of the Cold War and in particular of the hot war in Korea was overwhelmingly beneficial for Japan. After its intervention in the Korean conflict, the United States imposed a total trade embargo on the PRC, which SCAP also applied to Japanese trade with the communist Chinese. American special procurements for the war, which constituted 37 percent of Japan's total foreign exchange receipts for 1952–1953, more than compensated for the loss of the miniscule China trade. It was for this reason that Yoshida referred to the Korean War as “a gift from the gods.” In September 1952, Japan joined CHINCOM (the China Committee of the Paris Group), an organization established by the United States and its North Atlantic Treaty Organization (NATO) allies to enforce strict sanctions on trade with the PRC. Japan's economic relations with the Chinese mainland were maintained through a series of private trade agreements beginning in June 1952.

Yoshida had been leaning to one side in the Cold War since 1949, yet it took an American threat not to ratify the peace treaty before he agreed to normalize diplomatic relations with the Republic of China (ROC, Taiwan)

Lieutenant Colonel Omura (*right*), Japan Air Self-Defense Force student officer at Matsushima Air Installation, renders the traditional salute to his American flight instructor, Captain Edward Hartenberger, 12 July 1954. Omura, a 1934 graduate of Japan's Military Academy, had flown more than 5,000 hours in single-engine fighters and heavy bombers, including three-and-a-half years of combat during World War II and, pictured here, completed a refresher course. (Bettmann/Corbis)

rather than the PRC. A treaty was thus concluded on the same day that the San Francisco treaties went into effect (28 May 1952). Yoshida believed that Japan's dependence on the United States was temporary. The Yoshida Doctrine saw Japan maintain minimal military forces in order to focus on economic recovery. However, under intense pressure from Dulles, now secretary of state, Yoshida eventually agreed to an 180,000-man army, only half of what the Americans had requested. The Mutual Defense Assistance Agreement (MDAA), signed on 8 March 1954, committed Japan to a significant degree of rearmament, but with American financial aid and under American direction. Shortly thereafter, in July 1954, the Self-Defense Forces were created from the National Police Reserve, although the House of Councilors banned their dispatch overseas.

Reflecting a new emphasis on peaceful coexistence following Stalin's death in March 1953, the Soviets took the initiative and announced in Sep-

tember 1954 their readiness to normalize relations with Japan, a proposal confirmed in the Sino-Soviet Joint Declaration of 11 October 1954. Yoshida spurned this offer of negotiations, but in December 1954 Hatoyama Ichirō unseated the premier and immediately set out to counteract what he saw as Yoshida's overdependence on Washington. A more nationalistic and anti-communist figure, Hatoyama was nonetheless able to separate ideology from normal diplomatic and economic intercourse. He responded positively to the communist peace offensive and announced Japan's desire to "open a window to the East." The Japanese government was soon pressing the Americans to shorten the list of embargoed goods for the China market, and official negotiations for a peace treaty opened with the Soviet Union on 1 June 1955 in London. After fifteen months of intermittent talks failed to resolve the territorial dispute over the Kurile Islands, however, Hatoyama had to settle for a joint declaration ending the state of war in October 1956. Two months later, with the withdrawal of the Soviet veto, Japan gained admission to the UN.

Hatoyama's term in office was also notable for two other developments. First, in late 1955 a major reorganization of the domestic political structure occurred with the consolidation of most progressive forces in the Nihon Shakaitō (Japan Socialist Party, or JSP), the party of perpetual opposition, and of most conservative politicians in the Jiyū Minshutō (Liberal Democratic Party, or LDP), the party of permanent government. This 1955 system, a diffuse but rigid bipolar political structure, was to endure into the post-Cold War era. Second, Hatoyama's administration witnessed the beginning of rapid economic growth. With American assistance, Japan joined the General Agreement on Tariffs and Trade (GATT) on 10 September 1955, significantly improving Japanese companies' access to Western markets.

Hatoyama's successor was the Liberal Democrat Ishibashi Tanzan, who was soon supplanted by the very different figure of Kishi Nobusuke. Although hailing from the same wing of the LDP as Hatoyama, Kishi focused on fighting communism rather than accommodating it. Like Hatoyama, he supported accelerated rearmament and renegotiation of the unbalanced Security Treaty with the United States, but he was also an Asianist of the old school who believed that Japan should resume its place as the natural leader of Asia. In May 1957, in return for an American commitment to withdraw remaining U.S. ground troops from Japan, the Kishi cabinet approved a Basic Policy for National Defense and the First Defense Buildup Plan. This envisaged a continuing, albeit slowly diminishing, dependence on U.S. military protection. On 28 September 1957, the Foreign Ministry announced three principles of Japanese foreign policy that embraced the contradictions in Tokyo's thinking. The declaration reaffirmed Japan's position as a member of the Asian community, stressed that diplomacy centered on the UN, and maintained Japan's position in the free world. On 13 May 1958, Japan launched a major foreign policy initiative that called on the world's three nuclear powers (the United States, the United Kingdom, and the USSR) to cease all nuclear testing, production, and stockpiling.

Kishi's anticommunism did not extend to obstructing Japan's burgeoning trade relationship with its communist neighbors. Indeed, under the

convenient rubric of *seikei bunri* (the separation of political from economic relations), Japanese trade with the PRC was booming. Following a minor incident in which a PRC flag was attacked in a Japanese department store, however, Beijing suspended all economic transactions with Japan on 9 June 1958.

Japan remained a semidetached ally of the United States, but by the late 1950s it became clear to President Dwight D. Eisenhower that a new treaty was needed to reflect Japan's increasing economic strength and position as a partner with the United States rather than as a subjugated former enemy. After fifteen months of intensive negotiations, the new ten-year Treaty of Mutual Cooperation and Security was signed in Washington on 19 January 1960. In it the United States gave up its right to intervene in Japanese domestic politics and for the first time made an explicit commitment to defend Japan. The revised treaty provoked harsh criticism from Japan's communist neighbors and serious domestic turmoil, bringing more than a million students and others into the streets of Tokyo in postwar Japan's largest political demonstrations. This Anpo Crisis reached its climax in May 1960, when Kishi resorted to strong-arm tactics to secure Diet ratification of the Security Treaty. This forced Eisenhower to cancel a scheduled visit to Japan, threatened party unity, and shortly thereafter caused Kishi to resign.

Kishi's replacement, Ikeda Hayato, turned his attention to economic development at home. An income-doubling plan became the national goal for the 1960s. He kept a low profile abroad while nonetheless broadening relations with both the West and Asia. On 28 April 1964, Japan became the first Asian nation to join the so-called Rich Man's Club, the Organization for Economic Cooperation and Development (OECD), and to gain Article 8 status in the International Monetary Fund (IMF).

With American encouragement, Japan concluded reparations agreements with several Southeast Asian nations that served to restore both trade and diplomatic channels in the region long damaged by memories of the Asia-Pacific War. Despite American objections, unofficial trade resumed with the PRC on 9 November 1962. The 1964 Tokyo Olympics symbolically set the seal on Japan's international rehabilitation. During the 1960s, Japan's average rate of growth was more than 10 percent per year. By the end of the decade, Japan had surpassed the Federal Republic of Germany (FRG, West Germany) to become the world's second-largest capitalist economy.

Ikeda's term also saw the public emergence of the Sino-Soviet rift. This increased polarization within Japan's domestic political structure but strengthened Ikeda's confidence in his essentially pro-Western policies. Despite Soviet and communist Chinese campaigns to solicit Japanese support, active noninvolvement became the cornerstone of Tokyo's policy in the dispute.

Satō Eisaku, another Yoshida protégé, succeeded Ikeda on 9 November 1964 and became Japan's longest-serving postwar premier. After fourteen years of often bitter negotiations, he oversaw the final stages in the normalization of diplomatic relations with the Republic of Korea (ROK, South Korea) in June 1965, a development greeted with hostile mass demonstrations on both sides of the Tsushima Straits. Nor were these the only popular

protests that Satō had to contend with, for 1965 also marked the beginning of Japan's anti-Vietnam War movement.

Satō was responsible for formalizing two of the more pacifist aspects of Japanese foreign policy: the total ban on arms exports (21 April 1967) and the Three Non-Nuclear Principles (not possessing nuclear weapons, not producing them, and not permitting their introduction into Japan) announced on 27 January 1968. This was despite the fact that Satō personally believed that Japan should become a nuclear power.

On 21 November 1969, Satō achieved his primary foreign policy objective when U.S. President Richard Nixon promised to return the Ryukyu Islands, free of nuclear weapons, to Japanese administration in 1972. In return, however, Satō agreed to allow the United States to retain bases on the islands. Even more significantly, he conceded that the security of South Korea was vital, while the maintenance of peace and security in the Taiwan area was also important to Japanese security. On 23 June 1970, the Security Treaty was automatically renewed despite enormous popular protests, and Japanese-U.S. relations appeared to be closer than ever.

Trade friction had been steadily mounting, however, and on 15 July 1971, without forewarning, President Nixon announced that he had accepted an invitation to visit the PRC. One month later, he imposed a 10 percent import surcharge and floated the U.S. dollar, taking it off the gold standard. This all came as a huge shock for Japan and produced a palpable sense of betrayal. Satō's subsequent efforts to reverse his earlier stance and promote improved relations with the PRC were spurned, and thus it fell to his successor, Tanaka Kakuei, to visit Beijing and normalize diplomatic relations on 29 September 1972. Controversially, the Sino-Japanese joint declaration included a clause opposing hegemony in the Asia-Pacific region. This thinly veiled reference to the Soviet Union did not prevent Japanese corporations from subsequently becoming involved in a number of large-scale resource development projects in Siberia.

The Japanese economy received another severe jolt in the oil crisis of 1973–1974, but it recovered quickly when the government broke ranks with the United States and made clear its pro-Arab stance. Thereafter, Japan undertook a major effort to diversify its sources of supply for vital raw materials. This later evolved into one facet of Tokyo's comprehensive security strategy.

Southeast Asia was of growing importance to Japan. After some initial reluctance, Japan had become a strong supporter of the Association of Southeast Asian Nations (ASEAN) and invested heavily in the region. However, in January 1974 accusations of Japanese economic imperialism led to violent protests in Indonesia. Tokyo had already normalized diplomatic relations with the communist Democratic Republic of Vietnam (DRV, North Vietnam) in 1973, and after the collapse of the Republic of Vietnam (ROV, South Vietnam) in April 1975, Prime Minister Fukuda Takeo pronounced the Fukuda Doctrine (August 1977), which was an attempt to mediate between Vietnam and ASEAN. It met with little success, at least in the short term.

Fukuda was more successful one year later, when Japan and the PRC finally signed a Treaty of Peace and Friendship (12 August 1978). Now a

Japanese-U.S.-PRC anti-Soviet alignment seemed to be emerging, but Tokyo refused Beijing's request to sell defense technology to the PRC. Instead, in May 1979, the Japanese government for the first time offered the PRC loans to assist with its economic development. It thus became the largest of many recipients of Japanese foreign aid during the last decade of the Cold War as well as a major trading partner and a significant investment destination.

During 15–17 November 1975, Japan attended the inaugural meeting of the Group of Five (G5, later G8), the largest industrialized nations in the noncommunist world. Japan had finally achieved Ikeda's goal of becoming "a pillar of the free world." Japan also played a central role in the development of the concept of an Asia-Pacific region bringing together North America, East Asia, and Australasia via a series of multilateral institutions.

The Japanese government's attitude toward participation in the renewed Cold War of the 1980s proved considerably more enthusiastic than it had been during the earlier period. After Soviet troops entered Afghanistan in December 1979, Japan was quick to join the Americans in imposing economic sanctions. The following February, moreover, the Maritime Self-Defense Force participated in the U.S.-led RIMPAC (Pacific Rim) exercises for the first time. By May 1981, Prime Minister Suzuki Zenkō was ready to commit Japan to the defense of sea-lanes to a distance of 1,000 nautical miles and was the first premier to refer publicly to the United States as an ally. His successor, Nakasone Yasuhiro, went even further. He immediately opposed Soviet deployment of SS-20 missiles in Asia, and it was largely at Nakasone's insistence that the U.S.-Soviet Intermediate Nuclear Forces Agreement of December 1987 eliminated all such missiles. In the intervening six years, Nakasone had transformed Japanese foreign policy. On 19 January 1983, he told an American audience that Japan was an "unsinkable aircraft carrier," which in the event of war would block Soviet naval access to the Pacific Ocean. In November 1983, he reversed the sixteen-year-old ban on military exports when he signed the Technology Exchange Agreement with the United States. In September 1986, Japan agreed to participate in President Ronald Reagan's Strategic Defense Initiative (SDI) research. The following year saw the 1 percent of gross national product (GNP) limit on defense spending limitation that had been in place since November 1976 exceeded, albeit just barely.

Japan was very slow to acknowledge Soviet leader Mikhail Gorbachev's efforts to end the Cold War. By the end of the 1980s, American critics were commenting wryly that the Cold War was over and Japan had won. For Japan, however, the post-Cold War era has thus far been marked by the bursting of the economic bubble and a long period of relative decline.

Maintaining the solidarity of the Western alliance was crucial to the outcome of the Cold War in East Asia, and sustaining Japan's allegiance was vital to maintaining the strength of the Western alliance in the region. Japan was perceived as the key domino whose geostrategic location, industrial base, vulnerability to external pressure, and potential as a role model for the rest of Asia made it a prime target for both sides in the Cold War. Similarly, the Japanese saw themselves as living on the fault line between East and West.

Huddled under the U.S. security umbrella, they were able to concentrate on building their economy without devoting too much attention or resources to their own defense.

Japan accepted the Potsdam Declaration on 14 August 1945 and signed the formal surrender document ending World War II on 2 September. Following the arrival of U.S. occupation forces, the first objective of U.S. policy regarding Japan was to ensure that it would never again pose a military threat to the United States or to world peace. Japan was to be completely disarmed and demilitarized, and the Japanese Imperial Army and Navy were to be dissolved. Article 9 of the 1946 constitution renounced “war as a sovereign right of the nation and the threat or use of force as a means of settling international disputes.” In order to accomplish this, Japan was never to maintain “land, sea, and air forces.” Japan’s security would be guaranteed by the U.S. occupation forces. The navy lived on, however, through a small, demilitarized minesweeping detachment, the Maritime Safety Agency (MSA), for the detection of some 100,000 remaining underwater mines in Japanese coastal waters.

U.S. policy regarding Japanese rearmament changed with the Cold War. The major turning point was the beginning of the Korean War on 25 June 1950 and subsequent U.S. concerns over the military threats posed by the Democratic People’s Republic of Korea (DPRK, North Korea) and, primarily, the People’s Republic of China (PRC). In order to dispatch U.S. forces stationed in Japan to Korea, on 8 July General Douglas MacArthur, commander of U.S. occupation forces in Japan, ordered the Japanese government

Japan, Armed Forces

Tanks roll down a Tokyo street on 3 October 1955 celebrating the first anniversary of Japan's Self-Defense Force. Silent crowds watch with decidedly mixed emotions. With U.S. assistance, the Japanese military had been rebuilt to 130,000 ground troops, 16,000 men manning a 70-ship navy, and an air force of 6,000 men and 200 trainer and cargo aircraft. (Bettmann/Corbis)

to organize a National Police Reserve of 75,000 personnel to provide internal security. This led to the decision in December 1950 to establish four district forces (World War II-type infantry divisions). Not generally known at the time, during October–December 1950 virtually the entire minesweeping capacity of the MSA—forty-six minesweepers and a mine destructor ship—were deployed off North Korea at Wonsan, Kunsan, Inchon, Haiju, and Chinnampo. There they swept both channels and anchorages. Two minesweepers were lost.

On 8 September 1951, Japan signed both the San Francisco Peace Treaty and the United States–Japan Security Treaty. Japan's Defense Agency came into being on 1 July 1954, and ground, maritime, and air self-defense forces were established. The United States played an indispensable role in building up Japan's defense capability, furnishing both advisors and surplus U.S. World War II equipment. The Ground Self-Defense Force (GSDF) was organized through the change from the National Police Reserve and consisted of the Northern Army, Northeastern Army, Eastern Army, Middle Army, and Western Army, comprising 130,000 personnel. The Maritime Self-Defense Force (MSDF) was organized from the small minesweeping detachment and included 115 units totaling some 58,000 tons. Its main combat ships were patrol frigates and amphibious fire support ships supplied by the United States in 1953 to be employed as gunboats. The MSDF won the right to have its own air arm, which began with four helicopters purchased from the United States in 1953.

The United States then furnished 217 aircraft. The Air Self-Defense Force (ASDF) possessed some 140 training aircraft and 6,700 personnel in 1954.

Because the island of Hokkaido was perilously close to the Soviet Union, the GSDF attached great importance to the defense of northern Japan. The MSDF had the task of defending the peripheral sea straits and sea-lanes, while the ASDF protected against violations of Japanese airspace.

By the second defense program of 1962–1966, the GSDF consisted of five armies, thirteen divisions, and 171,500 personnel. By that date, most of its basic equipment (small arms, artillery, tanks, and various armored vehicles) were produced domestically. Japan acquired from the United States eighteen frigates (1953) and four destroyers (1954–1959). The MSDF pushed forward with domestic ship production, producing its first destroyer in 1956 and its first submarine in 1960. By 1960 it had in service a dozen domestically built destroyers: 2 Harukaze class, 7 Ayanami class, and 3 Murasame class. Other destroyers and smaller ships followed on a regular basis. By the mid-1960s the MSDF counted 59 surface combatants, 7 submarines, and 230 aircraft.

The ASDF took over from U.S. forces in Japan alert duty by 1960 and air defense control by 1961. By the mid-1960s, the ASDF counted 1,100 aircraft, including training types. It also operated twenty-four radar warning sites. In addition, the Japanese produced under license U.S. Lockheed F-104J Starfighter interceptors and surface-to-air (SAM) Nike missiles.

Japanese forces went on alert when, on 6 September 1976, a defecting Soviet Air Force pilot landed his MiG-25 at Hakodate Airport on Hokkaido. The ASDF scrambled but could not intercept the MiG-25. The Soviet Union threatened military action unless the pilot and aircraft were returned, but the Japanese government delayed until sixty-seven days later, after U.S. experts had dismantled the plane and studied it in detail. The plane was returned in pieces.

The MSDF carried out joint training with the U.S. Navy beginning in 1955 and participated in RIMPAC (Pacific Rim) exercises for the first time in February 1980. Following a conversation with U.S. President Ronald Reagan in May 1981, Prime Minister Suzuki Zenkō declared that Japan would assume the defense of several hundred nautical miles of Japanese peripheral waters and 1,000 miles of sea-lanes. Prime Minister Nakasone Yasuhiro, who took office in 1982, established a particularly close relationship with Reagan and stated that Japan was “an unsinkable aircraft carrier” that would defend the four straits: Soya, Tsugaru, Tsushima, and Korea. The MSDF continued to upgrade its equipment and in 1985 numbered 58 surface ships, 14 submarines, and 145 aircraft. During 1984–1985 the MSDF held seven joint exercises with the U.S. Navy in the seas off Japan.

The ASDF also modernized. It deployed its first airborne early warning E-2C aircraft in 1983 and McDonnell-Douglas F-15 Eagle interceptors in 1984. It had 368 operational aircraft in 1985. The ASDF began joint training exercises with the U.S. Air Force in 1978 and assumed responsibility for outer periphery defense in 1984–1985.

The GSDF modernized as well. In 1985 it possessed 1,200 tanks and 1,000 artillery pieces. The GSDF had abandoned at-sea and shoreline destruction of an invading force, most likely the Soviet Union or the PRC, because of a lack of combat capability. The GSDF defensive plan called for survival in the interior, there to await reinforcement by U.S. armed forces. To improve defensive capability against attack, Japan stepped up investment in surface-to-surface missiles, long-range artillery, and multiple-fire rockets. With these, Japan modified its former defensive scheme to engage and destroy any invasion force, first at sea, then on the shore, and as a last resort in the coastal area. The Japanese military gave priority to the defense of the southern coast of the Soya Straits between Hokkaido and Sakhalin. The GSDF began joint exercises with the United States in 1981 and carried out five more joint exercises during 1984–1985. Japan also applied its technological expertise to the development in the late 1980s of high-tech weaponry systems such as the Mitsubishi F-1 jet fighter/ground attack aircraft, improved Tan surface-to-air missiles, and Asagiri-class destroyers.

In the post-Cold War era, Japan reviewed its defense capabilities with the intent to make its forces more efficient and mobile and also to be able to

respond to a variety of natural disasters and international peacekeeping situations. The Japanese-U.S. security arrangement remains the cornerstone of Japanese defense planning.

Japan, Occupation after World War II

On 2 September 1945, General Douglas MacArthur, acting in the capacity of Supreme Commander of the Allied Powers (SCAP), gained control over Japan upon its acceptance of unconditional surrender after World War II. Initially, the Americans sought to demilitarize and democratize Japan to prevent a revival of militaristic imperialism. In 1947, however, the reverse course in U.S. policy began to transform Japan into a bulwark against communist expansion in Asia. Early assessments viewed the U.S. occupation as positive, benevolent, and enlightened, building on prewar changes to produce a democratic society in postwar Japan. Later historians would criticize the so-called American Interlude because it integrated Japan into a Cold War strategy in Asia that sought to defeat the goals of revolutionary nationalist movements.

MacArthur seemed to rule Japan like a Tokugawa-era shogun, but in fact Washington had decided upon basic occupation policies beforehand. Moreover, SCAP worked through existing parliamentary institutions and the bureaucracy. General Order Number One assigned the task of demobilizing the armed forces to the Japanese themselves, which they completed in two months. As in Germany, trials punished war criminals, but more significant was the purge of 200,000 military, government, and business leaders who had supported the war. Under SCAP's pressure, the Japanese government abolished the Ministries of War, Navy, and Home Affairs. But MacArthur and his staff were not about to let the Japanese determine the nature and scope of subsequent reform. Japanese leaders prepared a draft providing for modest revisions in the Meiji constitution, for example, but U.S. officials instantly rejected it, formulating a new document and permitting only cursory changes. Effective in May 1947, it swept away all vestiges of elitism, militarism, and authoritarianism.

Five areas of reform would bring fundamental and permanent changes in Japan's economic, political, and social system. First, in October 1946, SCAP forced the Diet (the legislature) to pass a plan for sweeping land redistribution that sought to eliminate large landowners and foster the emergence of yeoman farmers who would be the "bulwark of democracy." Under its provisions, 2.3 million landowners were forced to sell their land to the government at undervalued prices, often for the equivalent of a carton of cigarettes. By 1950, about 4.75 million tenants had bought roughly 5 million acres of land on generous credit terms and at very low prices. Huge demand for food and raw materials in postwar Japan, especially after the Korean War began in June 1950, resulted in rising prices that spurred production, creating an independent, prosperous, and conservative farmer class.

A second thrust of reform established labor unions, again to encourage democratic tendencies. The Trade Union Law of December 1945 made staging strikes legal and mandated joint collective bargaining. Two years later, another law set minimum standards for working hours, safety provisions, and accident compensation. Japanese unions were a startling success. By 1948, there were 6.5 million members comprising about half the workforce. Labor leaders acted with increasing assertiveness to control occupation policies that contributed to a growing pattern of violence and acts of sabotage when U.S. officials would not cooperate. Beginning in 1948, SCAP, in cooperation with Japanese leaders, took strong steps to limit labor's power, gaining passage of a new law aimed at restraining the unions and implementing a new purge of communist leaders.

Third, the United States wanted to eliminate the *zaibatsu* (financial cliques), believing that Japanese megafirms in banking, shipping, international trade, and heavy industry had been willing partners with the military in leading Japan to war. SCAP implemented reforms requiring the sale of *zaibatsu* stock and the dissolution of holding companies, expecting that a more equitable division of wealth and economic power would foster democratization. Freezing the assets of *zaibatsu* families, SCAP purged family members and top executives from management with prohibitions against resuming work with the same firms. Fears of economic stagnation and growing complaints from U.S. business and financial leaders about alleged socialist schemes caused SCAP to abandon plans to break up remaining monopolistic companies.

Education was the fourth area of reform, with the objective of encouraging individualism and creating a genuinely egalitarian society. SCAP abolished educational practices aimed at molding students into willing servants of the state, especially the teaching of morals and history courses that indoctrinated youths to embrace extreme nationalism. Many old-guard teachers were purged after SCAP investigated prewar activities. Militarist propaganda as well as references to Shintoism disappeared from new textbooks in an effort to foster democracy and civil rights. No longer were students confined to prewar channels of vocational, normal, technical, or university training. Insufficient teachers and funds limited the reach of wider educational opportunities, however.

Finally, a new constitution assigned sovereignty to the people, while the emperor became the symbol of the state. Citizens at least twenty years of age had the right to vote for members of the Diet without regard to gender, income, or social status. Primary power resided in the lower house, which controlled the budget and ratified treaties. It could override the decisions of the upper House of Councilors. The lower house elected a prime minister, who named cabinet members. The cabinet selected and voters confirmed justices of a supreme court with the power to determine the constitutionality of legislation and name judges to sit on lower courts. Thirty-one articles guaranteed an assortment of “fundamental human rights,” among them respect as individuals, freedom of thought, education, sexual equality, and “minimum standards of wholesome and cultural living.”

Some reforms were abandoned after the U.S. occupation ended in May 1952, but the Japanese constitution survived without major alterations despite periodic conservative attempts at revision. Those on the Left and the Right acknowledged especially the benefits of Article 9 outlawing war, despite disagreement on how to interpret it. But SCAP’s reforms delayed economic recovery. Widespread destitution forced the United States to provide more than \$2 billion in food, fuel, and medicine to prevent mass starvation and disease. The termination of war reparations payments in 1949 and the Dodge Plan brought economic stabilization before recovery turned into prosperity in response to the Korean War. During that conflict, the Cold War partnership between the United States and Japan became concrete in 1951 with the Japanese Peace Treaty and the United States–Japan Security Treaty.

Japanese Council against Atomic and Hydrogen Bombs

See Gensuikyō

Polish Army general, communist politician, prime minister (1981–1989), and president (1989–1990). Born on 6 July 1923 in Kurów, Lublin Province, Wojciech Jaruzelski was descended from a noble landowning family with strong patriotic and anti-Soviet traditions. Before World War II he attended a secondary school run by priests in Warsaw. At the outbreak of World War II, he fled with his family to Lithuania. When that nation was annexed by the Soviets, he was sent to Siberia, where he worked in forestry. His father did not survive the hardships of Siberian life and died there.

When the German Army invaded the Soviet Union in 1941, Jaruzelski joined the army formed by Polish communists and finished his schooling at the Military Academy in Riazan. He returned to Poland with the army following the German defeat.

Jaruzelski remained in the army after the war as a professional soldier. In 1956 he was promoted to general of brigade, in 1960 to general of division, in 1968 to *general broni* (equivalent to U.S. lieutenant general), and in 1973 to general of the army. During 1965–1968 he was the head of the General Staff, and in 1968 he became minister of defense. As such, he was responsible for the purging of Polish Jews from the army and for Poland's participation in the August 1968 invasion of Czechoslovakia and the use of troops in suppressing the December 1970 unrest at Gdańsk. Throughout the 1970s, he was an outspoken critic of Prime Minister Edward Gierek's policies.

In 1981, during the crisis that ensued from the formation of the Solidarity trade union, Jaruzelski became the first secretary of the Polish Communist Party (PZPR) and prime minister. On 13 December 1981, in an effort to quash the Solidarity movement and placate Moscow, Jaruzelski declared martial law throughout the country. That same month Solidarity was outlawed, and thousands of its members were arrested. Jaruzelski's martial law decree brought condemnation from Western nations, an international trade embargo, and the suspension of all but emergency diplomatic contacts between Poland and many nations of the world. It also may have saved Poland from a Soviet invasion.

Jaruzelski lifted martial law in 1983 but had no idea how to improve the foundering Polish economy. Nor did he show any intention of moving away from traditional Marxist-Leninist principles. Poland was therefore plunged into a period of economic stagnation, with no concrete plans in place to halt the slide. Demonstrations and riots fomented by underground Solidarity units occurred on a regular basis, pushing Jaruzelski to enact minor reforms, none of which had much effect or mollified the restless population.

Jaruzelski, Wojciech (1923–)

Wojciech Jaruzelski, a general in the Polish armed forces and a leader in the Polish Communist Party, played a crucial role in Poland's transition from a communist state to a socialist pluralist democracy. His imposition of martial law perhaps averted a Soviet invasion of his country. (Embassy of the Republic of Poland)

In spring 1989 Jaruzelski permitted a roundtable meeting of PZPR representatives, government opposition leaders (mainly from Solidarity), and the Catholic Church. In June 1989 a compromise was brokered that allowed for semidemocratic elections to take place. These events led to a chain reaction of resistance, reform, and upheaval that soon engulfed the whole of Eastern Europe, eventually breaking down the Iron Curtain.

Jaruzelski himself did not participate in the historic roundtable talks but tried to control them as head of the PZPR. Following parliamentary elections, in July 1989 a bare majority of the National Assembly elected him president of Poland. A year later, as communism collapsed, Jaruzelski resigned the presidency, paving the way for the election of Solidarity leader Lech Wałęsa as Poland's first postwar, noncommunist head of state.

Ji Pengfei

(1910–2000)

Chinese diplomat, foreign minister, and vice premier of the People's Republic of China (PRC). Born in Linyi, Shanxi Province, on 2 February 1910, Ji Pengfei joined the Chinese Communist Party (CCP) in 1933. During both the Sino-Japanese War and the Chinese Civil War, he served in the Red Army and was responsible for political and health programs.

When the PRC was established in October 1949, Ji was transferred to the Ministry of Foreign Affairs. His first significant mission was to lead a diplomatic delegation to the German Democratic Republic (GDR, East Germany), where he stayed for three years, ultimately becoming the first Chinese ambassador to East Germany. In 1955 he returned to China, becoming vice foreign minister and assuming the post of foreign minister in 1972, a position he held until 1974. Throughout his two decades of service in the Foreign Ministry, Ji's most notable achievement was his role as head of the Chinese delegation to the Paris peace negotiations on the Vietnam War in January 1973.

In 1979 Ji became minister of the International Liaison Department of the CCP Central Committee and, concurrently, vice premier and secretary-general of the State Council. Another of his important contributions came after 1982, when he became state councilor, deputy head of the Leading Group on Foreign Affairs of the CCP Central Committee, and director of the

Office of Hong Kong and Macau Affairs. As such, his task was to ensure the smooth implementation of Deng Xiaoping's one country, two systems concept after the China–Hong Kong and the China–Macau reunifications of 1997 and 1999, respectively. Ji also chaired two drafting committees that were responsible for writing the Basic Laws for post-1997 Hong Kong and post-1999 Macau. After the Basic Laws were approved in 1990, Ji retired and returned to private life. He died on 10 February 2000 in Beijing.

President of the Republic of China (ROC, Taiwan) during 1947–1975 and leader of the Guomindang (GMD, Nationalists), also known as the Kuomintang (KMT). Born on 31 October 1887 in Qiguo, Zhejiang province, Jiang Jieshi graduated from the Japanese Military Academy in 1910. He joined the 1911 Revolution that led to the establishment of the ROC on 1 January 1912. In August 1912 he helped found the GMD and became its leader in 1925. As commander in chief of the National Revolutionary Army, Jiang launched the Eastern and Northern Expeditions to unite China in 1925.

When unification was completed in 1928, Jiang named Nanjing, Jiangsu, the new capital of the ROC, with himself as the generalissimo of all Chinese forces and chairman of the new national government. In 1947 he sponsored a constitution that resulted in his de facto and de jure election as president of the ROC.

True Chinese unity, however, had never actually been achieved. In north-eastern China in the late 1920s and early 1930s the Japanese firmly established their sphere of influence, waiting to conquer all of China. The former Chinese warlords, who had declared allegiance to the GMD during the Northern Expedition, reemerged as the GMD's enemies because of mutual distrust. In southwestern and western China, the Chinese Communist Party (CCP), Jiang's former ally during the initial phase of the Northern Expedition, lurked menacingly, with its own designs to rule all of China.

For Jiang, the complete elimination of the CCP assumed top priority, especially in view of its growing power and influence in the countryside. This was best exemplified in his first internal pacification, then external resistance policy, adopted in 1931 when the Japanese began to take northeastern China

Jiang Jieshi
(1887–1975)

Jiang Jieshi, the hard-line precommunist leader of China and later longtime ruler of Taiwan, and his Nationalist Party supporters were forced to flee the mainland for Taiwan in 1949 after the victory of Mao Zedong and his communist forces. Jiang ruled Taiwan until his death in 1975. (Library of Congress)

by force. Only in late 1936, as a result of the Xi'an (Sian) Incident, did he agree to stop the undeclared GMD-CCP civil war and lead the nation to fight the Sino-Japanese War (1937–1945).

As soon as the Sino-Japanese War ended, Jiang resumed the civil war, which was officially declared in 1947. Despite massive U.S. aid dating back to 1941, Jiang lost the civil war and the Chinese mainland to the CCP in October 1949. He was then forced to relocate the GMD to Taiwan.

In Taiwan, Jiang immediately reestablished the ROC and resumed the presidency, still entertaining the idea of controlling the mainland. As he had done in the Sino-Japanese War, Jiang, through his Americanized wife Song Meiling, sought American assistance by presenting himself as the one true leader of China. This effort, however, met no success, as the United States had no overwhelming interest in aiding the ROC.

U.S. assistance finally came in the 1950s, first during the Korean War when America stood ready militarily to defend the ROC's sovereignty and again in late 1954 when the People's Republic of China (ROC) heavily shelled the offshore islands in the Taiwan Strait, provoking the First Taiwan Strait Crisis. Determined to halt further PRC advances, the U.S. government concluded a mutual security treaty with Jiang on 2 December 1954 that acknowledged the U.S.-ROC alliance and promised U.S. assistance in defending Taiwan. In return, Jiang granted the U.S. rights to deploy military forces on Taiwanese territories, which later facilitated American military actions during the Second Taiwan Strait Crisis (1958) and the Vietnam War.

With U.S. aid, Jiang ensured not only the ROC's defense against the PRC but also the rapid modernization and Westernization of Taiwan. These efforts included a Western-style constitution, agricultural reform, and rapid industrialization, which helped raise Jiang's credibility. Diplomatically and politically, Jiang remained the legitimate Chinese leader, retaining the legal seat in the United Nations Security Council as one of the so-called Big Five. Despite his somewhat dictatorial rule in Taiwan, he was still regarded as the leader of free China, competing against the PRC on the mainland.

Jiang died in Taipei on 5 April 1975. Shortly after his death, the U.S.-ROC alliance came to an end as the PRC and the U.S. normalized relations.

Communist Chinese political leader and influential wife of Mao Zedong. Born in Zhucheng, Shandong Province, in March 1914, Jiang Qing enrolled at the Experimental Arts Academy in early 1929. To pursue an acting career, she moved to Shanghai, Jiangsu, in 1933. After the Sino-Japanese War broke out in 1937, she fled to the Chinese communist base in Yan'an, Shaanxi. The following year she joined the Chinese Communist Party (CCP) and became the mistress of CCP leader Mao. In the autumn of 1939 Jiang married Mao but was largely kept from public life until the 1960s.

Jiang's political ascendancy began in 1966 when Mao, now the chairman of the Central Military Commission, appointed her the chief cultural advisor of the People's Liberation Army and deputy head of the Cultural Revolution Group. Mao's intention was to revive the class struggle so as to assert his monolithic power and leadership within the People's Republic of China (PRC) and the communist bloc as a whole. This sparked the infamous Cultural Revolution (1966–1976), an ultraleftist movement aimed at rooting out the petty bourgeoisie, rank privileges, and bureaucracy from China while at the same time building Mao's cult as a true Marxist.

Under Jiang's leadership, a number of senior officials, including Deng Xiaoping, Lin Biao, and Liu Shaoqi, fell victim to political purges. During the Cultural Revolution, imposing statues and pictures of Mao were erected and ubiquitously posted throughout China, designed to foster the so-called cult of personality that Mao sought. In the cultural realm, Jiang replaced the traditional Beijing Opera with revolutionary ballet and destroyed Chinese museums that memorialized China's feudal past. Jiang's reign of terror ended in October 1976 when she was arrested by Premier Hua Guofeng, who seized control of the PRC upon Mao's death.

In January 1980 Jiang was charged with conducting a counterrevolution and put on trial. She was sentenced to the death penalty, which was later commuted to life imprisonment. Jiang died in Beijing on 14 May 1991.

Jinmen and Mazu

Two island groups in the Taiwan Strait and the source of military tensions between the People's Republic of China (PRC) on the mainland and the Republic of China (ROC) on Taiwan. Jinmen, known to Westerners as Quemoy, and its eleven smaller islands totaling 95 square miles are located at the mouth of the Bay of Xiamen off the mainland's Fujian Province along the southeastern coast, 170 miles northwest of Taiwan's southwestern port of Gao Xiong. North of the Jinmen Islands is Mazu (Matsu) and its smaller eighteen islands totaling 18 square miles, situated off Fujian's Min River and 130 miles northwest of Taiwan's port of Jilong.

Finally convinced of its defeat by communist forces in the Chinese Civil War (1947–1949), the Guomindang (GMD, Nationalist) government gave up the mainland and fled to Taiwan in early 1949, the largest and farthest offshore island from Fujian in the Taiwan Strait. The GMD also retained a number of smaller islands, including Jinmen and Mazu, close to the mainland. The GMD held these islands for two main purposes: as a strategic fortress to defend the relocated ROC and as a springboard to retake the mainland in the future. Once settled, the GMD government issued the Emergency Decree, which imposed martial law on all territories under its jurisdiction. Jinmen and Mazu were placed under military administration and were heavily reinforced.

To the leaders of the Chinese Communist Party (CCP), the GMD's continued possession of the offshore islands meant that the PRC's birth on 1 October 1949 was merely a de facto termination of the civil war. Hence, securing the Taiwan Strait became the PRC's primary task, and the first attempt to liberate the offshore islands took place on 25 October 1949 in the Battle of Kunington, when 10,000 PRC troops departed Xiamen and landed on Jinmen's northern shore. They were quickly repelled by GMD troops, however. Half of the PRC troops were killed, while the rest surrendered at Kuningtou, a northern coastal village of Jinmen on 28 October 1949.

The second attempt to liberate the Taiwan Strait was scheduled for October 1950, after the PRC had successfully taken all the islands off Guangdong Province in August 1950. This campaign, however, was postponed because of PRC intervention in the Korean War (1950–1953).

The PRC finally launched another attempt to secure the Taiwan Strait in September 1954, when it began the bombardment of Jinmen from the Fujian coast, provoking the First Taiwan Strait Crisis (1954–1955). Because of the U.S. defense commitment to the ROC in accordance with the Mutual

Defense Treaty signed in December 1954 and because of other diplomatic considerations, the PRC scaled down the shelling, ending the crisis in May 1955. Jinmen and Mazu remained under ROC control.

In August 1958, the PRC began a new massive shelling of Jinmen, leading to the Second Taiwan Strait Crisis. Besides liberation, the PRC manipulated this bombardment to test the U.S.-ROC alliance. Despite its pledge to defend Taiwan, the United States had never clearly stated whether Jinmen and Mazu were entitled to American protection, a question stemming from the vagueness of the 1954 treaty. In the 1958 crisis, however, the Americans finally clarified that both Jinmen and Mazu fell within the U.S. defensive line. Besides providing naval forces to assist the GMD in reinforcing the defensive capacities on the islands, the United States threatened to retaliate with nuclear weapons. With American intentions now quite clear, the PRC's bombardment subsided, ending the crisis in October 1958.

American readiness to defend Jinmen and Mazu was reiterated during the 1960 presidential election. Both Republican candidate Richard Nixon and Democratic candidate John F. Kennedy pledged to use military force, including nuclear weapons, to defend the islands, but this commitment was never tested, as both the PRC and the ROC lost interest in upsetting the status quo in the Taiwan Strait.

However, tensions continued between the Fujian coast and Jinmen and Mazu throughout the remainder of the Cold War, including routine and periodic exchanges of bombardment and the conduct of sabotage activities on both sides. Calm in the Taiwan Strait gradually set in during the 1980s after the PRC established a formal diplomatic relationship with the United States and the ROC decided to pursue nonofficial people-to-people diplomacy to improve its relationship with the PRC. As such, the military importance of Jinmen and Mazu was rendered moot. In 1985 martial law was lifted, and in 1992 both Jinmen and Mazu were returned to civilian administration. In 2001, as a result of nearly two decades of consultations, the PRC and the ROC created the so-called Little Three Links, or the Mini Three Links, allowing direct postal, transportation, and trade links between Fujian and the Jinmen-Mazu islands, which established the basis for a future China-Taiwan reunification.

Jinnah, Mohamed Ali (1876–1948)

Indian lawyer, Pakistani nationalist, founder of Pakistan, and first governor-general (1947–1948). Born on 25 December 1876 in Karachi, Mohamed Ali Jinnah was sent to Bombay to receive his primary education at the Gokul Das Tejpal School. He then attended the Church Mission High School and passed the matriculation examination to Bombay University. In 1892 he elected to travel to England where he studied law, becoming in 1896 the youngest Indian ever called to the bar. He returned to India that same year and worked as an attorney until 1906, when he was appointed advocate of the Bombay High Court. In 1908 he supported the future constitution of India as proposed by the Indian National Congress. He soon came to occupy a unique position as both an important lawyer and ardent nationalist.

In 1909 Jinnah was elected to represent the Muslims of Bombay in

India's Supreme Legislative Council. In 1916 he was again elected by the Muslims of his province to the Imperial Legislative Council. Eschewing Mohandas Gandhi's approach of boycotting all aspects of British rule in India as a way to effect independence, Jinnah advocated a moderate approach of cooperation with the British to bring about a gradual transfer of power.

In December 1920 Jinnah resigned from the Indian National Congress to protest Gandhi's call for noncooperation, which Jinnah warned was bound to be counterproductive. Ultimately, he was proven right. For several decades, he labored to unite colonial India's Hindu and Muslim populations into a working democratic union. He was not successful, and he finally became convinced that there was no alternative other than the creation of a separate Pakistani entity.

On 14 August 1947 Pakistan became an independent state, and Jinnah became the nation's first governor-general. At the time, Pakistan was the world's largest Muslim country, with a population of nearly 80 million people. On 15 August, Jinnah outlined his principles of Pakistani governance. They included the preservation of peace and the right of all peoples to live with dignity and honor. Although he was dying from tuberculosis, as governor-general he gave some fifty-five speeches, many of which outlined the future constitution of Pakistan and its policies. After less than a year in office, Jinnah died in Karachi on 7 August 1948.

NILLY KAMAL

Mohamed Ali Jinnah was the architect of Pakistani independence. The Muslim Jinnah first united with the Hindus in fighting British rule but then opted for a separate Muslim state, a decision that ultimately led to the partition of the Indian subcontinent and the creation of Pakistan. (UPI/Bettmann/Corbis)

Saiyid, Matlubul Hasan. *Mohammad Ali Jinnah: A Political Study*. Karachi: Elite, 1970.

Extreme right-wing U.S. political organization founded by Robert Welch in 1958; ostensibly bipartisan but essentially a mouthpiece for archconservatives in the Republican Party. The society was named after John Birch, an American missionary and intelligence operative murdered by Chinese communists in 1945. The organization claims that Birch was the first U.S. casualty of the Cold War.

Welch began the John Birch Society in Indianapolis, Indiana, as a way to fight the threat of communism in America and to champion what he termed the “free-enterprise system.” In many ways, the organization was a vestige of McCarthyism, which raged on the U.S. home front in the early and mid-1950s.

A group enamored with wild and convoluted conspiracy theories, the John Birch Society campaigned rabidly against the civil rights movement in the 1960s. It went so far as to claim that the movement was a “communist plot” designed to tear the nation apart. The society is also known for its anti-Semitism. Over the decades the John Birch Society has taken strong stances against globalization, free trade, welfare, immigration, and the United Nations (UN), for which it holds particular antipathy.

By 1961, the John Birch Society may have had as many as 60,000–100,000 dues-paying members. Convinced that the world system was run by a small circle of internationalists and collectivists bent on world domination, the society launched a number of prominent petition, letter-writing, and lobbying campaigns designed to advance its agenda. Welch and other members of the organization denounced President Dwight D. Eisenhower and Secretary of State John Foster Dulles as vehicles of the “communist conspiracy.” The conservative pundit and writer William F. Buckley, a one-time friend of Welch, dismissed such claims as “idiotic.”

The John Birch Society reached the peak of its influence during the 1964 presidential campaign. Welch and a number of John Birchers strongly backed Arizona Senator Barry Goldwater’s 1964 bid to oust President Lyndon Johnson from the White House. After Goldwater lost the election by an overwhelming electoral defeat, the society lost some of its luster. Rightist Republicans also began to distance themselves from the reactionary movement. Nevertheless, the John Birch Society continued to spin conspiracies and agitate for the far Right. In the 1970s, the society denounced President Richard Nixon’s administration for its environmental policies, health and safety laws, and opening of diplomatic relations with the People’s Republic of China (PRC).

John Birch Society

By the mid-1980s, the John Birch Society had suffered significant membership losses, although because of its decentralized and secretive makeup it is difficult to say how much. However, by the early 1990s the society was on an upswing. This was fueled by the UN's participation in the Persian Gulf War, President George H. W. Bush's pronouncement of a "New World Order," and the rise of antic, rightist radio talk show hosts. The advent of the Bill Clinton administration gave the society more grist, and it came out vocally in support of his impeachment after the Monica Lewinsky scandal. The John Birch Society continues on, undeterred, and lobbies against free trade and the UN, among other issues.

John XXIII, Pope (1881–1963)

Roman Catholic prelate and pope (1958–1963). Pope John XXIII was born Angelo Giuseppe Roncalli on 25 November 1881 in Sotto il Monte, Italy. The fourth son in a peasant farming family of fourteen children, he entered the Bergamo Seminary at age eleven, studied at the Pontifical Roman Seminary during 1901–1905, and was ordained a priest in 1904. Roncalli served as the secretary to the bishop of Bergamo during 1905–1915 and also served in World War I as a sergeant, first in the medical corps and then as a chaplain.

Following the war, Roncalli was called to Rome to head the Society for the Propagation of the Faith. Named an archbishop in 1925, he was dispatched as a diplomatic representative successively to Bulgaria, Turkey, and Greece and then as papal nuncio to France in 1944. In 1953 he was named patriarch of Venice and was made a cardinal.

Elected pope on 28 October 1958, Roncalli took the name John XXIII. He immediately reached out to non-Catholics, advancing the Church's ecumenism with other denominations including Greek Orthodox and the Church of England. He was the first pope in 400 years to meet with the archbishop of Canterbury. Far more approachable and down-to-earth than his predecessor Pius XII, Pope John XXIII embarked on the first official papal act off Vatican property since 1870 by visiting prisoners, telling them that "you could not come to me, so I came to you."

On 25 January 1959, John XXIII announced his intention to convene a council to renew the Church in the modern world, promote diversity within the Church, and consider reforms promoted by modern ecumenical and liturgical movements. Vatican Council II, convened on 11 October 1962, was the first council called not to combat heresy, pronounce new dogma, or marshal the Church against hostile forces. The council revolutionized the Church by making it more open and accepting of varying forms of worship. When it ended in 1965, the legacies of the Vatican Council II were quite clear: Latin was dropped as the official language of liturgical services, the role of music during Mass was reinvigorated, bishops were given more authority to tailor services to meet their unique diocesan needs, and ecumenism became a priority. Vatican Council II was undoubtedly the pope's greatest achievement.

Pope John XXIII's two encyclicals, *Mater et Magistra* (Mother and Teacher, 1961) and *Pacem in Terris* (Peace on Earth, 1963), clearly demonstrated his commitment to international social justice and worldwide peace. His encyclicals advocated social reform, assistance to underdeveloped countries, a living wage for all workers, and equality among all peoples and issued a specific condemnation of racism.

John XXIII, although he had roundly condemned "the mistakes, greed and violence" of Soviet rulers, came to believe by 1962 that communism was no worse than many other problems that the Church had faced in the past. The Soviets were openly grateful for the pope's mediation efforts during the 1961 Berlin Crisis and the 1962 Cuban Missile Crisis. Reflecting the Vatican's new attitude toward the communist bloc, Russian Orthodox clergy were invited to observe the Vatican Council meetings, and in 1963 the pope granted an audience to Soviet Premier Nikita's Khrushchev's son-in-law. Pope John XXII died in Rome on 3 June 1963. His successor was Paul VI.

John XXIII was only pope from 1981 to 1983, but he had an influential pontificate. He reached out to non-Catholics and called Vatican Council II, which made the church more open and tolerant of different forms of worship. (Bettmann/Corbis)

John Paul II, Pope

(1920–2005)

Roman Catholic prelate and pope (1978–2005). Born in Wadowice, Poland, on 18 May 1920, Karol Józef Wojtyła grew up in humble circumstances and knew hardship as a youth. His mother died when he was just nine years old, and he lost his only sibling—a brother—when he was twelve years old. An engaging young man who was an exemplary student, Wojtyła enrolled in the faculty of philosophy at Jagellonian University in Kraków in 1938. During the 1938–1939 academic year, he joined the experimental theatrical group known as Studio 38, showing great interest in and proclivities toward acting. He began exhibiting a keen interest in the writings of St. John of the Cross and St. Teresa of Avila, which propelled him toward the study of theology and complemented his deep-seated faith. To avoid imprisonment under the German occupation after September 1939, he was forced to work first in a stone quarry beginning in late 1940 and then in a chemical plant in early 1942. That same year he clandestinely entered an underground seminary in Kraków and enrolled in the faculty of theology at Jagellonian University.

Pope John Paul II during a visit to the United States, 4 October 1979. (Library of Congress)

Wojtyła continued to work in the chemical plant while studying. In August 1944 he was transferred to the archbishop of Kraków's residence, where he remained until Poland was liberated by Soviet forces in 1945. In 1946 Wojtyła completed his fourth year of studies, was ordained a priest, and left for Rome for postgraduate studies. In 1947 he earned his licentiate in theology. The following year he earned a master's degree and doctorate in sacred theology from Jagellonian University. In the late 1940s and into the mid-1950s, he served in a variety of pastoral positions in Poland, began to publish, and ultimately was appointed as chair of ethics at Poland's Catholic University in Lublin in 1956. He was named auxiliary bishop in the archbishopric of Kraków in 1958, becoming its archbishop in 1964. He also participated in the proceedings of Vatican Council II during 1962–1965. All the while, he labored under the considerable restrictions of communist-controlled Poland, which was openly hostile toward organized religion, especially the Catholic Church.

Wojtyła was named a cardinal by Pope Paul VI in 1967. During the early to mid-1970s, Cardinal Wojtyła—by now a well-respected philosopher and theologian—continued to publish prolifically on a wide range of scholarly and theological topics. He also traveled extensively and spent many months at the Vatican, where he taught, lectured, and participated in influential synods. On 16 October 1978, following the death of Pope John Paul I, Wojtyła confounded the pundits when he was elected pope on the eighth balloting. In honor of his immediate predecessor, he took the name John Paul II and became the first non-Italian pope in

455 years. At age fifty-eight, he was also an unusually youthful pontiff who was an avid skier and hiker.

From the very beginning of his pontificate John Paul II, who spoke eight languages, eschewed many of the trappings of his office. Instead, he became known as a master communicator who relished personal contacts, wading into huge crowds to kiss babies, hug the young and infirm, and talk with some of the estimated 17.6 million people who visited St. Peter's Square during his twenty-six-year papacy.

Just eight months into his pontificate, John Paul II paid an emotional nine-day visit to his native Poland, the first pope to visit the nation. His sojourn caused great consternation among communist officials, who feared that the pope's strong anticommunist sentiments would result in popular unrest. Although this did not immediately happen, communist officials had much to worry about. By the early 1980s, John Paul II had tacitly aligned himself with Poland's Solidarity movement and, by the early 1990s, was credited with being a key force behind the 1989 Velvet Revolution that swept away communist rule in Eastern Europe and hastened the end of the Cold War.

Pope John Paul II was the most visible and well-traveled pontiff in the 2,000-year history of the Church. During his tenure he completed 104 foreign pastoral visits. He visited places that no pope had ever gone, such as Great Britain and Egypt. John Paul II was also the first pontiff to visit a predominantly Orthodox nation (Romania, in 1999) and was the first pope to visit a Muslim mosque (Damascus, in 2001). It is hard to overstate the impact that John Paul II had on world politics, as he reached out in an unprecedented way to the world's Jews as well as Muslims and non-Catholic Christians.

In affairs of social justice, faith, and church governance, John Paul II was at once liberal and conservative. On most social issues, he was considered liberal and was a vocal critic of both communism and the excesses of capitalism. He frequently decried the gap between rich and poor nations and was a champion of the world's impoverished and downtrodden. He had little use for political oppression of any stripe and worked tirelessly to curb politically motivated violence. John Paul II was an ardent foe of the death penalty and of abortion, arguing that the inherent "sanctity of human life" could not be defiled by secular institutions. This stance made him popular with liberals and conservatives around the world. Yet in terms of Catholic doctrine, the pope was conservative, if not orthodox. He steadfastly refused to consider the ordination of women, the abandonment of celibacy for Catholic clergy, or the lifting of the Church's ban on contraception.

John Paul II died in Rome on 2 April 2005 after battling a series of debilitating ailments, some of which were the result of a near-mortal gunshot wound he received during a May 1981 assassination attempt in St. Peter's Square. John Paul II will be remembered not only for his humility and service to humanity—he visited his would-be assassin in prison and embraced and forgave him in 1983—but also for his role in accelerating the demise of communist rule in Europe.

PAUL G. PIERPAOLI JR. AND LUC STENGER

John Paul II was also the first pontiff to visit a predominantly Orthodox nation (Romania in 1999), and was the first pope to visit a Muslim mosque (Damascus, 2001).

Johnson, Louis Arthur (1891–1966)

U.S. secretary of defense. Born on 10 January 1891 in Roanoke, Virginia, Louis Johnson graduated from the University of Virginia Law School in 1912. Admitted to the West Virginia bar, he established his own firm and served in the West Virginia House of Delegates. During World War I he enlisted in the U.S. Army. Earning a commission through officers' candidate school, he saw combat in France and was a major by war's end. One of the founders of the American Legion and a longtime Democratic Party leader in West Virginia, he served as an assistant secretary of war from 1937 to 1940.

From 1940 to 1949, Johnson practiced law and remained active in Democratic Party politics. In return for his fund-raising efforts during the hotly contested 1948 presidential race, President Harry S. Truman named Johnson as defense secretary, replacing James Forrestal, in March 1949. Looking to reduce military expenditures and pay down the national debt, Truman ordered Johnson to conduct a complete review of the American defense structure. What resulted was the so-called Johnson Axe, which culminated in deep across-the-board military cuts. Johnson believed that Defense Department unification and closer cooperation between the services would reduce needless duplication and that the creation of a strong nuclear deterrent would hold down conventional military expenses.

Johnson's plans for atomic weapons control alienated the U.S. Navy. He advocated giving sole control over American atomic power to the U.S. Air Force and also ordered additional B-36 bombers. In addition, he canceled a key naval program, the 65,000-ton flush-deck aircraft carrier *United States*. When Secretary of the Navy John Sullivan resigned in protest, Johnson replaced him with a fund-raising friend, Francis Matthews, derisively known as the "rowboat secretary" for his complete lack of naval experience. Leading naval officers were outraged, and in congressional hearings during the so-called Revolt of the Admirals, the navy slandered the air force by denigrating the abilities of the B-36. When Johnson promptly sacked Chief of Naval Operations Admiral Louis Denfeld, other naval officers resigned in acrimonious

protest. Only after much wrangling did the Defense Department reach a consensus that the nation needed multiple nuclear options to deal with the Soviet threat.

Johnson's tenure at the Pentagon proved short and stormy. His legendary acerbity no doubt contributed to his downfall, but his decisions also failed to soothe the interservice rivalries in the formative years of the Defense Department. Secretary of the Air Force Stuart Symington resigned over budget cuts, and Secretary of the Army Kenneth Royall departed because of racial integration of the military, which Johnson strongly supported. Congressmen and senators found their constituents unhappy with the impact of defense cuts on local economies. When the Korean War exposed America's military unpreparedness in the summer of 1950, Johnson became a political liability and a convenient scapegoat. Although Truman himself had pushed for defense cutbacks, at the president's request Johnson resigned his post and left the Defense Department on 19 September 1950. Returning to private life, he practiced law until his death in Washington, D.C., on 24 April 1966.

Democratic politician, U.S. congressman (1938–1949), U.S. senator (1949–1961), vice president (1961–1963), and president of the United States (1963–1969). Lyndon Johnson was born in Stonewall, Texas, in a farmhouse on the Pedernales River on 27 August 1908. His early life was touched by rural poverty, which would later make him a champion of the poor and underprivileged. He worked his way through Southwest Texas State Teachers College and subsequently taught mostly poor Mexican students in an inner-city Houston high school.

**Johnson, Lyndon
Baines**
(1908–1973)

Lyndon B. Johnson, one of the most controversial U.S. presidents of modern times, fought hard for civil rights and education and sought to use the nation's wealth to eradicate poverty. Johnson also increased the U.S. commitment to the Vietnam War, which in the end consumed his presidency. (Library of Congress)

In 1931 Johnson became active in Democratic Party politics and that same year went to Washington, D.C., to serve as secretary to a Texas congressman. A shrewd, brilliant, and sometimes overbearing politician, Johnson honed his political skills early on and successfully won a seat in the U.S. House of Representatives in 1937, which he retained until 1949. During World War II he served briefly as a lieutenant commander in the U.S. Navy.

In 1948 Johnson won election to the Senate and in 1953 became its youngest majority leader in history. As majority leader, he worked with President Dwight D. Eisenhower's administration to maintain a bipartisan foreign policy. Johnson was instrumental in defeating the proposed Bricker Amendment, which would have prohibited executive agreements with foreign powers, and also supported the Formosa Resolution and the Eisenhower Doctrine.

In 1960 Johnson was elected vice president on the Democratic ticket with President John F. Kennedy. Riding in the Dallas motorcade on 22 November 1963 during which Kennedy was assassinated, Johnson was sworn in as president that same day in Dallas and moved decisively to bring the mourning nation together in the days and weeks after Kennedy's murder. Taking advantage of the outpouring of grief immediately following the assassination, Johnson mustered his pitch-perfect political skills to ensure congressional passage of the landmark 1964 Civil Rights Act, which forbade discrimination in all public places and in hiring practices based on race, religion, sex, or national origin. This success marked one of the high points in the ongoing civil rights movement. He also pushed through Congress a series of stimulative tax cuts that had originally been proposed by Kennedy. Hugely popular, Johnson won

the presidency in his own right in the November 1964 election, handily defeating his conservative Republican opponent, Barry Goldwater, with 61 percent of the popular vote.

Despite the lengthening shadows cast by the Vietnam War, Johnson took full advantage of his electoral mandate by ushering in some of the most far-reaching domestic reforms since the New Deal. After much arm-twisting, Johnson pushed the 1965 Voting Rights Act through Congress and declared that the United States must "build a Great Society" in which poverty and social injustices would be eradicated. His ambitious program called for reforms in education, health care, and urban renewal and also called for the elimination of rural isolation and poverty, among many other reforms. In 1965 Congress passed the Medicare Act, a government-subsidized health care program for senior citizens and the first major initiative aimed at the elderly since the Social Security Act thirty years earlier.

Johnson soon became overwhelmed by the course of events in Vietnam. Ultimately, many of his Great Society programs languished as the war consumed additional resources and more public attention. Upon becoming president, Johnson had informed the South Vietnamese government that he would stay the course and help it secure victory over the communist insurgency. He approved OPLAN 34A, a U.S.-supported series of raids by the South Vietnamese along the Democratic Republic of Vietnam's (DRV, North Vietnam) coast. A raid on 31 July 1964, coupled with a signals intelligence-gathering DESOTO patrol by the destroyer *Maddox*, helped precipitate the Gulf of Tonkin incidents and led to the subsequent Tonkin Gulf Resolution, giving the president carte blanche to deploy U.S. forces in Southeast Asia. He used the resolution as legal justification to escalate the Vietnam War.

After the 1964 election, Johnson felt obliged to reverse the deteriorating military and political situation in the Republic of Vietnam (ROV, South Vietnam). With the support of most of his civilian and military advisors, he pursued a policy of gradual escalation beginning in 1965. In February 1965 he ordered a sustained bombing campaign against North Vietnam, code-named Operation ROLLING THUNDER. In March, he deployed the Marines to protect U.S. airbases. U.S. Army troops followed, and Johnson announced an open-ended commitment to South Vietnam in late July. By the end of 1965, he had dispatched 180,000 American troops to Vietnam. He defended his decision to escalate the war as a "political necessity" that he believed was essential to secure passage of Great Society legislation.

Other foreign policy issues came to the fore, including the 1965 American intervention in the Dominican Republic. Johnson dispatched Marines there on 28 April 1965 to protect American lives and prevent a potential communist takeover of the government. In June 1967, Johnson met with Soviet Premier Alexei Kosygin for two days in Glassboro, New Jersey, to discuss

Vietnam, the impact of the Six-Day War in the Middle East, and the potential for arms control talks and nuclear nonproliferation.

In the end, Vietnam overshadowed everything else. During 1966–1967, American troop strength in Vietnam sharply escalated, bombing increased, casualties mounted, and yet the war ground on without resolution. Johnson grew increasingly frustrated by critics of his Vietnam policies, some of which were from his own party. Public disaffection with the war also increased. Large antiwar demonstrations became commonplace by 1967, some of which resulted in violence and rioting. Meanwhile, as the war siphoned resources away from domestic programs, racial tensions increased dramatically, widespread urban riots and arson plagued the nation, and college campuses became hotbeds of political radicalism and antiwar activism. Johnson, who once seemed politically invincible, appeared incapable of dealing with the mounting crises.

In late January 1968, after the administration had assured the American public that the war was being won, North Vietnamese and Viet Cong forces launched the Tet Offensive, a nationwide military operation that destroyed the credibility of the Johnson administration. Although a tactical victory for the Americans and South Vietnamese, Tet 1968 permanently undermined American support for the war and the president who escalated it. With 500,000 U.S. troops in Vietnam and growing violence and radicalism on the home front, Johnson took the nation by surprise on 31 March 1968, following a setback in the Democratic primary in New Hampshire, by announcing that he would not seek another presidential term. He then authorized exploratory truce talks with the North Vietnamese, which almost immediately stalled as the fighting continued. Johnson left office a broken man, both physically and mentally. He was immensely unpopular by 1968 and would always be associated with America's failure in Vietnam. In retirement, he wrote his memoirs. Johnson died on 22 January 1973 at his ranch in Johnson City, Texas.

Jordan

Middle Eastern nation covering 35,637 square miles, about the size of the U.S. state of Indiana. Jordan, officially known as the Hashemite Kingdom of Jordan, borders Israel and the West Bank to the west, Syria and the Golan Heights to the north, Iraq to the east, and Saudi Arabia to the east and south. During 1516–1919, Jordan remained under the control of the Ottoman Empire. When the Ottoman Empire came to an end as a result of World War I, Transjordan (as it was then known) became a part of Britain's League of Nations mandate over Palestine in 1920. In 1921, Abdullah ibn Hussein—a member of the Hashemite dynasty—became the de facto king of Transjordan. Transjordan became a constitutional monarchy under Hussein, who was formally placed on the throne by the British in 1928 as Abdullah I. Nevertheless, it was still considered part of the British mandate. That changed in May 1946 when Transjordan was granted its independence.

A member of the Arab League when the state of Israel was created in 1948, Abdullah was obliged to fight alongside his Arab neighbors against the Israelis. Like most Arabs, he flatly rejected Zionist ambitions. In 1949 he gained control of the West Bank as a result of the war, and he officially changed his country's name to Jordan to reflect the newfound territories west of the Jordan River. That same year, Jordan signed an armistice agreement with Israel. Months later, Abdullah moved to permanently annex the West Bank, which deeply troubled Arab leaders who believed the territory should be reserved for the Palestinians. In 1951 a Palestinian assassinated Abdullah in Jerusalem, and the following year he was succeeded by his grandson, King Hussein I. Hussein ruled Jordan for the next forty-seven years.

A series of anti-Western uprisings in Jordan combined with the Suez Crisis in 1956 compelled Hussein to sever military ties to Britain. In February 1958 he formed the Arab Federation with Iraq. The king saw this as a countermeasure to the newly formed United Arab Republic (UAR), dominated by Egypt's Pan-Arab nationalist President Gamal Abdel Nasser. The Arab Federation fell apart by autumn 1958, however, after the Iraqi king was overthrown in a coup. Later that same year, leaders of the UAR called for the overthrow of governments in Beirut and Amman. Hussein fought back by requesting help from the British, who dispatched troops to Jordan to quell antigovernment protests. The Americans had simultaneously sent troops to Lebanon to bolster its besieged Christian-led government. Jordan's relations with the UAR remained tense. Indeed, in 1963 when a rival Jordanian government-in-exile was set up in Damascus, Hussein declared a state of emergency. The crisis subsided when the Americans and British publicly

King Hussein I of Jordan meets with acting U.S. Secretary of State Christian A. Herter in 1959. (National Archives and Records Administration)

endorsed Hussein's rule. For good measure, the United States placed its Sixth Fleet in the Mediterranean on alert.

After the mid-1960s and more than a decade of crises and regional conflicts, Hussein turned his attention to domestic issues. He was devoted to improving the welfare of his people, so he launched major programs to improve literacy rates (which were very low), increase educational opportunities, bolster public health initiatives, and lower infant mortality rates. In these endeavors he was quite successful. By the late 1980s, literacy rates approached 100 percent, and infant deaths were down dramatically. Jordan's economy also began to expand as the nation engaged in more trade with the outside world and as its relations with Egypt improved. Hussein also began to erect a modern and reliable transportation system and moved to modernize the country's infrastructure. Notable in all of this was that Hussein accomplished much without resorting to overly repressive tactics. Indeed, throughout the Cold War Jordanians enjoyed a level of freedom virtually unrivaled in the Middle East.

By the late 1960s, another Arab-Israeli conflict was in the making. After Egypt blockaded Israeli shipping in the Gulf of Aqaba in 1967, Hussein signed a mutual defense pact with Egypt. Normally a moderating force in volatile Middle East politics, Hussein sided with Egypt—even as Tel Aviv was imploring him to remain out of the impending war. When the fighting ended, Jordan and the other Arab nations came out on the losing end. Israel took the entire West Bank from Jordan along with all of Jerusalem.

Also as a result of the war, thousands of Palestinians fled to Jordan. By 1970 Palestinian guerrilla groups and the Palestine Liberation Organization (PLO) were in open warfare with Jordanian forces, who had unsuccessfully tried to prevent Palestinian attacks on Israel from taking place on Jordanian soil. Hussein also opposed the Palestinian aims of creating a Palestinian state in the West Bank, which he hoped to regain in the future. In September 1970, after ten days of bloody conflict, thousands of Palestinians fled Jordan for Syria and Lebanon.

The early 1970s saw continued unrest. In 1972 Hussein tried to create a new Arab federation, which would have included the West Bank as Jordanian territory. The idea was rejected by Israel and most of the Arab states. In December 1972 Hussein was nearly assassinated by a Palestinian. In the 1973 Yom Kippur War, Hussein played only a small role, ordering a limited troop deployment to fight in Syria. In 1974, he finally agreed to recognize the Arab League's position that the PLO was the sole representative of the Palestinian people.

Hussein strengthened relations with neighboring Syria beginning in the late 1970s, and he vigorously opposed the 1979 Israeli-Egyptian peace treaty. Jordan backed Iraq in the Iran-Iraq War (1980–1988). The 1980s was a period of economic chaos for the Jordanian people. This led Hussein to seek U.S. financial aid. When he chose to back Saddam Hussein in the 1991 Persian Gulf War, U.S. aid was curtailed. Saudi Arabia and Kuwait also withheld financial assistance. The economy went from bad to worse. When some 700,000 Jordanians returned to Jordan because they were unwelcome in Kuwait and Saudi Arabia, the economic situation became truly dire. Not until 2001 did the economy begin to regain its footing. King Hussein died in February 1999 and was succeeded by his son, King Abdullah II.

Juan Carlos I, King of Spain (1938–)

King of Spain who guided the return of Spanish democracy. Born in Rome on 5 January 1938 to Juan de Borbón y Battenberg (Don Juan) and Maria de Borbón-Nápoles, Juan Carlos Victor Maria de Borbón y Borbón was the grandson of Spanish King Alfonso XIII, who had been forced into exile in 1931. Alfonso formally abdicated the throne to Don Juan in 1941, but Spain's dictator Francisco Franco, although favoring a return of the monarchy, disliked Don Juan and in any case intended to retain power. In answer to Don Juan's repeated calls that he hand over power, Franco promulgated the Succession Law of 1947. This acknowledged Spain as a kingdom and legitimized royal authority but did not identify the king or the date of his restoration. Franco also made clear that the monarchy would be restored only after his death.

During World War II, Juan Carlos moved with his father and mother to Lausanne, Switzerland, and later to Estoril, Portugal. In 1948 Don Juan met Franco on a yacht off Galicia. Franco insisted that Juan Carlos be educated in Spain if there was to be any hope of the crown prince one day becoming king. Don Juan agreed, and in 1948 Juan Carlos began his education in Madrid. In 1954 Don Juan and Franco met again and agreed on higher education for Juan Carlos, who completed his studies at the

University of Madrid. In May 1962 Juan Carlos married Princess Sofia Schleswig Holstein Sondenburg of Greece. Then, in July 1969, Franco officially designated Juan Carlos as his successor and future king of Spain, which was officially approved by vote of the Spanish Cortes (parliament).

In the late 1960s and early 1970s, as Franco's health began to decline, Juan Carlos prepared for the succession, discreetly aligning himself with the *Tácito* reformist group. Juan Carlos assumed temporary powers when Franco was seriously ill during July–September 1974 and formally assumed power in Spain following the death of Franco on 20 November 1975.

Officially proclaimed king of Spain by the Cortes, Juan Carlos I announced his interest in reform. The first phase of the king's rule under President of the Government (prime minister) Carlos Arias Navarro did not go well, as Navarro sought to pursue a middle course that pleased neither reformers nor conservatives. In 1976 Juan Carlos appointed centrist politician Adolfo Suárez as president of the government. Acceptable to the Francoists, Suárez nonetheless identified with the king's desire for reform. Together they pushed through political changes that included universal suffrage and a system of political parties for the first time in Spain since the Spanish Civil War. The Cortes also became a bicameral, popularly elected parliament, and Juan Carlos announced an amnesty for political offenses. A

King of Spain Juan Carlos I, pictured here in 1978.
(Jacques Pavlovsky/Sygma/Corbis)

new constitution in 1978 saw the king yield sovereignty to the Spanish people, and Spain became a kingdom of autonomous regions.

The king's reforms created a rightist backlash among Francoists. The most serious threat came in February 1981 when rightist elements from the army and Civil Guard attempted to seize power. Juan Carlos played a key role in bringing about the collapse of the coup by immediately voicing his strong support for the constitution. The failure of the coup helped bring the Left to power in 1982, and a socialist government led by Felipe González Márquez marked the final transition to democracy. Juan Carlos I played a critical roles in this crisis and in healing the deep divisions in Spanish national life.

See Panama, U.S. Invasion of

JUST CAUSE, Operation

Dating back to Saints Ambrose (d. AD 397) and Augustine (d. AD 430), the just war tradition reflects attempts by theologians, political philosophers, and military leaders to define the requisite conditions that justify armed conflict (*jus ad bellum*) and to establish moral limits on the use of force within a war (*jus in bello*). The Cold War and the advent of nuclear weapons and nuclear deterrence posed new challenges for the application of just war principles.

The destructive power of nuclear weapons complicated application of the just war insistence on limited warfare, especially in terms of discrimination between combatants and civilians, often referred to as noncombatant immunity. For example, some viewed nuclear warfare as intrinsically opposed to the *jus in bello* criteria. Statements by two of the largest U.S. religious denominations epitomized these concerns. In a 1983 letter, the United States Conference of Catholic Bishops began their discussion of U.S. nuclear policy

Just War Theory

with a denunciation of any use of nuclear weapons against civilian sites such as cities. They went on to question the very concept that nuclear warfare could be limited or contained in any meaningful sense and called for full nuclear disarmament. Similarly, in 1986 the United Methodist Council of Bishops in the United States wrote *In Defense of Creation: The Nuclear Crisis and Just Peace* in which they too called for complete nuclear disarmament. The council specifically condemned the policy of nuclear deterrence and claimed that instead of encouraging peace, it led to perpetual hostility and encouraged a nuclear arms race and nuclear proliferation.

Other theorists, such as the Protestant theologian Paul Ramsey, believed that nuclear weapons could be used within a moral framework given the right conditions. Although Ramsey prioritized discrimination between combatants and noncombatants, for example, he thought that counterforce nuclear targeting (as opposed to counterpopulation targeting) was justifiable based on just war principles. He recognized that some noncombatants would inevitably die in a nuclear attack on military targets. Nevertheless, for Ramsey the rule of double effect as developed by just war theorists during the Middle Ages allowed for the possibility of noncombatant casualties. According to the rule, a soldier could proceed with an attack likely to harm noncombatants provided that the injury to civilians was unintentional and that the good effect of the action outweighed the negative consequences. Ramsey applied similar logic to his understanding of nuclear deterrence. Since a discriminate, proportional use of nuclear weapons was morally justifiable, according to Ramsey, the threat of nuclear retaliation was also justifiable. On the other hand, he argued that the indiscriminate use of nuclear weapons on population centers was immoral, and therefore the threat of indiscriminate use of nuclear weapons was also immoral. Based on these criteria, he repudiated the policy of mutual assured destruction (MAD) and urged policymakers to develop a new generation of low-radiation yield, discriminate nuclear weaponry.

Unlike the approach taken by Ramsey and other theological writers, Michael Walzer's *Just and Unjust Wars* articulated just war principles within the context of an emphasis on human rights. Walzer's theory of supreme emergency in particular left room for immoral acts in extreme circumstances. He suggested that a political community had a right to defend itself and temporarily abrogate the moral limitations on warfare if its very existence was threatened and if all other options had been exhausted. Although not restricted to nuclear warfare, this principle left a narrow opening for counterpopulation nuclear threats and for counterpopulation nuclear warfare.

Just war positions during the Cold War developed around other themes as well. Some condoned the possession of nuclear weapons for deterrence purposes but objected to any actual use of the weapons. Others emphasized a no-first-use policy and insisted that nuclear bombs only be used in retaliation for nuclear attacks. Still others saw nuclear weapons as an acceptable response to conventional attacks under certain circumstances. Another area of debate centered on the morality of seeking nuclear superiority.

The demise of the Soviet Union in 1991 and the end of the Cold War diminished the immediate threat of nuclear attack and signaled a new context for just war theorizing regarding nuclear ethics.

K

Hungarian communist politician, general secretary of the Hungarian Communist Party, and de facto leader of Hungary (1956–1988). Born János Csermanek on 26 May 1912 in Fiume (now Rijeka), János Kádár had almost no formal education. He joined both a labor union and the outlawed Communist Party in his teens. During the next several years he was repeatedly arrested and imprisoned for his political activities.

In 1942 Kádár joined the Communist Party's Central Committee and in 1944 became its chief secretary. In 1946 he became deputy general secretary of the party, and during 1948–1950, following the communist takeover, he was minister of internal affairs and head of the Budapest secret police. In 1949 he participated in the show trial of party member László Rajk. Kádár was subsequently arrested in April 1951 on charges of treason against the party and in 1952 was sentenced to life imprisonment.

In July 1954, following the thaw after the death of Josef Stalin the year before, Kádár was released and given new assignments in the party. On 25 October 1956, two days after the outbreak of the Hungarian Revolution, he replaced Ernő Gerő as general secretary of the party and retained this position until May 1988. Between 30 October and 4 November 1956, Kádár was the deputy prime minister in Imre Nagy's reformist cabinet. Kádár appeared to support Nagy's liberal reform policies but in fact favored less radical changes. On 2–3 November 1956, Kádár was in Moscow negotiating a reversal of the revolution with Soviet leaders. He then returned to Hungary and at Szolnok, about 80 miles southeast of Budapest, openly denounced Hungary's withdrawal from the Warsaw Pact. On 4 November Soviet tanks rolled into Budapest. Kádár returned to Budapest on 7 November and, with Soviet support, took control

Kádár, János

of the government. The next day, he announced the formation of the Revolutionary Worker-Peasant Government and its Fifteen-Point Program.

By June 1957 Kádár had stabilized Hungary and secured his position as the most prominent political leader in the country. In doing so, he instituted repressive measures under which Nagy and his fellow reformists were ultimately tried and executed in 1958. This resulted in international condemnation and several years of political isolation for Kádár's government. By the late 1960s, however, Kádár began to implement his so-called Goulash Communism that brought improved relations with the West, a rising standard of living, and relative freedom from Soviet interference. In 1977 Pope Paul VI received Kádár at the Vatican, which symbolically marked the end of Hungary's moral and diplomatic isolation.

Kádár was elected general secretary of the party's Central Committee in 1985. However, by the end of the decade he found it difficult to adapt to Soviet President Mikhail Gorbachev's reform initiatives. By then, Kádár's presence in the party had become an obstacle to internal development and reform. In May 1988 he was relieved as general secretary and assumed the mostly ceremonial post of party president. A year later he was removed from the presidency and ousted from the Central Committee. Kádár died shortly thereafter, on 6 July 1989, in Budapest.

Kaganovich, Lazar Moiseyevich

(1892–1991)

Soviet leader and close associate of Soviet dictator Josef Stalin. Born on 22 November 1892 into a working-class Jewish family in Kabanay near Kiev in Ukraine, Lazar Kaganovich did not receive a formal education. As a teenager he worked in a tannery and became a cobbler. He joined the Bolshevik Party in 1911 and participated in the Bolshevik Revolution of November 1917.

During the 1920s Kaganovich held a succession of important posts in the Communist Party in Ukraine. Called to Moscow, he was appointed first secretary of the party committee in the capital in 1930, in effect mayor of the capital city. Here he supervised construction of the Moscow subway and, later, the purging of the city's party organization. He also became a full member of the Politburo of the Communist Party of the Soviet Union (CPSU).

Kaganovich supported Stalin against his popular rival, Sergei Kirov, who wanted to slow the pace of collectivization and industrialization in the early 1930s. Kaganovich also played a major role in the collectivization of agriculture, which brought the deaths of millions of peasants. A slavish admirer of Stalin, Kaganovich was one of the few “old Bolsheviks” to survive the Great Purges of the 1930s, in which he took an active part. Along with Stalin and Vyacheslav Molotov, Kaganovich signed the death warrants of thousands of Soviet citizens.

Closely identified with Soviet domestic affairs and in particular with the railroads (a traditional Bolshevik stronghold), Kaganovich was minister for transport (1935–1937), heavy industry (1937–1939), and the fuel industry (1939). He became deputy premier in 1938, and during World War II he played an important role as part of the five-man council that supervised the Soviet Union’s economy.

A prominent member of the collective leadership after the death of Stalin in March 1953, Kaganovich strongly opposed the de-Stalinization policies of his former Ukrainian protégé, Soviet leader Nikita Khrushchev. In 1957 Kaganovich joined with fellow hard-liners Nikolai Bulganin and Molotov in an effort to unseat Khrushchev in the so-called Anti-Party Affair. In sharp contrast to what would have occurred under Stalin, Khrushchev expelled Kaganovich from his posts and the party and banished him to Sverdlovsk as manager of a cement factory. Kaganovich died in Moscow on 25 July 1991.

Japanese Liberal Democratic Party (LDP) politician and prime minister (1989–1991). Born on 2 January 1931 in Aichi Prefecture and graduating in 1954 with a degree in law from Waseda University, Kaifu Toshiki was first elected to the Japanese parliament (the Diet) on the LDP ticket in 1960.

Kaifu Toshiki
(1931–)

Kaifu twice served as minister of education before being unexpectedly elevated to the premiership on 9 August 1989. He was selected for his clean image after a political crisis that tainted most of the LDP leaders. Quick to appreciate the shrinking Soviet sphere of influence, he pursued an active economic agenda in Eastern Europe and Central Asia. When he visited Europe in January 1990, just two months after the fall of the Berlin Wall, he promised nearly \$2 billion in aid to Hungary and Poland as well as encouraged Japanese investment in Eastern Europe.

Kaifu was slower to embrace the new Russia. At his personal insistence, the Japanese Defense Agency dropped any reference to a Soviet threat in its 1990 annual report. At the July 1990 G7 Summit, he placed the Kurile Islands territorial dispute on the agenda, seeking return of this Japanese territory given to the Soviet Union after World War II. He also resisted large-scale aid to the Soviets.

When Soviet President Mikhail Gorbachev visited Tokyo in April 1991, he left empty-handed. At the July 1991 G7 Summit, Kaifu opposed Russia's admission to the G7, the International Monetary Fund (IMF), and the World Bank. In sharp contrast, he took the lead in restoring ties with the People's Republic of China (PRC) following the June 1989 Tiananmen Square massacre. By January 1991 Japan had lifted its limited sanctions against China, and in August Kaifu became the first G7 leader to visit Beijing.

Upon the outbreak of the Persian Gulf War in August 1990, Kaifu's political stature declined precipitously. A proposed bill to authorize the dispatch of Japan's Self-Defense Forces to the Gulf met with strong domestic opposition and was abandoned in the autumn of 1990. A revised bill was introduced the following year, and in addition to the \$13 billion that Japan contributed to the war effort, Kaifu sent a minesweeping flotilla to the Gulf, albeit after the fighting had ended. He resigned as premier on 5 November 1991 after failing to win support for electoral reform from powerful LDP factions. Kaifu left the LDP and became a leading figure in several major opposition parties before rejoining the LDP in November 2003.

KAL Flight 007

(1 September 1983)

Downing of a civilian Korean Airlines (KAL) jetliner by Soviet air defenses that killed 269 people and heightened Cold War tensions. U.S. President

Ronald Reagan condemned the Soviet destruction of KAL Flight 007 in September 1983, pointing to the incident as further proof for his claim that the Soviet Union was an “evil empire.” U.S. officials exploited the tragedy to gain leverage in the Soviet-American Cold War confrontation that had been rekindled in the early 1980s. For a decade, bitter accusations and indignant rebuttals only added to the mystery of why a civilian aircraft strayed into sensitive Soviet airspace.

Shortly before 3:30 A.M. on 31 August 1983, KAL 007 departed Anchorage, Alaska, after refueling on the final leg of its New York to Seoul route. On board the Boeing 747 were 269 people. Several minutes after takeoff, the jet deviated from its assigned course, straying twice over the Kamchatka Peninsula and then Sakhalin Island, the location of a major Soviet military installation. Five hours after the flight left Alaska and with the plane approximately 11 miles off Moneron Island, which itself is 30 miles southwest of Sakhalin’s southern tip, Soviet Air Defense Force Colonel Gennady N. Osipovich fired two missiles from his SU-15 fighter that struck KAL 007. Minutes later, the jumbo jet plunged into the sea. All aboard perished, including 61 U.S. citizens, among them U.S. Representative Larry P. McDonald, a Georgia Democrat.

President Reagan immediately decried the downing as an “act of barbarism” directed “against the world and the moral precepts which guide human relations among people everywhere.” Soviet leader Yuri Andropov insisted that the KAL 007 flight was a deliberate attempt to spy on or provoke the Soviet Union. Reagan ordered the U.S. Eighth Army in the Republic of Korea (ROK, South Korea) on full alert, and its commander advised the press that nations of the northern and western Pacific area should prepare for the possibility of war.

Meanwhile, conflicting explanations for the tragedy were emerging. Because an American RC-135 spy plane had flown near Sakhalin earlier on the night of the attack, the incident likely was a case of mistaken identity. But KAL also shared the blame. In 1983, KAL was combating its negative reputation for flight delays with an unusual policy that paid pilots a bonus to arrive on time “any way they can.” But uncertainty persisted because the Soviet government, denying any culpability, waged a campaign to keep U.S. investigators away from the crash site.

In 1993, Russian President Boris Yeltsin ended speculation about the doomed flight when he released the in-flight data recordings that the Soviets had discovered amid KAL 007’s wreckage. A series of navigational errors shortly after takeoff had taken the airliner some 300 miles north of its intended route. For more than two hours, the Korean flight crew was unaware that the plane was off course and was flying over forbidden Soviet airspace. Soviet air defense, meanwhile, tracked the intruding aircraft and made attempts at identification. The pursuit pilot reported that unlike a spy plane, the aircraft had its navigation lights aglow. Because Soviet rules of engagement required air defense forces to shoot down any intruder that ignored a warning, Colonel Osipovich tipped his wings and fired warning cannons. Apparently, the Korean crew neither saw nor heard these signals. His efforts at identification having failed, the Soviet pilot followed orders to shoot, reporting tersely that “the target is destroyed.”

For a decade, bitter accusations and indignant rebuttals only added to the mystery of why a civilian aircraft strayed into sensitive Soviet airspace.

The U.S. Navy submersible *Deep Drone* being readied for deployment from the U.S. Navy fleet tug *Narragansett* during the search for Korean Airlines Flight 007, 1 July 1984. (U.S. Department of Defense)

Soviet leaders soon learned that the intrusion was the result of navigational error, but they refused to admit it. This allowed the Reagan administration to initiate a major public relations effort to discredit the Soviets. On 6 September, the United Nations (UN) Security Council for the first time watched a video supporting the U.S. contention that a Soviet pilot wantonly shot down what he knew was a passenger jetliner. The purpose of the display was to use the KAL 007 incident to undermine Soviet integrity, thereby blunting Moscow's so-called peace campaign to dissuade America's European allies from basing upgraded U.S. nuclear weapons on their soil.

U.S. officials knew the truth, however, because top secret American intelligence stations near the Soviet border had monitored the pursuit of KAL 007 minute by minute, recording how the Soviets believed that the intruder was a military plane but realized their error too late. Reagan and his aides refused to attribute the incident to mistaken identity or bureaucratic rigidity. One reason for this was to keep secret the reach of American intelligence, but more important was scoring a propaganda victory that Reagan defenders would argue helped win the Cold War.

Noncontiguous region of the Russian Republic located on the Baltic Sea and separated from Russia proper by the territories of Lithuania and Belarus. The Kaliningrad Oblast had previously been part of the northern third of German East Prussia. During World War II the area was occupied by the Red Army. In Section V of the Potsdam Protocol at the July 1945 Potsdam Conference, the Allied leaders agreed that "pending the final determination of territorial questions at the peace settlement," the city of Königsberg (now Kaliningrad) and area adjacent to it would be transferred to the Soviet Union. Moscow was anxious to secure the area as a base on the Baltic Sea.

The Kaliningrad Oblast is 5,830 square miles in area, and Königsberg's 1945 population was 140,000 people. Most of the Germans who had previously inhabited the territory fled the advancing Red Army or were expelled after the fighting in the area ended in April 1945. The city of Königsberg was 90 percent destroyed during a two-month Soviet siege, and civilian casualties were extremely high.

The Soviets began rebuilding the city in 1946 and renamed it Kaliningrad. Historical sites that had survived the fighting, such as Königsberg Castle, were destroyed by the Soviets in an effort to eradicate the former German presence. Kaliningrad, connected to the Baltic Sea by an inland channel, and its nearby port, Baltiysk (Pillau), remain ice-free year-round and served during the Cold War as the Soviet Union's principal Baltic naval base. Until early 1991 the entire region was a restricted military area off-limits to foreigners and nonresident Soviet citizens.

Before the disintegration of the Soviet Union in 1991, the region was attached to the USSR. It is now separated from the Russian Republic by 600 miles of foreign territory, and unimpeded overland communication with Kaliningrad has been a matter of contention between Russia and Lithuania. In 1991 the region had 900,000 inhabitants, of whom 412,000 resided in Kaliningrad. The majority of the residents at the beginning of the twenty-first century are the offspring of Russians who had moved to the region after the war, but there are also inhabitants of Ukrainian and Belarusian descent.

Uncertainty over the future of Kaliningrad accompanied the somewhat chaotic collapse of the Soviet Union. Some nationalist enthusiasts in Lithuania called for the inclusion of what they called "Lithuania Minor" in a Greater Lithuania. Yet some ethnic Germans from the former Soviet republics in

Kaliningrad Oblast

Central Asia moved to Kaliningrad after 1991 and increased the German component of the area. The 1994 official tally of ethnic Germans in the region was 5,000, but the actual figure was probably closer to four times as large. As a result of the growing German population, some Russian and Slavic inhabitants of the territory feared that German investment there might be a prelude to German territorial claims.

Economically speaking, the collapse of the Soviet Union hit the region hard. Subsidies from Moscow were reduced, and Soviet-related defense industries went into a steep decline. Local producers of consumer goods have also suffered as a result of growing competition from goods produced outside Russia. Some two-thirds of consumer goods are imported. In 1991 the province was declared a free economic zone. However, in 1993 a conflict arose between Kaliningrad and the federal Russian government over a new law on customs and tariffs. Kaliningrad certainly harbors economic potential, but much depends upon Russian policy and its relations with the European Union. The region boasts abundant natural resources, including amber, offshore oil deposits, peat, mineral water, salt mines, fish, and timber, and also possesses an educated and low-cost labor force. Switzerland, Lithuania, and Germany have been leading investors and trading nations with Kaliningrad since the fall of the Soviet Union.

Kampuchea

See Cambodia, Vietnamese Occupation of

Kania, Stanisław (1927–)

Polish communist politician and first secretary of the Central Committee of the Polish United Workers' Party (PUWP) during 1980–1981. Born on 8 March

1927 in the village of Wrocanka, Stanisław Kania came from a peasant background and graduated from the Institute of Economy at the Social Sciences College of the party's Central Committee. In 1945 he joined the communist Young Struggle Union and became an official in its successor organization, the Union of Polish Youth, during 1952–1956.

Beginning in 1958, Kania began to hold a series of increasingly important posts in the PUWP apparatus. In April 1971 he was appointed secretary of the Central Committee, after which he dealt chiefly with security, police, military affairs, and relations with the Catholic Church. On 6 September 1980 he became first secretary of the Central Committee, replacing Edward Gierek, who was blamed for the ongoing economic crisis and the outbreak of strikes and protests. A moderate who proposed compromise and cooperation with the Solidarity movement, in December 1980 and again in March 1981 Kania managed to convince Soviet Premier Leonid Brezhnev to resist using the Red Army or Warsaw Pact troops to quash the Solidarity trade union. In June 1981, Kania survived an attempted coup by communist hard-liners.

At the Tenth Extraordinary Congress of the PUWP (14–21 July 1981), Kania was once again elected first secretary as the centrist candidate. But three months later, on 17 October 1981, he was dismissed from his post at the Fourth Plenary assembly because of his inability to control Solidarity. General Wojciech Jaruzelski replaced him. In 1982 Kania became a member of the State Council, a rather inconsequential position that he held until 1985. He retired in 1989. In 1991 Kania published a memoir, along with Edward Gierek, in which he steadfastly defended his policies during 1980–1981.

Region shared by Finland and Russia but mainly inhabited by people of Finnish extraction. The eastern part of Karelia is located in Russia and the

Karelia

western part in Finland. Karelia was almost entirely ceded to the Soviet Union as a result of World War II, becoming a Soviet republic with its capital at Petrozavodsk, and gained autonomous status within the Russian Federation after the collapse of the Soviet Union in 1991.

Karelia borders on the eastern part of the Gulf of Finland, the Ladoga Sea, the Onega Sea, and the White Sea and the northern part of the Gulf of Botten. Its 1945 population was approximately a half million people. Its chiefly Finnish-speaking eastern portion was a target of Finnish irredentist policies, although it never passed into Finnish hands; the western part did belong to Finland until World War II. In the Treaty of Tartu in 1920, Finland expanded territorially up to the Petsamo region, although it continued to harbor ambitions to incorporate the whole of Karelia.

In 1932 Finland and the Soviet Union signed a nonaggression pact that lasted seven years. But in 1939, following the Molotov-Ribbentrop Pact, the Soviets invaded Finland. The Moscow Peace Treaty of 1940 that ended hostilities gave the Soviet Union most of Karelia, including the port of Viipuri (Vyborg).

Finland lost a strategic territory, rich in resources and accounting for 12 percent of Finnish area. Also, more than 400,000 inhabitants (or about 12 percent of the total Finnish population) living in the lost territories had to be evacuated and resettled in Finland proper. The emergency resettlement act of June 1940 allocated 1,274 square miles of land to former Karelian farmers.

From August 1940, the Finnish government negotiated with Berlin regarding military cooperation between Finland and Germany against the Soviet Union. The Finns' goal was to regain the territory lost in the Russo-Finnish War as well as to annex eastern Karelia. Finland received German military assistance in return for facilitating German troop transfers to Norway through its territory and authorizing the stationing of German troops in Finland.

Finland remained neutral until late June 1941, when the German government announced that Finland had aided Germany in its invasion of the Soviet Union. Berlin's action led the Soviets to bomb Turku, Helsinki, and Poryoo. Finland then joined Germany in war against the Soviet Union.

In the second half of 1941, Finland regained its pre-World War II frontiers, including Karelia. The Finns took some additional territory for defensive purposes, but they refused to assist the Germans in taking Leningrad. When the tide of war turned in June 1944, Soviet forces went on the offensive against the Finns, in both the Karelian Isthmus and Lake Ladoga regions. In September 1944 when the so-called Continuation War ended, the Soviets had retaken Viipuri and the territories lost earlier.

Following the resignation of President Risto Ryti in August 1944, the new president, Carl Gustaf Mannerheim, accepted the responsibility of ending the war, risking retaliation by German forces remaining on Finnish soil. As a consequence of the peace settlement with Moscow, thousands of Finns who had returned to Karelia were again forced to relocate to Finland. The Allies concluded formal peace with Finland in the Paris Treaty of 1947. Finland was forced to cede the Karelian Isthmus and also Petsamo and grant an extended lease of the Porkkala peninsula west of Helsinki.

During the Cold War, Karelia became the Karelo-Finnish Soviet Socialist Republic. By 1954 Russian had replaced Finnish in the schools, assisted by the settlement of Russians and Belarusians in the area and by intermarriage with the Finns. By 1955 collective farms had been introduced, and many place names had been Russianized.

In 1956, however, the Soviets evacuated Porkkala, and the Karelo-Finnish Soviet Socialist Republic was demoted from the status of a union republic to that of an autonomous republic within the Russian Soviet Federated Socialist Republic (RSFSR). This move implied that the Soviets no longer harbored the notion of annexing the whole of Finland.

The collapse of the USSR in 1991 abrogated the Soviet-Finnish treaties of 1947 and 1948. Karelia then became the Republic of Karelia within the Russian Federation. Finnish attempts to secure the region met rebuff. Reportedly, in November 1998 a Finnish businessman offered Russian President Boris Yeltsin \$500 million to return Karelia to Finland but received no response.

A former princely Indian state located in southern Asia comprising some 86,000 square miles. Muslims conquered Kashmir in the fourteenth century and forcibly converted its mostly Hindu and Buddhist population to Islam. The British sowed the seeds of the subsequent agitation over control of Kashmir when they placed a Hindu prince on its throne in 1846.

The dispute over the future of Kashmir began in 1947 with the partition of the Empire of India and the creation of independent India and Pakistan. India is primarily Hindu, while Pakistan is mainly Muslim. Under the terms of the 1947 Indian Independence Bill, Kashmir was supposed to determine which of the two nations it would join. Because of Kashmir's Muslim majority, Pakistanis believed that it should be part of Pakistan. Kashmir, however, was led by the Hindu Maharaja Hari Singh. His decision to join his state to India, accepted by the Indian parliament on 26 October 1947, precipitated conflict with Pakistan. This event sparked an uprising in Kashmir

A mountain pass in Kashmir, the object of bitter land disputes between India and Pakistan for more than half a century. (Corel)

by its predominantly Muslim population and Pakistani tribesmen, the Azad Kashmiri, who marched on the provincial capital of Srinagar. The Indian government responded by airlifting troops into Kashmir the next day. Heavy fighting then occurred between Indian Army and Air Force units on the one hand and the rebellious Muslims and their Pakistani supporters on the other.

In November Pakistani troops crossed the border into Kashmir and fought an undeclared war with Indian forces through December 1947. Direct negotiations between India and Pakistan over Kashmir having failed, at the end of December 1947 the dispute was referred to the United Nations (UN). On 20 January 1948, the UN Security Council set up a commission to resolve the dispute. Sporadic fighting between the two sides continued, including a Pathan uprising in Kashmir on 8 February 1948 that was put down by Indian forces. Finally, UN mediation brought about a cease-fire on 1 January 1949. India, however, rejected the arbitration arrangement put forward by the UN, and the continuing dispute over Kashmir rendered close relations between India and Pakistan impossible.

Under the January 1949 agreement, UN observers monitored the cease-fire line. Pakistan was left in control of the north, known as Azad (free) Kashmir. India maintained control of the remainder, including Jammu, amounting to nearly two-thirds of the state. The vote to decide Kashmir's future called

for by the UN never occurred. Negotiations took place intermittently between India and Pakistan over Kashmir but with no tangible result. On 20 August 1953, Sheikh Mohammed Abdullah, the prime minister of Kashmir, and Jawaharlal Nehru, the prime minister of India, reached agreement on a plebiscite regarding the future of Jammu, but India then withdrew its pledge and imprisoned Abdullah. On 26 January 1957, India officially annexed Kashmir. Pakistan protested this action, and the UN refused to recognize it.

The dispute continued and was a principal cause of war between India and Pakistan in 1965. Border clashes in August led to major fighting in September. Large tank battles between the two sides resulted in stalemate. In a UN-brokered cease-fire on 22 September, both sides agreed to withdraw to the lines held on 5 August.

On 10 January 1966, India and Pakistan agreed to the Tashkent Declaration, which reestablished the former cease-fire line but failed to provide a permanent solution to the dispute between the two states. Hostilities between India and Pakistan began anew in 1971, this time over the succession of East Pakistan (later Bangladesh) from West Pakistan.

Although the war was not fought over Kashmir, fighting did occur along the cease-fire line. The war ended on 3 July 1972 with the Simla Agreement, signed by Pakistani President Zulfikar Ali Bhutto and Indian Prime Minister Indira Gandhi. The agreement defined a new line of control in Kashmir, the same basic line as before with only minor deviations. The line of control is roughly 460 miles long and runs over extremely rugged terrain from Jammu in the southwest through the Himalayas in the northeast. Again, this line was monitored by UN observers. The agreement also called for Pakistan and India to refrain from the use of force in Kashmir.

India currently controls 53,665 square miles of Kashmir, while Pakistan administers nearly 32,358 square miles. The line between the two is monitored by members of the UN Military Observer Group in India and Pakistan (UNMOGIP). This team has been understaffed and insufficiently equipped since 1950. The UN team has been unable to accurately assess the many cease-fire violations claimed by Pakistan against India. For its part, India has not claimed a cease-fire violation since 1972 and has also severely limited UN observers from inspecting Indian-controlled areas. Violations mainly consisted of small-arms and artillery fire. By 1989, a Pakistan-supported insurgency in Indian Kashmir led to a rapid buildup of Indian forces in the area. The number of forces in the area has been substantially inflated, and India does not release information regarding its military forces. The insurgency and turmoil continue in the region.

Kaunda, Kenneth David (1924–)

African nationalist leader and president of Zambia (1964–1991). Born at Lubwa Mission in Chinsali, Northern Rhodesia (now Zambia), on 28 April 1924, Kenneth Kaunda attended the Munali Training Centre in Lusaka during 1941–1943 and was a teacher and school headmaster during 1943–1951.

In 1951 Kaunda entered public life through a welfare association affiliated with the Northern Rhodesia African National Congress (NRANC), a nationalist organization. In 1953 he was elected general secretary of NRANC. Faced with the possible merger of Northern Rhodesia, Southern Rhodesia (now Zimbabwe), and Nyasaland (now Malawi) under white leadership, he joined other African nationalists in organizing mass demonstrations. In 1953 and again in 1956, he was jailed, albeit briefly, by colonial authorities.

In 1958 Kaunda broke with the NRANC to form the Zambia African National Congress (ZANC). In 1959 ZANC was banned, and Kaunda was imprisoned for nine months. He continued his political activities and in January 1964 was elected prime minister following sweeping political reforms and a new constitution that would lead the country to independence. On 24 October 1964, Zambia became independent, with Kaunda as its first president.

A socialist, Kaunda helped unify his country, but his economic policies eventually visited considerable hardship on his people. He was, however, a significant force in southern Africa regional politics and played a major role in efforts to bring an end to the war in neighboring Rhodesia.

Sadly, Kaunda turned toward political repression to retain power. When violence followed the 1968 elections, he banned all political parties except his own, the United National Independence Party (UNIP). In spite of his political orientation, his relations with communist nations were limited mainly to contact with the People's Republic of China (PRC), which helped build the Tanzania-Zambia Railway allowing landlocked Zambia to increase exports of its chief commodity, copper.

By the late 1980s, a faltering economy and calls for pluralistic elections had begun to weaken the Kaunda regime, which had grown corrupt and arrogant. In 1991 multiparty elections were held, forcing Kaunda from office on 2 November 1991.

Finnish prime minister (1950–1953, 1954–1956) and president of Finland (1956–1981). Born in Pielavesi on 3 September 1900, Urho Kekkonen studied law at the University of Helsinki, receiving a bachelor's degree in 1928 and a doctorate in 1936. He became a successful journalist and for a time worked for the Ministry of Agriculture. In 1933 he joined the Agrarian Party (renamed the Center Party in 1965) and in 1936 was elected to parliament, becoming a cabinet minister the same year.

Kekkonen had been involved in the execution of Red Guard prisoners during the Finnish Civil War in 1918 and thus remained a hard-liner toward the Soviet Union until the early 1940s. However, he realized during the course of World War II that Finland could retain its independence only by seeking accommodation with its powerful neighbor. As a minister of justice after the war, Kekkonen was responsible for the highly unpopular trials of wartime political leaders, which nevertheless helped to save Finland from direct Soviet interference in domestic affairs.

As prime minister during 1950–1953 and again during 1954–1956, Kekkonen developed his own foreign policy trajectory, which combined the paradigm of maintaining good relations with the Soviet Union with the rhetoric of neutrality and the promotion of a Scandinavian security community that steered clear of Cold War politics. Kekkonen was elected president in February 1956 and served until October 1981, when poor health forced his resignation.

As president, Kekkonen mastered both the Night Frost Crisis of 1958–1959, when the Finnish Communist Party (SKDL) was prevented from joining the government and the Soviet Union then imposed economic restrictions upon Finnish trade and recalled its ambassador, and the Note Crisis of 1961, when, following the Federal Republic of Germany's (FRG, West Germany) rearmament and increasing naval presence in the Baltic, the Soviets demanded military consultations against the alleged threat in accordance with the 1948 Treaty of Friendship, Cooperation, and Mutual Assistance. But both instances can also be interpreted as Soviet promotion of Kekkonen as the only Finnish leader capable of handling the difficult bilateral relations. Kekkonen was unsuccessful in his attempt to establish a nuclear weapons-free

Kekkonen, Urho
(1900–1986)

zone in Scandinavia, and the Soviet Union refused to support his candidate, Max Jakobson, for secretary-general of the United Nations (UN) in 1971 because this would have raised the stature of Finland in world affairs. Arguably, Kekkonen's greatest success was hosting the 1975 Conference on Security and Cooperation in Europe, which resulted in the landmark Helsinki Final Act. Kekkonen died in Helsinki on 31 August 1986.

Kelly, Petra Karin

(1947–1992)

German political and human rights activist and leader and cofounder of the German Green Party. Born in Günzburg, Bavaria, then part of the Federal Republic of Germany (FRG, West Germany), on 29 November 1947, Petra Karin Lehmann adopted her American stepfather's last name of Kelly as a young girl. First raised in Germany, she moved with her family to the United States in 1960. She studied political science at American University in Washington, D.C., graduating in 1970.

During her time in the United States, Kelly was active in the U.S. civil rights and anti-Vietnam War movements and worked as a volunteer for the 1968 presidential campaigns of first Robert Kennedy and then Hubert Humphrey. In 1971 she received an MA in political science from the University of Amsterdam. Two years later, she joined the administrative staff of the European Community in Brussels. Beginning in the mid-1970s, she became increasingly engaged in environmental, peace, and feminist activities in West Germany.

In 1979, Kelly left the Social Democratic Party (SDP) and became one of the founding members of the Green Party. Elected to the German Bundestag as a Green member in 1983, Kelly became a staunch proponent of environmental policies and vehemently objected to the placement of U.S. nuclear missiles in West Germany. In 1982 she was awarded the annual alternative Nobel Peace Prize.

Kelly had a reputation as a smart and sensitive activist who alternatively confused and dazzled the West German public with her idealism and charisma. She was a prominent fixture in the Green Party and a much-sought-after speaker at peace and antinuclear rallies. Despite her uncompromising stance on matters of disarmament, the environment, and nonviolent

protest, she refrained from endorsing her party's anti-American and pro-socialist leanings.

In the late 1980s, Kelly lost influence with the Greens. In the wake of German reunification, the Greens lost all their parliamentary seats in the 1990 elections, and Kelly became estranged from her political colleagues. After the defeat, she largely withdrew from public life. On 1 October 1992, Kelly's partner, former Green Party deputy Gert Bastian, allegedly shot her to death as she slept in their Bonn home. Bastian then took his own life.

U.S. diplomat, Soviet expert, historian, and ambassador. Born in Milwaukee, Wisconsin, on 16 February 1904, George Kennan attended Princeton University and joined the U.S. Foreign Service in 1926, undergoing intensive, specialized Russian training at Berlin University and Riga.

As one of the State Department's small coterie of Russian experts, Kennan spent five years in the American embassy in Moscow, returning there in 1944 as minister-counselor. Despite his distaste for the Soviet regime, as World War II ended he recommended reassigning control of Eastern Europe to the Soviets. His influential February 1946 "Long Telegram" argued that the internal dynamics of Russian communism made genuine Soviet-Western understanding unattainable. Widely circulated throughout the U.S. foreign policy bureaucracy, it made him an instant celebrity.

From 1947 to 1949 Kennan headed the State Department's Policy Planning Staff, exercising his greatest impact on American foreign policy by enunciating the containment doctrine that became the basis of U.S. Cold War strategy toward the Soviet Union. He later suggested that American officials misinterpreted his original version of containment by overemphasizing the military aspects, which he regarded as secondary. His claim, which has generated substantial historiographical debate, runs contrary to his policy-making at the time, however.

Kennan soon found himself increasingly out of sync with the evolving Cold War policies. In the late 1940s and again during the 1950s, he called for the neutralization and unification of Germany, and he opposed the creation

Kennan, George Frost
(1904–2005)

U.S. diplomat and historian George F. Kennan was an energetic proponent of a containment policy against communist expansion. He was among the most influential foreign policymakers of the post–World War II era. (Library of Congress)

of the North Atlantic Treaty Organization (NATO) in 1949. Although on leave, Kennan initially supported U.S. intervention in the Korean War but regretted the decision to carry the war into the Democratic People's Republic of Korea (DPRK, North Korea). In 1951 he took part in unofficial negotiations with Soviet diplomats that led to the opening of armistice talks. In 1952 he was briefly ambassador to the Soviet Union, but his criticism of Josef Stalin's regime resulted in expulsion. Kennan then began a lengthy career as a historian and political commentator.

Keen to encourage polycentrism within the communist world, Kennan welcomed his 1951 appointment as ambassador to Yugoslavia, where he remained until 1963. He applauded the manner in which President John F. Kennedy and Soviet leader Nikita Khrushchev handled the Cuban Missile Crisis and the Limited Test Ban Treaty. Kennan believed that American preoccupation with Vietnam distracted officials from pursuing détente with the Soviets. He applauded French President Charles de Gaulle's initiatives toward détente and called for Western recognition of the German Democratic Republic (GDR, East Germany). Initially outraged by the 1968 Soviet invasion

of Czechoslovakia, Kennan demanded massive American troop reinforcements in Western Europe but soon endorsed Federal Republic of Germany (FRG, West Germany) Chancellor Willy Brandt's Ostpolitik.

Kennan initially showed little interest in Vietnam. In 1950 he had urged American attempts to encourage noncommunist, nationalist "third forces" in Indochina but by 1955 had grown pessimistic that such endeavors would succeed. Despite misgivings, he endorsed President Lyndon B. Johnson's 1964 Tonkin Gulf Resolution. Johnson's subsequent escalation of the war convinced Kennan that the United States was too heavily involved in a country of relatively slight strategic significance. He suggested that the United States restrict itself to defending strategic enclaves and supporting the Republic of Vietnam (RVN, South Vietnam) government. During widely publicized congressional hearings in 1967, he argued that employing the force levels needed to ensure victory in Vietnam would likely trigger Chinese intervention and full-scale, probably nuclear, Sino-American war. By November 1969 he publicly advocated American military withdrawal, notwithstanding the probability that the communists would then take over South Vietnam.

In 1967 and 1972 Kennan published two volumes of best-selling confessional memoirs. He continued to write well into his nineties, frequently warning against the American tendency to intervene in nations and conflicts of little direct strategic interest and suggesting that wider concerns, particularly the environment, population growth, and arms control, were of far greater importance. During the late 1960s he opposed the eastward expansion of NATO, and in 2003 he condemned the forthcoming U.S. invasion of Iraq. Kennan died in Princeton, New Jersey, on 17 March 2005.

Kennedy, John Fitzgerald (1917–1963)

U.S. congressman (1946–1952), senator (1953–1961), and president of the United States (1961–1963). John F. Kennedy was born in Brookline, Massachusetts, on 29 May 1917 into a large and wealthy Irish Catholic family. His father, Joseph P. Kennedy, was a multimillionaire with presidential aspirations, and his mother, Rose Fitzgerald, came from a prominent and politically active Boston family. After attending the elite Choate Preparatory School in Wallingford, Connecticut, Kennedy earned his bachelor's degree from Harvard University in 1940. He also spent six months of his junior year working in the U.S. London embassy while his father was U.S. ambassador to Great Britain. His observations during this time inspired his senior honors thesis on British foreign policies, which was published the year he graduated under the title *Why England Slept*. During World War II Kennedy served four years in the U.S. Navy. He was awarded the Navy and Marine Corps Medals and the Purple Heart for action as commander of *PT-109*, which was rammed and sunk by a Japanese destroyer in the South Pacific.

Kennedy worked for a brief time as a newspaper correspondent before entering national politics at the age of twenty-nine, winning election as Democratic congressman from Massachusetts in 1946. In Congress, he backed social legislation that benefited his largely working-class constituents and criticized what he considered to be President Harry Truman's "weak stand" against communist China. Throughout his career, in fact, Kennedy was known for his vehement anticommunist sentiments.

Kennedy won election to the U.S. Senate in 1952. In 1953 he wed the New York socialite Jacqueline Bouvier. Kennedy had a relatively undistinguished Senate career. Never a well man, he suffered from several serious health problems, including a back operation in 1955 that nearly killed him. His illnesses limited his ability to become an activist senator. While he recuperated from his back surgery, he wrote—with his wife's assistance—his second book, *Profiles in Courage*, for which he won the 1957 Pulitzer Prize in history.

Despite his fragile health and lackluster performance in the Senate, Kennedy nonetheless was reelected in 1958 after losing a close contest for the vice presidential nomination at the Democratic National Convention in 1956. He now set his sights on the presidency. Four years later, he won the Democratic nomination for president on the first ballot. As a northerner and Roman Catholic, he recognized his weakness in the South and shrewdly chose Senator Lyndon Baines Johnson of Texas as his running mate. As a candidate, Kennedy promised more aggressive defense policies, health care

Never a well man, Kennedy suffered from several serious health problems, including a back operation in 1955 that nearly killed him.

reform, and housing and civil rights programs. He also proposed his New Frontier agenda, designed to revitalize the flagging U.S. economy and to bring young people into government and humanitarian service. Winning by the narrowest of margins, he became the nation's first Roman Catholic president. Only forty-three years old, he was also the youngest man ever to be elected to that office.

In his inaugural address, Kennedy spoke of the need for Americans to be active citizens and to sacrifice for the common good. His address, which in some respects was a rather bellicose call to arms, ended with the now-famous exhortation "ask not what your country can do for you—ask what you can do for your country." As president, Kennedy set out to fulfill his campaign pledges. Once in office, he was forced to respond to the ever-more-urgent demands of civil rights advocates, although he did so rather reluctantly and tardily. By establishing both the Alliance for Progress and the Peace Corps, Kennedy delivered American idealism and goodwill to aid developing countries.

Despite Kennedy's idealism, no amount of enthusiasm could blunt the growing tension of the U.S.-Soviet Cold War rivalry. One of his first attempts to stanch the perceived communist threat was to authorize a band of American-supported Cuban exiles to invade the communist island in an attempt to overthrow Fidel Castro in April 1961. The Bay of Pigs invasion, which turned into an embarrassing debacle for the president, had been planned by the Central Intelligence Agency (CIA) under the Dwight Eisenhower administration. Although Kennedy harbored reservations about the operation, he nonetheless approved it. The failure heightened already-high Cold War tensions with the Soviets and ultimately set the stage for the Cuban Missile Crisis of 1962.

Cold War confrontation was not limited to Cuba. In the spring of 1961, the Soviet Union renewed its campaign to control West Berlin. Kennedy spent two days in Vienna in June 1961 discussing the hot-button issue with Soviet Premier Nikita Khrushchev. In the months that followed, the crisis over Berlin was further intensified by the construction of the Berlin Wall, which prevented East Berliners from escaping to the West. Kennedy responded to the provocation by reinforcing troops in the Federal Republic of Germany (FRG, West Germany) and increasing the nation's military strength. The Berlin Wall, unwittingly perhaps, eased tensions in Central Europe that had nearly resulted in a superpower conflagration. In the meantime, Kennedy had begun deploying what would be some 16,000 U.S. military "advisors" to prop up Ngo Dinh Diem's regime in the Republic of Vietnam (RVN, South Vietnam). In so doing, Kennedy had put the United States on the slippery slope of full-scale military intervention in Vietnam.

With the focus directed away from Europe, the Soviets began to clandestinely install nuclear missiles in Cuba. On 14 October 1962, U.S. spy planes

The administration of President John F. Kennedy, famous for its youth and style, ushered in a period of hope, vigor, and commitment for the United States that would be cut short by Kennedy's assassination. (John F. Kennedy Library)

photographed the construction of missile-launching sites in Cuba. The placement of nuclear missiles only 90 miles from America's shores threatened to destabilize the Western Hemisphere and undermine the uneasy Cold War nuclear deterrent. Kennedy imposed a naval quarantine on Cuba, designed to interdict any offensive weapons bound for the island. The world held its collective breath as the two Cold War superpowers appeared perched on the abyss of thermonuclear war, but after thirteen harrowing days of fear and nuclear threat, the Soviet Union agreed to remove the missiles. In return, the United States pledged not to preemptively invade Cuba and to remove secretly its obsolete nuclear missiles from Turkey.

Both Kennedy and Khrushchev had been sobered by the Cuban Missile Crisis, realizing that the world had come as close as it ever had to a full-scale nuclear war. Cold War tensions were diminished when the Soviets, British, and Americans signed the Limited Nuclear Test Ban Treaty on 5 August 1963, forbidding atmospheric testing of nuclear weapons. In October 1963, the same three nations agreed to refrain from placing nuclear weapons in outer space. To avoid potential misunderstandings and miscalculations in a future crisis, a hotline was installed that directly linked the Oval Office with the Kremlin.

Following the nerve-racking Cuban Missile Crisis, Kennedy looked toward 1963 with considerable enthusiasm. He told close advisors that after the election, he planned to draw down U.S. forces in Vietnam. He was also buoyed by his successful efforts to reduce Cold War tensions, and he began planning his 1964 reelection campaign by visiting constituents around the nation. In an effort to mediate between warring conservative and liberal Democratic Party factions in Texas, a state that was vital to his reelection, in November 1963 Kennedy embarked on a whirlwind tour of the state with his wife and vice president in tow. On 22 November in Dallas, Texas, just as Kennedy's motorcade neared the end of its course and as onlookers cheered, shots rang out. Kennedy, riding in an open car, was fatally wounded by an assassin's bullet. In the hours immediately after the murder, Lee Harvey Oswald was arrested for the assassination of the president. Two days later, as the president's body lay in state at the U.S. Capitol, Jack Ruby fatally shot Oswald in the basement of the Dallas police station as millions of Americans watched the latest bizarre event on television in dazed horror. In a great national outpouring of grief, Kennedy was laid to rest in Arlington National Cemetery on 25 November 1963.

U.S. attorney general (1961–1964), U.S. senator (1965–1968), and chief advisor to his brother, President John F. Kennedy (1961–1963). Born in Boston, Massachusetts, on 20 November 1925, Robert F. Kennedy was the seventh child of Joseph P. Kennedy, multimillionaire business tycoon and ambassador to Great Britain. Robert Kennedy served in the U.S. Navy Reserve during 1944–1946 before graduating from Harvard University in 1948. In 1951 he earned a law degree from the University of Virginia. He began his legal career as an attorney in the Criminal Division of the U.S. Department of Justice in 1951.

In 1952 Kennedy managed his brother John's successful U.S. senatorial campaign. After the campaign, he served as assistant counsel and counsel to various U.S. Senate committees and subcommittees before becoming chief counsel to the Senate Select Committee on Improper Activities in the Labor and Management Field during 1957–1960. Kennedy made a name for himself there by doggedly countering the testimony of hostile witnesses, including Teamsters Union leader James "Jimmy" Hoffa.

A canny and scrappy politico, Kennedy left his Senate position in 1960 to manage John Kennedy's successful presidential campaign. Following the 1960 election, President-elect Kennedy appointed his younger brother to his cabinet as U.S. attorney general. Despite charges of nepotism, Robert Kennedy proved to be a forceful and highly effective attorney general. He was especially successful in dealing with a number of potentially explosive situations involving the burgeoning civil rights movement.

Robert Kennedy was also President Kennedy's closest advisor. This relationship proved vital as U.S.-Soviet tensions peaked in 1962. Robert Kennedy played a key role in advising the president on the ill-fated 1961 Bay of Pigs invasion, the October 1962 Cuban Missile Crisis, and the deteriorating military and political situation in the Republic of Vietnam (RVN, South Vietnam).

After President Kennedy's assassination in November 1963, Robert Kennedy resigned his cabinet post in the autumn of 1964 to run for a seat in the U.S. Senate, representing New York. Sworn into the Senate in January 1965, he proved to be a vigorous advocate of social reform and minority rights and became particularly well known as a spokesman for the poor and

**Kennedy, Robert
Francis**
(1925–1968)

Robert Kennedy served as campaign advisor and attorney general under his brother President John F. Kennedy. Robert followed in his brother's footsteps by running for president in 1968 but, like his brother, was killed by an assassin's bullet. (Lyndon B. Johnson Library)

underprivileged. Although he had initially supported his brother's increasing military and economic aid to South Vietnam, he became sharply critical of President Lyndon B. Johnson's steep escalation of the war. By 1968, Kennedy was proposing the formation of a new South Vietnamese coalition government that would have included the communist Viet Cong. He also urged the rapid draw-down of U.S. troops in Vietnam, who numbered some 500,000 in 1968.

Urged to run for the Democratic presidential nomination in 1968, Kennedy declined until Johnson dropped out of the running in early March. On 16 March 1968, Kennedy declared his presidential candidacy. He conducted an energetic and finely focused campaign and won a series of primary victories, culminating in California on 4 June 1968. That night, after addressing his supporters at the Ambassador Hotel in Los Angeles, he was shot at point-blank range by Jordanian American Sirhan B. Sirhan. Suffering from a devastating head wound, Kennedy lay in a coma until he died on 6 June 1968. He was forty-two years old. Sirhan was apprehended at the scene and later convicted of murder. As was his brother John F. Kennedy, Robert Kennedy was interred in Arlington National Cemetery. Included in his many accomplishments are two widely read posthumous publications, *Thirteen Days: A Memoir of the Cuban Missile Crisis* (1969) and *To Seek a Newer World* (1969).

Kenya

A nonaligned, developing nation in east-central Africa. With a 1945 population of approximately 5.4 million people, Kenya covers 224,961 square miles, roughly twice the area of the U.S. state of Nevada. It is bordered by the Indian Ocean and Tanzania to the south, Sudan and Ethiopia to the north,

Uganda to the west, and Somalia to the east. Prior to the late nineteenth century, when Britain took control of the region, Kenya was a land with small and scattered tribal groups, including the Kikuyu, Kamba, Luo, and Masai. Although they have become increasingly Westernized, distinct tribal identities persist. At the 1885 Berlin Conference, which established spheres of influence in eastern Africa, Germany received the concession to modern-day Tanzania, while Britain received Uganda and Kenya. Uganda became a protectorate in 1893, and Kenya was classified as a protectorate in 1895.

The British went first to Uganda, using Indian laborers to build a Mombassa-to-Kampala railway for easier movement of natural resources. The British then turned to Kenya, establishing white-owned plantations on former African tribal lands, although only 7 percent of Kenya's land was arable. By 1915, the British owned most of the good land, while the natives were segregated on the largely unusable holdings. The maldistribution of land continues to this day, exacerbating Kenya's intractable unemployment problems.

In the 1920s the economic difficulties of African Kenyans led to the formation of nationalist organizations. Jomo Kenyatta went to England in 1929 to begin negotiating independence on behalf of the Kikuyu Central Association (KCA). Service in the military during World War II enhanced Kenyan conscripts' political awareness. As a result, in 1944 African Kenyans received the limited right to political participation. Soon after the war, however, guerrilla groups formed, bent on expelling the whites and eliminating all vestiges of colonial rule. The most significant of these was the Mau Mau, who took an oath to forcefully expel British occupiers and eliminate Africans who cooperated with or benefited from colonialism.

The British colonial government declared a state of emergency on 19 October 1952 and arrested Kenyatta, Achieng Oneko, and other nationalists the next day. In response, the Mau Mau uprising began. During the rebellion, 13,423 Africans were killed, with thousands more wounded. Only a few dozen Asians and Europeans died. The African casualty rates were so high because the British employed a Home Guard composed of Kamba and Kalenjin tribesmen against the Mau Mau, who were mostly Kikuyu, Meru, and Embu. Outnumbered and outgunned, the Mau Mau fought a vicious guerrilla war from the shelter of the forests of Mount Kenya and the Aberdare Mountains, slowly gathering support from other tribes. From prison, Kikuyu leader Kenyatta wrote letters that advanced Kenyan nationalism and evoked world sympathy.

Harsh conditions in detention camps also led to many deaths. Among the detainees were leaders of the Kenya African Union (KAU), the organization that replaced the KCA. British-led forces finally killed Mau Mau leader Dedan Kimathi, and with the movement now in disarray, the British prevailed in 1956.

Although the rebellion failed, it greatly alarmed both the white settlers and the administration, which declared a state of emergency, allowed African access to farmlands, and attempted to create an African middle class. Direct elections to the Legislative Council began in 1957. The British lifted the state of emergency in 1960 and held a conference with African leaders concerning

In 1990 the foreign minister, Robert Ouko, was assassinated after he threatened to name corrupt ministers.

the country's future. One agreement guaranteed that the Africans would have a voice in their government.

The KAU became the Kenyan African National Union (KANU) under Kenyatta, who had been released from prison in 1961. In a contest with the minority Kenya African Democratic Union (KADU), which represented a coalition of small tribes who feared domination by the larger tribes, the KANU won the elections in 1963, the same year that Kenya became an independent state, with Kenyatta as its president. In 1964, KADU became part of KANU.

Opposition to Kenyatta's rule came from the Left in 1966, with the formation of the Kenya People's Union (KPU) under the Luo elder Jaramogi Oginga Odinga, a former Kenya vice president. When a visit by Kenyatta to Nyanza Province caused political unrest, he banned the KPU and detained Odinga until he agreed to join KANU, which became the single lawful political party in Kenya after opposition parties were outlawed in 1969. Assassinated opposition leaders included Tom Mboya in 1969 and Kariuki in 1975. Rioting after the assassinations led to government crackdowns.

When Kenyatta died in August 1978, Vice President Daniel Arap Moi became interim president. He was subsequently elected head of KANU and then president that October. Moi's rule was autocratic and repressive. When air force officers attempted a coup in 1982, Moi broke up the air force and established a new one, and Kenya became a one-party state. Faced with growing dissent and the threat of a breakaway second party, Moi modified the constitution to specify a single party, formalizing Kenyatta's prohibition. In 1990 the foreign minister, Robert Ouko, was assassinated after he threatened to name corrupt ministers. Because of its corruption and repression, the World Bank and other international donors withheld foreign aid.

After the one-party provision of the constitution was repealed in 1991, multiparty elections took place in December 1992. Although Moi won another five-year term and KANU held parliament, the opposition garnered 45 percent of the vote. Reforms in 1997 expanded the number of parties from eleven to twenty-six, but Moi won yet another term, while his party held on to a narrow majority.

Although Moi improved relations with neighboring Somalia and Tanzania, Kenya failed to prosper economically. Kenya experienced negative economic growth in the early 1990s, an upswing during 1995–1996, then renewed sluggishness despite economic liberalization and assistance from international sources such as the International Monetary Fund (IMF) and the World Bank. Under Moi, Kenya's government was unstable, reform was intermittent, infrastructure was inefficient, and social problems included violence, high birthrates, and an AIDS epidemic.

Educator, anticolonial activist, Kenyan politician, prime minister (1963–1964), and Kenya’s first president (1964–1978). Born in Ng’enda in the Gatandu Division of Kiambu, Jomo Kenyatta’s exact birth date has never been firmly established, although it is believed he was born on 20 October between the years 1889 and 1893. Kenyatta’s birth name was Kamau wa Ngengi. In 1914 he was christened Johnston Kamau, but he later changed his name to Johnston Kenyatta, finally calling himself Jomo Kenyatta. He grew up on a farm in the Kimbu District and was educated at the Scottish Mission Centre in Thogoto.

In the early 1920s Kenyatta moved to Nairobi, where he worked as a storekeeper before securing a position with the Nairobi City Council water department. In 1928 the Kikuyu Central Association (KCA), a political organization that called upon Kenya’s British colonial rulers to grant more rights to the country’s Kikuyu tribe, asked Kenyatta to become its spokesman. As general secretary of the KCA, he edited the organization’s newspaper and increased its membership.

In 1929, Kenyatta traveled to London on an official mission to discuss the KCA’s grievances with the British government. A second trip to Europe in 1931 marked the beginning of a self-imposed sixteen-year exile, during which he continued his education at the Woodbrooke Quaker College (1931–1932) in Birmingham, England; the University of the Toilers of the East in Moscow (1932–1933); and the University of London (1935–1937). During his stay in Europe, he established contacts with numerous African anticolonial activists. In 1938 he published *Facing Mount Kenya*, an anthropological study that refuted the assumption that Kikuyu culture was inferior to that of white Europeans. Seven years later, he attended the fifth Pan-African Conference in Manchester as a representative of East Africa.

In 1946 Kenyatta returned to Kenya, where he continued to be involved in politics. In 1947, while working as the principal of Koinange’s Teacher Training College at Githunguri, he was elected president of the newly formed Kenya African Union (KAU), a political organization that

(National Archives and Records Administration)

called for an end to colonial rule. But Kenyatta's plan to mobilize grass-roots support for KAU's political program failed, as organizers of the militant Mau Mau movement managed to recruit an increasing number of supporters. Although Kenyatta repeatedly denounced the violent strategies of the secretive Mau Mau movement, British authorities arrested him in 1952 for alleged involvement with the militant movement and sentenced him to seven years in prison. Following his release in 1959, the British colonial government nonetheless continued to hold Kenyatta in custody.

In 1961 Kenyatta was finally released and shortly thereafter became a member of the colonial legislative council. By that time, political reforms and the country's growing nationalist movement had finally paved the way for Kenya's independence. Kenyatta led negotiations with British authorities over self-government and became the new nation's first prime minister in June 1963. On 12 December 1964, he became the country's first president, a post that he would retain until his death.

As prime minister and during the early tenure of his presidency, Kenyatta first sought to improve the strained relations between Africans and European settlers. By 1969, when Kenyatta was reelected as president, he had established a one-party state by agreement and a capitalist economy that protected property rights and allowed for foreign investment. He also launched an ambitious program to improve Kenya's educational and medical infrastructure. The president's domestic agenda translated into robust economic growth until the 1970s. In foreign politics, Kenyatta advocated a pro-Western stance and maintained amicable ties with the United States and European nations. During the last years of his life, the aging leader gradually withdrew from the political spotlight. Kenyatta died on 22 August 1978 in Mombasa.

Kerouac, Jean Louis

(1922–1969)

American writer who coined the term “Beat Generation” to describe the restless, discontent group of young intellectuals in the 1950s. Born in Lowell, Massachusetts, on 12 March 1922, Jean Louis “Jack” Kerouac attended Catholic parochial schools and the Horace Mann School in New York City before winning a scholarship to Columbia University in 1940.

Kerouac soon left Columbia to experience a wide variety of jobs, places, and experiences. Throughout his life he often returned to Lowell, where he lived with his mother, who supported him financially. In 1942 Kerouac again briefly attended Columbia, his nearby apartment becoming a meeting place for many promising young intellectuals, including William S. Burroughs and Allen Ginsberg. While Kerouac became the Beat movement's main novelist, Ginsberg went on to become its chief poet.

Kerouac was for a time in the merchant marine. He joined the U.S. Navy in 1943 but was given a psychiatric discharge after several months. During much of 1943–1950 he traveled throughout the United States and Mexico working a variety of jobs and spending time in Lowell, where he wrote a book about his boyhood, *The Town and the City*. Its publication in 1950 earned him literary recognition.

Kerouac had already begun a new book using a more spontaneous process that eschewed the customary practice of writing. Seeking to capture the spontaneity and emotions of his 1943–1950 wanderings, he bought twenty-foot rolls of art paper, taped the ends together, and over a three-week span furiously typed—without editing—until he believed that he was finished. The publication of this work, *On the Road*, in 1957 led to Kerouac being heralded as a major new American writer. His writing style might best be described as a purposeful stream of consciousness. His writings were especially influential among the young and inspired many to drop out of established society and abandon the pursuit of material wealth.

Kerouac's next novel, *The Dharma Bums* (1958), described the years between finishing *On the Road* and its publication. At this point, Kerouac reportedly had six more novels already written, including *The Subterraneans*, *Doctor Sax*, and *Maggie Cassidy*, published in quick succession during 1958–1959. They drew praise for their freshness and criticism for their seeming randomness.

The last decade of Kerouac's life was characterized by hard drinking and fast living, but the author did write other books, including *Desolation Angels* (1966) and *Satori in Paris* (1967). Kerouac died in St. Petersburg, Florida, on 21 October 1969.

Khmer Rouge

Cambodian communist organization and guerrilla force that ruled Cambodia during 1975–1979. Cambodian Prince Sihanouk originally applied the term “Khmer Rouge” (Red Khmer) to all internal left-wing opponents. The Khmer People’s Revolutionary Party (KPRP) was founded in 1953 under the influence of the Indochinese Communist Party. To escape Sihanouk’s suppression of leftist factions, the KPRP resorted to underground activities. In 1966 it changed its name to the Communist Party of Kampuchea but continued to be known as the Khmer Rouge.

Following Cambodian Premier Lon Nol’s coup d’état on 18 March 1970, the Khmer Rouge joined Sihanouk’s National United Front of Kampuchea (FUNK) in resisting the new government and received military support from both the People’s Republic of China (PRC) and the Democratic Republic of Vietnam (DRV, North Vietnam). Although Sihanouk was the nominal head of the National Unity government of Cambodia, he remained in Beijing. Khmer Rouge leader Khieu Samphan exercised real power.

In November 1973 Khmer Rouge forces blockaded Phnom Penh, but at the end of February 1974 Lon Nol’s Forces Armées Nationales Khmer (FANK, National Khmer Armed Forces), secretly supplied by the U.S. Central Intelligence Agency (CIA), pushed them back from the capital. In the second half of 1974, however, the less-well-armed but better-led Khmer Rouge came to control the countryside. With only about 70,000 troops, it lacked the strength for an offensive against the cities. The much larger FANK of some 200,000 men controlled the towns but, plagued by poor leadership, low morale, and corruption, was unable to undertake aggressive action in the rural areas. U.S. congressional restrictions of December 1974 on aid to Cambodia adversely affected FANK’s fighting ability.

In January 1975 the Khmer Rouge received sufficient North Vietnamese assistance to launch a major offensive against the FANK and soon had cut off land and Mekong River access to Phnom Penh. Lon Nol resigned, and on 17 April Khmer Rouge troops took control of the city. The economy was in ruins. Few schools and hospitals were operating, and half of the population had been uprooted from their homes. But far worse lay ahead. Khmer Rouge leaders renamed the country Kampuchea, emptied the cities, and attempted to take the country back into the Middle Ages, herding the people into agricultural communes and initiating a reign of terror that has few precedents in history.

Under the leadership of Pol Pot, Khieu Samphan, and others, the Khmer Rouge severely restricted access to medical care, education, and religious observances. Intellectuals and the elite were brutally repressed, and thousands

of people were separated from their families and denied adequate food. The people were forced to perform hard physical labor in agriculture or in the building of waterways, dams, and other infrastructure. Thousands were tortured and then executed. A Yale University study on Cambodian genocide concluded that as many as 1.7 million of Cambodia's 8 million inhabitants died during 1976–1979 in one of the most horrific genocides in history.

Following border clashes between the Khmer Rouge and Vietnamese troops and atrocities committed against ethnic Vietnamese in Cambodia, on 25 December 1978 Vietnamese forces invaded Cambodia and on 7 January 1979 captured Phnom Penh. The Khmer Rouge then conducted a guerrilla war against the occupiers and the Vietnamese-installed government. Although the Vietnamese occupation ended the wholesale bloodshed in Cambodia, much of the international community, including the United States, condemned it. Only the Soviet bloc recognized the Vietnamese-sponsored People's Republic of Kampuchea (PRK) under Heng Samrin. The United States and the PRC both supported Pol Pot's Democratic Kampuchea.

Vietnamese forces finally departed Cambodia in 1989, and in October 1991 a peace agreement, to which the Khmer Rouge was a party, was signed in Paris. However, the Khmer Rouge boycotted the general election carried out in May 1993 under the provisional government, supervised by the United Nations (UN), and continued its guerrilla activities with the support of Thai generals. In 1994 the new Cambodian government declared the Khmer Rouge illegal and within four years had eliminated major Khmer Rouge strongholds. Most of the senior Khmer Rouge leadership surrendered. The government then resisted international pressure to bring them to trial.

A Yale University study on Cambodian genocide concluded that as many as 1.7 million of Cambodia's 8 million inhabitants died during 1976–1979 in one of the most horrific genocides in history.

Iranian Muslim cleric, head of the antishah revolution (1979–1980), founder of the first modern Islamic republic (1980), and leader of Iran (1980–1989). Born in Khomein, a village near Tehran, on 17 May 1900, Seyyed Ruhollah Musavi Khomeini, as with his father, pursued theological studies, attained the rank of ayatollah, and ultimately became an Islamic jurist.

Khomeini, Ruhollah
(1900–1989)

One of the modern era's most influential revolutionary leaders, Ayatollah Ruhollah Khomeini used the Islamic Revolution of 1979 to infuse a fundamentalist Islamic crusading sentiment into the Iranian state. (Bettmann/Corbis)

For decades, Khomeini watched passively as Shah of Iran Mohammad Reza Pahlavi promoted secularization and restricted the influence of clerical powers. Khomeini also remained detached from the crisis of the early 1950s, as the shah turned to the United States for assistance. In 1953, the Central Intelligence Agency (CIA) engineered a coup against a popularly elected government and brought the shah back to power.

A disciple of Iran's preeminent cleric Ayatollah Mohammed Boroujerdi, who was a defender of the tradition of clerical deference to established power, Khomeini took over this role in 1962 following Boroujerdi's death and began a sharply antagonistic campaign against the shah. That same year, the shah passed a bill that permitted municipal officials to take oaths of office on whatever holy scripture they preferred. This move deeply offended Khomeini and other Islamic fundamentalists, who considered the Koran to be the only appropriate scripture for such occasions. In January 1963 Khomeini issued a strongly worded declaration denouncing the shah and his plans.

Condemning Iran's ties with Israel, Khomeini also called a proposal to permit American servicemen in Iran to be tried in U.S. military courts "a document for Iran's enslavement." After several arrests, in 1964 Khomeini was finally banished to Turkey. He was then allowed to relocate to the Shiite holy city of Najaf, Iraq. In exile, he became the recognized leader of the antishah fundamentalist opposition. While in exile, he shaped a revolutionary doctrine. Condemning the shah's dependence on the United States and his blatant secularism, Khomeini called for the creation of an Iranian clerical state.

In 1978, unrest began to spread throughout Iran. Islamic fundamentalists were joined by students and others disaffected with the shah's heavy-handed rule, state-sanctioned police brutality, and a corrupt bureaucracy. By the end of the year, a host of student-led protests shook the shah, who was then ailing with cancer. Members of the middle class also began to demand the shah's ouster. On 3 January 1979 Shapur Bakhtiyar of the National Front was appointed prime minister. Ten days later, the shah left Iran.

In February 1979, Khomeini became Iran's unquestioned leader. He ended the brief parliamentary experiment and ordered an Assembly of Experts—a group of high-ranking Islamic clerics—to draft an Islamic constitution that would establish and enforce religious law. In November 1979 Khomeini's partisans, most of them young college students, seized the U.S. embassy in Tehran and held fifty-two Americans there hostage for 444 days. The affair led to extremely tense U.S.-Iranian relations and ultimately contributed to President Jimmy Carter's electoral loss in 1980.

In the remaining ten years of his life, Khomeini consolidated his power, proving fully as ruthless as the shah. He instituted a strict regime of Islamic law and suspended the criminal justice system in favor of religious courts.

He also tried to export his revolution by calling for Islamic revolutions throughout the Middle East.

In September 1980 Iraq's Saddam Hussein attacked Iran, hoping for a quick victory and access to Iran's rich oil fields. Hussein believed that the political chaos in Iran would ease both the invasion and occupation, but he badly miscalculated. Khomeini and his followers saw the Iraqi invasion as a holy war and rallied the Iranian people in a fanatical defense of the country. Khomeini was disdainful of Hussein's secular regime. The war dragged on until 1988, bringing staggering casualties and great suffering to both sides.

Meanwhile, life in Khomeini's Iran was repressive, particularly for those who did not subscribe to its fundamentalist tenets. Khomeini encouraged a veritable personality cult by the late 1980s, while harsh punishments were meted out to those who did not adhere to the strict Islamic laws enforced by the state. Reports of wholesale human rights abuses, including torture, were attributed to the Islamic regime. In early 1989, Khomeini precipitated an international uproar when he publicly called for the murder of the writer and novelist Salman Rushdie, who, Khomeini charged, had committed blasphemy in his book *The Satanic Verses*. As the fatwa against Rushdie continued to create controversy, Khomeini became gravely ill and died on 2 June 1989 in Tehran.

Soviet politician, first secretary of the Communist Party of the Soviet Union (CPSU) during 1953–1954, and premier of the Soviet Union during 1958–1964. Born on 17 April 1894 in Kalinovka, Kursk Province, to a peasant family, Nikita Sergeyevich Khrushchev worked beginning at age fifteen as a pipe fitter in various mines near his home. His factory work exempted him from wartime service. In 1918 he joined the Russian Communist Party.

In 1919 Khrushchev became a political commissar in the Red Army, accompanying troops fighting both the Poles and Lithuanians. In 1922 he returned to school and completed his education. In 1925 he became Communist Party secretary of the Petrovsko-Mariinsk District. Early recognizing the importance of Communist Party Secretary Josef Stalin, Khrushchev nurtured a friendship with Stalin's associate and party secretary in Ukraine, Lars Kaganovich, who helped him secure a full-time party post in the Moscow city party apparatus in 1931.

Khrushchev, Nikita
(1894–1971)

Soviet Premier Nikita Khrushchev. Rising to the position of leader of the Communist Party of the Soviet Union in 1953 after the death of Josef Stalin, Khrushchev instituted various reforms and led the Soviet Union through some of the most tense years of the Cold War before being ousted in 1964. (Library of Congress)

By 1935 Khrushchev was secretary-general of the Moscow Communist Party, in effect mayor of the capital. In 1938 he became a candidate (nonvoting member) of the Politburo, and in 1939 he was a full member. He was one of few senior party officials to survive Stalin's Great Purges. After the German invasion of the Soviet Union in June 1941, Khrushchev was made a lieutenant general and placed in charge of resistance in Ukraine and relocating heavy industry eastward.

With the Red Army's liberation of Ukraine, Khrushchev took charge of that region. This led to his first clash with Stalin. With Ukraine suffering major food shortages in 1946, Khrushchev concentrated on efforts to increase agricultural production, while Stalin wanted emphasis to be on heavy industry. As a consequence, Stalin demoted Khrushchev. By 1949, however, Khrushchev was back in favor in his previous post as head of the Communist Party machinery in Moscow. In 1952, at the 19th Party Congress, Khrushchev received the assignment of drawing up a new party structure, which led to the replacement of the old Politburo by the Presidium of the Central Committee. Khrushchev benefited from this change as one of the powerful committee secretaries.

Following Stalin's death on 5 March 1953, a brief power struggle ensued, with no one person on the ten-member Presidium dominating. Khrushchev did not appear to be a likely choice for supreme power, but on 14 March, when Georgy Malenkov suddenly resigned as secretary of the Central Committee, Khrushchev succeeded him.

Malenkov, however, retained his post as head of the party. Shortly thereafter, another Khrushchev rival, Lavrenty Beria, was removed from authority and executed. Over the next four years, Malenkov and Khrushchev struggled over who would dominate the Soviet state. Khrushchev had taken responsibility for Soviet agriculture, and by 1953 he registered considerable successes in that vital sector of the economy. His Virgin Lands program the next year opened new agricultural lands in Kazakhstan and western Siberia. Early successes in that region assisted his rise to power, although they were only temporary. Unpredictable climatic conditions and overuse of chemical fertilizers undermined the program after he was in power.

Meanwhile, Malenkov advocated increases in consumer goods to benefit the Soviet people. Hard-liners in the party leadership and military opposed this and sought continued concentration in heavy industry and increases in defense spending. Khrushchev took the tactical decision to side with the hard-liners, and in February 1955 Malenkov was defeated in a party plenum called on this issue and resigned as party chairman. On Khrushchev's recommendation, Nikolai Bulganin succeeded Malenkov. For a time it appeared as if both Bulganin and Khrushchev were running the Soviet state, although

Khrushchev wielded actual power through his control of the party machinery.

Malenkov remained a member of the Presidium, where he continued to intrigue against Khrushchev. In June 1957 Khrushchev took full authority when an attempt by Malenkov, Kaganovich, and Vyacheslav Molotov to unseat Khrushchev miscarried and they themselves were purged. It speaks volumes about the change in the Soviet state under Khrushchev, however, that the three men were not executed.

Indeed, Khrushchev's greatest—and perhaps most risky—achievement as leader of the Soviet Union was the unmasking of Stalin's legacy and his attempt to de-Stalinize Soviet society. The most powerful blow to the Stalinists came during his famous speech at a closed session of the 20th Party Congress on 25 February 1956 in which Khrushchev documented just some of the crimes and purges of the Stalinist period. In fact, the Soviet Union became gradually more liberal under Khrushchev, and it never did return to the kind of oppressive barbarism for which Stalin was known.

Nevertheless, the overall thrust of Khrushchev's policies tended to be ambivalent and was overshadowed by surprising shifts, inconsistencies, and poorly conceptualized initiatives. Success during the 1950s in economic policy, industrial production, and the space program, in which he took special interest, compelled Khrushchev to proclaim that by 1970, the Soviet Union would surpass the United States in per capita production. In 1980, he predicted, America would embrace communism.

In reality, severe economic problems persisted in the Soviet Union, particularly with respect to consumption and agriculture, where the early initiative to develop the Virgin Lands ended poorly. During Khrushchev's reign, the ideological and political atmosphere often changed. To some extent, his orientation in this regard depended upon his standing within the Soviet leadership and the international communist movement. In 1957 he forbade the publication of Boris Pasternak's *Doctor Zhivago*, whereas in 1962 he allowed the publication of Aleksandr Solzhenitsyn's (much more critical) novel *One Day in the Life of Ivan Denisovich*.

In foreign policy, Khrushchev generally attempted to ease tensions with the West, particularly with the United States. He rejected Stalin's thesis that wars between capitalist and socialist countries were inevitable and instead sought peaceful coexistence. On the whole, up until 1960, Soviet-American relations improved. Khrushchev's 1959 visit to the United States was a remarkable success. His talks with President Dwight D. Eisenhower produced, at least for a brief time, what came to be called the Spirit of Camp David. Another highlight of improved East-West relations was the 25 July 1963 signing of a Nuclear Test Ban Treaty.

But Khrushchev engaged in some rather dubious and dangerous foreign policy initiatives as well. He initiated the 1958 Berlin Crisis, authorized the construction of the Berlin Wall in 1961, and used the U-2 Crisis in 1960 to provoke a showdown with Eisenhower and torpedo the May 1960 Paris Conference.

Leaders of the Soviet Union

<i>Name</i>	<i>Term</i>
Vladimir Lenin	December 1922–January 1924
Josef Stalin	January 1924–March 1953
Georgy Malenkov	March–September 1953
Nikita Khrushchev	September 1953–October 1964
Leonid Brezhnev	October 1964–November 1982
Yuri Andropov	November 1982–February 1984
Konstantin Chernenko	February 1984–March 1985
Mikhail Gorbachev	March 1985–December 1991

Most disturbing of all, in 1962 Khrushchev decided to install intermediate-range ballistic missiles in communist Cuba. After a brief but extremely tense confrontation with President John F. Kennedy's administration in October 1962, during which the superpowers were poised on the abyss of thermo-nuclear war, Khrushchev decided to remove the weapons. The Cuban Missile Crisis was by far Khrushchev's worst foreign policy mistake. Although he did exact a few concessions from the Americans in return for the missiles' removal, the crisis was clearly a humiliating loss of face for the Soviets and for the Soviet leader personally. Ultimately, it became an important factor in his fall from power less than two years later.

Khrushchev's policy toward other socialist states was equally ambivalent. He restored Soviet relations with Yugoslavia in 1955, after the Tito-Stalin break of 1948. He promoted de-Stalinization programs in Eastern bloc states and allowed a certain extent of limited autonomy for communist parties abroad. However, Khrushchev was not above cracking down on dissent when it was in his best interest. When his secret 1956 speech on Stalin and the ensuing de-Stalinization campaign led to revolts in Poland and Hungary, he intervened in both cases. In fact, he ordered the 1956 Hungarian Revolution crushed by brute force. He was unable to head off crises in Soviet-Albanian and Sino-Soviet relations when Albanian and Chinese officials criticized his de-Stalinization policies and rapprochement with the West. Both crises became quite serious by the early 1960s and led to permanent schisms. Particularly noteworthy was the Sino-Soviet split, for which Khrushchev was largely blamed.

Because of the failure of Khrushchev's agricultural policies, the Sino-Soviet split, the debacle of the Cuban Missile Crisis, and the leader's increasingly unpredictable and unstable leadership, he was ousted by the party's Central Committee on 14 October 1964 and relieved of all his positions. He then wrote his memoirs, which were published in the West beginning in 1970. Khrushchev died in Moscow on 11 September 1971 following a massive heart attack.

Federal Republic of Germany (FRG, West Germany) politician and chancellor (1966–1969). Born on 6 April 1904 in Ebingen, Germany, Kurt Kiesinger studied philosophy, history, law, and political science at the universities of Tübingen and Berlin. He joined the National Socialist (Nazi) Party in 1933. During 1935–1949 he practiced law in Berlin; in 1940 he became an assistant in the German Foreign Office. He became division head for general propaganda in 1942 and deputy director of the radio division in 1943.

Because of Kiesinger's involvement in the Nazi Party, the Allies interned him for eighteen months after the German surrender in 1945. In 1947, however, he was allowed to establish himself as a solicitor in Tübingen, where he joined the Christian Democratic Union (CDU). He was elected to the Bundestag in 1949 and was one of the earliest supporters of European integration, subsequently driving the integration of West Germany into the Western alliance. During 1958–1966, he served as minister president of Baden-Württemberg.

On 1 December 1966 Kiesinger succeeded Ludwig Erhard as chancellor, forming a coalition of West Germany's major parties. As chancellor, he committed himself to restructuring the federal budget and proposed a draft for a national emergency law, aimed at improving national security, that was passed by the Bundestag in 1968. His strong support of this hotly debated law was certainly a reaction to the student protests of 1967–1968 and the so-called extraparlimentary opposition, which he regarded as a threat to the state. It was also a clear sign of his conservatism. In foreign affairs, Kiesinger and foreign minister Willy Brandt took the lead in applying the Hallstein Doctrine with more flexibility.

Despite opposition from some hard-liners inside his own cabinet, Kiesinger followed Brandt's policy prescriptions. This was most clearly indicated in Kiesinger's Bundestag speech of 12 April 1967, when the chancellor addressed delegates of the Socialist Unity Party (SED) congress, an unthinkable action for his predecessors Konrad Adenauer or Erhard, who had never mentioned the German Democratic Republic (GDR, East Germany) so directly in an official speech. When Brandt became chancellor in October 1969, Kiesinger became CDU opposition leader until 1971. He remained in

Kiesinger, Kurt-Georg (1904–1988)

the Bundestag until 1980. Kiesinger died in Tübingen, Germany, on 9 March 1988.

Kim Dae Jung (1926–)

Republic of Korea (ROK, South Korea) prodemocracy activist, politician, and president of the ROK (1998–2003). Born on 6 January 1926 in Haui'do on a small impoverished island off the southwestern Korean coast, Kim Dae Jung graduated from Mokpo Commercial High School in 1943 and entered the shipping business. During the Korean War, he managed a shipping firm that supplied ROK and United Nations (UN) military forces. He entered politics in 1954 but lost a bid for a seat in the National Assembly. In 1960 he won election to the Assembly and was reelected three times.

In the 1971 presidential elections, Kim challenged incumbent President Park Chung Hee as the New Democratic Party's candidate, winning 43.6 percent of the vote in a contest that had been heavily rigged for Park. Kim's strong showing shocked the Park regime. Fearing Kim's popularity, Park embarked on a campaign to silence him. Kim was ceaselessly harassed and narrowly escaped death in a government-sponsored "accident." He was in Japan for medical treatment when, on 17 October 1972, the Park government imposed martial law in South Korea. Kim immediately condemned this decision. On 8 August 1973, Park's Korea Central Intelligence Agents kidnapped Kim in Tokyo and transported him to South Korea, almost killing him. Park placed Kim under house arrest and later imprisoned him for sedition and other spurious "crimes."

Six weeks after Park's assassination on 26 October 1979, Kim was released from prison. Park's successor, Major General Chun Doo Hwan, continued the vendetta against Kim. In May 1980 Kim was arrested and sentenced to death on trumped-up charges but eventually, in a deal with President Ronald Reagan's administration, was allowed to travel to the United States. Kim voluntarily returned to South Korea in February 1985 but was briefly placed under house arrest again. Then, after the 1987 June Resistance for democratization, Kim was cleared of all charges and had his political rights restored.

Following consecutive losses in the 1987 and 1992 presidential elections, Kim finally won election in December 1997 and was installed in February 1998. He ardently supported the establishment of friendlier relations with North Korea, and as such his administration pursued the so-called sunshine policy of rapprochement with Pyongyang. Kim's historic 13–15 June 2000 summit meeting with North Korean leader Kim Jong Il in Pyongyang resulted in his winning the Nobel Peace Prize in December 2000. Kim's sunshine policy profoundly transformed South Korean perceptions of the Democratic Republic of Korea (DPRK, North Korea). On the other hand, South Korean–U.S. relations deteriorated rapidly, especially after U.S. President George W. Bush refused to support Kim's rapprochement with North Korea, going so far as to label Pyongyang part of an “axis of evil.” Anti-American sentiments have since been on the rise in South Korea, potentially jeopardizing a fifty-plus-year relationship and endangering the long-standing U.S.–South Korean security alliance. Kim stepped down as president in February 2003.

President of the Republic of Korea (ROK, South Korea) Kim Dae Jung, pictured here in 2000. (Serra Antoine/Corbis Sygma)

Founder and president of the Democratic People's Republic of Korea (DPRK, North Korea) during 1948–1994, general secretary of the Korean Workers' Party, and instigator of the Korean War. Born Kim Song Ju on 15 April 1912 to a peasant family in Mangyongdae near Pyongyang, he later assumed the name of Kim Il Sung, a legendary hero of the Korean independence movement, and under this name became a well-known anti-Japanese guerrilla commander in the 1930s. During the Japanese occupation, he led his guerrilla forces on raids against Japanese outposts all across northern Korea. Fleeing the Japanese crackdown on guerrillas in Manchuria, he sought refuge in eastern Siberia in the Soviet Union in 1941.

Kim returned to Korea in September 1945 after the end of World War II and used both his guerrilla record and the support of Soviet occupation

Kim Il Sung
(1912–1994)

authorities to become the undisputed leader of North Korea. When North Korea was formally established on 9 September 1948, he became premier. The pro-Western Republic of Korea (ROK, South Korea) had already been established under the leadership of Syngman Rhee.

Kim possessed a burning ambition to reunite the Korean Peninsula under his rule. With Soviet and Chinese acquiescence and support, he launched a surprise military invasion across the 38th Parallel against South Korea on 25 June 1950. After initial success, however, the assault was repulsed by the forces of South Korea, the United States, and other nations under the flag of the United Nations (UN). Only the massive November 1950 Chinese intervention saved North Korea from defeat. The war eventually stalemated and ended with an uneasy cease-fire in 1953 that left the peninsula divided at the 38th Parallel. To this day, North and South Korea are still technically in a state of war, as no formal peace treaty has been signed.

In the aftermath of the Korean War, Kim systematically purged his political opponents, creating a highly regimented and centralized system that accorded him unlimited power and generated a formidable cult of personality. He was referred to by his subjects in North Korea as *suryong*, or "the Great Leader." Kim used *Juche*, or the ideology of self-reliance, to legitimize his regime and to keep foreign influences out of North Korea. Under his rule, North Korea became isolated from the world commu-

nity and hard-pressed economically. Throughout much of the Cold War and beyond, North Korea remained one of the most enigmatic and closed societies in the world. In particular, after Kim's death in 1994, North Korea became increasingly unable to stabilize its sinking economy and to feed its own people.

Kim had made the United States his primary enemy, blaming Washington for the division of the peninsula in 1945. He also abhorred America for its 1950 intervention, which prevented reunification on his terms, and for turning South Korea into a virtual U.S. colony. Thus, he pursued a consistently hard-line policy toward the United States, as demonstrated by the USS *Pueblo* incident in 1968 and the brutal 1976 ax murders of two American officers in the demilitarized zone. On the other hand, Kim had long sought a dialogue with the United States in hopes of persuading the United States to withdraw its 37,000 troops from the peninsula. He also hoped that a closer relationship with Washington would offset the collapse of the North Korean-Soviet alliance and the weakening of North Korea's relations with Beijing. After March 1993, Pyongyang began using its nuclear weapons program as a bargaining chip for recognition, security assurances, and economic aid from the United States and other Western nations. For a failing and isolated regime with few other cards to play, this potentially deadly brinkmanship proved

moderately successful. In 1994, the United States promised North Korea modest aid and help building nuclear power plants that could not be used to produce weapons-grade uranium. In return, the North Koreans were to abandon their nuclear weapons programs, a pledge that they evidently had no intention of fulfilling.

Kim died of a massive heart attack on 8 July 1994 in Pyongyang, just before what would have been a historic South Korean–North Korean summit with South Korean President Kim Young Sam. Kim’s son, Kim Jong Il, succeeded his father as absolute ruler of North Korea. Kim Il Sung is as omnipresent in death as in life, and the junior Kim has ruled North Korea in accordance with the teachings of the departed Great Leader.

For the past half century, while Pyongyang has glorified Kim as something akin to a deity, Seoul has portrayed him as a demon, a scoundrel, and a fraud. But South Korean President Kim Dae Jung’s tenacious efforts to engage Pyongyang have helped to erode such Cold War–era attitudes in South Korea. As an example, some lines in a newly approved high school textbook in South Korea for the first time credited Kim Il Sung for his role in combating Japanese colonialism. The passages symbolize rapidly changing South Korean views of North Korea.

South Korean politician, cofounder of the Democratic Party, opposition leader, and president of the Republic of Korea (ROK, South Korea) during 1993–1998. Born on 20 December 1927 to a wealthy family on Koje Island near Pusan, Kim Young Sam entered Seoul National University in 1947. During the Korean War, he served in the South Korean Army in propaganda activities.

Kim was elected to the National Assembly in 1954 as a member of South Korean President Syngman Rhee’s Liberal Party but soon rebelled against Rhee’s increasingly dictatorial rule. Kim then helped found the opposition Democratic Party in 1955. As an opposition leader, he was an outspoken critic of the South Korean government yet remained undaunted by the oppression that often accompanied his position. A family tragedy in 1960, in which his mother was killed by an agent of the Democratic People’s Republic

Kim Young Sam
(1927–)

Kim Young Sam, opposition leader and one of the founders of the Democratic Party, served as president of South Korea from 1993 to 1998, the first civilian to hold the office since 1960. (Embassy of the Republic of Korea)

of Korea (DPRK, North Korea), shielded him from the Red-baiting commonly used against opposition politicians. His establishment roots and relatively moderate political views also made him acceptable to middle- and upper-class members of Korean society. Kim was elected to head the New Democratic Party in 1974 and again in 1978. In 1987 he was chosen to head the Unification Democratic Party.

Discouraged by his defeat in the 1987 presidential election, Kim joined President Roh Tae-woo's ruling party in 1990. After many years as a political dissident opposed to military rule, Kim finally won election to the presidency in December 1992 as the candidate of the Liberal Democratic Party, then the government political party. He took office in February 1993. He was the first civilian president since the military coup that overthrew the democratic government of John M. Chang in May 1961.

Kim was not well equipped to handle South Korean–U.S. relations or the new opportunities for reconciliation with North Korea. Like many South Koreans, whose sentiments toward North Korea in the early 1990s were a complicated mixture of kinship, disdain, and fear, the president's views were replete with inconsistencies. Kim alternated between taking a hard line against North Korea, calculated to bring about its early collapse, and pursuing an accommodation to bring about a “soft landing,” leading to a gradual unification. Because he usually pursued the former and often collided with the United States, which

favored the latter, South Korean–U.S. relations were tense during his term of office. Kim has also been blamed for the collapse of the South Korean economy during the East Asian financial crisis. As a result, South Korea had to resort to an International Monetary Fund (IMF) bailout that many South Koreans viewed as a national humiliation. Kim left office in February 1998.

King, Martin Luther, Jr.
(1929–1968)

African American minister, political activist, and U.S. civil rights leader. Born on 15 January 1929 in Atlanta, Georgia, Martin Luther King Jr. graduated from

high school at the age of fifteen and attended Morehouse College during 1944–1948. Following in his father's footsteps, he decided to become a Baptist minister. He subsequently attended Crozer Theological Seminary in Pennsylvania before beginning doctoral studies in systematic theology at Boston University in 1951.

Shortly before completing his doctoral dissertation in early 1955, King accepted a position as minister of the Dexter Avenue Baptist Church in Montgomery, Alabama. In December 1955, Rosa Parks, a young African American seamstress, refused to yield her seat on a Montgomery city bus to a white, thereby breaking the city's segregation ordinance. At the time, nearly all Southern localities—large and small—were strictly segregated according to race. When local African American leaders organized a boycott of the city's buses, King was asked to become the president of the Montgomery Improvement Association, which coordinated the campaign. During the year-long boycott, King, influenced by veteran pacifist activists, developed a non-violent protest strategy that closely resembled the tactics of Indian activist Mohandas Gandhi.

In 1957, after blacks had successfully desegregated Montgomery's buses, King and other civil rights activists formed the Southern Christian Leadership Conference (SCLC) as a platform from which to expand the civil rights struggle. But when African American students initiated a massive sit-in movement to force the desegregation of lunch counters and restaurants that spread across the South in 1960, King and the SCLC remained on the sidelines. Only in 1962 did the SCLC attempt to launch a nonviolent protest campaign in Albany, Georgia, which failed. A year later, King and his supporters used this experience to launch a highly successful protest campaign in Birmingham, Alabama. The violence that white policemen employed to disperse black demonstrators shocked the nation and deeply embarrassed the United States internationally. By then, in fact, it had become clear that America could no longer take the high road in protesting human rights abuses behind the Iron Curtain when it allowed such flagrant civil rights violations on its own soil. The civil rights movement laid bare the hypocrisy of American foreign policy and handed the Soviet Union a perfect propaganda weapon.

In August 1963, 250,000 demonstrators gathered in Washington, D.C., where they lobbied for civil rights legislation and listened to King's deeply moving and memorable "I Have a Dream" speech. The enormity of the event and the attendant emotion that it brought to the movement had deeply impressed President John Kennedy, who until that time had been a rather reluctant partner in the struggle for civil rights. In June 1964, with the full force of President Lyndon Johnson's coercive arm-twisting, Congress finally passed the landmark 1964 Civil Rights Act, which forbade discrimination

Martin Luther King Jr. led the African American struggle to achieve the full rights of U.S. citizenship and eloquently voiced the hopes and grievances of African Americans before he was assassinated in 1968. His powerful speeches and message of nonviolence have continued to inspire people of all races and generations. (Library of Congress)

based on race, ethnicity, religion, sex, or national origin in most public venues and in employment. Six months later, King received the Nobel Peace Prize for his civil rights activism.

Although the Federal Bureau of Investigation (FBI) sought to smear King's reputation, especially after he denounced America's Vietnam War policies, his nonviolent rhetoric won him both white and black supporters across the nation. Another successful SCLC campaign for voting rights that began in Selma, Alabama, in 1965 further established King's standing as the most prominent spokesman of the African American freedom struggle. The Selma campaign is credited with contributing to the passage of the Voting Rights Act of 1965. By 1966, however, after dozens of race riots had erupted in American cities, many black activists began to denounce King's non-violent philosophy. That year, younger activists began to call for Black Power, a militant concept that had been influenced by the slain black separatist Malcolm X. By 1967, the civil rights movement had begun to splinter. King no longer commanded the solitary admiration of most blacks as he had in the past, and his anti-Vietnam War stance alienated many whites.

On 4 April 1968 while organizing a strike of sanitation workers in Memphis, Tennessee, King was assassinated. His murderer was James Earl Ray, a career criminal who staunchly opposed racial integration. Ray was apprehended and convicted and spent the rest of his life in prison.

Kinnock, Neil Gordon (1942–)

British politician and Labour Party leader (1983–1992). Born on 28 March 1942 in Tredegar, South Wales, the son of a miner, Neil Kinnock earned a BA degree in industrial relations and history from University College, Cardiff, in 1964.

Kinnock was first elected to Parliament in 1970. Following in the footsteps of other radical politicians from Wales, he strongly supported labor

unionism and the radical Left within the Labour Party. When Labour lost the 1979 general election to Margaret Thatcher's Conservative Party, Kinnock served as opposition spokesman for education. He was also a member of the Labour Party's national executive committee. Labour fared no better in the 1983 elections, and its leader, Michael Foot, took the blame for its poor showing. Shortly after the election, Kinnock replaced Foot as party leader.

Kinnock immediately set out to reorganize and reinvigorate the party. Realizing that radical elements within Labour had helped contribute to its years in the political wilderness, he expelled the Militant Tendency Organization, a radical leftist group within the party. He also moderated the party line in order to attract more voters, many of whom had shifted to the Right during the era of Thatcher as prime minister. Although Labour lost the 1987 elections, it did noticeably better than in the previous election.

As the Conservative government began to wane in the late 1980s, many Labourites, including Kinnock himself, thought that they were destined to win in the 1992 elections. They did not. After the 1992 defeat, Kinnock resigned his leadership position. There is little doubt, however, that his reorganization and repositioning of the Labour Party was a significant factor in it attaining victory under Tony Blair. Kinnock went on to serve as transportation commissioner for the European Union (EU) in 1995.

Neoconservative political scientist and outspoken U.S. ambassador to the United Nations (UN) during 1981–1985. Jeane Kirkpatrick was born Jeane Duane Jordan on 19 November 1926 in Duncan, Oklahoma. Her father was an oil wildcatter, her mother an accountant. She received her undergraduate degree in 1948 from Barnard College and a master's degree in 1950 from Columbia University. She married political scientist Evron Kirkpatrick in 1955, reared three sons, and then began teaching at Georgetown University in 1967. In 1968 she earned a PhD from Columbia and joined the staff of the American Enterprise Institute (AEI), a Washington, D.C., think tank.

As an active Democrat, Kirkpatrick worked on Vice President Hubert Humphrey's 1968 presidential campaign. Like Humphrey and many others in the party, she favored liberal domestic social programs and a muscular foreign policy to counter the perceived Soviet threat abroad. She opposed South

**Kirkpatrick, Jeane
Jordan**
(1926–2006)

Jeane Kirkpatrick migrated from the academic world to the diplomatic circles of the United Nations as she shifted her affiliation from the Democratic Party to the right wing of the Republican Party. (AP/Wide World Photos)

Dakota Senator George McGovern's 1972 Democratic presidential candidacy because she disagreed with his dovish foreign policy platform, leading her and nine other party members to form the Coalition for a Democratic Majority (CDM) to urge the party to return to its earlier foreign policy positions. In 1976 Kirkpatrick, much of the CDM, and some Republicans advocated increased defense spending and greater scrutiny of arms control agreements and détente by establishing the Committee on the Present Danger. Consequently, as with those with similar backgrounds and beliefs, Kirkpatrick was rather imprecisely labeled a neoconservative.

In a 1979 article titled "Dictatorships and Double Standards," Kirkpatrick charged that Democratic President Jimmy Carter's opposition to right-wing autocrats in Iran and Nicaragua had unintentionally led to their replacement by either radical Muslim fundamentalist or left-wing governments that were hostile to American interests. She advocated democratization while also acknowledging the circumstances of "friendly dictators." The article caught the eye of conservatives running President Ronald Reagan's 1980 campaign, and as a result Kirkpatrick was appointed ambassador to the UN in 1981. She became a passionate adherent of the Reagan administration's get-tough policy toward the Soviets and was a vocal proponent of the Republican Party's social and foreign policy agendas.

Tired of the internecine squabbling on Reagan's foreign policy team and disappointed to be passed over for national security advisor, Kirkpatrick resigned in 1985 shortly after formally joining the Republican Party. She then returned to Georgetown University and her post at AEI. In 1993 she cofounded Empower America, a public policy organization. Kirkpatrick died in Bethesda, Maryland, on 7 December 2006.

Conservative Japanese politician and prime minister (1957–1960). Born on 13 November 1896 in Tabuse-chō in the Yamaguchi Prefecture, Kishi Nobusuke graduated from the law school of Tokyo Imperial University in 1920. That same year he entered government work in the Ministry of Agriculture and Commerce. In 1936 he was appointed assistant general manager of the government in Manchukuo, an area of Northeastern China annexed by Japan in 1932. Kishi became one of the top economic bureaucrats in Manchukuo. In 1939 he returned to Japan as undersecretary of commerce and industry, and in 1941 General Tōjō Hideki appointed Kishi minister of commerce and industry in his first cabinet. When the Commerce and Industry Ministry was converted to the Munitions Ministry in 1943, Kishi became a minister of state and undersecretary of munitions.

During the U.S. occupation of Japan after World War II, Kishi was detained as a suspected "Class-A" war criminal from 1945 to 1948. Ultimately acquitted by the Tokyo Tribunal, he was banned from public life until 1952, when he joined the anti-Yoshida Shigeru faction and became secretary-general of the Democratic Party. Kishi was largely responsible for uniting all of Japan's conservative parties into the powerful Liberal Democratic Party (LDP) in 1955 and served as the first head of the LDP.

When ailing Prime Minister Ishibashi Tanzan resigned in 1957, Kishi assumed the post of prime minister. His first cabinet lasted only until 1958, but he quickly assembled a second cabinet that same year, which lasted until 1960.

Kishi Nobusuke
(1896–1987)

Japanese Prime Minister Kishi Nobusuke, June 1960.
(AFP/Getty Images)

As prime minister, Kishi authorized war reparations to Indonesia and authorized the implementation of the Japanese National Defense Plan to fortify Japanese defensive capabilities. He also traveled to the United States in 1957 to talk with President Dwight D. Eisenhower. Most notably, Kishi sought renewal of the United States–Japan Security Treaty. He again journeyed to Washington and in January 1960 returned to Japan with a new security treaty. But he was soon overwhelmed by a widespread backlash to the treaty, which many perceived as one that would subliminate Japanese interests to those of the Americans. Amid the growing public uproar, late in the evening of 19 May 1960 Kishi’s government rammed the treaty through the Diet (parliament) on a snap vote. On 15 July 1960, he was forced to resign thanks in part to this heavy-handed parliamentary maneuver. Kishi died on 8 August 1987 in Shinjuku, Tokyo.

Kissinger, Henry (1923–)

U.S. national security advisor (1969–1975) and secretary of state (1973–1977); together with President Richard Milhous Nixon, devised and implemented a major reorientation of U.S. foreign policy. Of German-Jewish extraction, Henry Alfred Kissinger was born on 27 May 1923 in Fürth, Germany. He left Adolf Hitler’s Germany for New York in 1938 and became an American citizen five years later. After serving in the U.S. Army, Kissinger became a professor of government at Harvard University, publishing his doctoral dissertation, *A World Restored* (1955), that focused particularly upon the Austrian Prince von Metternich, whom Kissinger admired and in some ways modeled himself upon. He also published a study of U.S. atomic policy for the prestigious Council on Foreign Relations.

Although his intellectual capabilities were highly respected, Kissinger's real ambitions lay in the practice, not the study, of international relations. He used his Harvard position to meet major political figures and served as an advisor to leading Republicans, including Governor Nelson A. Rockefeller of New York and former Vice President Nixon. Kissinger's efforts won him only minor assignments under President John F. Kennedy, but when Nixon became president he appointed Kissinger as his national security advisor. Kissinger greatly overshadowed William P. Rogers, nominal secretary of state until August 1973, when Kissinger succeeded him, taking virtual control of U.S. foreign policy.

Kissinger's undoubted abilities included an immense capacity for hard work, a talent for grand designs and broad conceptualization, and the imagination to reformulate the international system to accommodate the relative weakness of the United States, de-emphasizing ideology in favor of a balance of power and the pursuit of closer relations with communist People's Republic of China (PRC) and détente with the Soviet Union. This resulted in the 1972 Strategic Arms Limitation Treaty (SALT) I and the Anti-Ballistic Missile Treaty that imposed limits on Soviet and American nuclear arsenals and delivery systems; the 1975 Helsinki Accords that normalized relations between Eastern and Western Europe and created the permanent Conference on Security and Cooperation in Europe (CSCE); and a rapprochement between communist China and the United States that Kissinger pioneered with a secret 1971 personal visit to Beijing. He also proved himself to be an excellent negotiator in complicated and protracted shuttle diplomacy designed to resolve long-standing Arab-Israeli tensions and disputes after the October 1973 Yom Kippur War.

Kissinger's weaknesses included a penchant for secrecy and intrigue, enormous vanity, and overweening personal ambition, all of which sometimes impelled him to decidedly unscrupulous behavior; an overriding concern to maintain international stability that often led him to endorse brutal right- or left-wing regimes; and a focus on realism in foreign policy to the near exclusion of all considerations of morality. The latter was apparent in his involvement in the secret bombing of Cambodia in the early 1970s, an operation that Congress halted when it became public in 1973, and the 1970–1971 invasion of that country despite Nixon's promise when he took office to end the Vietnam War as soon as possible; acquiescence in a 1973 military coup that brought the death of left-wing president Salvador Allende of Chile; endorsement of Indonesia's military takeover of Portuguese East Timor in December 1975 and the brutal suppression of indigenous resistance there; and readiness to authorize wiretapping against American bureaucrats suspected of leaking official information to the press. These aspects of Kissinger and his failure, constant negotiations notwithstanding, to end the Vietnam War—a conflict that his Cambodian policies effectively broadened—until 1973 made him the *bête noire* of many American liberals.

Conservative Republicans found equally opprobrious Kissinger's willingness to accommodate the communist Soviet Union and the PRC and, if Sino-American rapprochement required, to jettison the Republic of China

Kissinger greatly overshadowed William P. Rogers, nominal secretary of state until August 1973, when Kissinger succeeded him, taking virtual control of U.S. foreign policy.

Secretary of State Henry Kissinger, a principal architect of U.S. foreign policy during the administrations of Republican presidents Richard Nixon and Gerald Ford. (Marion S. Trikosko/Library of Congress)

(ROC, Taiwan), a longtime U.S. ally. Under Nixon's successor, Gerald R. Ford, who became president in August 1974 when the Watergate scandal forced Nixon's resignation, both SALT I and the Helsinki Accords on Europe that Kissinger helped to negotiate with the Soviets became targets for attack by such conservatives as California governor and presidential hopeful Ronald W. Reagan, who assailed the Soviet human rights record. The fall of Vietnam to communist forces in April 1975, little more than two years after Kissinger had negotiated the Paris Peace Accords supposedly ending the war, also damaged his credibility. On 3 November 1975 Ford replaced Kissinger as national security advisor, although Kissinger remained secretary of state until Ford left office in January 1977.

Upon leaving government, Kissinger established an influential business consultancy firm. He continued to provide unofficial advice to successive administrations, wrote and spoke extensively on international affairs, and published three weighty volumes of memoirs. He remains a perennially controversial figure. Liberals still denigrate his foreign policy accomplishments, and even decades later journalists including Seymour Hersh and, most notably, Christopher Hitchens argued that Kissinger's past behavior made him liable to trial and conviction for war crimes. It became almost an academic parlor game to point out discrepancies between Kissinger's own account of his time in office and the increasingly available documentary record. Outside the United States, Kissinger was a less polarizing figure, and as he began his ninth decade many in Europe and Asia still admired his achievements.

Impromptu exchange between U.S. Vice President Richard M. Nixon and Soviet Premier Nikita Khrushchev at the American National Trade and Cultural Exhibition in Moscow on 24 July 1959. Dubbed the “Kitchen Debate” because the two leaders engaged in a debate over technology and the quality of life in each other’s countries in front of a model U.S. kitchen display, the repartee was covered by media throughout the world. Although some of their comments were in jest or were lighthearted, as the discussion progressed both men became more belligerent. Nixon had just begun his visit

Kitchen Debate

(24 July 1959)

Soviet Premier Nikita Khrushchev and U.S. Vice President Richard Nixon engage in a vigorous discussion in front of a kitchen display at the U.S. exhibit at Moscow’s Sokolniki Park, 24 July 1959. While touring the exhibit, both men kept a running debate on the merits of their respective countries. On the right is Leonid Brezhnev, future Soviet premier. (AP/Wide World Photos)

to the USSR and had started his tour of the exhibit shortly before he encountered Khrushchev. Their encounter had not been preplanned. The debate occurred amid growing U.S.-Soviet tensions that began with the launching of *Sputnik 1* in 1957 and would culminate in the 1960 U-2 Crisis.

Nixon stayed in the USSR for eleven days, and on 1 August 1959 he gave an unprecedented speech on Soviet television in which he criticized communism and warned that its ideology should not be spread abroad. A month later, Khrushchev made his historic visit to the United States, the first for a Soviet leader. The Kitchen Debate not only demonstrated the simmering tensions between the superpowers but also showcased the growing technological rivalry between the two nations, which was most pronounced in the incipient Space Race.

Kohl, Helmut (1930–)

German politician, chancellor of the Federal Republic of Germany (FRG, West Germany) during 1982–1990, and chancellor of the reunited Germany during 1990–1998. A career politician, Helmut Kohl was born in Ludwigshafen, Germany, on 3 March 1930. His father helped found the Christian Democratic Union (CDU) in Ludwigshafen after World War II, and the younger Kohl became a member of the youth section in 1946. At the age of twenty-three he entered the leadership of the local party organization, and in 1955 he became a member of the party leadership for the state of Rhine-Palatine.

Kohl first studied law at the University of Frankfurt am Main but transferred to Heidelberg University, where he earned a doctorate in history in 1958. His dissertation centered on the revival of political parties in Germany after 1945. By 1966 he was chairman of the state party organization, and in 1969 he became the minister-president of Rhine-Palatine.

Kohl's image as a dynamic reformer helped the CDU win an absolute majority in Rhine-Palatine in the elections of 1971 and 1975. His own career, however, slowed slightly. He failed in his attempt to become the national CDU chairman in 1971. After winning that post on his second attempt in 1973, he then lost the contest for the chancellorship in 1976. He went to Bonn as the leader of the opposition but was forced to allow Franz Josef Strauss, leader of the Bavarian wing of the party, to stand for chancellor in 1980. How-

ever, a constructive vote of no-confidence against the government of Helmut Schmidt allowed Kohl to take the chancellorship on 1 October 1982.

Kohl immediately made his mark, pushing through legislation that allowed the North Atlantic Treaty Organization (NATO) to place new missiles in West Germany despite the protests of the Soviet Union and the West German peace movement. More important for his continuing success, however, was a steady improvement in the West German economy. Under Kohl, an additional 1.3 million West Germans found work between 1983 and 1989.

Kohl also deepened Germany's involvement with and commitment to Europe. In September 1984, he met with French President François Mitterrand at Verdun for a joint commemoration of the victims of both world wars. The two men also worked together to develop a European defense corps and a European radio station and to lay the foundations for the Treaty of Maastricht and common European currency. Kohl also worked closely with Soviet leader Mikhail Gorbachev and U.S. President Ronald Reagan. While Kohl's joint commemoration with Reagan of the victims of World War II at an SS cemetery in Bitburg created some controversy, the CDU was confirmed in government in the elections of 1983 and 1987.

Kohl was the right man in the right place when the Berlin Wall was finally breached in November 1989. He quickly seized the initiative, surprising the German parliament with a ten-point program for German unity before the end of the month. He promised immediate economic aid to the German Democratic Republic (GDR, East Germany), to be followed by political reform. He followed this with a milestone speech on the topic before more than 100,000 people at the Frauenkirche in Dresden, East Germany, on 19 December 1989. Kohl was rewarded with a resounding victory for the CDU in the first (and last) free elections held in the East Germany in March 1990.

Kohl worked to rapidly integrate the two Germanies, at great cost and with mixed success. His government barely won reelection in 1994 and was soundly defeated in 1998 largely because of the economic burdens imposed on Germany by his program of unification. Four years later, he was forced to resign as chairman of the CDU due to revelations that he had known about illegal payments made on behalf of the party. His legacy nonetheless is among the greatest of German politicians. Having served sixteen years in office, he was the longest sitting federal chancellor and ranked behind only Otto von Bismarck in time in office overall. Kohl was honored as an honorary citizen of Europe, only the second time that title was bestowed, for his role in German reunification and is still widely known as "The Chancellor of German Unity."

TIMOTHY C. DOWLING

Komitet Gosudarstvennoi Bezopasnosti

The main Soviet security and intelligence agency from 13 March 1954 to 6 November 1991. During this period, the Komitet Gosudarstvennoi Bezopasnosti (KGB, Committee for State Security) operated as an agency and even a ministry. Its tasks included external espionage, counterespionage, and the liquidation of anti-Soviet and counterrevolutionary forces within the Soviet Union. The KGB also guarded the borders and investigated and prosecuted those who committed political or economic crimes.

Soviet security forces have a long history, dating back to the pre-1917 czarist period. Communist predecessors of the KGB were the All-Russian Extraordinary Commissary against the Counterrevolution and Sabotage (also known by its Russian acronym, Cheka), the Main Political Department (GPU), and the Joint Main Political Department (OGPU) headed by Felix Dzerzhinsky, the “Knight of the Revolution,” during 1917–1926. The name “Cheka” suggested that it was to be only a temporary body, but the agency became one of the principal pillars of the Soviet system. In 1934, the OGPU merged into the People’s Commissariat of Internal Affairs (NKVD), with Genrikh Yagoda (1934–1936), Nikolai Yezhov (1936–1938), and Lavrenty Beria (1938–1945) as its chiefs. Under Yezhov and Beria, the NKVD carried out brutal purges within the Communist Party of the Soviet Union (CPSU). NKVD officers, for example, murdered Leon Trotsky in Mexico in 1940.

During the rule of Soviet dictator Josef Stalin, the security apparatus had achieved almost unrestricted powers to harass, arrest, and detain those who were perceived as class enemies. The Soviet Union thus became a police state in which millions of innocent victims suffered arbitrary and brutal terror. Official figures suggest that between January 1935 and June 1941, some 19.8 million people were arrested by the NKVD and an estimated 7 million were subsequently executed.

Following World War II, in 1946 the NKVD was raised to a state ministry under Beria, who became a member of the Politburo. After the deaths of Stalin (March 1953) and Beria (December 1953), the security services were again reorganized, and on 13 March 1954 the secret police was renamed the KGB. There were a half dozen principal directorates.

The First Directorate was responsible for foreign operations and intelligence-gathering activities. The Second Directorate carried out internal political control of citizens and had responsibility for the internal security of the Soviet Union. The Third Directorate was occupied with military counterintelligence and political control of the armed forces. The Fifth Directorate also dealt with internal security, especially with religious bodies, the artistic community, and censorship. The Ninth Directorate, which employed 40,000 persons, provided (among other things) uniformed guards for principal CPSU leaders and their families. The Border Guards Directorate was a 245,000-person force that oversaw border control. Total KGB manpower estimates range from 490,000 in 1973 to 700,000 in 1986.

The KGB helped and trained the security and intelligence agencies in other communist countries. It was also heavily involved in supporting wars of national liberation in the developing world, especially in Africa. The Soviet Union also maintained a close alliance with the Palestine Liberation Organization (PLO), providing it with arms, funds, and paramilitary training. The KGB mostly avoided direct involvement with terrorist operations, but it played an important role in directing aid to these groups and producing intelligence reports on their activities. Scandals concerning defectors and moles plagued the KGB throughout its existence, but the agency also scored notable successes such as, for the recruitment of the Cambridge Five in Great Britain, atomic scientist Klaus Fuchs, and Aldrich Ames, a KGB mole within the U.S. Central Intelligence Agency (CIA).

Under Stalin's successor, Nikita Khrushchev, the terror lessened considerably. Both the security police and the regular police were subjected to a new legal code, and the KGB was made subordinate to the Council of Ministers. Nevertheless, it was allowed to circumvent the law when combating political dissent. Indeed, in the 1960s and 1970s, the KGB waged a campaign against dissidents such as Aleksandr Solzhenitsyn and Andrei Sakharov, who became worldwide symbolic figures of communist repression. In July 1978 the head of the KGB received a seat on the Council of Ministers.

The KGB had a considerable impact on Soviet domestic and foreign policymaking. Its chief, Yuri Andropov, became CPSU leader in 1982. Under Mikhail Gorbachev's reform policies during 1985–1990, Soviet citizens' fears of the KGB diminished, which signaled the erosion of the Soviet system. The KGB was dissolved in November 1991 following the August coup attempt against Gorbachev, which was engineered by KGB chief Colonel General Vladimir Kryuchkov. Its successor organization, the Federalnaya Sluzhba Bezopasnosti (FSB, Federal Security Service), bears great resemblance to the old security apparatus.

Korea, Democratic People's Republic of

East Asian nation with a 1945 population of approximately 8.8 million people. The Democratic People's Republic of Korea (DPRK, North Korea) was officially formed on 9 September 1948 on the northern half of the Korean Peninsula and covers 47,950 square miles, making it roughly the size of the U.S. state of Mississippi. It is bordered by the Republic of Korea (ROK, South Korea) to the south, the People's Republic of China (PRC) and Russia to the north, the Yellow Sea to the west, and the Sea of Japan to the east.

Japanese colonial rule in Korea ended on 15 August 1945 when Japan surrendered unconditionally to the Allies. Korea was thus liberated but was divided at the 38th Parallel. The United States and the Soviet Union divided the Korean Peninsula into two temporary occupation zones to accept the surrender of the Japanese forces, but this arrangement soon became permanent. The United States and the Soviet Union administered their respective occupation zones in southern and northern Korea through radically different instrumentalities. In the north, the Soviet authorities made use of the indigenous people's committees, and a policy of communization was enforced.

On 8 February 1946, the North Korean Interim People's Committee was organized as the new governing body, taking the place of local people's committees. With the help of the Soviets, veteran communist and Red Army officer Kim Il Sung was named chairman. In February 1947, a convention of the local representatives elected in November 1946 was held, which in turn elected the Supreme People's Assembly. The assembly approved the creation of the North Korean People's Committee, which became the highest executive governing organization under Kim.

On 16 February 1948, the North Korean People's Committee proclaimed its intention to form a government representing all Korea within the next few months. On 25 August 1948, ten days after the ROK was officially proclaimed, North Korea held an election for the Supreme People's Assembly throughout Korea. Some rightists and many leftists in South Korea participated in the election. The representatives to the Supreme People's Assembly met in Pyongyang on 3 September to ratify a constitution that had been drafted earlier in the year. The DPRK government was officially established on 9 September, with Kim as premier. On 12 October, the Soviet Union officially recognized this new government.

The formation of the ROK and of the DPRK formalized the de facto division of the Korean Peninsula at the 38th Parallel. Each state claimed to represent the entire nation and remained adamantly antagonistic toward the other. Each also worked to unite Korea on its own terms and with the assistance of its principal foreign patron.

Kim remained determined to unify the Korean Peninsula by military means. North Korea's armed forces significantly surpassed the South Korean Army in manpower and equipment. Calculating that the United States would not protect South Korea, Kim persistently pressed Soviet leader Josef Stalin and PRC leader Mao Zedong for permission to reunify the Korean Peninsula by military means. Indeed, Kim began lobbying for an invasion of South Korea as early as March 1949. He proposed it to Stalin and, with Stalin's and Mao's approval and with a Soviet battle plan to guide him, executed it.

On 25 June 1950, North Korea launched a full-scale attack on South Korea and within three days captured the capital city of Seoul. At that point, it looked as if Kim's ambitions to unify Korea by force under communist rule would be fulfilled. Only then did the United States decide to take military action to save South Korea. The military intervention of United Nations Command (UNC) forces, comprised largely of U.S. troops, completely frustrated the ambitions of North Korean leadership.

The Korean War was quite costly for North Korea. It suffered 523,400 casualties, comprised of 294,151 dead and 229,249 wounded. UNC bombing inflicted heavy damage, turning the North Korean capital of Pyongyang into ruins. On 28 July 1953, a day after the Korean Armistice Agreement was signed, Kim claimed a great victory over the "U.S. imperialists, their South Korean lackeys, and the entire imperialist camp" and vowed to continue his struggle for the "liberation of the southern half of the Republic."

During the 1950s and 1960s, North Korea exhibited an extremely hostile attitude toward the United States via harsh verbal attacks, occasionally accompanied by military actions, always demanding the withdrawal of U.S. troops from South Korea. During 1966–1969, North Korea waged another Korean conflict, with a large number of border clashes along the demilitarized zone (DMZ) at the 38th Parallel. In 1967 and 1968 alone, a total of 1,769 border incidents, more than 260 of which were classified as "significant," occurred within the South Korean sector of the DMZ. These produced some 900 casualties among South Korean and American troops. Then on 23 January 1968, North Korean naval ships illegally seized the USS *Pueblo* in international waters off its coast, killing 1 crewman and taking 82 others hostage. On 15 April 1969, North Korean MiG fighters attacked and shot down a U.S. EC-121 surveillance plane, killing all 43 crew members. Then,

North Korean propaganda poster of August 1950 urging citizens to work for victory over United Nations forces. (National Archives and Records Administration)

In the domestic sphere, after the Korean War Kim Il Sung systematically and brutally consolidated his power, making North Korea his own kingdom.

on 18 August 1976, North Korean guards at the joint security area in the village of Panmunjom attacked a party of U.S. and South Korean soldiers engaged in a tree-trimming operation on the UN side of the area, murdering 2 American officers.

Since the early 1960s, North Korea has pursued its two primary objectives in foreign policy dealing with the United States: the withdrawal of U.S. troops from South Korea and the establishment of direct contacts with Washington. Thus, Pyongyang practiced a seemingly contradictory foreign policy of antagonism and hostility toward the United States while making seemingly conciliatory gestures with the singular aim of establishing direct contacts with America. The refusal of the United States to respond to Pyongyang's overtures eventually led the North Koreans to play the nuclear card, which succeeded in bringing a reluctant United States to a bilateral conference table in the 1990s. After March 1993, Pyongyang used its plutonium-based nuclear weapons program as a bargaining chip for security assurances and economic aid from the United States, which proved successful. In early October 2002, North Korea admitted that it had continued to pursue its nuclear weapons program, this time using highly enriched uranium in violation of the 1994 U.S.-North Korean Agreed Framework freezing North Korea's nuclear program. That admission damaged the already-strained relations between the two nations. On 29 January 2002, in his State of the Union address, U.S. President George W. Bush defined North Korea as part of the "axis of evil," along with Iraq and Iran. North Korea has settled on a twofold strategy of keeping its nuclear weapons program even as it seeks to improve ties with Washington.

In the domestic sphere, after the Korean War Kim systematically and brutally consolidated his power, making North Korea his own kingdom. Referred to by his people as "Great Leader," he established a formidable cult of personality, outdoing even Stalin and Mao. From the 1950s, Kim developed his own political philosophy of *Juche*, or self-reliance, possibly motivated by unsatisfactory support from the Soviet Union and unwelcome domination by the PRC during the Korean War. The *Juche* philosophy was meant to appeal to deep-rooted Korean resistance to foreign invasion and domination. It quickly became synonymous with North Korea's notorious economic autarchy. *Juche* also developed another peculiar North Korean endeavor: our-style socialism. North Korea shut itself off from the world, maintaining diplomatic relations only with communist bloc countries. *Juche* and our-style socialism helped contribute to the total collapse of the North Korean economy in the 1990s, which led to widespread starvation that the North Korean government vehemently denied.

Kim died on 8 July 1994, and his son, Kim Jong Il, succeeded him as his political heir. The younger Kim had no intention of changing his father's hallmark policies, and the increasingly quixotic quest to "live in our own way" has continued in the world's last unreconstructed Stalinist state. North Korea has also become the center of a major and continuing international crisis through its pursuit of weapons of mass destruction and missile development programs.

Known as the Korean People's Army (KPA), the Democratic People's Republic of Korea's (DPRK, North Korea) armed forces have been the backbone of the Stalinist regime dominated by Kim Il Sung and his son and political successor Kim Jong Il. The KPA was established in mid-1946 with the assistance of Soviet occupation forces but was not formally founded until 8 February 1948. Initially, the North Korean armed forces numbered about 30,000 men. But by June 1950, at the time of the outbreak of the Korean War, the KPA had expanded to between 150,000 and 180,000 troops.

The Soviet Union actively aided the North Korean military. When the Soviet occupation troops withdrew in December 1948, they left behind as many as 150 advisors in each KPA division for training and organizational purposes. Under the terms of a reciprocal aid agreement concluded on 17 March 1949, the Soviets agreed to furnish North Korea with arms and equipment for six infantry divisions, three mechanized units, and eight battalions of mobile border constabulary. During 1949–1950, the Soviet Union supplied 10 reconnaissance aircraft, 100 Yak fighter planes, 70 attack bombers, and 150 Russian T-34 and T-70 tanks as well as heavy artillery. The North Korean armed forces were thus far superior to the Republic of Korea's (ROK, South Korea) army in training, manpower, firepower, and equipment when North Korea invaded South Korea on 25 June 1950.

The KPA was decimated by the U.S.-led United Nations (UN) forces in the early stages of the Korean War. During the war, North Korean armed forces suffered horrendous casualties totaling 294,151 dead and 229,249 wounded. At the end of the conflict, the KPA was less than half the strength of the South Korean armed forces.

After the war, North Korea pursued military augmentation. Kim Il Sung took a militant posture toward South

Korea, Democratic People's Republic of, Armed Forces

Korean People's Army (KPA, North Korean Army) soldiers in the demilitarized zone (DMZ) between North and South Korea in 1998. The 2.4 mile-wide DMZ has separated North and South Korea since 1953. (U.S. Department of Defense)

Eight different factories in North Korea have produced lethal chemicals such as nerve, blister, and blood agents as well as tear gas. Their quantity is estimated to be 2,500–5,000 tons.

Korea and the United States, increasing defense expenditures at the expense of economic development. The North Korean armed forces are now estimated to number some 1.2 million people, the fifth-largest military establishment in the world. Following the philosophy of *Juche* (self-reliance), North Korea has developed an extensive defense industrial capacity, although most of its equipment is of outdated Soviet or Chinese design. Some equipment has been redesigned by North Koreans, however, including armored personnel carriers, self-propelled artillery, light tanks, high-speed landing craft, Romeo-class submarines, SCUD-derived surface-to-surface missiles, and anti-tank missiles (the SA-7, SA-14, SA-16, and possibly SA-2). Aircraft production is believed to have begun in 1995. North Korea operates some 134 armament factories, many of them underground.

The large number of North Korean troops and equipment poses a grave threat to South Korea. North Korean ground forces are composed of 20 corps with 170 divisions and brigades, including 25 SOF (Special Operations Forces) brigades. North Korea has deployed approximately 10 corps and some 60 divisions and brigades in the forward area south of the Pyongyang/Wonsan line and is thus prepared to launch a surprise attack and invade South Korea without further troop deployment. North Korea has some 3,800 tanks, 2,300 armored vehicles, 12,500 artillery, and 13,800 air defense weapons. North Korea has more fighters and bombers than South Korea, but the equipment is old. The North Korean Air Force has 790 fighters, 80 bombers, 520 support aircraft, and 320 helicopters. MiG-19s and MiG-21s make up the core of the aircraft. North Korea is also equipped with some highly advanced fighters such as the MiG-23 and MiG-29 as well as the SU-25. North Korea built underground facilities to store and protect its combat aircraft. Ninety submarines, of which some 70 are coastal or midget craft, form the main component of the North Korean Navy.

The North Korean government has had the desire and capability to develop nuclear weapons, build and export medium-range missiles, and construct and stockpile chemical and biological weapons. It has exerted full effort in nuclear development since the 1950s, receiving technological support from the former Soviet Union. It is estimated that by the 1990s, North Korea acquired sufficient weapons-grade plutonium to make one or two nuclear bombs. Eight different factories in North Korea have produced lethal chemicals such as nerve, blister, and blood agents as well as tear gas. Their quantity is estimated to be 2,500–5,000 tons. North Korea is also suspected of maintaining numerous facilities for cultivating and producing anthrax and other forms of biological weapons. Since the early 1980s, North Korea has also embarked on the development of ballistic missiles and has already produced and deployed 500km-range SCUD-Cs by upgrading Soviet SCUD-Bs. In 1993, North Korea succeeded in test-firing a 1,300km-range Nodong-I missile and has deployed the missiles for operational purposes since 1997. The maximum ranges of long-range Taepodong-I and Taepodong-II missiles are estimated to reach 2,000–2,500 kilometers and 6,700 kilometers, respectively.

Pyongyang has pursued a military-first policy, and its armed force has been the pillar of the so-called socialist revolution and the main force for its

Juche philosophy. As a result of the steady increase in military manpower and weaponry, North Korea has essentially become one huge armed camp. It is the most heavily armed nation in the world, relative to its size. But the government's efforts to build a powerful military force have greatly taxed the North Korean economy. About 25 percent of its gross national product (GNP) has been allocated to the maintenance of its armed force. Such an emphasis has had seriously adverse effects on the nation's standard of living. Since the Soviet Union finally collapsed in 1991, North Korea has had serious problems and has become increasingly isolated internationally. The North Korean armed forces remain potent, but it is unclear how long they can continue to prop up such a repressive regime.

East Asian nation with a 1945 population of approximately 16 million. The Republic of Korea (ROK, South Korea) covers 38,023 square miles, about the size of the U.S. state of Indiana. It is bordered by the Democratic People's Republic of Korea (DPRK, North Korea) to the north, the Sea of Japan to the east, the Korea Strait to the south, and the Yellow Sea to the west. South Korea was officially proclaimed on 15 August 1948 under U.S. auspices after a three-year military occupation. In mid-August 1945, when the defeat of Japan was imminent, the United States and the Soviet Union hastily agreed to divide the Korean Peninsula at the 38th Parallel for the purpose of accepting the surrender of Japanese forces and maintaining security until Korea's future course as an independent nation could be settled. The joint Soviet-American military occupation was intended as a temporary arrangement. As the Cold War deepened, however, the Korean Peninsula became the site of two antagonistic regimes based on diametrically opposed ideological principles and sponsors.

On 8 September 1945, 72,000 American forces of Lieutenant General John R. Hodge's XIV Corps arrived in Korea. The American troops quickly occupied their zone south of the 38th Parallel and established the U.S. Army Military Government in Korea (USAMGIK).

Korea, Republic of

The Cold War had a profound impact on Korea's future. From the outset, Korea's future as a unitary nation depended on the ability of the United States and the Soviet Union to maintain friendly relations. But Washington and Moscow began to implement unilateral policies of zonal reconstruction that completely disregarded the interests of the other. The two superpowers established a joint commission in 1946 to produce an independent, unified Korea. Almost from the beginning, however, the commission had little chance of success.

From 1946 on, the United States and the Soviet Union seemed determined to establish client states in their zones that would share their respective ideological and political goals. By 1948 the United Nations (UN), with the active support of the United States, sanctioned elections in Korea that were to produce a free and independent state. Since the Soviets had already indicated that they would not allow such elections to be held in the north, this essentially meant the establishment up a separate government in the south. On 10 May 1948, elections in the south occurred. With all the leftists and most moderates already excluded from the political process, Syngman Rhee and the rightists claimed victory. Three months later, on 15 August, South Korea was formally established with Rhee as president.

The course of events in South Korea brought a prompt response from North Korea. On 9 September 1948 North Korea, led by Kim Il Sung, was proclaimed. On 12 December 1948 the UN recognized the ROK as the only lawfully constituted government on the Korean Peninsula.

South Korea faced a guerrilla insurgency beginning in the fall of 1948, which began with a major rebellion in its own security forces. On 19 October 1948, some 2,000 troops rebelled at the port city of Yosu under communist instigation. The South Korean government ended most of the unrest by late October, but the rebellion was followed by numerous small guerrilla actions designed to topple the Rhee government, although most of them had been ended by May 1950. In the meantime, tensions mounted as U.S. and Soviet troops turned over control of the peninsula to their Korean counterparts.

During 1949, border skirmishes between North and South Korea escalated. The presence of occupation forces had prevented a military confrontation between the two Koreas, but the Soviets had announced that their troops would be withdrawn by the end of 1948, and the United States had begun a quiet pullout, which it completed in June 1949. By now the lines of future conflict were essentially drawn.

On 25 June 1950, North Korea launched a well-planned, full-scale invasion of South Korea. Only the decision of President Harry S. Truman to commit U.S. troops to the Korean War under UN auspices saved South Korea from defeat. Truman and his advisors were convinced that the outbreak of war in Korea was orchestrated by Moscow. After three years of a bloody war of attrition, on 27 July 1953 the Korean Armistice Agreement was signed by North Korea, the People's Republic of China (PRC), and U.S. representatives. Rhee refused to sign. Although the communists had argued for the restoration of the 38th Parallel boundary, the military line became the armistice line, with a demilitarized zone created to extend 2 kilometers along each side of it.

The most important diplomatic action to come out of the war was the 1 October 1953 signing of the Mutual Defense Treaty between South Korea and the United States. Rhee had desperately wanted this arrangement, which in fact was part of a larger promise for extensive military and economic assistance that Washington had already given to him in return for his acceptance—if not approval—of the armistice.

The Mutual Defense Treaty had tremendous implications for both South Korea and the United States. The two nations were now bound together as never before, and the United States was legally and publicly committed to the defense of South Korea. As part of that defense, significant numbers of American ground, air, and naval forces would be permanently stationed in South Korea. The U.S. military commitment also implied a major political and economic commitment to South Korea as well.

Since the mid-1980s, however, the international and regional context of South Korean–U.S. relations has undergone great and possibly fundamental changes, at a rate outpacing the ability of officials to deal with them. Domestic changes in South Korea, particularly rapid economic growth, political democratization, and generational change, have triggered a profound transformation in the relationship between the two countries. These changes have encouraged new stirrings of nationalism among Koreans. At the same time, the near-collapse of the North Korean economy and the progress of inter-Korean relations have also affected South Korean–U.S. relations. Many South Koreans no longer regard North Korea as a serious threat, and their perception of the United States, in particular the American military presence, has become jaded. As it has grown in economic wealth and worked toward military self-sufficiency, South Korea has chafed in its role as a junior partner of the United States and has been seeking greater independence within the alliance.

South Korea's fear of the military threat from North Korea has rapidly declined since early 1998, when South Korean President Kim Dae Jung was inaugurated and soon initiated the so-called sunshine policy of rapprochement with Pyongyang, producing a great debate in South Korean society over the U.S. military presence. The 36,500 U.S. troops guarding against another North Korean invasion have been increasingly perceived as a social irritant and a remnant of the now almost-forgotten Cold War. Recent standoffs between Washington and Pyongyang over North Korea's nuclear ambitions have also adversely affected the already-strained relations between Seoul and Washington. Seoul's sunshine policy to actively engage Pyongyang might well foreshadow the sunset of the South Korean–U.S. alliance. There remained a widespread and entirely natural longing in South Korea to end the threat from North Korea and to jettison the burdens that this entails.

In terms of domestic politics, from its inception the South Korean government was dominated by strong, autocratic rulers exercising virtually unchecked powers. Rhee became increasingly dictatorial and corrupt until a student-led revolt forced him to resign in April 1960. A year later his moderate successor, John M. Chang, was ousted by a military coup led by Major General Park Chung Hee, whose iron-fisted rule ended abruptly with his

Student demonstrators during a protest in Seoul on 23 June 1987. Demonstrators protesting throughout South Korea against the political and economic situation eventually brought to an end the regime of President Chun Doo Hwan. In October 1987 a new constitution provided for direct presidential elections. (Patrick Robert/Sygma/Corbis)

assassination in October 1979. Park's successor, Major General Chun Doo Hwan, went on to create another authoritarian regime. Under Park and Chun, South Korea experienced dramatic industrial development and became an economic powerhouse. But the discrepancy between economic prosperity and political backwardness created growing public discontent.

Near the end of Chun's regime, South Koreans demanded an end to military rule. The June Resistance of mid-1987 was a critical turning point for the South Korean government, as it sought to abolish authoritarianism and embrace a civil, democratic society and the rule of law. In the 1990s, under Presidents Roh Tae Woo, Kim Young Sam, and Kim Dae Jung, South Korea's burgeoning democracy threw off the last vestiges of military rule. But its once-famed economy, the world's eleventh-largest, collapsed in 1997 during the Asian financial crisis, forcing Seoul to seek a bailout loan from the International Monetary Fund (IMF). Contrary to many predictions at the time, the recovery from the economic crisis came quickly and forcefully, once again producing a groundswell of national confidence.

The Republic of Korea's (ROK, South Korea) armed forces were formed by the U.S. Army Military Government in Korea (USAMGIK) immediately after World War II. Americans envisioned a national defense force, and the constabulary was seen as the basis of a military force, or national army. By April 1946, the constabulary force in southern Korea numbered just over 2,000 men, armed principally with World War II-era Japanese small arms. On 8 February 1948, the Democratic People's Republic of Korea (DPRK, North Korea) announced the establishment of the Korean People's Army (KPA), and in March the United States proclaimed its support for a 50,000-man South Korean constabulary.

On 8 April 1948, the U.S. Army ordered that a South Korean armed force be organized, equipped, and trained for internal defense and security. Fearful that the South Koreans might use the force to attack North Korea and embroil the United States in a war, Washington severely restricted the armament of the new army, depriving it of adequate antiaircraft, antitank, and artillery weaponry and denying it tanks altogether. On 5 December 1948, the South Korean government created the Ministry of National Defense as well as an army and navy. Simultaneously, all constabulary brigades were reclassified as army divisions. By March 1949, the South Korean security forces amounted to some 114,000 men, of which 65,000 were army, 4,000 coast guard, and 45,000 police. There was no air force. The South Korean Army had equipment for only 50,000 men, while approximately one-half of the police and coast guard were equipped with American carbines and side arms; the remainder used Japanese equipment of a similar type. On 1 July 1949, the United States organized the Korean Military Advisory Group (KMAG) to train and advise the South Korean Army.

By June 1950, when the Korean War began, the South Korean Army had grown to 98,000 men, but its equipment from the United States was sufficient for only 65,000. There were eight infantry divisions—the 1st, 2nd, 3rd, 5th, 6th, 7th, 8th, and Capital. Only one, the Capital Division, was near full strength; the others were handicapped because equipment for six divisions had to be allotted to eight. As for the navy, the South Korean Coast Guard had 6,145 men with an assortment of approximately ninety vessels, ranging from Japanese minesweepers to picket boats, of which less than half were

Korea, Republic of, Armed Forces

operational. South Korea had practically no air force, because the United States was in no way committed to support one with advisors or materials. The air service numbered only 1,865 men, with fourteen aircraft that had been received in 1948 for liaison purposes only.

Thus, North Korea's armed forces were far superior in military strength when they invaded South Korea on 25 June 1950. Even though the South Korean army was only slightly smaller than the aggressors, the fighting capacity of the two forces was incomparable. The halfhearted U.S. support for South Korean forces was revealed in the failure of the army to defend itself successfully against North Korean aggression.

Badly outgunned at the outset of the Korean War and battered repeatedly by enemy offensives throughout, the South Korean military emerged as a significant force by the end of the conflict in 1953. As a result, the South Korean military establishment had a powerful voice in Korean domestic politics from the early 1960s to the early 1990s, mainly as a legacy of the Korean War. Indeed, the war turned the military into the most powerful organization in South Korean society.

During 1965–1973, the South Korean government authorized the dispatch of more than 47,000 South Korean troops to Vietnam at the request of the U.S. government. Because there was an annual rotation of troops, the total number of individual South Korean soldiers sent to Vietnam amounted to approximately 312,000. This was far and away the largest contingent of foreign troops sent to Vietnam outside of American forces. The United States provided offset payments for the Koreans in Vietnam, who gained valuable combat experience and also became proficient in the use of advanced U.S. weaponry.

By the end of the Cold War, although North Korea's weaponry was quantitatively far greater, it was also qualitatively inferior to that of South Korea, which was far more modern. With a 520,000-man ground force, South Korea maintains 1,566 tanks, 1,550 armored vehicles, 4,200 field artillery pieces, and 12 surface-to-surface missiles. The air forces of both Koreas were comparatively equal in quantity and quality. North Korea has more fighters and bombers, but its equipment was much older than that of the South Korean Air Force. South Korea's 40,000-man air force had 385 fighters, 51 special aircraft, 37 transport aircraft, 400 helicopters, and 263 other aircraft. South Korean fighters consisted mostly of F-5s and F-4s. But South Korea also had a number of F-16s, which have proven to be far better performers than North Korea's MiG-29s.

The navies of both Koreas have distinctively different characteristics. The South Korean Navy, consisting of 35,000 men, was centered on 49 destroyers and frigates, while the main component of the North Korean Navy of 40,000 men was 25 patrol submarines.

At the end of the Cold War, South Korea's most vulnerable spot was Seoul, the South Korean capital of more than 13 million people, that lies only 28 miles from the demilitarized zone (DMZ) line along the 38th Parallel. It is within easy range of North Korea's artillery. Estimates held that North

Korea could rain 300,000–500,000 artillery rounds on Seoul in the first hours of a conflict, inflicting more than 1 million casualties.

The Korean War was a watershed conflict within the Cold War. The first shooting war of the Cold War, it was also the first limited war of the nuclear age. Korea was long the scene of confrontation among China, Japan, and Russia. Controlled by either China or Japan for most of its modern history, Korea was divided in half after World War II. Wartime agreements called for the United States to temporarily occupy southern Korea up to the 38th Parallel, while the Soviet Union did the same north of that line. The Cold War brought the permanent division of Korea into two states.

Efforts to establish a unified Korea failed, and in September 1947 the United States referred the issue to the United Nations (UN), which called for a unified Korean government and the withdrawal of occupation forces. In January 1948 Soviet authorities refused to permit a UN commission to oversee elections in northern Korea, but elections for an assembly proceeded in southern Korea that spring. By August 1948 the Republic of Korea (ROK, South Korea) had officially formed with its capital at Seoul and was headed by seventy-year-old Syngman Rhee, a staunch conservative. Washington then terminated its military government and agreed to train South Korea's armed forces.

In September 1948 the communists formed the Democratic People's Republic of Korea (DPRK, North Korea) with its capital at Pyongyang and led by veteran communist Kim Il Sung. Kim had fought the Japanese occupation and ended World War II as a major in the Soviet Army.

Both Korean governments claimed authority over the entire peninsula, but in December 1948 the UN General Assembly endorsed the ROK as the

Korean War (1950–1953)

KOREAN WAR, 1950 – 1953

only lawfully elected government. That same month the USSR announced that it had withdrawn its forces from North Korea. The United States withdrew all its troops from South Korea by June 1949.

Beginning in May 1948, sporadic fighting began along the 38th Parallel. Washington, fearful that the United States might be drawn into a civil war, purposely distanced itself from these clashes. President Harry S. Truman announced that fighting in Korea would not automatically lead to U.S. military intervention. In January 1950 Secretary of State Dean Acheson excluded Korea from the U.S. strategic Asian defensive perimeter. The Joint Chiefs of Staff (JCS) agreed with this, as did U.S. Far Eastern commander General of the Army Douglas MacArthur. Such pronouncements undoubtedly encouraged Kim to believe that the United States would not fight for Korea.

For many years North Korea, the USSR, and the People's Republic of China (PRC) maintained that the Korean War began with a South Korean attack on North Korea. This was propaganda. Beginning in late 1949 North Korea prepared for full-scale war. Its Korean Peoples Army (KPA) was well armed with Soviet weapons, including such modern offensive arms as heavy artillery, T-34 tanks, trucks, automatic weapons, and about 180 new aircraft. The KPA numbered about 135,000 men in ten divisions.

South Korea's military situation was far different. The Republic of Korea Army (ROKA) lacked equipment and trained leaders because of Washington's unwillingness to fight in Korea and because the meager U.S. defense budget would not allow it. ROKA training was incomplete and lacked heavy artillery, tanks, and antitank weapons. South Korea had no air force apart from trainers and liaison aircraft. The South Korean military numbered 95,000 men in eight divisions, only four of which were at full strength.

Washington was aware of the North Korean military buildup but believed that the communist powers would not risk war. Limited war was still a foreign concept to U.S. planners. The U.S. military was also woefully unprepared and ill-equipped. The army numbered only nine divisions and 630,000 men.

Kim planned to use his military superiority to invade and quickly conquer South Korea. Twice he consulted Soviet leader Josef Stalin, promising him victory in a matter of weeks, assuring him that there would be a communist revolution in South Korea, and insisting that Washington would not intervene. Moscow and Beijing were actively preparing for the invasion as early as the spring of 1949, and Russian military advisors assisted in its planning. Stalin concluded that even if the United States decided to intervene, it would come too late.

Stalin pledged military assistance but not direct Soviet military involvement. He also insisted that Kim meet with PRC leader Mao Zedong and secure his assent to the plans. In late 1949, Mao released the People's Liberation Army (PLA) 164th and 166th Divisions of Korean volunteers who had fought against the Japanese and in the Chinese Civil War, providing North Korea with 30,000–40,000 seasoned troops.

On 25 June 1950, KPA forces invaded South Korea. The UN Security Council called for an immediate cease-fire and the withdrawal of North

Korean forces, a resolution that went unchallenged because of a Soviet UN boycott. On 27 June the Security Council asked UN member states to furnish assistance to the South Korea. President Harry S. Truman also extended U.S. air and naval operations to include North Korea and authorized U.S. Army troops to protect the port of Pusan. Upon General MacArthur's recommendation, President Truman committed U.S. Far Eastern ground forces to Korea on 30 June.

The invasion caught both MacArthur and Washington by surprise. Yet U.S. intervention was almost certain, given the Truman Doctrine, domestic political fallout from the communist victory in China in 1949, and the belief that success in Korea would embolden the communists elsewhere. During the three-year conflict, no war was ever formally declared; Truman labeled it a "police action."

At the time of the invasion the United States had four poorly trained and equipped divisions in Japan. By cannibalizing his 7th Infantry Division, MacArthur was able to dispatch the 24th and 25th Infantry Divisions and the 1st Cavalry Division to Korea within two weeks. Meanwhile, Seoul fell on 28 June. Most of South Korea's equipment was lost when the bridges spanning the Han River were prematurely blown.

On 5 July the first American units battled the KPA at Osan, 50 miles south of Seoul. Expected to stop a KPA division, Task Force Smith consisted of only 540 men in two rifle companies and an artillery battery. The KPA, spearheaded by T-34 tanks, easily swept it aside.

At the request of the UN Security Council, the UN set up a military command in Korea. Washington insisted on a U.S. commander, and on 10 July Truman appointed MacArthur to head the UN Command (UNC). Seventeen nations contributed military assistance, and at peak strength UNC forces numbered about 400,000 South Korean troops, 250,000 U.S. troops, and 35,000 troops from other nations. Two British and Canadian units formed the 1st Commonwealth Division. Turkey provided a brigade, and there were troops from Australia, Thailand, the Philippines, Colombia, Ethiopia, France,

Greece, Belgium, Luxembourg, the Netherlands, and New Zealand. Other nations provided medical units.

U.S. forces were unprepared for the fighting. Difficult terrain, primitive logistics, poor communication, and refugees did as much to delay the North Korean offensive as did the defenders. In the chaotic atmosphere of the UNC retreat, both sides committed atrocities. The South Koreans executed some 2,000 political prisoners. U.S. and UNC troops shot a number of innocent civilians as the KPA infiltrated throngs of refugees and used them as human shields. North Korea committed far greater atrocities during its occupation of South Korea, however, slaying an estimated 26,000 political opponents. The KPA also executed American prisoners of war (POWs) in the fall of 1950.

By mid-July UNC troops had been pushed back into the so-called Pusan Perimeter, an area of 30–50 miles around the vital port of Pusan on the southeastern coast of Korea. Here U.S. and ROK forces bought valuable time and ultimately held. This success was attributable to UNC artillery, control of the skies, and Eighth Army (EUSAK, Eighth U.S. Army in Korea) commander Lieutenant General Walton Walker's brilliant mobile defense. The KPA also failed to employ its early manpower advantage to mount simultaneous attacks along the entire perimeter.

Even as the battle for the Pusan Perimeter raged, MacArthur was planning an amphibious assault behind enemy lines. Confident that he could hold Pusan, MacArthur deliberately weakened EUSAK to build up an invasion force. He selected Inchon as the invasion site. As Korea's second largest port and being only 15 miles from Seoul, Inchon was close to the KPA's main supply line south. Seizing it would cut off KPA troops to the south. MacArthur also knew that he could deal North Korea a major political blow if Seoul were promptly recaptured.

The Inchon landing was a risky venture, and few besides MacArthur favored it. Inchon posed the daunting problems of a thirty-two-foot tidal range that allowed only six hours in twenty-four for sea resupply, a narrow winding channel, and high seawalls. On 15 September, Major General Edward Almond's X Corps of the 1st Marine Division and the 7th Infantry Division commenced the invasion. Supported by naval gunfire and air attacks, the Marines secured Inchon with relatively few casualties. UNC forces reentered Seoul on 24 September.

At the same time, EUSAK broke out of the Pusan Perimeter and drove north, linking up with X Corps on 26 September. Only one-quarter to one-third of the KPA escaped north of the 38th Parallel. Pyongyang ignored MacArthur's call for surrender, and on 1 October South Korean troops crossed into North Korea. On 7 October the UN General Assembly passed a resolution calling for a unified, independent, and democratic Korea, and two days later MacArthur ordered U.S. forces across the 38th Parallel. Pyongyang fell on 19 October as stunned KPA forces fled north.

MacArthur then divided his forces for the drive to the Yalu River. He ordered X Corps transported by sea around the Korean Peninsula to the east coast port of Wonsan. Almond would then clear northeastern Korea. EUSAK

would remain on the west coast and drive into northwest Korea. The two commands would be separated by a gap of between 20 and 50 miles. MacArthur believed, falsely as it turned out, that the north-south Taebaek Mountain range would obviate large-scale communist operations there. The Eighth Army crossed the Chongchon River at Sinanju, and by 1 November elements of the 24th Division were only 18 miles from the Yalu. Several days earlier a South Korean unit reached the Yalu, the only UNC unit to get there.

China now entered the war—unofficially. Alarmed over possible U.S. bases adjacent to Manchuria, Mao had issued warnings about potential Chinese military intervention. He believed that the United States would be unable to counter the Chinese numerical advantage and viewed American troops as soft and unused to night fighting. On 2 October Mao informed Stalin that China would enter the war.

Stalin agreed to move Soviet MiG-15 fighters already in China to the Korean border. In this position they could cover the Chinese military buildup and prevent U.S. air attacks on Manchuria. Soviet pilots began flying missions against UNC forces on 1 November and bore the brunt of the communists' air war. Stalin also ordered other Soviet air units to deploy to China, train Chinese pilots, and then turn over aircraft to them.

Although Russian and Chinese sources disagree on what the Soviet leader promised Mao, Stalin clearly had no intention of using his air units for anything other than defensive purposes. China later claimed that Stalin had promised complete air support for their ground forces, but this never materialized.

On 25 October Chinese troops entered the fighting in northwestern Korea, and Walker wisely brought the bulk of EUSAK back behind the Chongchon River. Positions then stabilized, and the Chinese offensive slackened. The Chinese also attacked in northeastern Korea before halting operations and breaking contact. On 8 November the first jet battle in history occurred when an American F-80 shot down a MiG-15 over Sinanju.

The initial Chinese incursion ended on 7 November. In a meeting with President Truman at Wake Island on 15 October, General MacArthur had assured the president that the war was all but won but that if the Chinese were to intervene, their forces would be slaughtered. UNC airpower, he believed, would nullify any Chinese threat. Yet from 1 November 1950 to October 1951, MiGs so dominated the Yalu River area that U.S. B-29 bombers had to cease daylight operations.

The initial Chinese intervention had consisted of eighteen volunteer divisions. In early November they moved an additional twelve divisions into Korea, totaling some 300,000 men. MacArthur responded by ordering the air force to destroy the bridges over the Yalu. Washington revoked the order, but MacArthur complained that this

U.S. Air Force North American F-86 Sabre jet fighters at a South Korean air base in the Republic of Korea (ROK, South Korea) June 1951. (National Archives and Records Administration)

threatened his command. Washington gave in. On 8 November, 79 B-29s and 300 fighter-bombers struck bridges and towns on either side of the Yalu. The bombing had little effect. At the time most of the Chinese were in North Korea, and the Yalu was soon frozen.

Meanwhile, Washington debated how to proceed. The political leadership and the JCS under the chairmanship of General Omar Bradley believed that Europe was the top priority. Washington decided that while Manchuria would remain off-limits, MacArthur could take other military steps that he deemed advisable, including resumption of the offensive. The Democrats were reluctant to show weakness in Korea, and the Republicans had gained seats in the November 1950 congressional elections.

While much was being made in the United States about the prohibitions of strikes on Manchuria, the communist side also exercised restraint. With the exception of a few ancient biplanes that sometimes bombed UNC positions at night, communist airpower was restricted to north of Pyongyang. No effort was made to strike Pusan, and UNC convoys traveled without fear of air attack. Nor did communist forces attempt to disrupt Allied sea communications.

MacArthur had made X Corps dependent logistically on EUSAK instead of Japan, and Walker insisted on delaying resumption of the offensive until he could build up supplies. Weather also played a factor, with temperatures already below zero. Finally, Walker agreed to resume the offensive on 24 November. To the east, X Corps was widely dispersed.

MacArthur seemed oblivious to any problems, seeing the advance as an occupation rather than an offensive. It went well on the first day, but on the night of 25–26 November the Chinese attacked the Eighth Army in force. The Americans held, but on 26 December the South Korean II Corps disintegrated, exposing EUSAK's right flank. The Chinese poured eighteen divisions into the gap, endangering the whole Eighth Army. In a brilliant delaying action at Kunu-ri, the U.S. 2nd Division bought time for the other EUSAK divisions to recross the Chongchon. MacArthur now ordered a retirement just below the 38th Parallel to protect Seoul.

Washington directed MacArthur to pull X Corps out of northeastern Korea to prevent it from being flanked. Under heavy Chinese attack, X Corps withdrew to the east coast for seaborne evacuation along with the South Korean I Corps. The retreat of the 1st Marine Division and some army elements from the Chanjin Reservoir to the coast was one of the most masterly withdrawals in military history. X Corps was redeployed to Pusan by sea. On 10 December, Wonsan was evacuated. At Hungnam through 24 December, 105,000 officers and men were taken off along with about 91,000 Korean refugees who did not want to remain in North Korea.

The Korean War had entered a new phase: in effect, the UNC was now fighting China. MacArthur refused to accept a limited war and publicized his views to his supporters in the United States, making reference to "inhibitions" placed on his conduct of the war. UNC morale plummeted, especially with General Walker's death in a jeep accident on 22 December. Not until Lieutenant General Matthew Ridgway arrived to replace Walker did the situation improve. In the United States, Truman found himself under heavy

In August armistice talks broke down, and later that month the Battle of Bloody Ridge began, developing into the Battle of Heartbreak Ridge that lasted until mid-October.

pressure from Republicans to pursue the war vigorously. But the administration reduced its goal in Korea to restoring the status quo ante bellum.

UNC forces again had to retreat when the Chinese launched a New Year's offensive, retaking Seoul on 4 January. But the Chinese outran their supply lines, and Ridgway took the offensive. His methodical, limited advance was designed to inflict maximum punishment rather than to secure territory. Nonetheless, by the end of March UNC forces recaptured Seoul, and by the end of April they were again north of the 38th Parallel.

On 11 April 1951 President Truman relieved MacArthur of command, appointing Ridgway in his stead. Lieutenant General James Van Fleet took over EUSAK. Although widely unpopular at the time, MacArthur's removal was fully supported by the JCS, as MacArthur had publicly expressed his disdain of limited war. He returned home to a hero's welcome, but much to his dismay, political support for him promptly faded.

On 22 April the Chinese counterattacked in Korea. Rather than expend his troops in a defensive stand, Van Fleet ordered a methodical withdrawal with maximum artillery and air strikes against communist forces. The Chinese pushed the UNC south of the 38th Parallel, but the offensive was halted by 19 May.

UNC forces then counterpunched, and by the end of May the front stabilized just above the 38th Parallel. The JCS generally limited EUSAK to that line, allowing only small local advances to gain more favorable terrain.

The war was now stalemated, and a diplomatic settlement seemed expedient. On 23 June 1951 Soviet UN representative Jacob Malik proposed a cease-fire. With the Chinese expressing interest, Truman authorized Ridgway to negotiate. Meetings began on 10 July at Kaesong, although hostilities would continue until an armistice was signed.

UNC operations from this point were essentially designed to minimize friendly casualties. Each side had built deep defensive lines that would be costly to break through. In August armistice talks broke down, and later that month the Battle of Bloody Ridge began, developing into the Battle of Heartbreak Ridge that lasted until mid-October. In late October negotiations resumed, this time at Panmunjom, although the fighting continued. Half of the war's casualties occurred during the period of armistice negotiations.

On 12 November 1951 Ridgway ordered Van Fleet to cease offensive operations. Fighting now devolved into raids, local attacks, patrols, and artillery fire. In February 1953 Van Fleet was succeeded as EUSAK commander by Lieutenant General Maxwell D. Taylor. Meanwhile, UNC air operations intensified to choke off communist supply lines and reduce the likelihood of communist offensives.

In November 1952 General Dwight Eisenhower was elected president of the United States on a mandate to end the war. With U.S. casualties running 2,500 a month, the war had become a political liability. Eisenhower instructed the JCS to draw up plans to end the war militarily including the possible use of nuclear weapons, which was made known to the communist side. More important in ending the conflict, however, was Stalin's death on 5 March 1953. As the armistice negotiations entered their final phase in May,

the Chinese stepped up military action, initiating attacks in June and July to remove bulges in the line. UNC forces gave up some ground but inflicted heavy casualties.

The chief stumbling block to peace was the repatriation of POWs. The North Koreans had forced into their army many South Korean soldiers and civilians, and thousands of them had subsequently been captured by the UNC. If all KPA prisoners were repatriated, many South Koreans would be sent to North Korea. Also, many Chinese POWs sought refuge on Taiwan (Formosa) instead of returning to the PRC. Truman was determined that no prisoner be repatriated against his will. This stance prolonged the war, but some U.S. officials saw a moral and propaganda victory in the Chinese and North Korean defections. The communist side rejected the UNC position out of hand.

Following intense UNC air strikes on North Korean hydroelectric facilities and the capital of Pyongyang, the communists accepted a face-saving formula whereby a neutral commission would deal with prisoner repatriation. On 27 July an armistice was signed at Panmunjom, and the guns finally fell silent.

Of 132,000 North Korean and Chinese military POWs, fewer than 90,000 chose to return home. Twenty-two Americans held by the communists also elected not to return home. Of 10,218 Americans captured by the communists, only 3,746 returned. The remainder were murdered or died in captivity. American losses were 142,091, of whom 33,686 were killed in action. South Korea sustained 300,000 casualties, of whom 70,000 were killed in action. Other UNC casualties came to 17,260, of whom 3,194 were killed in action. North Korean casualties are estimated at 523,400 and Chinese losses at more than a million. Perhaps 3 million Korean civilians also died during the war.

The war devastated Korea and hardened the divisions between North and South. It was also a sobering experience for the United States. After the war, the U.S. military establishment remained strong. For America, the Korean War institutionalized the Cold War national security state. It also accelerated the racial integration of the armed forces, which in turn encouraged a much wider U.S. civil rights movement.

China gained greatly from the war in that it came to be regarded as the preponderant military power in Asia. This is ironic, because the Chinese Army in Korea was in many respects a primitive and inefficient force. Nonetheless, throughout the following decades exaggeration of Chinese military strength was woven into the fabric of American foreign policy, influencing subsequent U.S. policy in Vietnam.

The Korean War effectively militarized the containment policy. Before the war, Marshall Plan aid had been almost entirely nonmilitary. U.S. aid now

Anticommunist North Koreans wave Republic of Korea (ROK, South Korea) flags as they arrive in Seoul after being released from prisoner of war (POW) camps. The issue of repatriation complicated the armistice negotiations, as many North Korean POWs desired to remain in South Korea. (National Archives and Records Administration)

shifted heavily toward military rearmament. The war also marked a sustained militarization of American foreign policy, with the Vietnam War a logical consequence.

Additionally, the Korean War solidified the role of the United States as the world's policeman and strengthened the country's relationship with its West European allies and the North Atlantic Treaty Organization (NATO). The war facilitated the rearmament of the Federal Republic of Germany (FRG, West Germany). It also impacted Japan and was a major factor fueling that nation's economy.

Militarily, the war was interesting for the extensive use of helicopters and jet aircraft. The conflict was also a reminder that airpower alone cannot win wars, and it revealed the importance of command of the sea.

No formal peace has ever been concluded in Korea. Technically, the two Koreas remain at war, and the 38th Parallel remains one of the Cold War's lone outposts.

Korolev, Sergei Pavlovich

(1906–1966)

Founder and director of the Soviet space program. Sergei Korolev was born in Zhitomir, Ukraine, on 30 December 1906. His parents divorced when he was young, and his mother then married an electrical engineer who encouraged his stepson's interest in mathematics. At age eleven, Korolev moved with his family to Odessa.

In 1924 Korolev enrolled at the Kiev Polytechnic Institute in its aviation branch. He also became a glider enthusiast. In 1926 he transferred to the

Bauman High Technical School in Moscow, the top engineering college in the Soviet Union. In 1928 he designed a glider, which he flew in a competition. Graduating in 1929, he joined the Central Aero and Hydraulic Institute, working under the brilliant Soviet aircraft designer Andrei Tupolev. The next year Korolev became interested in the development of liquid-fuel rocket engines. In July 1932 he was appointed head of its Jet Propulsion Group, which the next year became the Jet Propulsion Research Institute with Korolev as its deputy chief. He headed research into cruise missiles and a manned rocket-powered glider.

Soviet dictator Josef Stalin's Great Purges of the late 1930s included many scientists among the innocent victims, and in June 1938 Korolev was arrested and accused of subversion, apparently because he advocated development of liquid-fuel over solid-fuel systems. Sentenced to ten years in prison, he was sent to the Siberian gulag. He nearly died in the brutal conditions there, but in March 1940 he was returned to Moscow and was placed in Butyrskaya Prison. That September he was transferred to a *sharashka*, in effect a slave-labor camp for those held to be useful to the state. This *sharashka* was an aviation design bureau prison. There he worked with other aviation engineers, including Tupolev. Released in July 1944 on parole, in September 1945 Korolev traveled to Germany to study and evaluate that nation's V-2 rocket program. The next year he was appointed head of a new agency charged with developing long-range ballistic missiles based on the German World War II advances. In this research the Soviets utilized some 5,000 captive Germans who had worked on the wartime V-1 and V-2 programs.

Over the next two decades, Korolev—the Soviet counterpart to Wernher von Braun in the United States—headed the Soviet development of ballistic missiles, satellite launch vehicles, satellites, manned spacecraft, and interplanetary probes. Korolev's R-1 missile doubled the range of the German V-2 and was the first ballistic missile to have a separate warhead. His R-5, which flew successfully in 1953, had a range of 720 miles. The R-7 of 1957, with a range of 4,200 miles, was the first true intercontinental ballistic missile (ICBM). In 1952 he joined the Communist Party of the Soviet Union (CPSU), although he was not completely rehabilitated politically until 1957.

Korolev was especially interested in the space program and proposed the R-7 rocket to lift satellites into orbit. Aware of the U.S. space program through press reports, he secured the support of Soviet leader Nikita Khrushchev, against the opposition of military and other political leaders, for the attempt by the USSR to be the first nation to launch an object into space orbit. Korolev achieved this feat in October 1957 with *Sputnik I*. Beginning the next year, he planned a manned mission, achieved with the *Vostok* spacecraft in April 1961.

Korolev advocated a Soviet effort to land a spacecraft on the moon, and for this his team designed the immense N1 rocket and the *Soyuz* spacecraft as well as *Luna* vehicles to land on Mars. He also sought to send unmanned missions to Mars and Venus. He did not live to see his plans come to fruition. Korolev had already suffered a heart attack in 1960. His weakened heart contributed to his death on 14 January 1966, following a botched routine surgical

procedure. Korolev's pivotal role in the Soviet space program was kept secret from the Soviet people and the world and was not widely known until well after his death.

**Kosygin, Alexei
Nikolayevich**
(1904–1980)

Soviet premier. Born in St. Petersburg on 21 February 1904, Alexei Kosygin served in the Red Army during 1919–1921. He graduated from the Leningrad Cooperative Technicum in 1924 and from the Leningrad Textile Institute in 1935, after having joined the Communist Party of the Soviet Union (CPSU) in 1927. After directing a textile mill and becoming active in the Leningrad party apparatus, Kosygin began a rapid ascent in the CPSU, facilitated by the removal of many members during the Great Purges of the 1930s.

In 1939, Kosygin was named to head the Soviet textile industry and became a full member of the CPSU Central Committee. In 1940 he assumed the post of deputy chairman of the Council of People's Commissars (Council of Ministers after 1946), a post he held until 1953. He became a candidate member of the Politburo in 1946 and a full member in 1948. His ties to Andrei Zhdanov, who was purged in 1948, resulted in his demotion to candidate status in the Politburo (now Presidium) in 1952.

Following Premier Josef Stalin's death in 1953, Kosygin's fortunes fluctuated wildly as Stalin's successors struggled for power. Expelled from the Presidium, he was removed from and then regained numerous posts because of his opposition to Georgy Malenkov, who lost the premiership in 1955 but remained a powerful figure in the Presidium. Malenkov's failed attempt to remove First Secretary Nikita Khrushchev in July 1957 cost him his seats in the Presidium and Central Committee. In the aftermath, Kosygin was returned to candidacy status in the Presidium and was restored as deputy chairman of the Council of Ministers. In 1960 he was elected a full member of the Presidium.

Kosygin's disagreements with Khrushchev over economic policies led him to join the faction that ousted Khrushchev from power in October 1964. In the resulting reapportionment of power, Kosygin became chairman of the Council of Ministers (premier) in the new government. As premier, his most significant achievements were in domestic economic affairs. He sponsored the so-called Kosygin Reforms in 1965, which provided individual enterprises

with increased autonomy from party control. They also further centralized control of the economy through the elimination of regional economic councils. Although never fully implemented, the reforms did improve the efficiency of economic planning.

Initially viewed as equal to First Secretary Leonid Brezhnev in the collective leadership, Kosygin's power was in decline by 1968. The Prague Spring crisis lessened Politburo interest in economic reform, and Brezhnev soon assumed control over foreign affairs. By the early 1970s, Kosygin was in a subordinate position to Brezhnev. Declining health led to Kosygin's retirement in October 1980. He died in Moscow on 18 December 1980.

Alexei Nikolayevich Kosygin was premier of the Soviet Union during 1964–1980. His most important achievements came in domestic affairs, chiefly economic reforms. (Library of Congress)

Hungarian politician, head of the Smallholders' Party, and briefly deputy prime minister in November 1956. Born on 20 April 1908 in Patacs, Hungary, Béla Kovács attended only elementary school and then worked on the family farm. In 1933 he joined the Smallholders' Party and became county general secretary. In 1939 he was chosen as the assistant general secretary of the party, and in 1941 he became head of the Hungarian Peasant Association.

On 15 November 1945, as leader of the Smallholders' Party, the largest Hungarian political party, Kovács was appointed minister of agriculture in the Ferenc Nagy government. In February 1946 Kovács resigned to dedicate more time to the Smallholders' Party, of which he was now leader. Fearing the strength of this party and Kovács's influence, Soviet authorities arrested him on 25 February 1947 and charged him with plotting against the Soviet occupational forces. Without benefit of trial, he was sentenced to life imprisonment in Siberia.

Kovács, Béla
(1908–1959)

In the autumn of 1955 Kovács was moved to Hungary, but he was not released until the spring of 1956. In the brief reform government of Imre Nagy, Kovács served as minister of agriculture and deputy prime minister (2–4 November 1956). On 3 November 1956, he was elected chairman of the reorganized Smallholders' Party. In 1958 he won a seat in parliament. Within weeks of his election, however, he became seriously ill and was never seated in parliament. Kovács died on 21 June 1959 in Pécs.

Kreisky, Bruno

(1911–1990)

Diplomat, chancellor of Austria, and notable champion of détente and nuclear disarmament. Born on 22 January 1911 into a well-to-do Jewish industrialist family in Vienna, Bruno Kreisky joined the Revolutionary Socialist Youth Movement in his high school years and in the mid-1930s was jailed by Austrian fascists for his political beliefs. On the day after Nazi Germany annexed Austria (the *Anschluss*), he graduated from the University of Vienna Law School and fled to Sweden for the duration of World War II. After the war, Chancellor Karl Renner drafted Kreisky into the Austrian foreign service. He was first posted to Scandinavia.

In 1953 Kreisky became secretary of state in the Foreign Ministry and was instrumental in negotiating the Austrian State Treaty of 1955. From 1959 to 1966 he served as Austria's foreign minister and made Vienna a premier East-West meeting ground, operating behind the scenes during the summit of June 1961 between Soviet leader Nikita Khrushchev and U.S. President John F. Kennedy. Elected chairman of the Socialist Party in 1966, Kreisky drove it to electoral victory in 1970 and would become Austria's longest-serving chancellor (1970–1983).

As chancellor, Kreisky continued to press for his East-West bridge-building vision of a Cold War détente. He was instrumental in the Helsinki Process and the Helsinki Meeting of 1975, and he also presided over the meeting in Vienna in 1979 between Soviet leader Leonid Brezhnev and U.S. President Jimmy Carter. As the longtime chairman of the Socialist International, Kreisky was an early visionary in advocating a Middle Eastern policy of a negotiated peace between Israel and the Palestinians. He was one of the

first leaders to recognize Yasir Arafat's Palestinian Liberation Organization (PLO) and was often critical of hard-line Israeli governments. Along with the Federal Republic of Germany's (FRG, West Germany) Willy Brandt and Sweden's Olof Palme, Kreisky also championed the North-South dialogue. These three socialist so-called Wise Men of Europe were dominant forces in European politics for much of the 1970s. Kreisky sharply disapproved of U.S. President Ronald Reagan's reignition of the Cold War in the early 1980s yet lived to see the end of it before his death in Vienna on 27 July 1990.

Chairman of the Council of State of the German Democratic Republic (GDR, East Germany) during 1989. Born in present-day Kolberg, Poland, on 19 March 1937, Egon Krenz joined the Socialist Unity Party (SED) of East Germany in 1955 and progressed slowly through its ranks. Throughout most of his career, he scrupulously followed the party line.

Krenz became a member of the Politburo in 1983. When public protests forced Erich Honecker to resign on 18 October 1989, Krenz, a virtual unknown at that point, was drafted as his replacement. The hope was that Krenz could promulgate reform while maintaining the political stability and leadership of the SED. One of his first reforms went awry, however, when an easing of travel restrictions mistakenly announced by one of his ministers on television on 9 November 1989 led to the opening of the Berlin Wall and the collapse of the SED regime. Krenz resigned on 7 December 1989.

Krenz joined the successor party of the SED, the reformed communist Party of Democratic Socialism (PDS), but his unrepentant attitude led the PDS to strip him of membership in 1990. In 1997, Krenz was tried on charges of electoral fraud and complicity in the deaths of almost one hundred persons who died trying to get across the Berlin Wall. Convicted, he was sentenced to six and a half years in prison. He maintained that events that had taken place in East Germany were not covered by either the West German or the new German code of law since East Germany had been a sovereign

Krenz, Egon
(1937–)

state. He also argued that both he and East Germany were not ultimately responsible, as the superpowers had “dictated actions on both sides.” His appeal was rejected in 1999, however, and he entered prison. Released in 2003, Krenz retired to Dierhagen, Mecklenburg.

Kubitschek, Juscelino (1902–1976)

President of Brazil (1956–1961). Born 12 September 1902 in Diamantina, Minas Gerais, Juscelino Kubitschek moved to Belo Horizonte in 1921 and graduated from Belo Horizonte University with a medical degree, becoming a physician in 1927.

Kubitschek began his political career in 1934 when he was elected to the Brazilian House of Representatives. He subsequently became the chief of staff of the Minas Gerais government. In 1937 Brazilian President Getulio Vargas dissolved the House of Representatives, cutting short Kubitschek’s political career. He then returned to his medical practice. In 1940 he was appointed mayor of Belo Horizonte before again being elected to the House of Representatives in 1945. In 1950 he became governor of Minas Gerais.

Standing for the Social Democratic Party, which he had helped form in 1945, Kubitschek ran for the presidency on the platform of “fifty years of progress in five,” the centerpiece of which would be the construction of a magnificent new capital at Brasilia. In the 1955 presidential elections, he won a comfortable victory, assuming office on 31 January 1956.

Kubitschek believed that he needed U.S. financial support if he were to achieve his aims, as only U.S. aid could supply the levels of investment and materials needed to drive his economic reforms. Toward that end, he attempted to forge closer ties with the President Dwight D. Eisenhower’s administration. In hopes of encouraging the United States to commit substantial monetary aid to the region akin to the Marshall Plan, Kubitschek unveiled a plan that he dubbed Operation PAN-AMERICA. However, the Eisenhower administration was unwilling to agree to any proposal that would require large commitments of foreign aid to Latin America. Kubitschek tried to use the negative fallout from Vice President Richard M. Nixon’s visit to Latin America in 1958 as leverage to wrest more foreign aid from Washing-

ton but was unsuccessful. In spite of these setbacks, Kubitschek did manage to forge better U.S.-Brazilian relations during his tenure in office.

In 1957 Kubitschek signed into law the relocation of the Brazilian capital to the new city of Brasilia, which consumed much of the government's financial resources. This coupled with a sharp drop in coffee prices led to serious inflationary pressures. Soon thereafter, Kubitschek was forced to adopt more austere economic policies.

Kubitschek left office in January 1961. He had intended to run for president again in 1965, but in 1964 the military regime then in power suspended his political rights. After a three-year exile, he returned to Brazil in 1967 and entered the business world. Kubitschek died in a car crash near the city of Resende on 22 August 1976.

Archipelago of thirty large and small islands, the sovereignty of which has long been contested by the Russians and Japanese. The Kurile Islands are located between the Japanese territory of Hokkaido and the Russian territory of Kamchatka. Between the Kurile Islands and Hokkaido are islands the Japanese call the Northern Territories (Kunashiri, Etorofu, Shikotan, and Habomai Islands). In the eighteenth century both the Russians and Japanese laid claim to the Kuriles. In 1875, Japan gave up Sakhalin Island. In return, Russia agreed to withdraw from the Kuriles. The Japanese controlled the islands until the end of World War II.

The Soviets entered the war against Japan on 9 August 1945. One of Soviet leader Josef Stalin's key objectives upon entering the war against Japan was to control the Kuriles, which blocked Soviet exits to the open sea. Soviet control of the Kuriles had, in fact, already been arranged at the February 1945 Yalta Conference. There the Allied leaders had approved a plan in which South Sakhalin Island and the Kurile Islands were to go the Soviet Union. It was codified by the 1951 San Francisco Peace Treaty that Japan abandon the islands, but the exact terms of the transfer of the islands were not prescribed in the treaty.

Japanese Prime Minister Yoshida Shigeru argued at the San Francisco Conference that the Northern Territories were Japanese lands and were not to be part of the larger agreement concerning the Kuriles. The Soviets refused

Kurile Islands

to sign the treaty. The United States supported the Japanese position in September 1956, and a formal diplomatic memorandum stating as such was sent to the Soviet Union in May 1957.

Nevertheless, Prime Minister Hatoyama Ichirō wished to normalize relations between Japan and the Soviet Union in order to settle the territorial problems and to liberate Japanese who were still being detained by the Soviet Union from World War II. Hatoyama visited Moscow, discussed the issues with Soviet Premier Nikolai A. Bulganin, and concluded the Japanese-Soviet Joint Declaration in October 1956. Japan won the release of all the detainees, but the territorial dispute persisted.

Deployment of Soviet forces in the Northern Territories and Kurile Islands waxed and waned over time, but their numbers increased dramatically during the 1970s and 1980s. The island of Hokkaido remained the main focus of Japanese defensive preparations throughout the Cold War in spite of the Japan-Soviet Joint Declaration in 1956. The sovereignty issue concerning the Kuriles continues and is still an obstacle in Russo-Japanese relations, even well after the end of the Cold War.

Kuwait

Monarchy in the Middle East. Kuwait, with a 1945 population of some 100,000 people, occupies 6,880 square miles, including the Kuwaiti share of the Neutral Zone defined by agreement with Saudi Arabia in 1922 and partitioned by mutual agreement in 1966. Kuwait is thus about the size of the U.S. state of Hawaii.

The oil-rich nation of Kuwait is strategically located at the northern end of the Persian Gulf. It is bordered by Saudi Arabia to the south, Iraq to the west and north, and the Persian Gulf to the east. The topography is flat, low desert, and the climate is very hot and dry. Over 95 percent of the Kuwait people live in urban areas, mostly along the coast. The nation's major natural resources are oil and natural gas, comprising an estimated 10 percent of the world's known reserves. There is a minor fishing industry, but oil sales make up half of Kuwait's gross domestic product (GDP) and provide 80 percent of the government's yearly revenues. The large oil reserves have sustained a relatively high per capita GDP annually and allow for extensive social services for Kuwaiti citizens.

Oil and geographic location have made Kuwait a crucial strategic state far beyond what might be expected of a country its size and population. Kuwait has been a key to British imperial interests in the Middle East, a major player in regional affairs, a staunch Cold War ally of the United States, the focus of the 1990 Persian Gulf War, and an important staging area for subsequent American-led operations in Iraq.

In contrast to its current prominence, Kuwait was a remote part of the Ottoman Empire in the eighteenth century, largely left to manage its own affairs. This earlier insignificance is manifest in the fact that the Utub tribes that settled in the area early in the eighteenth century called their central town Kuwait, the Arabic diminutive for *kut*, meaning a fortress built near water. By midcentury the Utub's al-Sabah tribe, whose descendants still rule Kuwait to this day, had emerged as the most prominent in the area. The al-Sabah focused on developing the local pearl beds and taking advantage of location to promote regional trade.

Recognizing the fact that any increase in the wealth of Kuwait and the al-Sabah family would attract Ottoman attention and invite closer imperial control and higher taxation, Sheik Mubarak al-Sabah sought the protection of Britain, the major European power in the region. The result was an 1897 agreement in which Kuwait ceded control over its foreign affairs and defense to the British. In return, Kuwait agreed to eschew alliances with other powers and promised not to cede any concessions—economic or military—to any other nations. Kuwait thus became a British protectorate. This situation remained fairly static until Britain reduced its imperial commitments after World War II. Kuwait became fully independent in June 1961.

Kuwait then aligned itself with the West—the United States in particular—in regional and international affairs. The 1979 Iranian Revolution served to further strengthen this alliance, and Kuwait became a staunch supporter of Iraq during the Iran-Iraq War, which began in 1980. That support included nearly \$35 billion in grants, loans, and other assistance to the Iraqis. After the war, which ended in 1988, Iraqi leader Saddam Hussein demanded that Kuwait forgive its loans, reasoning that Iraq had been the bulwark in the Arab world against Iran and was thus owed monetary concessions. Iraq also accused the Kuwaitis of slant-drilling for oil into Iraqi fields and then claimed that Kuwait was a “lost” Iraqi province, the administrative boundaries of which dated back to the defunct Ottoman Empire.

Angry with Kuwait's refusal to forgive the Iraqi debt and convinced that the kingdom was keeping oil prices artificially low by pumping too much oil, Hussein launched an invasion of Kuwait on 2 August 1990. The international response, which was divided into two stages, was strong and swift. The U.S.-led Operation DESERT SHIELD saw a large-scale military buildup in Saudi Arabia. Then in January 1991, when Hussein steadfastly refused to withdraw from Kuwait, Operation DESERT STORM began, during which the United States led an international military coalition, including other Arab nations, to drive Iraqi forces from Kuwait. The brief war ended on 27 February 1991, with Iraq compelled to recognize Kuwaiti independence.

There is a minor fishing industry, but oil sales make up half of Kuwait's gross domestic product (GDP) and provide 80 percent of the government's yearly revenues.

Kuwaiti troops ready for review by King Fahd of Saudi Arabia. The men were participating in an assembly of coalition forces before Operation DESERT STORM. (U.S. Department of Defense)

Thereafter, Kuwait remained a firm ally of the United States and allowed its territory to be used as a staging area for the U.S.-led effort to oust Hussein from power in spring 2003. In return the United States has been restrained in any criticism of Kuwaiti internal affairs. In May 2005, however, Kuwait's parliament granted full political rights to women. The United States maintains a significant military and naval presence in the region that protects the al-Sabah ruling family of Kuwait, which has had long experience in maintaining its position from the nineteenth century to the present.

L

U.S. secretary of defense (1969–1973). Born in Omaha, Nebraska, on 1 September 1922, Melvin Laird was the son of a businessman with interests in state politics. Laird graduated from Carleton College in 1942 and served in the U.S. Navy during World War II.

Elected as a Republican U.S. congressman in 1952, Laird remained in the House until 1969, becoming one of his party's leading authorities on military affairs and national security. A strong advocate of strategic weapons systems, he feared that President Lyndon B. Johnson had imprudently diverted funds from these to finance both the Vietnam War and Great Society social programs.

In 1969 newly elected Republican President Richard M. Nixon appointed Laird secretary of defense. Nixon and his national security advisor, Henry A. Kissinger, intended to retain control of foreign affairs themselves and hoped that Laird's excellent congressional connections would defuse potential political criticism of their policies. Much to Laird's embarrassment, Nixon and Kissinger often left him publicly ignorant of their initiatives.

On Vietnam, Laird implemented Nixon's policies of gradual Vietnamization, replacing U.S. military forces there with Republic of Vietnam (RVN, South Vietnam) troops while maintaining American air support. Laird's instincts were nonetheless solidly hawkish. In 1970 and 1971 he defended U.S. military attacks on Laos and Cambodia intended to eliminate enemy sanctuaries in those states, arguing that such measures shortened the war and saved American lives. He also strongly criticized Democratic proposals to extend amnesty to young American draft evaders.

A hard-liner on military spending, Laird strongly supported the development of an American antiballistic missile (ABM) system on the grounds that the Soviets were doing likewise. When the Anti-Ballistic Missile Treaty and

Laird, Melvin
(1922–)

the Strategic Arms Limitation Treaty (SALT) I placing limits on Soviet and American ABMs were signed in 1972, Laird unsuccessfully urged that the Senate should only ratify them if it were prepared to increase military budgets for other weapons systems.

At the end of Nixon's first term, Laird resigned as secretary. In summer 1973 he briefly assisted Nixon in handling the burgeoning Watergate scandal, unavailingly calling for a speedy impeachment vote to resolve the crisis. In 1976 Laird was an advisor in Gerald R. Ford's unsuccessful presidential campaign and afterward resigned from active politics. In retirement Laird served on several corporate boards.

Landsbergis, Vytautas (1932–)

Lithuanian politician, leader of the Lithuanian independence movement, and Lithuanian head of state (1991–1992, 1996–2000). Born into a family of intellectuals in Kaunas, Lithuania, on 18 October 1932, Vytautas Landsbergis studied music and then lectured at various music schools and institutions in Soviet-controlled Lithuania. He became a recognized expert in musicology and music history.

Although Landsbergis was never a dissident, he strongly resented Soviet rule in Lithuania, established during World War II. In 1988, he was a founding member and then chairman of the Lithuanian reform movement, Sąjūdis. The following year, Landsbergis was chosen as one of Lithuania's deputies to the Soviet Congress of People's Deputies, and in early 1990 he was elected to the Supreme Council (parliament) of Lithuania.

Initially, the Sąjūdis movement claimed to support Soviet leader Mikhail Gorbachev's reformist perestroika policies, but it soon became clear that most Lithuanians would settle for nothing less than full independence. On 11 March 1990, the Lithuanian Supreme Council declared full and unconditional independence. Landsbergis was then elected president of the Supreme

Council and in effect the head of state. Moscow responded by imposing an economic blockade on Lithuania, and on 13 January 1991 fourteen Lithuanians died during a Soviet crackdown on protesters in Vilnius.

Landsbergis had criticized Western leaders for supporting Gorbachev's policies while at the same time sidestepping Lithuania's rightful claim to independence. His ideological and uncompromising stand caused some irritation in the West, not to mention in Moscow, but in Lithuania it was supported and admired. After the abortive putsch against Gorbachev's regime in August 1991, Lithuania finally achieved unconditional independence.

Following his defeat in the 1992 parliamentary elections, Landsbergis became leader of the opposition. The following year, he was elected chairman of the Lithuanian Conservative Party. During 1996–2000, he was once again president of the Lithuanian parliament and head of state. Landsbergis withdrew from politics in 2002.

U.S. Air Force officer, intelligence operative, and purportedly the model for the leading character in Graham Greene's novel *The Quiet American*. Born in Detroit, Michigan, on 6 February 1908, Edward Lansdale graduated from the University of California at Los Angeles in 1931 and was commissioned in the army through ROTC. During the Great Depression, he earned a living selling advertising in California. He went on active duty during World War II in the U.S. Army, serving with the Office of Strategic Services (OSS) and finishing his wartime service as a major with the U.S. Army Air Forces as chief of the Intelligence Division in the western Pacific. After the war he was stationed in the Philippines with the air force until 1948, when he became an instructor at the Air Force Strategic Intelligence School in Colorado.

In 1950, at the request of Filipino president Elpidio Quirino, Lansdale became a member of the U.S. Military Assistance Group, tasked with operations to suppress the communist Hukbalahap rebellion. In 1953 Washington dispatched Lansdale to join the U.S. mission in Vietnam as advisor on counter-guerrilla operations. After a brief tour in the Philippines, he returned to Vietnam in 1954 to serve with the U.S. Military Advisory Group there.

**Lansdale, Edward
Geary**
(1908–1987)

During Lansdale's two years in southern Vietnam, he formed a close relationship with Ngo Dinh Diem, who would soon become president of the Republic of Vietnam (RVN, South Vietnam). Lansdale's Vietnam service included supervision of largely unsuccessful covert operations against the Democratic Republic of Vietnam (DRV, North Vietnam) as well as efforts to train the Republic of Vietnam Army (ARVN). In 1955 he advised Ngo on methods to ensure victory in the October 1955 Vietnamese referendum.

After helping to solidify Ngo's rule, Lansdale returned to Washington in 1957 to serve in various military and Defense Department positions. He was promoted to brigadier general in 1960 and major general upon his retirement in 1963. From 1959 to 1961, he played a prominent role in training Cuban exiles for the disastrous April 1961 Bay of Pigs invasion. Until his retirement in November 1963, he also worked with the Central Intelligence Agency (CIA) in its attempts to assassinate Cuban leader Fidel Castro.

Lansdale's convoluted career included two years of service as a consultant to the Food for Peace Program. He returned to South Vietnam in 1965 as senior liaison officer of the U.S. Mission to the Republic of Vietnam and then became assistant to U.S. Ambassador Ellsworth Bunker in 1967. Lansdale retired for good in 1968, wrote his memoirs, and died in McLean, Virginia, on 23 February 1987.

Laos

Southeast Asian nation located on the Indochinese Peninsula. Comprising 91,428 square miles, about twice the size of the U.S. state of Pennsylvania, Laos is a landlocked nation bordering on Vietnam to the east, Cambodia to the south, Thailand to the west, and Burma and China to the north. It had a 1945 population of some 1.7 million people. During the Cold War, Laos was consumed by revolution and war. Landlocked by larger neighbors and the buffer between ancient empires, after World War II Laos found itself at the intersection of French colonialism, Indochinese nationalism, communist expansionism, and U.S. containment policies.

Communist Pathet Lao troops during a military exercise in Laos, 1959. (Library of Congress)

Once an ancient Thai kingdom, in 1893 Laos was incorporated into French Indochina. Lao nationalism developed rapidly upon Japan's conquest of Indochina during World War II. Lao King Sisavangvong proclaimed Lao independence in March 1945. But with Japan's defeat shortly thereafter, he renounced the declaration and instead endorsed a French protectorate. His prime minister, Prince Phetsarath, did not agree with this decision and in September 1945 proclaimed Lao independence. The king dismissed him, and Phetsarath joined the dissident Lao Issara (Free Lao) movement.

The Lao Issara was intertwined with the communist-led Viet Minh in neighboring Vietnam. Many Lao nationalists, such as Prince Souvannaphong, were linked to Vietnam by ethnicity or marriage. In March 1946 Lao and Vietnamese guerrillas fought together against French rule. The French prevailed, and the Lao Issara fled in disarray to Thailand. Laos was then re-absorbed into French Indochina. Badly weakened by World War II and conflict with the Viet Minh that included the latter's invasion of Laos, in 1953 France granted the Royal Lao Government (RLG) nominal independence. The independence of Laos was confirmed in the July 1954 Geneva Accords.

The United States began economic and social programs to develop Laos. However, aid created a dependency on the United States that eventually spawned considerable resentment. Prince Souvannaphong and others joined the communist Pathet Lao (Country of Lao), which opposed Western imperialism, including aid from the West. Fearing a civil war, a neutralist solution emerged in the mid-1950s, centered on Prince Souvanna Phouma. Intelligent and mild-mannered, Souvanna was well respected by most Lao.

However, U.S. officials saw him as a communist dupe. Souvanna believed that Laos could survive the Cold War only through neutrality. He also tried to bridge divisions by building coalition governments. In 1956 Souvannaphong and other leftists representing the Neo Lao Hak Xat (NLHX, Lao Patriotic Front) joined Souvanna's coalition.

The success of the NLHX in the 1958 elections alarmed the Americans, leading to the withdrawal of U.S. aid. This action destabilized Souvanna's government and gave rise to Phoui Sananikhone, a pro-American rightist. He became prime minister in August 1958 and brought members of the Royal Lao Army (RLA) into government, notably Colonel Phoumi Nosavan. Phoumi led the RLA against North Vietnamese forces using Lao territory for the Ho Chi Minh Trail into the Republic of Vietnam (RVN, South Vietnam). When Phoui challenged this, Phoumi took control of the government in a December 1959 coup.

Phoumi was related to Thai strongman Sarit Thanarat and developed links through him to the U.S. military in Thailand. This alienated some Lao, even within the RLA, who resented foreign domination. In August 1960, RLA soldiers led by Captain Kong Le launched a coup of their own to restore Souvanna's neutralist government. Humiliated, Phoumi withdrew to secret bases in northern Thailand. U.S. President Dwight Eisenhower's administration decided to reestablish aid programs to Souvanna and restrain Phoumi, but Thailand refused to lift its blockades of the Lao border. Souvanna appealed to the Soviet Union, which airlifted supplies to Vientiane. In December 1960, Phoumi's forces drove Souvanna out of Vientiane. Kong Le's men retreated to the Vietnamese border, where they linked up with the Pathet Lao. Phoumi installed yet another government under Prince Boun Oum.

The Democratic Republic of Vietnam (DRV, North Vietnam) now feared that Phoumi would shut down the Ho Chi Minh Trail and allow American air bases in Laos. American strategy was to deny communist access through Laos to insurgencies in South Vietnam and northern Thailand, and Laos thus became an important litmus test of America's anticommunist resolve. Washington backed Phoumi and increased aid to Thailand, which became the base for many operations throughout Indochina.

U.S. President John F. Kennedy's administration continued these policies but by 1962 decided to abandon the volatile Phoumi. Instead, Kennedy reluctantly put his faith in Souvanna. After months of negotiations, in June 1963 an international agreement was reached barring foreign military advisors and establishing a neutralist, coalition government in Laos. Souvanna returned as prime minister, with both Souvannaphong and Phoumi serving in his cabinet.

The agreement did not last. North Vietnamese soldiers remained in eastern Laos, while American and Thai operations continued in other parts of the country. Infighting paralyzed the Lao government with assassinations and ceaseless power struggles. Finally, Souvanna abandoned neutralism, convinced that Hanoi controlled the Pathet Lao. In December 1964 he authorized U.S. military operations against communists in the country, drawing Laos ever closer to the war next door in Vietnam.

In Operation BARREL ROLL, the United States routinely bombed the Ho Chi Minh Trail in eastern Laos, and by 1968 there were between 200 and 300 U.S. air strikes in the country daily. Laos soon became the most heavily bombed country in the history of warfare. As a result, untold thousands of Lao people were killed, with ethnic minorities, comprising 50 percent of the population, caught in the middle. Many minority Hmong, Yao, Akha, and other peoples became refugees. Some joined anticommunist irregular forces under the command of Hmong RLA officer Vang Pao, who was trained and supplied by the Thais and Americans to fight the so-called Secret War in Laos.

By 1970 the communists controlled much of Laos. The Americans responded with more bombing, expanded covert operations, and then a South Vietnamese invasion of the Ho Chi Minh Trail. All failed. RLG losses were very high, and by 1970 a large number of Vang Pao's men were in fact Thais secretly reassigned to Laos. Facing defeat, in 1973 the RLG secured a cease-fire upon the Paris Peace Accords between North Vietnam and the United States. A new coalition government emerged, dominated by the NLHX.

Communist victories in Cambodia and South Vietnam did not immediately spread to Laos. Pathet Lao success came from Vietnamese backing and did not translate into wide popular support. Many still favored Souvanna and Lao King Savana Vatthana. Gradually, the NLHX eliminated its rivals. Finally, in December 1975, the communists forced Souvanna and the king to resign their offices. The NLHX took power with Souvannaphong as president and banned all other political parties.

There was, however, no peace for Laos. Armed resistance continued, particularly among the Hmong. Many Lao people died or disappeared in communist reeducation camps, including the royal family. Border clashes with Thailand flared throughout the 1980s, and innumerable economic problems made Laos one of the world's poorest countries. Laos became even more dependent on Vietnam, which itself was isolated from the world community because of its Cambodian occupation. Only very recently has Laos opened up and begun to address the long, painful process of rebuilding.

Latin America, Communist Parties in

Castro and Cuba attempted to export the revolution throughout the region, encouraging revolutionaries to pursue change through armed insurrection.

The development of communism and communist party structures in Latin America began well before the Cold War. European immigrants familiar with the writings of Karl Marx and events such as the 1871 Paris Commune began importing communist ideology to Latin America in the late nineteenth century. After the successful Russian Revolution of 1917 and the emergence of the Comintern (Communist International) in the 1920s, many communist organizations in Latin America became aligned with the Communist Party of the Soviet Union (CPSU).

Throughout the Cold War, communism in Latin America was shaped by several varieties of communist thought, emanating from both international and domestic sources. Most prominent Latin American communist parties took instructions directly from the Soviets. Beginning in the late 1950s, however, many Latin American nations had competing communist factions influenced by Chinese communism. In 1963 the Chinese Communist Party (CCP) called for the growth of Marxist-Leninist parties independent of Soviet direction. By 1965, there were CCP-style organizations in Bolivia, Brazil, Chile, Colombia, Ecuador, and Peru. These parties pledged allegiance to the People's Republic of China (PRC). The pro-Chinese organizations remained relatively small, however, often operating in the shadows of the pro-Soviet parties. Only in Peru and the Dominican Republic did pro-Chinese organizations come to outnumber pro-Soviet parties in membership.

Latin America also witnessed a number of indigenous communist movements. One of the most persistent of these was Venezuela's Movement to Socialism (MAS), founded in December 1970. Although some MAS party leaders were defectors from the older pro-Soviet Communist Party of Venezuela (PCV), many espoused an ambiguous ideology that viewed international communist parties with indifference. MAS candidates enjoyed modest success in the 1970s, and by the 1980s the party had become a significant force in Venezuelan politics.

Some Latin American communist factions took guidance from the Cuban government of Fidel Castro. Since Castro's successful 1959 revolution and the installation of the Communist Party of Cuba (PCC) as the nation's only legal party, Cuba attempted to export its revolution throughout the region, encouraging revolutionaries to pursue change through armed insurrection. In the 1960s Cuba sent small numbers of troops to Central America, South America, and elsewhere in the Caribbean to foment rebellion. It was during one such engagement in Bolivia that Cuban revolutionary Ernesto "Che" Guevara was killed in 1967.

While the Castro model for seizing power by fighting guerrilla wars in the countryside was strong throughout the 1960s, it was mostly in conflict with the advice coming from the CPSU. The Soviets publicly encouraged working within the apparatus of labor organizations and striving for influence through peaceful means. The most successful effort following the advice of the Soviets occurred in Chile. The Communist Party of Chile rose to power

in the elections of 1970 as the dominant faction in the broader Popular Unity coalition. In a congressional vote, the Popular Unity coalition built support for and elected as president a Socialist Party leader, Salvador Allende. Pro-Soviet communists in Latin America hailed this victory as a model for furthering the spread of communism in the hemisphere.

To the United States, however, the strength of the Chilean communists within the Popular Unity coalition appeared as a threat to hemispheric security. In 1973 a coup backed by the U.S. Central Intelligence Agency (CIA) succeeded in deposing and killing Allende and installing the strongly anti-communist dictator Augusto Pinochet.

Nicaragua's communist regime under the Sandinistas, in power since July 1979, was a major supporter of communist insurrection in neighboring El Salvador throughout the 1980s. Although the Sandinistas continued exporting arms to communist rebels in El Salvador as late as 1990, the party was voted out of office that same year, leaving Castro the only communist leader in control of a Latin American nation.

By the end of the Cold War the communist parties of Latin America were diminishing in size and influence and had begun to identify ways to continue shaping Latin American politics by working within existing political frameworks. A convention of ten South American communist parties met in Quito, Ecuador, in February 1990. There they pledged support for multi-party systems and agreed to cooperate with social and Christian democratic parties as well as with other reform factions.

Fidel Castro's successful consolidation of the revolutionary state in Cuba after 1959 encouraged the mobilization of popular resistance movements throughout much of Latin America. These liberation movements generally had two targets: standing governments that repressed popular political ambitions and

Latin America, Popular Liberation Movements in

aspirations, and the international order that, according to the theoretical assertions of the organizers of the liberation movements, held Latin America in a subordinate position.

The Cuban Revolution did not in itself spark liberation movements in other countries. In fact, efforts by Ernesto “Che” Guevara to sponsor other revolutions through the creation of organizational *focos* failed.

Foco meant literally a focal point of organizational activity, associated with *foquismo*, whereby the term was blown up into a theory of revolution. Guevara and his followers asserted that a small group of committed revolutionaries could, given the circumstances of Latin America’s general exploitation and widespread poverty, move into any isolated or impoverished area and generate a community of resistance by providing an example of sacrifice, organization, and ideological commitment. This theory had been extrapolated from the Cuban revolutionary experience in the Sierra Maestra, the highlands of central Cuba, where a small band of committed revolutionaries galvanized popular support for the movement to overthrow Fulgencio Batista. Guevara and his later supporters built up their experience into a general plan for revolutionary struggle and change. Their assertions were particularly influential for rebel efforts in Central America and Chiapas in southern Mexico. In 1967, Guevara himself was captured and executed in Bolivia during such an attempt.

The atmosphere that produced the spread of popular liberation movements was more complex. First, the Cold War fostered the rise of powerful dictatorships in much of Latin America. During the 1940s and 1950s, governments in Argentina, Brazil, Colombia, Guatemala, Peru, and Venezuela that had mobilized popular sectors with promises of economic and social reform had been forced from power by military coups (often sponsored by the United States), foreign invasion, or interparty strife. By the start of the 1960s, the power of the regimes that had come into being earlier in the Cold War had weakened substantially, and in turn frustration over the lack of substantive reform had grown.

A variety of examples had appeared in and beyond Latin America that helped inspire organized challenges to state power. The defeat of the French in Indochina in 1954 helped demonstrate the potential success of a guerrilla insurgency against a stronger foe. Algerian resistance to French control beginning in November 1954 generated important theoretical and practical lessons. The brief success of the Bolivian Revolution in 1952 and the ability of Castro and his communist rebels to challenge one of Latin America’s most entrenched dictatorships demonstrated that a social base for revolution existed within the region.

In the 1960s, two distinct intellectual streams inspired the development of revolutionary organizations. The Marxist tradition, central to the Cuban Revolution, enjoyed broad support among intellectuals, students, and organizations linked to industrial workers. Although communist parties, in existence for decades in almost every Latin American country, remained largely isolated from the popular mobilization under way, in universities, large cities, and within unions clandestine radical groups formed and began to organize for

revolution. Groups that defined themselves as Marxist and dedicated themselves to the revolutionary struggle appeared in almost every Latin American country before 1965.

Coincidentally, within organizations associated with the Roman Catholic Church, a second revolutionary front took shape. Responding to calls from the Church hierarchy to make the Church more responsive to the needs of the poor and oppressed, lay organizers and clergy alike began reaching out to communities in new and important ways. The worker-priest movement in Argentina and the *Comunidades Eclesiales de Base* (CEBs, Ecclesial Base Communities) in Brazil and elsewhere are notable examples of this trend. As this push for social and political engagement peaked in response to the instructions that Vatican Council II (1962–1965) provided, many of the clergy became radicalized by the experience. Discouraged by the Catholic Church's conservatism, individuals resigned their positions and became political activists.

The spread of revolutionary organizations did not result in many successful challenges to established regimes in the 1960s, however. Urban revolutionary cells in Mexico, Nicaragua, and Venezuela appeared and quickly collapsed. In Guatemala, efforts to organize a peasant revolt collapsed under pressure from military campaigns that the United States helped coordinate and support.

The few successful organizations relied on a community or institutional base. Radical Marxist groups in Peru took shape in Andean universities. In Argentina, the *Ejército Revolucionario del Pueblo* (ERP, Revolutionary Army of the People) and the *Montoneros* emerged from groups that had splintered off from the Perónist political movement. Other groups, such as the *Fuerza Armada Revolucionaria Colombiana* (FARC, Colombian Revolutionary Armed Forces), the M-19 in Colombia, and the *Frente Sandinista de Liberación Nacional* (FSLN, Sandinista National Liberation Front) in Nicaragua, survived and expanded by shifting from urban to rural bases.

The Catholic Church unintentionally contributed to the survival and spread of popular liberation movements in much of Latin America. While Church officials eventually backed away from the political engagement that Vatican II had dictated, local parishes provided space and protection for community groups that initially focused on community needs and concerns. The meeting places and community base allowed leaders to shift these groups into more radical directions. This trend, which took place in the late 1960s and early 1970s, came at times in reaction to attempts at repression or came as a result of links to other radical cells that effectively recruited locals to their broader causes.

In the 1970s, incompetent or incomplete efforts to destroy guerrilla groups and protest organizations helped galvanize liberation movements

Sandinistas arriving in Managua following the overthrow of Nicaraguan strongman Anastasio Somoza, September 1978. (John Giannini/Sygma/Corbis)

in some cases. Most notably in Nicaragua, the clumsy and brutal actions of the Anastasio Somoza dictatorship helped win sympathy and support for the FSLN. By 1979, united with opposition political parties, reform groups, and other dissenters, the FSLN overthrew the dictatorship and moved to establish a new Marxist revolutionary regime.

By the end of the 1970s, applying the lessons learned from the Vietnam War and motivated by the challenge that the Sandinista government represented to its authority in the region, the United States became more directly involved in a military reaction to popular liberation movements. U.S. intervention in El Salvador helped transform the conflict there into a bloody stalemate. Aid and advice to the Guatemalan military sustained its struggle against peasant-based resistance groups.

Military governments in Argentina and Uruguay effectively neutralized urban guerrilla movements. But in other contexts, government actions helped maintain the strength of liberation movements into the 1980s and beyond. While organizationally distinct from early revolutionary cells that had operated in Chiapas, the Ejército Zapatista de Liberación Nacional (EZLN, Zapatista National Liberation Army) launched a strong challenge to the authority of the Mexican state beginning in 1984.

Lattimore, Owen

(1900–1989)

One of America's foremost experts on Central Asia and China, political advisor to Chinese leader Jiang Jieshi, and during the McCarthy era a victim of anticommunist hysteria. Born in Washington, D.C., on 29 July 1900, Owen Lattimore spent much of his youth in China, where his father was an educational advisor to the Chinese government.

Lattimore became enthralled with Asian culture and society. In 1920 he joined the staff of a newspaper in Shanghai and devoted himself to the study of Chinese history and culture. He also made the acquaintance of Nationalist Chinese leader Jiang. In 1928 Lattimore took up studies at Harvard University but in 1929 returned to China, traveling the famed Silk Road and other parts of the country.

In 1930 Lattimore, now acknowledged as one of the leading American experts on China, took an academic post at Johns Hopkins University, where he soon became the director of its Page School of International Relations, a position he held until 1953. As he wrote and lectured, he also became more engaged in public policy issues, especially as they related to U.S.-Chinese relations. During 1941–1942 he served as Jiang’s political advisor and during 1943–1944 was deputy director of the Office of War Information’s Pacific theater operations. In 1945 Lattimore returned to his post at Johns Hopkins University and published *Solution in Asia*. In it, he urged Jiang to purge his government of corrupt officials and undertake genuine democratic reforms. This book made Lattimore a special target of the so-called China Lobby, those Americans who opposed compromise with the Chinese communists and supported Jiang without reservation and question.

Following the October 1949 communist victory in the Chinese Civil War, Lattimore and other so-called China Hands (U.S. State Department China experts such as John Stewart Service and John Paton Davies) came under fire from reactionary Republicans and other conservatives for having helped America “lose China.” Such rhetoric was politically driven and utterly without merit, for if anyone had “lost” China, it was Jiang and the inept Nationalists. This line of accusation nonetheless played into the hands of Republican Senator Joseph McCarthy, who in 1950 accused Lattimore of being “Moscow’s top spy.” Lattimore came under intense scrutiny and was investigated by McCarthy’s Senate subcommittee but was subsequently cleared of all charges. However, in 1952 Lattimore was indicted for perjury and again underwent agonizing scrutiny. Finally, in 1955, he was cleared of all charges. But the damage had been done, and his name would always remain suspect among those who believed that he was a spy. Lattimore continued to write, teach, and lecture. He died on 21 May 1989 in Providence, Rhode Island.

Owen Lattimore testifies before the Senate Internal Security Subcommittee. Lattimore, an academic and expert on China, was accused of being a Soviet spy by Senator Joseph McCarthy in 1950. Although Lattimore was cleared of all charges in 1955, the damage had been done. (Library of Congress)

Latvia

Former Soviet republic and since August 1991 the independent Republic of Latvia. Latvia, with a 1945 population of approximately 1.3 million people, covers 24,938 square miles, roughly the size of the U.S. state of West Virginia. It borders on Lithuania and Belarus to the south, Russia to the east, Estonia to the northeast, and the Baltic Sea to the west-northwest. Latvia has a long history of changing governments and shifting populations. Its major industries include the manufacturing of buses, vans, railroad cars, synthetic fibers, agricultural machinery, fertilizers, electronics, pharmaceuticals, processed foods, and textiles.

From 1721 to 1918, Latvia was controlled by imperial Russia. Latvia gained its independence on 18 November 1918, although the republic was vexed by political turmoil and lasted only twenty-one years. The Non-aggression Pact of 23 August 1939 between Germany and the Soviet Union contained secret provisions whereby the Soviet Union would take control of Latvia. Thus, in October 1939, Moscow forced the Latvians to sign a treaty of mutual assistance, which gave the Soviet Union ground, air, and naval basing rights there.

On 17 June 1940, Soviet forces invaded Latvia. Three days later, a new pro-Soviet government was installed, and Latvia formally became a Soviet territory. Some 35,000 Latvians were either killed or deported within the first year of the incorporation. Germany invaded the Soviet Union in June 1941, occupying Latvia until 1944. Many Latvians considered the Nazi occupiers as liberators. However, this did not stop Germany from slaughtering as many as 90,000 Latvian Jews. The Red Army reoccupied Latvia in 1944, and many Latvians fled west during 1944–1945 to escape the return of Soviet control.

After the war, Latvians suffered severe hardships under Soviet rule because of their resistance to mandated socioeconomic changes and the collectivization of agriculture. As a result, more than 175,000 Latvians were killed or deported to Siberia and northern Russia. At the same time, a large-scale influx of Russians into Latvia lowered the number of Latvians there by 25 percent.

During the second Russian occupation, Latvia remained one of most economically advantaged and industrialized territories in the Soviet Union. The Latvian Communist Party was composed mainly of non-Latvian immigrants, who maintained political control and shaped cultural influences in the area for the next forty years.

In the late 1980s, with the advent of Soviet leader Mikhail Gorbachev's reform agenda, Soviet control of Latvia began to loosen. Demands for self-rule soon began to surface, and members of the local Latvian government joined with activists pushing for democratic reform. In the spring 1990 elections, Latvian nationalists won a majority of seats in the parliament and moved quickly to draft and adopt a constitution. A 1991 popular referendum resulted in a majority vote for secession from the Soviet Union. Latvia's independence drive was hastened by unforeseen events in Moscow. Two days after the coup attempt against Gorbachev, Latvia declared its independence

on 21 August 1991, which was recognized by the crumbling Soviet government on 6 September 1991. Two weeks later Latvia joined the United Nations (UN), and in 1994 the last of the Russian troops left the country.

Latvia applied for European Union (EU) membership in 1995 and was accepted in 2004. It has become a preferred trading route between what is now Western Europe and Russia. Latvia's major trading partners are Russia, Germany, Britain, Sweden, and Finland. Latvia joined the World Trade Organization (WTO) in 1999 and has been a member of the North Atlantic Treaty Organization (NATO) since 2004.

Strategic defensive concept that involves launching nuclear forces when incoming nuclear missiles are still in flight—that is, when radar warnings of an enemy attack are received. During the Cold War, it is believed that both the United States and the Soviet Union adhered to some type of Launch on Warning (LoW) strategy. With the advent of large nuclear missile forces in the late 1950s, both nations adopted a LoW posture, although neither side seemed willing to publicly admit to it.

LoW was theoretically designed to lessen the likelihood of a preemptive first strike. The logic went that if one side knew that its opponent's nuclear forces would be launched before any actual detonations occurred (during a sneak attack), then the fear of massive retaliation (and, later, mutual assured destruction, or MAD) would prevent a preemptive nuclear strike. LoW would also theoretically increase the odds of a retaliatory strike, because nuclear missiles would be launched before being destroyed by incoming missiles. In essence, military planners found unacceptable a scenario in which a retaliatory blow would be administered only after their country absorbed a crippling and catastrophic first strike. LoW went hand in hand with MAD. Both postures sought to discourage the use of a sneak attack by making the result of such an attack too nightmarish to contemplate.

After the U.S. Ballistic Missile Early Warning System was erected in 1959, the ability to implement LoW became far easier. The task became easier still in the 1970s with the advent of satellite-based warning systems.

Launch on Warning

In most cases, these early warning devices gave commanders anywhere from fifteen to thirty minutes' warning of a nuclear attack. The Soviets, of course, developed their own early warning systems. It is interesting that neither the Soviets nor the Americans made LoW an explicit part of their nuclear strategies. Nevertheless, the capability to do so had existed since at least the early to mid-1960s. The extreme sensitivity and covert nature of the issue make it difficult to determine when and if LoW ever became standard operating procedure.

There are obviously very grave consequences associated with LoW, as its many critics have made clear. It most certainly raises the specter of an accidental nuclear exchange. If warning systems malfunction or are somehow misinterpreted, nuclear forces may be launched upon false alarm. Such scenarios are not just the bailiwick of fiction and Hollywood producers. Indeed, both the Americans and Soviets have documented false warnings of nuclear attack that might have unleashed Armageddon. Perhaps one of the most disturbing of such occurrences happened on 14 November 1979. In the wee hours of the morning, Zbigniew Brzezinski, President Jimmy Carter's national security advisor, was awakened by a phone call. What he heard was horrifying. An early warning system indicated that a full-scale Soviet nuclear attack involving some 2,220 missiles was under way. As he was about to inform the president, Brzezinski received another call indicating that the attack was indeed a false alarm. Had Carter been made aware of the attack, he would have had just three to seven minutes to decide on a response. As it turns out, someone had mistakenly inserted a war game exercise program into an early warning computer. The Soviets have reported similar incidents.

Leahy, William Daniel (1875–1959)

U.S. naval officer, administrator, diplomat, and outspoken opponent of the atomic bombings of Hiroshima and Nagasaki. Born on 6 May 1875 in Hampton, Iowa, William Leahy graduated from the U.S. Naval Academy, Annapolis, in 1897. He saw action in the Spanish-American War (1898) as well as in

the Philippine Insurrection and Boxer Rebellion in China during 1899–1902.

Deciding to make a career in the navy, Leahy was stationed at a number of posts and became close friends with Franklin Roosevelt, then assistant secretary of the navy. In 1918 Leahy was promoted to captain, and in 1927 he became a rear admiral, at the same time taking on the post of chief of the Bureau of Ordnance. He rose to the rank of vice admiral in 1935.

In January 1937 Leahy was promoted to full admiral and became chief of naval operations. He retired in 1939, which prompted President Roosevelt to warn, “Bill, if we have a war, you’re going to be right back here helping me run it.” In September 1939, one month after Leahy’s retirement, Roosevelt appointed him governor of Puerto Rico. In November 1940 he became ambassador to France, a position he held until May 1942. True to his words, Roosevelt called Leahy back to active duty in July 1942 to serve as chief of staff to the commander in chief, a special post created for the wartime situation. In effect, Leahy was the first chairman of the Joint Chiefs of Staff, although that title would not come into use until after the war. He performed brilliantly in the role.

In December 1944 Leahy became the U.S. Navy’s first fleet admiral. He gained respect from some and scorn from others when he vigorously opposed the use of atomic weapons against Japan. He believed that Japan could be defeated without the use of the bombs and without a costly invasion. He cited the fact that America’s insistence on an unconditional surrender was preventing the Japanese from capitulating.

In March 1949 Leahy again resigned his post and retired. The following year, just as McCarthyism was about to set in and the Korean War broke out, Leahy published his memoirs, *I Was There*. Its publication revived the debate about the use of the atomic bomb. Indeed, Leahy wrote, “in being the first to use it, we had adopted an ethical standard common to the barbarians of the Dark Ages.” Such a position from a high-ranking war hero raised many eyebrows and served only to fuel the fires of McCarthyism. Leahy died in Bethesda, Maryland, on 20 July 1959.

Lebanon

Middle Eastern nation located on the eastern end of the Mediterranean Sea, bordering on Israel to the south and Syria to the east and north. Covering 4,015 square miles (roughly twice the size of the U.S. state of Delaware), Lebanon's 1945 population was approximately 1.4 million people. This figure is only an estimate, as there are no official census figures. The only government census was in 1932, when France held Lebanon as a League of Nations mandate. It counted 861,399 people. France used this census as the basis for the religious composition of local government, giving a six to five advantage to Lebanese Christians. That ratio was maintained after independence following World War II, with subsequent population figures being estimates by experts on demographic trends. A U.S. Central Intelligence Agency (CIA) population estimate in 1986 showed that Shia Muslims comprised 41 percent and Sunni Muslims 27 percent of the population. The Maronites (Christians) comprised 16 percent, Greek Orthodox and Greek Catholics 5 percent each, and the Druze 7 percent.

Lebanon declared its independence from France in November 1941, becoming a charter member of the United Nations (UN) in 1945 and a member of the Arab League the same year. However, sectarian differences served as a basis for internal strife, as did regional and international conflicts. Although the Maronites continued to control Lebanon, the relative growth of other groups—mainly Islamic—brought that control into contest.

Sectarian tensions have plagued Lebanon since independence. The growing Muslim population led ultimately to dissatisfaction with Christian dominance. This strife has been exacerbated by regional and international conflicts. Lebanon's membership in the Arab League embroiled the country in the Arab-Israeli conflict from the very beginning of Israeli independence in 1948, with Lebanese forces joining other Arab nations to crush the Jewish state.

The Cold War also played a part in Lebanon's woes, as both the United States and the Soviet Union sought influence in the region by supporting various regimes at odds with each other. A turning point came in 1958. That year, the pro-Western monarchy in Iraq fell and was replaced by a government that seemed to tilt toward the Soviet bloc. Egypt had already rejected Western support in favor of Soviet aid in building the Aswan Dam and was pursuing union with Syria, which still had claims to Lebanon. Lebanon's Maronite-controlled government responded by requesting American aid, and President Dwight D. Eisenhower sent U.S. Marines to Beirut to stabilize the region. The intervention worked. Muslim and Christian Lebanese appeared to be working together in recognition of the growing power of the Muslim population.

This seeming accommodation was short-lived, for regional conflicts now took center stage. Since 1948 there had been more than 100,000 Palestinian refugees in Lebanon, some of whom pursued guerrilla operations against Israel. Lebanese Muslims generally supported the Palestinians, while the Christian population opposed guerrilla operations, fearful that these would

lead to Israeli reprisals that would threaten Lebanese independence. The Arab-Israeli wars of 1967 and 1973 coupled with the expulsion of Palestinian guerrillas from Jordan in 1970–1971 increased the power of the Palestinians in Lebanon. Indeed, the Palestinian Liberation Organization (PLO) established its headquarters in Beirut.

The Lebanese Army tried to restrain the guerrillas, but this led to sectarian clashes between the Maronites and Muslims. Civil war broke out in 1975. The subsequent chaos involved years of conflict between Lebanese Christians and Lebanese Muslims. Lebanese of both faiths were often at odds with the Palestinians. In addition, occupation of various parts of Lebanon by chiefly Syrian but also Israeli and Palestinian forces as well as terrorist attacks on French and American military forces posted there in the early 1980s only added to the unrest. The human toll resulting from Lebanon's strife has been tremendous. Indeed, in some of the worst of the fighting during March 1975–November 1976, some 40,000 Lebanese were killed and 100,000 wounded.

The end of the Cold War did not mean the end of civil conflict in Lebanon. It continued, with Syria, a former Soviet client state, dominating the country with an active military presence. Although Syrian forces departed in 2005, Lebanon still suffers from the complex nature of its internal struggles and will likely remain a pawn in regional conflicts.

The first U.S. intervention in Lebanon occurred in 1958 when President Dwight Eisenhower ordered U.S. Marines to the tiny nation to support a peaceful transition of power. This action was in direct response to Cold War concerns of instability that might benefit the Soviet Union in the Middle East as well as to the perceived threat from Arab nationalism, then being promoted by Egyptian President Gamal Abdel Nasser. This intervention has generally been considered a success, and a peaceful transition of power was brokered by the United States. The second U.S. intervention in Lebanon took place during 1982–1984, when President Ronald Reagan similarly deployed U.S. Marines, first to act as a buffer between an invading Israeli military force

Lebanon, U.S. Interventions in

A U.S. Marine mans a machine gun near Beirut, Lebanon, July 1958. (Library of Congress)

and the Palestine Liberation Organization (PLO), headquartered in Beirut, and later to serve as peacekeepers.

In January 1957, President Eisenhower requested a congressional resolution authorizing the use of force in the Middle East to prevent the spread of communism. This policy, which became known as the Eisenhower Doctrine, was formed in response to waning British influence in the region following the Suez Crisis of 1956. Prior to this, the Eisenhower administration had been willing to allow the British to take the lead in protecting the Middle East, particularly its vital oil fields. By 1957, however, the president had lost faith in British capabilities and declared his intention to take the lead in keeping the region out of Soviet control. The doctrine was therefore used as a guarantee to the noncommunist governments in the region as well as a threat to those who would support alliances with the Soviets.

Events in the region during 1957 and 1958 were seen by the United States as warning signs that both communism and radical Arab nationalism were on the rise. In 1957, King Hussein of Jordan, considered a moderate, established diplomatic relations with the Soviet Union. In February 1958, the most radical regimes in the region, Egypt and Syria (both supported by the USSR), merged to form the United Arab Republic (UAR). In July 1958, the pro-Western Iraqi monarchy was overthrown by a radical military junta.

In the face of these developments, along with relentless propaganda by Arab nationalists against his more pro-Western regime and internal threats to his rule, Lebanese President Camille Chamoun asked for direct American

intervention to defend his government. President Eisenhower, invoking his new doctrine, immediately ordered U.S. Marines to Lebanon.

The main issue at stake in Lebanon was Chamoun's effort to change the constitution to allow him to continue to rule the nation after his term of office expired. Eisenhower instructed his personal representative in Lebanon, noted diplomat Robert Murphy, to pressure Chamoun to give up power in order to circumvent an all-out civil war in Lebanon. Chamoun eventually conceded, and a popular favorite for the presidency replaced him, allowing American troops to withdraw peacefully.

The second American intervention in Lebanon, during 1982–1984, was similar in many ways to the first, at least in the beginning. On 6 June 1982, Israeli forces invaded Lebanon in an effort to crush the PLO, which had been using Lebanon as a base of operations for attacks against Israel. Although a staunch supporter of Israel, by 1982 President Reagan had begun to fear that Israeli actions in Lebanon (and elsewhere) would inflame anti-Western sentiments in Arab nations and provide an opportunity for increased Soviet influence in the region. Therefore, his administration attempted to broker an arrangement whereby the PLO would be evacuated from Lebanon in exchange for an Israeli promise to withdraw to its own borders.

When worldwide pressure intensified against Israel after its relentless attacks in Lebanon, especially in the PLO's West Beirut stronghold, and after direct threats by the Reagan administration, the PLO was allowed to leave Beirut in late summer 1982. As part of the agreement, a multinational force (MNF) of American, French, and Italian troops was sent to Beirut to ensure the safety of those departing from its harbor. More than 15,000 Palestinians were successfully evacuated by the end of the operation on 1 September 1982.

Following the evacuation of the PLO, however, the ongoing civil war escalated among various Christian, Muslim, and Druze factions vying for control of Lebanon. Furthermore, Israeli and Syrian forces in Lebanon continued to clash, threatening an all-out war between the two nations. Reagan ordered the Marines back to Beirut (and convinced the other members of the MNF to do the same) to serve as peacekeepers. As time passed, the MNF was embroiled in the fighting and became viewed as supporting the Lebanese government.

When a bomb exploded outside the U.S. embassy in Beirut in April 1983, the justification for the MNF to stay in Lebanon changed. Secretary of State George Shultz argued that America would not give in to terrorists, and so the Marines stayed in place as the civil war raged on. Then, on 24 October 1983, an event occurred that forced the United States and the MNF from Lebanon for good. A suicide bomber, believed to be from a Shiite Muslim terrorist group, drove a vanload of explosives into the Marine barracks at the Beirut airport, killing 241 troops. Across town at the French headquarters, another bomb killed 58 soldiers. Public pressure in the United States and the collapse of the Lebanese Army in February 1984 finally forced Reagan to withdraw the Marines from Lebanon, and the other MNF nations soon followed. The Lebanese Civil War raged for years afterward.

Leclerc, Jacques-Philippe (1902–1947)

French Army general and commander of French Far Eastern forces (1945–1946). Born into an aristocratic family on 28 November 1902 near Amiens, Count Jacques-Philippe de Hauteclouque took the nom de guerre of Leclerc during World War II to avoid reprisals against his family in France. Upon his 1924 graduation from the French military academy at Saint-Cyr, he distinguished himself the next year as a second lieutenant fighting Moroccan rebels. He returned to teach at Saint-Cyr and also contributed articles on social issues to the *Revue Catholique*.

Wounded in June 1940 during the Battle of France, Leclerc was taken prisoner. The Germans believed him too weak to move and placed him at a chateau belonging to some of his friends, from which he escaped to join Brigadier General Charles de Gaulle's Committee of National Liberation in London.

After his recuperation, Leclerc went to Nigeria and gathered scattered groups of French colonial soldiers. In a daring campaign begun with only about twenty men, he won over garrisons and with them control of the Cameroons. By 1941 Free French forces controlled all of French Equatorial Africa. Leclerc, by now a colonel, commanded the Desert Army of veteran colonial troops, Chad Sharpshooters, an Arab camel corps, a few British officers, and some young Free Frenchmen. With this force and a few obsolete aircraft, he conducted successful raids against Italian outposts in the Sahara.

In late spring 1942 Leclerc decided on a march from Lake Chad to the Mediterranean. De Gaulle sent both supplies and reinforcements. Begun on 22 December, the march covered 2,000 miles in thirty-nine days. On 25 January Leclerc's force entered Tripoli concurrent with the British Eighth Army. In June 1944 Leclerc, now commanding the French 2nd Free French Armored Division, landed at Normandy. His division captured Alençon, the first French city retaken by French troops. General Dwight Eisenhower allowed Leclerc's division to be the first to liberate Paris, and it also liberated Strasbourg and Bordeaux.

With the end of fighting in Europe, in June 1945 de Gaulle appointed Leclerc to command the French Expeditionary Corps to restore French sovereignty in Indochina. Leclerc was unenthusiastic. "Send me to Morocco," he said. De Gaulle claimed that he replied, "You will go to Indo-China because that is more difficult."

Leclerc signed for France the Japanese surrender document, and on 5 October 1945 he arrived in the city of Saigon. He soon secured an agreement with the British that preserved France's position in southern Vietnam, and on 25 October he began the reconquest of Indochina for France, predicting that it would take about a month for mopping-up operations to be concluded. Leclerc's highly mobile mechanized forces quickly established French authority over southern Vietnam and Cambodia but, numbering only 40,000 men, they controlled little beyond the cities and main routes of communication.

Leclerc became convinced that the Viet Minh was a nationalist movement that France could not subdue militarily, and he supported talks that resulted in the March 1946 Ho-Sainteny Agreement with the Democratic Republic of Vietnam (DRV, North Vietnam). Unlike most of his compatriots, he was aware of the great difficulties of jungle warfare and favored negotiations that would mean abandoning the attempt to create an independent Cochin China. In a secret report to Paris on 27 March 1946, he said that there would be no solution through force in Indochina.

The return of French high commissioner to Indochina Admiral Georges Thierry d'Argenlieu to assume political control relegated Leclerc to military functions. D'Argenlieu and other French colonial administrators opposed meaningful concessions to the nationalists, and Leclerc, at his own request, departed Indochina in frustration. On 14 July 1946 he was named inspector general of French forces in North Africa and was promoted to full general. Leclerc died in a military plane crash in Algeria on 28 November 1947.

Vietnamese revolutionary, member of the Vietnamese Communist Party's Political Bureau, and chief negotiator at the Paris Peace Talks. Le Duc Tho was born Phan Dinh Khai in Nam Ha Province on 14 October 1911.

Le Duc Tho
(1911–1990)

He became active in communist political circles at a young age and in 1930 helped found the Indochinese Communist Party (ICP). During the 1930s he spent nearly a decade in prison for his anti-French political activities. In 1945 he helped form the nationalist Viet Minh organization with Ho Chi Minh and from the late 1950s largely directed the war in the Republic of Vietnam (RVN, South Vietnam). According to some sources, Le's views actually prevailed over those of Ho.

Le is primarily remembered for his role in the Paris Peace Talks with the United States, which began in May 1968. He demanded an immediate halt to U.S. bombing of the Democratic Republic of Vietnam (DRV, North Vietnam) and the dismantlement of South Vietnam's government. American negotiators, especially National Security Advisor Henry Kissinger, refused these demands. The negotiations and the bombings continued until 1972, when Le and Kissinger agreed to a cease-fire. Le again requested a halt to the bombings, but he softened his stance on Vietnam's political self-determination. He eventually accepted a cease-fire that would leave South Vietnam's President Nguyen Van Thieu in power but that also allowed North Vietnam's People's Army of Vietnam (PAVN) troops to remain in parts of South Vietnam. The final peace agreement was signed in early January 1973. The United States withdrew its troops in March of that year. Late in 1973 the Nobel Prize Committee awarded both Le and Kissinger its peace prize, which Le refused to accept because the war continued.

In 1975 Le traveled to South Vietnam to oversee the final offensive there, which resulted in the unification of the country in April 1975. Between 1975 and 1986 he continued as a member of the Vietnamese Communist Party Central Committee. In 1978 he oversaw Vietnam's invasion of Cambodia. His power diminished in the mid-1980s, and following the economic reforms of 1986 he resigned his posts. Le died in Hanoi on 13 October 1990.

Emerson**
(1906–1990)

U.S. Air Force general. Born in Columbus, Ohio, on 15 November 1906, Curtis LeMay attended Ohio State University by day and worked in an iron foundry at night. Enrolling in ROTC, in June 1928 he secured a commission as a second lieutenant in the field artillery before switching to the Army Air

Corps, winning his wings in October 1929. In 1937 he transferred to the 49th Bombardment Group at Langley Field, Virginia, becoming one of the first pilot-navigators of the new Boeing B-17 Flying Fortress and leading a fleet of the aircraft on a goodwill tour of Latin America.

Promoted to colonel in March 1942, LeMay took command of the 305th Bomb Group, leading it to Britain later that year as part of Eighth Air Force. He soon established himself as a daring commander and tactical innovator who improved bombing techniques. As commander of the 3rd Bombardment Division from June 1943, he led the first shuttle raid on Regensburg, Germany, landing in North Africa and winning promotion to brigadier general in September. In March 1944 he became the youngest U.S. major general since Ulysses S. Grant.

In August 1944 LeMay was transferred to the Pacific theater, where he headed the 20th Bomber Command of new Boeing B-29 Superfortress bombers based in China. With these planes, he conducted the first raids on the Japanese mainland. In January 1945 he took charge of the 21st Bomber Command on Guam and developed the highly innovative low-level, nighttime fire-bombing techniques that were used to destroy major Japanese industrial cities, while at the same time reducing B-29 losses. In July 1945 he took command of the Twentieth Air Force in the Marianas, which included the B-29s that dropped atomic bombs on Hiroshima and Nagasaki.

During 1945–1947 LeMay served as deputy chief of staff for research and development, helping to deploy the first jet bombers in the new U.S. Air Force. In October 1947 he assumed command of the U.S. Air Forces in Europe, thus overseeing the initial aerial resupply operations of the city of Berlin during the Soviet blockade of 1948–1949. In October 1948 he was recalled to the United States to head the Strategic Air Command (SAC). In his nine years as SAC commander, he greatly expanded its manpower and aircraft, adding B-47 and B-52 jet bombers and KC-135 jet tankers. He also integrated intercontinental missiles into the force.

In 1951 LeMay was promoted to full general, the youngest since Grant. Named Air Force vice chief of staff in 1957 and chief of staff in 1961, LeMay had numerous disagreements with President John F. Kennedy, Secretary of Defense Robert S. McNamara, and General Maxwell D. Taylor's flexible response strategy. LeMay took a hard-line approach in the 1962 Cuban Missile Crisis when he advocated bombing Soviet missile installations in Cuba. He also disagreed with President Lyndon B. Johnson's policy of gradual escalation during the Vietnam War. LeMay retired to enter private business in February 1965. His book *America in Danger* (1968) was sharply critical of Johnson's Vietnam policies.

U.S. Air Force General Curtis LeMay. A hawkish hard-liner when it came to the Soviet Union, LeMay directed the beginning of the Berlin Airlift in 1948 and then headed the Strategic Air Command. (Library of Congress)

LeMay advocated massive bombing of North Vietnam, not ruling out the use of nuclear weapons, “to bomb them back into the Stone Age.”

In 1968 LeMay ran unsuccessfully for the vice presidency of the United States on a ticket headed by George C. Wallace. LeMay advocated massive bombing of the Democratic Republic of Vietnam (DRV, North Vietnam), not ruling out the use of nuclear weapons, “to bomb them back into the Stone Age.” LeMay died at March Air Force Base, Riverside, California, on 1 October 1990.

Lend-Lease

Mutual-aid program among the various Allied powers during World War II, dominated mainly by U.S. material assistance to thirty-eight members of the wartime alliance. When World War II began in September 1939, the U.S. Neutrality Acts forbade the sale of American war matériel on anything other than a cash-and-carry basis. By autumn of 1940, with France out of the fight and the United Kingdom in dire straits and running short of supplies and assets, President Franklin Roosevelt realized the need to provide Britain with immediate assistance. Isolationist sentiment in the United States, however, dictated that Roosevelt not strike too munificent a deal. This led to Roosevelt’s brilliant (and consciously misleading) analogy, first aired at a press conference on 17 December 1940, that America should temporarily loan Britain war goods in the same way that a person might loan a garden hose to a neighbor whose home was on fire.

The Lend-Lease bill became law on 11 March 1941. It remained in effect until August 1945, when President Harry Truman canceled the bulk of the program after the Japanese surrender, a decision that vexed the British government given its perilous economic condition and angered the Soviets, who had also relied heavily upon Lend-Lease aid.

Any firm dollar amount of the value of Lend-Lease aid is somewhat speculative, but during its lifetime the program is thought to have provided at

least \$50 billion in aid. About half of this amount was in the form of munitions, 22 percent in industrial goods, 13 percent in agricultural products, 5 percent in oil, and the remainder in services rendered (for example, the rental, maintenance, and repair of shipping). Lend-Lease aid reached its peak in 1944, when the United States delivered \$15.1 billion in goods and services, or about 17 percent of the nation's entire war expenditures for that year. More than \$30 billion in Lend-Lease aid went to the United Kingdom, with the Soviet Union receiving \$11 billion, France \$2.3 billion, and China \$1.3 billion. The supply pipeline was not all one-way, however. The United States received \$7.3 billion from the British and French, mostly in the form of technology transfers and raw materials.

The terms of Lend-Lease repayment were left to the discretion of the president, and Roosevelt had spoken only of a vague "gentlemen's agreement," with no firm conditions laid down. In December 1945 the United Kingdom reached a settlement with the United States to pay off \$532 million in Lend-Lease obligations. The British government paid off the remainder of its Lend-Lease debt on 29 December 2006. Several billion dollars were supposed to be repaid by the Soviets at the end of hostilities, but the onset of the Cold War halted negotiations, and it was only in June 1990, under much different circumstances, that the United States and the USSR finally negotiated a settlement.

King of Belgium (1934–1950). Born on 3 November 1901 in Brussels, the son of King Albert I, Leopold Philippe Charles Albert Meinrad Hubertus Marie Miguel fought in World War I, serving as a soldier in the 12th Belgian Regiment. After the war, he enrolled at the St. Anthony Seminary in Santa Barbara, California. In 1926 he married Princess Astrid of Sweden. She died in a car accident, in which Leopold was driving, in 1935.

Leopold became king on 23 February 1934 following the death of King Albert. After September 1939 and the start of World War II, Leopold rejected

**Leopold III,
King of Belgium**
(1901–1983)

appeals from France and Britain for military conversations, fearful that this would encourage the Germans to invade Belgium. When the German Army did invade neutral Belgium in May 1940, Leopold soon surrendered his forces in violation of pledges made to France and Britain. He also refused to leave the country as part of the government-in-exile in London. In 1941 he married his children's governess, Liliane Baels, a commoner. Removed from Belgium by the Germans in 1944, Leopold was liberated by Allied troops in Austria at the end of the war.

Feelings in Belgium ran high against Leopold at the end of the war, and he remained in Geneva while the Belgian government debated the fate of the monarchy. In a March 1950 referendum, he received 57.7 percent of the vote. He then returned to Belgium, but when mass demonstrations and riots erupted in Wallonia (which had voted heavily against the king), he relinquished control of affairs to his son Baudouin on 2 August 1950. When Baudouin reached his majority, Leopold abdicated in his favor, and Baudouin acceded to the throne on 16 July 1951. Leopold subsequently traveled extensively and pursued an interest in social anthropology. He died in Bruxelles (Brussels) on 25 September 1983.

Le Pen, Jean-Marie (1928–)

French extreme rightist politician and founder and leader of the right-wing political party Le Front National (National Front). Born on 20 June 1928 in Trinité-sur-Mer, France, Jean-Marie Le Pen fought in the Resistance during World War II. This experience provided the grist for his rabid anti-Gaullism and anticommunism. Le Pen became politically active in right-wing youth organizations as a student of law at the University of Paris in the late 1940s and early 1950s.

In 1953 Le Pen abandoned his studies, joined the Foreign Legion, and served in Indochina as a parachutist. Upon his return in 1955, he resumed his studies and political career by joining the right-wing Poujadist movement. Winning a seat in the January 1956 elections as a Poujadist, he became the youngest member of the National Assembly. In September, however, he left France to participate in the Algerian War. Accused of torture, he was forced to return to France in May 1957.

After having broken with another right-wing politician, Pierre Poujade, Le Pen successfully ran as an independent in the November 1958 elections but lost his seat in November 1962. This setback did not keep him from supporting the candidacy of the rightist candidate Jean-Louis Tixier-Vignancour in the presidential elections of 1965. In 1972, Le Pen founded his own party, the far-rightist Front National. His primary focus has been one of seeking to maintain the purity of the French nation and its culture, mainly through vicious anti-immigration rhetoric. This largely explains his fierce anticommunism blended with anti-Semitism, xenophobia, homophobia, and admiration of German national socialism.

Le Pen has rejected the European integration process and is an advocate of a tariff-protected economy. Initially a mere marginal political figure, he has enjoyed increasing popularity, particularly since the 1980s. While capturing only 0.75 percent of the vote in the 1974 presidential elections, his share rose to 15 percent in the 1995 elections and to more than 16 percent in 2002. Moreover, he managed to win a seat in the European Parliament in 1984 and again in 1999. His hitherto unchallenged position in the party was damaged when his deputy, Bruno Mégret, challenged him as party leader in 1998. Although Mégret's power play was unsuccessful, the subsequent split weakened Le Pen and Le Front National.

Prime minister (1959–1990) and senior minister of Singapore (1990–present). Born in Singapore on 16 September 1923 to a middle-class Chinese family, Li Guangyao beginning in 1935 attended the Raffles Institute and Raffles College where he excelled as a student. He went on to study law at Cambridge University, graduating in 1949, and returned to Singapore to practice law.

Li's political career began in November 1954 when he founded the moderate-leftist People's Action Party (PAP), which has dominated Singapore politics ever since. He became a champion of the poor and of labor unions

Li Guangyao

while managing to solidify PAP's political influence. In June 1959 he became the first prime minister of the city-state of Singapore. In 1963 he brought Singapore into the Federation of Malaysia but in 1965 withdrew from the federation because of political unrest. A republic was established that same year, and Singapore became a wholly autonomous entity, with Li continuing as prime minister.

As prime minister, Li engineered a miraculous transformation of Singapore from a poverty-ridden port city to a wealthy, modern state that became the model of East Asian economic prowess. He oversaw a tightly controlled welfare state with an emphasis on private enterprise and foreign investment. But his rule also had a rather dark side that included the suppression of political opposition and the implementation of strict laws governing public behavior and drug use, many of which were accompanied by draconian enforcement that included corporal punishment and long jail sentences.

Criticized for his government's repressive policies, Lee stepped down as prime minister on 28 November 1990, although he retained the position of senior minister, which he still holds.

Li Peng

(1928–)

Chinese communist politician, vice premier, and premier of the People's Republic of China (PRC). Born in Chengdu, Sichuan, China, in October 1928, Li Peng was adopted by Zhou Enlai, the future Chinese premier, in 1939. In 1945 Li joined the Chinese Communist Party (CCP). He enrolled at the Moscow Power Institute in 1948 and graduated in 1954.

Li returned to China in 1955 and became involved in a number of electrical power programs, serving at the Fengman Hydroelectric Power Plant, in

the dispatcher's Office in the Northeast Power Bureau, and in the Beijing Electric Power Administration.

During 1979–1983 Li served successively as vice minister and minister of power industry and vice minister of the newly created Ministry of Water Conservancy and Power. Meanwhile, his connection to the now-deceased Zhou facilitated his rise in the CCP's political hierarchy. In June 1983 Li became vice premier, playing an active role in the PRC's foreign affairs. He became premier in 1988, a post he held until 1998. As premier, he was responsible for China's economic modernization and the military crackdown against student demonstrators in the Tiananmen Square incident on 4 June 1989. His role in the incident seriously harmed his reputation in the international community. Li retreated from the political spotlight in 1998, becoming chairman of the National People's Congress and a member of the Standing Committee of the Politburo.

Vice premier during 1954–1983 and president of the People's Republic of China (PRC) during 1983–1988. Born in Hongan, Hubei Province, on 23 June 1909, Li Xiannian was trained as a carpenter, having received little formal education. In 1927 he joined the Chinese Communist Party (CCP) and began organizing the peasantry and armed guerrilla units.

During the Sino-Japanese War, Li fought with communist forces in central China, earning him command of the Central China Military Region in 1944. During the Chinese Civil War, he served first as deputy commander of the Central Plains People's Liberation Army and then in May 1949 as chairman of the provisional government of Hubei and political commissar of the Hubei Military District.

After the PRC's birth in October 1949, Li was assigned to serve in Hubei, becoming mayor of Wuhan in 1952. In mid-1954 he was transferred to Beijing when he became the vice premier. In mid-1957 he was also appointed minister of finance, in which capacity he reformed the Chinese economy along Soviet lines, resulting in the disastrous failure of the Great Leap Forward in late 1959. As vice premier, he led a number of delegations abroad to nurture PRC ties with other socialist and third world nations. Despite several

Li Xiannian
(1909–1992)

political purges, including the ultraleftist Cultural Revolution (1966–1976), he retained his government positions. After the revolution ended, he took up more positions, first as vice chairman of the CCP Central Committee in 1977 and then vice chairman of the state financial and economic commission in 1979.

In 1983 Li succeeded Deng Xiaoping as president of the PRC, a post he held until 1988. During this time he devoted much attention to advancing his nation's international status. He retreated from public life in 1988 and retained only the chairmanship of the People's Political Consultative Conference, in which capacity he supported Deng's order to crack down on student demonstrators in Tiananmen Square on 4 June 1989. Li died on 21 June 1991 in Beijing.

Liao Chengzhi

(1908–1983)

Chairman of the Overseas Chinese Affairs Commission of the People's Republic of China (PRC). Born in Tokyo in September 1908, Liao Chengzhi enrolled at the Waseda University in Japan in 1925. In 1928 he joined the Chinese Communist Party (CCP), which resulted in his expulsion from the university and deportation from Japan. He then traveled to Europe and the Soviet Union. In 1932 he returned to China to continue underground party activities. During the Sino-Japanese War and the Chinese Civil War he served in Hong Kong and Guangdong Province as the party's purchasing agent, liaison officer, and coordinator of revolutionary work in southern China.

After the establishment of the PRC in 1949, Liao became deputy secretary of the New Democratic Youth League and president of the All-China Federation of Democratic Youth, both of which were founded by Liao himself and were devoted to promoting youth works and recruiting young party members. He was made vice chairman of the Overseas Chinese Affairs Commission, assuming the chairmanship in 1959. He was also responsible for establishing and leading a number of mass organizations, such as the Sino-Soviet Friendship Association, the Chinese People's Institute of Foreign Affairs, and the China Peace Committee, all of which came into existence in late 1949 to cultivate the Chinese communist cause and image at home and abroad. One of his primary tasks was to promote the PRC's ties with Japan,

which resulted in the establishment of the China-Japan Friendship Association in 1963.

In 1967 Liao was purged from office during the Cultural Revolution. In 1972 he returned to the public scene as advisor to the Foreign Ministry, continuing his previous works of fostering PRC ties with Japan and the overseas Chinese. Liao died on 10 June 1983 in Beijing.

Western African nation, approximately 38,000 square miles in size, bordering on Sierra Leone, Guinea, Côte d'Ivoire, and the Atlantic Ocean. In 1945, the population of Liberia was approximately 730,000 people. In 1820, former U.S. slaves began to colonize lands populated by many indigenous groups, and on 26 July 1847 they founded the state of Liberia. The new nation closely followed the political and constitutional model of the United States, from which its founders (known as Americo-Liberians) had come. The Americo-Liberian minority monopolized political power, denying citizenship to indigenous peoples until 1946.

With the outbreak of World War II, Liberian President Edwin Barclay sought to strengthen Liberia's historical ties to the United States by entering the war on the Allied side (although the tiny Liberian military never fought in the war) and granting the United States the right to build and maintain military bases in Liberia. In exchange, Liberia received American assistance in developing its infrastructure, which included the construction of Liberia's first deep-water port of Monrovia.

Barclay's successor, William Tubman, continued this pro-American policy throughout most of his nearly twenty-eight years as president (1944–1971), receiving significant U.S. aid and in return welcoming extensive foreign investment, especially from American companies. Under this policy, however, Liberia's economy remained weak, and sharp divisions between the prosperous Americo-Liberians and the impoverished masses led to increasing social unrest. Tubman also supported the United States politically, backing its stance on African decolonization as well as the war in Vietnam.

Over the course of his tenure, Tubman increased his personal power by effectively banning political opposition and setting up a vast internal security apparatus. He consolidated Liberia's modest military (including a national

Liberia

guard, militia, and coast guard) under a joint command and rechristened it the Armed Forces of Liberia (AFL). He also expanded its forces from 3,000 men in 1962 to 4,000 at the time of his death in 1971. In 1980, the AFL counted 5,000 troops. Throughout this period, the Liberian military received significant training and equipment from the United States.

When Tubman died in office in 1971, he was succeeded by his vice president, William Tolbert Jr. The late 1960s and the 1970s witnessed the deterioration of Liberian-U.S. relations. Complaining that the United States was taking Liberia's support for granted, first Tubman and then Tolbert turned toward Pan-Africanism and Cold War neutrality, while economically Liberia sought to expand trade and political contacts with Europe. Under Tolbert, Liberian relations with the communist bloc improved dramatically. Liberia engaged in diplomatic exchanges with the Soviet Union and Eastern Europe, formally recognized Cuba in 1976, and opened relations with the People's Republic of China (PRC) after Tolbert visited the PRC on a state visit in 1979.

Economic weakness and popular discontent mounted during the 1970s, reaching a peak in 1979. Liberia's so-called year of ferment began when the government proposed reducing subsidies on rice, effectively doubling the price of this Liberian staple food. The ensuing Rice Riots soon evolved into sustained, broad-based social protests against government corruption and ineptitude, which Tolbert met with harsh repression and the imprisonment of political opponents.

Amid this atmosphere of instability, a group of enlisted soldiers led by Samuel Doe staged a coup in April 1980, killing Tolbert and most of his cabinet while decimating the upper ranks of the military. The new regime promised a more equitable distribution of wealth and power, but the regime in fact enriched its members at the nation's expense and developed an extensive system of patronage, with political and military positions going disproportionately to Doe's own Krahn ethnic group.

Afraid that the new regime might turn to the Soviet Union and Libya for support, President Jimmy Carter's administration rushed an economic and military aid package to Liberia in 1980. President Ronald Reagan further expanded U.S. aid to Doe. In exchange, Liberia closed the Libyan embassy, reduced Soviet embassy staff, and cracked down on alleged leftist radicals. Despite Doe's brutality against his opponents and his fraudulent victory in the October 1985 presidential election, Reagan continued to back his regime. But under President George H. W. Bush, the United States slashed economic aid to the corrupt government.

Toward the end of the 1980s, discontent in Liberia manifested itself in the appearance of regional rebel groups. In December 1989, these groups allied with an Americo-Liberian former military officer, Charles Taylor, who led a guerrilla war against Doe from neighboring Côte d'Ivoire. The United States and the West declined to intervene in the conflict, although Doe received support from the Economic Community of West African States (ECOWAS), which sent a peacekeeping force to Liberia in August 1990. In

September 1990, rebels captured and killed Doe, precipitating a seven-year civil war among the rebel factions.

Prominent Soviet economist. Born in Slavuta in the Ukraine on 2 October 1897, Evgenii (Evsei) Liberman moved to Kiev with his family while he was still an infant. He was initially refused university entrance because of the Russian government's quota on Jews in higher education. He later secured a waiver during World War I because his sister was a military doctor. His law studies were interrupted both for service in the Russian Army during the war and then during the Russian Civil War thereafter, when he fought on the side of the Reds.

Resuming his studies at the University of Kiev, upon graduation Liberman moved to Kharkov as an economist with the Workers' and Peasants' Inspection. He then enrolled in the Kharkov Labor Institute to study economics, remaining there as an instructor. Travel to Germany formed the basis for his theories of production planning. In 1933 he joined the faculty of the Kharkov Institute for Engineer Economics and became its dean. Evacuated following the German invasion of 1941, he worked in industrial planning in Kirghizia. In 1944 he joined the Research Institute for Finance in Moscow and three years later rejoined the Kharkov Institute. In 1950 he published *Cost Accounting at an Engineering Works and Economic Management of a Socialist Enterprise*. In 1956 he was awarded a doctorate and was appointed professor at the Kharkov Institute.

The basis of Liberman's economic theory was that profitability, rather than output, should be the central criterion for judging the economic success of socialist enterprises. This implied recognition of the principle of supply and demand previously unaccepted in Soviet economics, which had relied solely on output set by a central planning agency. His theories were a reflection of the debates going on in the Soviet Union during de-Stalinization. Leading Soviet economist Vasily Nemchinov brought Liberman's ideas to the attention of Premier Nikita Khrushchev and persuaded him to allow Liberman to publish an article in *Pravda*. This article, "Plans, Profits, and Bonuses," which appeared on 9 September 1962, became the basis for the economic

**Liberman, Evgenii
Grigorevich**
(1897–1983)

reform program, appropriately known as Libermanism. Liberman argued not only that demand-driven production would lead to an increase in quality but also that profitability should be rewarded in the form of bonuses and higher wages. Khrushchev agreed, and in August 1964, shortly before his fall from power, he allowed limited experiment in two textile plants, the Bolshevichka in Moscow and the Mayak in Gorky.

Under Khrushchev's successors General Secretary Leonid Brezhnev and Premier Alexei Kosygin, the plan was confirmed by the Twenty-third Party Congress and supposedly implemented in a third of Soviet consumer products factories. The plan was doomed, however, because of widespread opposition among bureaucrats who had previously set production quotas and now did their best to sabotage its success by withholding necessary raw materials.

In 1963 Liberman joined the faculty at Kharkov State University. His reforms were curtailed in the early 1970s. The inability of the state to carry out meaningful economic reform was an important factor in the later collapse of the Soviet Union. Liberman died in the Soviet Union on 10 March 1983.

Libya

Predominantly Muslim North African nation covering 679,358 square miles. With a 1945 population of approximately 900,000 people, Libya borders Niger, Chad, and Sudan to the south; Tunisia and the Mediterranean Sea to the north; Algeria to the west; and Egypt to the east. The Ottoman Empire ruled Libya for much of the nineteenth century, but in 1907 Italy began to assert itself in the region, seeking colonies to bolster its status as a great European power. After a brief war with the Turks during 1911–1912, Italy gained control of Libya. A twenty-year Libyan insurgency resulted, and Italy did not pacify

LIBYA, 1981 – 1986

the colony until 1931. The rebellions against Italy gave Libya an important tradition of anti-imperialism.

Libya was the site of significant fighting in the North African campaigns of World War II until it was ultimately secured by the British and the Americans in 1943. At the end of the war, Libya's status was immersed in the larger question of the fate of European imperial possessions in the Middle East and Africa. Ultimately, in 1949 the United Nations (UN) passed a resolution in favor of a united, independent Libya. The UN appointed Dutch diplomat Adrian Pelt to act as commissioner and oversee the establishment of the new nation. Negotiations among the varied regions in Libya proved delicate. Those in and around Tripoli supported a large degree of national unity, while the more established government of Cyrenaica preferred a federal system and insisted on choosing the monarch. The process resulted in a constitutional monarchy, an elected bicameral parliament, and a federal system of government. Amir Idris of Cyrenaica was named hereditary king of Libya, and final independence was declared on 24 December 1951.

The new Kingdom of Libya had strong links to the West. Both Britain and the United States maintained military bases on its soil and supported the state financially in return. Libya also had a strong Arab identity and joined the Arab League in 1953. As Arab nationalist movements grew in response to the 1948 creation of the State of Israel, Libya experienced a conflict of identities. The emergence of Gamal Abdel Nasser's Pan-Arabic nationalist regime in Egypt in 1954 encouraged the growth of similar political thought within

Libya, and the 1956 Suez Crisis only increased this trend. The discovery of oil in the late 1950s transformed the country, endowing it with wealth and increased geopolitical significance. Oil exports reached \$1 billion by 1968.

Arab nationalism and Middle Eastern conflict continued to affect Libya and its pro-Western policies in the 1960s. In 1964 Nasser charged that American and British bases in Libya might be used to support Israel in a conflict, and he pressured the Libyan government to close them. The 1967 Arab-Israeli War proved a turning point for Libyan politics. On 5 June 1967, the day hostilities began, anti-Jewish and anti-Western riots broke out in Tripoli. When Nasser falsely claimed that the Arab defeat was because of American and British assistance to Israel, Libyan oil workers refused to load American, British, and German tankers. The Libyan prime minister was forced to resign, and the king appointed a new cabinet. In the months after the war, the government was under continued pressure from Arab nationalists internally and externally. It pledged financial aid to Egypt and Jordan and demanded the closing of all foreign bases on Libyan soil (although the demand was not pressed). On 31 July 1969, a group of junior army officers seized power while the king was out of the country. The Revolution Command Council (RCC), headed by Colonel Muammar Qadhafi, took control with little opposition.

Qadhafi, an adherent of Nasser's version of Arab nationalism, stressed Arab unity, socialist economic policies, and opposition to Western imperialism. Unlike Nasser, however, Qadhafi maintained that this agenda could be reconciled with a strong emphasis on Islamic law. He rejected the Western presence in the Middle East, and he completed the removal of foreign bases in Libya and considered Israel an imperialist outpost. After Nasser's death, Qadhafi actively sought leadership in the Muslim world in the 1970s, promoting his Third International Theory, a middle way between the communism of the Soviet Union and the capitalism of the West. Although he succeeded in convincing more than thirty African countries to reject relations with Israel, he never gained the confidence of other Muslim nations.

Always an enemy of Zionism, Qadhafi supported Yasir Arafat's al-Fatah faction of the Palestine Liberation Organization (PLO) and sponsored terrorist attacks against Israel and related Western targets. As the 1970s progressed, Qadhafi voiced his support for revolutionary movements around the world, and Libya played host to a number of insurgent groups. He also sought to build up the Libyan military and pursued significant arms purchases from France and the Soviet Union after 1970. However, his suspicion of the atheist dimension of Soviet communism kept Libya out of the Soviet orbit in the strict sense. Nevertheless, his anti-Western activities assured him of Russian support.

Internally, Qadhafi sought to remake Libyan society, insisting that a mixture of socialism and Islam would ensure social justice. He created a welfare state based on oil revenue and reformed the legal system to include elements of Koranic law (Sharia). His *Green Book* (1976) laid out his political philosophy. In it he rejected representative government in favor of direct democracy. In 1977, he set up Basic People's Congresses across the nation but still retained power in his own hands. Finally, he transformed Libya's oil industry by tak-

ing production away from international oil companies, setting a pattern that would be imitated by other oil-rich states.

Despite Qadhafi's radical politics, Libya and the United States avoided direct confrontation for much of the 1970s because of their economic relationship. This changed, however, when Libya vehemently opposed Egyptian-Israeli peace negotiations. Qadhafi viewed any Arab rapprochement with Israel as a betrayal, while the Americans viewed the talks and the resulting 1978 peace treaty as crucial for lasting peace in the Middle East. In 1977, President Jimmy Carter's administration listed Libya, Cuba, and the Democratic Republic of Korea (DPRK, North Korea) as states that supported terrorism. U.S.-Libyan relations continued to sour. On 2 December 1979, rioters targeted the U.S. embassy in Tripoli in imitation of the attack on the American embassy in Tehran earlier that year. As a result, in May 1980 the United States withdrew its diplomatic personnel from Libya.

With the election of President Ronald Reagan in 1980, relations chilled further. On 6 May 1981 the Reagan administration officially labeled Libya as a state supporter of terrorism and expelled Libyan diplomats from the United States. The administration also pursued a freedom of navigation policy and challenged Libya's 1973 claims of sovereignty over the Gulf of Sidra in the Mediterranean. On 19 July 1981, the *Nimitz* carrier battle group was patrolling near the Gulf when two of the carrier's F-14 Tomcat fighters were approached and attacked by two Libyan Soviet-made Su-22 fighter jets. The American planes evaded the attack and shot down both Libyan planes.

Libyan naval officer holding up a portrait of Muammar Qadhafi while another raises his arms in victory, five days after the U.S. bombing of Tripoli, 20 April 1986. (Bernard Bisson/Corbis)

Tensions increased further, and in March 1982 the United States banned the import of Libyan oil. The sanctions had limited effect, however, as European nations did not adopt U.S. policies. Qadhafi continued to support revolutionary and terrorist activity. On 5 April 1986, an explosion in a Berlin nightclub killed 3 people and injured 200, including 63 U.S. servicemen. The United States claimed Libyan involvement and retaliated with great ferocity. On 15 April, U.S. Air Force and Navy planes bombed five targets in Libya.

The Reagan administration maintained that the raid resulted in significant disruptions to Libyan-supported terrorism, and such activity did decline for a number of years. On 21 December 1988, Pan Am Flight 103 was destroyed over Lockerbie, Scotland, by a terrorist bomb. More than 270 people were killed, and subsequent investigations pointed to two Libyan men as primary suspects. When the Qadhafi regime refused to extradite the men for arrest and trial, the UN imposed sanctions on Libya in 1992. American confrontations with Libya continued, and a second incident over the Gulf of Sidra resulted in the destruction of two Libyan MiG-23 fighter planes in January 1989. At the end of the Cold War, the Qadhafi regime remained steadfast in its support of revolutionary movements and terrorist actions against Israel and the West. The United States continued to view Libya as a sponsor of international terrorism. In recent years, Qadhafi has taken a more conciliatory tone with the West, including turning over the men responsible for the Pan Am bombing and paying restitution to victims' families. In February 2004 Libya declared that it would renounce its weapons of mass destruction program and comply with the Nuclear Non-Proliferation Treaty. Thus began a thaw in relations with the United States, which resumed diplomatic relations that June and lifted all remaining economic sanctions in September 2004.

Lie, Trygve

(1896–1968)

Norwegian politician, diplomat, and first secretary-general of the United Nations (UN) during 1946–1952. Born on 16 July 1896 in Oslo, the son of a carpenter, Trygve Lie earned a law degree from the University of Oslo in 1919 and then worked as a legal advisor to the Norwegian Federation of

Norwegian Trygve Lie served from 1946 to 1952 as the first secretary general of the United Nations. (Library of Congress)

Trade Unions. Firmly established in the Labor Party, he was appointed minister of justice in 1935 and elected to parliament in 1936.

In 1939 Lie became minister of supply and shipping. He also served as foreign minister for Norway's government-in-exile in London, a post he held during 1941–1945. He continued on as foreign minister until February 1946, when he accepted the UN position as secretary-general.

Lie led the Norwegian delegation to the 1945 San Francisco UN organizational conference and played a key role in drafting the Security Council provisions of the UN Charter. When he assumed the UN secretariat in 1946, he sought to bridge the gap between East and West even as the Cold War began. The Soviets initially approved of his efforts, although the Western democracies were often frustrated by what they perceived as his equivocation and indecisiveness. Lie's attempts to establish a new cooperative world order were soon torn asunder by growing Cold War tensions.

Lie was certainly a proactive secretary-general who believed strongly in the role and purpose of the UN. He also set the tone of the organization by insisting that his office be accorded the dignity and respect that befitted a supranational body. But his tenure was not without its troubles. The Soviets were furious with him for supporting the American-led UN intervention in the Korean War (1950–1953). Ultimately, they refused to support him and attempted to block his reappointment in November 1950. Realizing that he

could not continue to be effective without the support of the communist bloc, he resigned in November 1952.

After leaving the UN, Lie continued his political and diplomatic career, serving as provincial governor of Oslo and Akershus during 1955–1963. In 1959 Norwegian King Olav appointed Lie to mediate a border dispute between Ethiopia and Somalia. He served as Norwegian minister of industry during 1963 and minister of industry and trade during 1963–1965. Lie died on 30 December 1968 in Geilo, Norway.

Ligachev, Yegor Kuzmich

(1920–)

Soviet Communist Party politician, first a supporter but later an outspoken critic of Soviet leader Mikhail Gorbachev's reform policies. Born on 29 November 1920 in Dubinkino, Siberia, Yegor Ligachev pursued what was viewed as a model career in the Communist Party of the Soviet Union (CPSU). He graduated from the prestigious Institute of Aviation in Moscow in 1939, joined the CPSU in 1944, and held a number of party posts in the Novosibirsk area before moving to Moscow. He became deputy chief of propaganda in 1961 and deputy chief of party personnel in 1964.

Four years later, Ligachev returned to Siberia, probably because he was unwilling to collaborate with Soviet leader Leonid Brezhnev. In 1976, however, Ligachev was granted full membership in the CPSU's Central Committee. In 1983 Yuri Andropov, new general secretary of the party, recalled Ligachev to Moscow. In 1985 Andropov's successor, Konstantin Chernenko, nominated Ligachev to the Politburo. He became a full member only weeks after Chernenko's death.

In 1985 Gorbachev became CPSU general secretary and announced his reform program, perestroika. Ligachev initially endorsed Gorbachev's efforts by chairing Politburo meetings, thus serving as Gorbachev's de facto second-in-command. But Ligachev refused to back the reformers' quest for what he considered to be radical changes. He thus played a major role in the dismissal from the Politburo of Boris Yeltsin, who had pushed for an even faster

pace to perestroika. In September 1988, when Ligachev publicly condemned efforts to reform the party apparatus, Gorbachev forced the Politburo to expel him from office. Ligachev then became widely identified with the orthodox, communist critique of Gorbachev and perestroika, which relegated Ligachev to the far fringes of Russian politics.

Vice premier of the People's Republic of China (PRC) during 1955–1971. Born in Huanggang, Hubei Province, on 5 December 1907, Lin Biao enrolled at the Huangpu Military Academy in 1925. He graduated the following year, joined the Chinese Communist Party (CCP), and enlisted in the armed forces. His military talents earned him the command of the 115th Division of the Eighth Route Army, one of the three components of the Chinese communist forces during the Sino-Japanese War. Wounded in early 1938, he retired from active military duty and went to Yan'an, Shaanxi, where he was involved in troop training and liaison work. He was then assigned to northern China, where he helped establish a powerful base that ensured the CCP's 1949 victory in the Chinese Civil War.

After the establishment of the PRC in October 1949, Lin became secretary of the Central-South Bureau and commander of the Central-South Military Region. In 1955 he became vice premier, vice chairman of the National Defense Council, a member of the CCP Central Committee, and a marshal of the People's Liberation Army. In September 1959 he assumed the posts of defense minister and the senior vice chairmanship of the National Defense Council. His power and influence peaked during the ultraleftist Cultural Revolution (1966–1976). Presenting himself as the spokesman for Chinese leader Mao Zedong, Lin advocated world communist revolution and resistance to American imperialism.

In April 1969 Lin replaced Liu Shaoqi as Mao's successor and heir apparent. Lin did not, however, remain long in power. It was alleged that, emboldened by his military power, he had staged an abortive coup in 1971. Having failed to assassinate Mao (as officially reported), Lin attempted to

Lin Biao
(1907–1971)

flee to the Soviet Union but died in an airplane crash on 13 September 1971 near the Mongolian border.

Lippmann, Walter (1889–1974)

American Walter Lippmann, a profound political thinker and an astute commentator on national and international events, influenced presidents for nearly sixty years. (Library of Congress)

Prominent American writer, journalist, columnist, and foreign policy pundit who helped popularize the term “Cold War.” Born on 23 September 1889 in New York City, the son of a successful clothing manufacturer, Walter Lippmann graduated from Harvard University in 1909 and began a storied career in journalism and public policy, writing extensively for the *New Republic* (which he founded), the *New York World*, and the *New York Herald Tribune*. He achieved his greatest exposure and influence, however, as a columnist for the *Washington Post* and *Newsweek* magazine. His newspaper column “Today and Tomorrow” was syndicated in more than 250 papers around the world, and his sensible, lucid writing style earned him two Pulitzer Prizes, not to mention a devoted audience of readers.

In his 1947 book *The Cold War*, Lippmann instantly popularized the term used to describe the state of hostility between the United States and the Soviet Union. He proposed that rather than relying on military might alone to contain the Soviet Union, the Cold War should be fought by consolidating and unifying the Atlantic community through economic integration, including programs such as the 1947 Marshall Plan.

Although generally considered to be a foreign policy realist, Lippmann opposed George F. Kennan’s doctrine of containment as unrealistic and unsustainable. Lippmann argued that the doctrine compelled the United States to adopt a reactive foreign policy, putting it at a strategic disadvantage. He also questioned the wisdom of extending security commitments to unreliable client states and putative anticommunist movements within states. He criticized the Truman Doctrine as overly militaristic.

By the mid-1960s, Lippmann's warnings proved quite prescient. He opposed American military intervention in support of the Republic of Vietnam (RVN, South Vietnam), which he saw as a manifestation of the inherent flaws of the containment policy. He lamented President Lyndon B. Johnson's decisions that had transposed Vietnam into an American war and predicted that U.S. intervention would ultimately divide America as the number of casualties rose.

Lippmann retired from journalism in 1967, at the height of a public standoff with Johnson, although he continued to contribute to *Newsweek* and grant interviews. Lippmann died in New York City on 14 December 1974.

The Cold War was fought on the literary as well as the diplomatic and political fronts. Although it did not provide so immediately absorbing subject matter for writers as did the two world wars of the twentieth century, it created a tense, competitive environment in which all thoughtful writers operated. Sometimes openly but often by parable or indirection, serious writers confronted the social, political, and philosophical issues raised by the conflict, which eventually split the world into two opposing ideological camps. During the McCarthy era of the early 1950s, a significant number of American writers found their careers threatened should they express sympathy for communism. Their often-coerced testimonies before the House Un-American Activities Committee (HUAC) and Senator Joseph McCarthy's Senate subcommittee were invariable dramatic and sometimes life-altering. Always mindful of the feared blacklist, writers learned to proceed with caution. Those who did not conform resorted to the use of pen names. At the same time, the interest generated by Senate hearings and Cold War intrigues provided the more openly commercial writers, those who produced entertainment that titillated casual readers, a superabundance of plot possibilities.

Decades before the Cold War began, numerous men and women of letters had found socialist and Marxist ideas attractive. Some had flirted with communism and had looked toward the Soviet Union as a noble experiment. Naturalism, the literary movement that dominated serious European and

Literature

Playwright and screenwriter Lillian Hellman. Her Left-leaning politics led to her being called before the House Un-American Activities Committee. Her refusal to cooperate with the committee caused her to be blacklisted in Hollywood for more than a decade. (Library of Congress)

American fiction in the first half of the twentieth century, had actually encouraged many writers in this direction. Since the time of Émile Zola in late nineteenth-century France, practitioners of literary naturalism had prided themselves on their ability to rouse the public and mitigate miserable living conditions by highlighting social abuses in fiction. Because these writers knew the social problems of Western Europe and the United States best and juxtaposed this reality to the rosy propaganda that was emanating from the Soviet Union, it was not uncommon for them to respond positively to features of the communist message.

As the HUAC hearings got under way, writers who had worked in Hollywood were particularly vulnerable to the committee's scrutiny. Lillian Hellman (1905–1984) was perhaps the most highly publicized writer to confront HUAC directly. A major American dramatist and woman of letters, she had earned her reputation with such plays as *The Children's Hour* (1934), one of the first Broadway dramas to treat lesbianism, and *Watch on the Rhine* (1941), an antifascist play. Although born in New Orleans to an affluent family, she had become involved in radical politics under the influence of her companion, Dashiell Hammett (1894–1961).

Hellman became an eager student of Marxist texts and briefly joined the Communist Party for humanitarian and idealistic reasons. In the early years of World War II, she had carefully followed the party line, first urging the United States to stay out of the conflict, during the Nazi-Soviet Pact, and later advocating involvement when Germany violated its treaties by invading the Soviet Union in 1941. By the time she was called to testify before HUAC, her days with the party were over. By skillful management of public relations, she was able to avoid tattling on former associates without going to prison herself.

Hammett was not so fortunate. Although a dedicated Marxist who had supported radical movements in the United States, he claimed that he had never actually joined the Communist Party. Nevertheless, he refused to cooperate with HUAC, invoking the Fifth Amendment eighty times during his testimony. Refusing to identify communist sympathizers he had known, he was sentenced to six months in federal prison, was blacklisted in Hollywood, and was hounded by the Internal Revenue Service (IRS) for the rest of his life. His writings, identified as subversive by Senator McCarthy and McCarthy's sidekick Roy Cohn, were removed from many libraries. This was a considerable disappointment to Hammett's many readers, who regarded him as a creator of the American hard-boiled school of detective fiction with his Sam Spade and Thin Man stories. His best-known works, such as *Red Harvest* (1927) and *The Maltese Falcon* (1930), are still regarded as classics of the genre.

Other writers with strong Hollywood connections caught up in the HUAC net included Clifford Odets (1906–1963), Ring Lardner Jr. (1915–1983), and Arthur Miller (1915–2005). Odets emerged as one of the sadder figures of the McCarthy era. A leading playwright of the 1930s and 1940s and the author of *Waiting for Lefty* (1935) and *Golden Boy* (1937), Odets was a member of the Marxist League of American writers, which had included the great American novelist Theodore Dreiser (1871–1945). Odets joined the party itself around 1935. According to his later testimony, he resigned six or eight months later in disappointment. The communist publications *The Daily Worker* and *The New Masses* had unfavorably reviewed his plays, labeling him a “hack writer” who did not properly promote proletarian themes. When he later testified before HUAC, Odets attempted to downplay leftist influence in Hollywood, claiming that the collaborative system that produced Hollywood films made it next to impossible for a writer to inject Marxist ideas into scripts. Because of his conciliatory approach to the committee, many of his colleagues accused him of collusion with the enemy, and the experience left him disheartened.

Lardner was the son of a popular American humorist and had been an Academy Award-winning screenwriter in 1942. He was the youngest of the group of motion picture screenwriters and directors accused of communist sympathies, designated as the Hollywood Ten. In the 1930s he had visited the Soviet Union to judge, he believed, the Marxist experiment firsthand. At that time he had truly believed it his duty to try to communicate Marxist ideas through film. HUAC regarded him as an important witness, but his failure to answer the committee’s questions resulted in a citation for con-

American playwright Arthur Miller, ca. 1950, whose *Death of a Salesman* won the Pulitzer Prize. Miller was married for a while to actress Marilyn Monroe. (Corbis)

tempt, a year's prison sentence, a \$1,000 fine, and the Hollywood blacklist. For two years he was forced to make his living anonymously. His novel *The Ecstasy of Owen Muir* appeared in England in the 1960s but could not be published in the United States. He was finally able to return to Hollywood in the 1960s, where he earned a second Academy Award for his work on the screenplay of *M*A*S*H* (1970).

Miller (1915–2005), like Hellman, was a major twentieth-century American playwright whose drama *Death of a Salesman* (1949) redefined tragedy for the modern theater. A liberal activist from youth, Miller had still never been willing to put himself under the discipline of the Communist Party. He rejected its doctrine that all artists should employ their talents to further the party line. Yet he believed that the Communist Party should be able to function legally in the United States, and he condemned HUAC as a pack of witch-hunters. While Miller was willing to be forthright with HUAC about his own beliefs and actions, he firmly refused to testify against others. On several occasions in later years, Miller publicly expressed his conviction that the very existence of civilization depended on trust and loyalty. Although his career survived and he became a media celebrity upon his marriage to Hollywood actress Marilyn Monroe, Miller did not escape unscathed. He was even refused a passport by the State Department.

Two later Miller plays powerfully reflect his reactions to HUAC and the anticommunist hysteria that damaged the careers of people close to him. *The Crucible* (1953), ostensibly about the Salem witch trials of early American colonial history, was generally understood to be a parable of McCarthyism. *After the Fall* (1964) was a more direct depiction of Miller's personal experiences as a harassed artist and husband of a neurotic film star.

To those who were seized by the Red hysteria, it often seemed that all American letters had turned leftist. There were, however, significant counterbalances. During the early years of the Cold War, Ernest Hemingway (1899–1961) and William Faulkner (1897–1962) were among the most admired American writers. Hemingway believed that a writer betrayed his art if he used it to promulgate an ideology. The extreme subjectivity of Hemingway and the social conservatism of Faulkner made them unlikely heroes of the Left.

Nineteen Eighty-Four (1947), a horrific piece of political satiric fiction by the English writer George Orwell (1903–1950), circulated throughout the United States and was widely interpreted as a vision of what the West would become if dominated by the Soviet Union. In the society of Oceania, as described in the book, the omnipresent television set indoctrinates folk in the Big Lie, the government's interpretation of everything. All speech, action, and even thought are controlled by Big Brother.

Another book that profoundly influenced American thought appeared in 1949. *The God That Failed* was a collection of essays by important novelists, poets, and journalists whose earlier ideals had been betrayed by the reality of what the Soviet Union had become. They had all initially believed communism to be the best hope for the oppressed masses of the world. The participants in *The God That Failed* were Arthur Koestler, a Hungarian novelist; Louis Fischer, an American journalist; André Gide, a French essayist and novelist; Richard Wright, a major African American novelist; Ignazio Silone, an Italian journalist and novelist; and the British poet Stephen Spender.

Especially moving was Richard Wright's narrative of his emergence from Mississippi plantation life to a writing career in Chicago. The Communist Party had promised equality for all, with particular concern for the plight of the African American in the years before the successes of the civil rights movement. Wright's eventual discovery of the tyranny and duplicity of the party was a painful epiphany.

Equally powerful was Gide's account of his visit to the Soviet Union in June 1936 as a guest of the Soviet Society of Authors. He had approached his visit with the conviction that the Russian experiment was the wave of the future. Although he was shown every courtesy and provided the finest accommodations the country had to offer, his eyes and ears were open. He was unable to deny that the vast masses of Soviet citizens still lived in abject poverty. While the rest of the world was bombarded with rosy visions of an ideal state by the party's propaganda machine, Russian workers continued to suffer under deplorable tyranny that rivaled that of the czars.

Perhaps the most outspoken and abrasive literary opponent of communism in the United States during the Cold War was Ayn Rand (1905–1982), a native of Russia who had experienced communism firsthand and passionately hated it and all its works. Her novels, which sometimes became best-sellers and always attracted a cult following, were rarely more than fictional embodiments of her ideas and prejudices. *We, the Living* (1936), *The Fountainhead* (1943), and *Atlas Shrugged* (1957) extolled the virtues of self-interest, the fulfillment of individual potential, and the value of capitalism as the system best designed to favor self-fulfilment. As a friendly witness before HUAC in October 1947, Rand attacked early Hollywood portrayals of life in the Soviet Union as an idealized lie. She testified that the Soviet Union was in fact a prison from which many were risking their lives to escape. Her claim that Russians smiled only "privately and accidentally" was widely quoted and was ridiculed by Hellman and others.

In the English language, it was genre fiction that most directly exploited the Cold War. Spy thrillers became a staple, expertly penned by Graham Greene (1904–1991), Ian Fleming (1908–1964), John Le Carré (1931–), Tom Clancy (1947–), and others. Greene was a major British writer who rarely concealed his hostility toward American policies. He divided his literary output into two clear categories: his serious fiction, which explored religious and philosophical themes, and his entertainments, often set against worldwide political conflicts. *The Third Man* (1948) unfolded in postwar Vienna with a leading character who bore a remarkable resemblance to Soviet mole Kim

Philby, a man for whom Greene had once worked. *The Quiet American* (1955) used Vietnam as a backdrop, at the beginning of the American involvement in the turmoil generated by the French and by nationalist and communist factions. *Our Man in Havana* (1958) revealed a cloak-and-dagger world of espionage more ridiculous than awesome.

Fleming, another British writer, created the character of James Bond, perhaps the most popular of all fictional Cold War spies, certainly after the cinema discovered him. Bond's most notable Cold War adventures erupted in *From Russia with Love* (1957) in which Bond romped with buxom Soviet female agents as he battled SMERSH, the Soviet organ of vengeance, interrogation, torture, and death; in *For Your Eyes Only* (1960), in which SHAPE headquarters, a Russian hideout near Paris, is destroyed; and in *Octopussy* (1966), which found Bond snaring a top Soviet agent found bidding for a Fabergé egg in a Sotheby auction. The Bond stories were splendid camp, and their exaggerations made many feel that the Soviets were more buffoons than threats.

Le Carré, a third British spy novelist, made good use of his personal experiences in the British Foreign Service as background for his novels. Among his best-known thrillers are *The Spy Who Came in from the Cold* (1963) and *Tinker, Tailor, Soldier, Spy* (1974). These narratives suggest a grim, lonely espionage underworld in which values are often blurred and loyalties sometimes ambiguous.

Clancy, an American, wrote thrillers rivaling the appeal of the leading British spy novelists. Books with special Cold War relevance included *The Hunt for Red October* (1984), *Red Storm Rising* (1986), *Patriot Games* (1987), and *Cardinal of the Kremlin* (1988). He wrote a fast-paced adventure narrative, more real-world than were the James Bond adventures, yet he avoided the moral ambiguities that intrigued Greene and Le Carré.

Science fiction became the most popular literary category during the Cold War, particularly after paperbacks became widely distributed. This genre at its best provided an even more provocative attack on communism than had the spy stories. Hundreds of paperbacks were published each year, some predicting dystopian futures in which tyranny would prevail. Others painted a horrifying panorama of a planet devastated by a Cold War turned hot in a thermonuclear disaster. These narratives generally refrained from siding with either East or West in the conflict. The destructive potential, they seemed to say, is spread about equally throughout the human race. The bomb had become the new Frankenstein monster, the golem through which the suicidal impulses of humanity would find expression.

Two of these apocalyptic novels attracted special attention. Neville Shute (1899–1960) was a British writer living in Australia when he published *On the Beach* (1957). He envisioned a near future where nuclear war has wiped out all life in the Northern Hemisphere. Australians alone survive, but only for a few days, with full awareness that global winds will soon bring radioactive contamination to them.

Three years after the appearance of *On the Beach*, Walter M. Miller Jr. (1922–1996) published his hauntingly poetic *A Canticle for Leibowitz*, one of

the few science fiction books that has crossed over literary categories to become recognized as a significant work of twentieth-century American fiction. In this unusual science fiction story, after the nuclear holocaust the tiny Catholic Order of Leibowitz undertakes the task of preserving some memory of previous civilization.

Although writers in the English language have most notably confronted the Cold War in their fiction, European literature has also been strongly conditioned by the events of the period, often struggling with Cold War issues on a philosophical or religious plane. In Italy, France, and elsewhere on the European continent, atheistic views, strongly influenced by the dialectal materialism of Karl Marx and Friedrich Engels, have battled Christianity in the minds and hearts of serious writers.

In France, Jean-Paul Sartre (1905–1980), highly sympathetic to Marxism although frequently critical of the Soviet Union, best represented the atheistic position. In 1945 Sartre founded a political and literary magazine, *Les Temps Modernes*, which reflected his position as an independent socialist addressing Cold War issues. His novels, such as *The Age of Reason* (1945) and *Troubled Sleep* (1949), gave fictional embodiment to his social and philosophical ideas. A more mellow atheistic French voice was that of Albert Camus, a fellow existentialist who had actually once been a Communist Party member. His novel *The Plague* (1947) has been variously interpreted as a parable of Resistance fighters in Paris revolting against Nazi domination and as a protest against all revolutionary movements that justify the use of any methods to achieve their ends.

Espousing Christianity even in a France often labeled “post-Christian” were writers such as Georges Bernanos (1888–1948), François Mauriac (1885–1970), and Julian Green (1900–1998), an American citizen who spent most of his life in France and wrote almost exclusively in the French language. Much of the career of Bernanos was devoted to writings that promoted his liberal views, which included his denunciations of French bourgeois values and Spanish dictator Francisco Franco’s exploits. As a frequent essayist, Bernanos took positions with which both communists and ultrarightists could occasionally agree.

Mauriac, who was awarded the Nobel Prize for literature in 1952, affirmed Christian values with novels that were more concerned with personal and family relationships than social movements. His message in numerous novels was that beneath prosperous exteriors, regardless of the political system, human beings are torn by uneasy emotions in disordered lives of their own making.

Green likewise concentrated on the wars within the human personality in books that reflected his personal dilemmas, his conversion from Protestantism to Catholicism, and his acknowledgment of his homosexuality. These introspective works included *Moirra* (1950) and *Each in His Own Darkness* (1960).

In Italy, Alberto Moravia (1907–1990), an influential intellect tormented by the plight of the poor, skeptical of Christian solutions, and alert to the appeal that the Communist Party made to postwar Italians, became the best

were to serve the
proletarian
revolution.

known of his country's novelists throughout Europe and the United States. From the beginning, the socially alienated were his choice subjects, while his style was sparse and realistic. *A Woman of Rome* (1947), about a Roman prostitute, and *Time of Desecration* (1978), a political allegory, were among his most penetrating works.

While the intellectuals were debating the social reality portrayed by Moravia and examining his implied solutions, masses of people were devouring the Don Camillo stories of Giovannino Guareschi (1908–1968). These were simple tales somewhat reminiscent of medieval legends of St. Francis, about a village priest in the Po Valley who converses with the crucifix above his altar and verbally spars with his old friend, Pepponi, the communist mayor of his village. The books made the simple plea for Christian virtues above the vapid promises of communism.

On the other side of the Iron Curtain, Russian writers faced very different problems than their Western counterparts, who often had a bewildering assortment of philosophical options from which to choose. Instead of castigating their opponents, Soviet writers had to concern themselves with pleasing their government and following the party line or else circulating their manuscripts through a flourishing Russian underground. Writing guilds in the Soviet Union operated under clearly defined precepts of socialist realism, which an individual author violated only with considerable courage. In Soviet Russia under Josef Stalin, there was to be no art for art's sake. All writings were to serve the proletarian revolution. Crude propaganda novels flooded the Russian market, celebrating women who chose to forgo singing in the Moscow opera in order to increase their egg production on collective farms or men allowed to marry their intended only after factory quotas had been surpassed.

Ilya Ehrenburg (1891–1967) was one of the best-known writers of genuine talent to faithfully follow the party line. He was, not surprisingly, awarded two Stalin Prizes for *The Fall of Paris* (1941), a fictional account of French societal decay from 1935 through 1940, and *The Storm* (1948), a war novel with Tolstoyan pretensions. Vera Panova (1905–1973) was another loyal Soviet novelist who, nevertheless, managed to convey in her writing the compassion and humanistic vision that had been the identifying feature of the great nineteenth-century Russian novelists. She received the Stalin Prize in 1947 for *The Train*. Although she did not fail to tackle social issues according to the canons of socialist realism, she is best remembered for her loving portraits of children, such as *Evodokiia* (1959).

Mikhail Sholokhov (1905–1984), who became the Nobel laureate of 1965, was acclaimed by his government as an obedient communist as well as a powerful writer. His most loved work was *And Quiet Flows the Don*, written between 1928 and 1940. It presented a vast panorama of the revolutionary period in a way that did not displease the authorities.

Two serious Russian writers came into open conflict with their government when they were awarded Nobel Prizes. During the Cold War the prize itself, still the most prestigious in the world for literary achievement, be-

came politicized. In 1958, Boris Pasternak (1890–1960) was coerced by his government into refusing the prize, which was awarded to him not only for a distinguished body of poetry but also for his masterpiece *Doctor Zhivago*, completed in 1956 but not published in his native land until 1988. *Doctor Zhivago*'s theme was the aspirations of the individual pitted against the demands of doctrinaire systems.

In 1970 Aleksandr Solzhenitsyn (1918–) was awarded the Nobel Prize. His writings—fictionalizations of personal experiences—had exposed the underside of Soviet life, the ruthlessness of the prison camps, and the injustice of the courts. *First Circle* (1968) was based on the years that he spent in a prison research institute, while *Cancer Ward* (1968) resulted from his hospitalization and treatment for cancer during a forced exile in Kazakhstan in the 1950s. *The Gulag Archipelago*, which began publication in Paris in 1973, was considered his most thorough exposé of the notorious Soviet prison and labor camps. Living under almost constant harassment, Solzhenitsyn did not bend to the Soviet authorities but remained a thorn in their flesh until he finally was expelled from the country in 1974. Equally unhappy in the West, despite the acclaim he received for both his writing and his political courage, he returned to Russia in 1994.

On both sides of the Iron Curtain, the Cold War conditioned both serious and popular literature. The unsettled quality of life and the fears generated by the reality of mutual assured destruction (MAD) may be easily discerned in the novels of several decades, although the conflict failed to call forth the epic writing that has always resulted from the world's great armed conflicts.

Russian author Boris Pasternak, author of the acclaimed novel *Doctor Zhivago*, outside his home in Peredelkino, a writers' colony located southwest of Moscow, October 1958. (Jerry Cooke/Corbis)

Lithuania

Former Soviet republic and now an independent Baltic state. The Republic of Lithuania, which declared its independence on 11 March 1991, had a 1945 population of some 2.25 million people. Covering 25,174 square miles, Lithuania is about the size of the U.S. state of West Virginia. It borders the Baltic Sea, Russia, and Poland to the west; Belarus to the south and east; and Latvia to the north. Lithuania is divided into ten counties. It is now a parliamentary democracy.

Throughout its history, Lithuania has fallen victim to its more powerful neighbors, namely the Soviet Union and Germany. On 23 August 1939, the German-Soviet Nonaggression Pact contained secret clauses that divided Eastern Europe into German and Soviet spheres of control. The Soviets controlled Lithuania only for a short time during the initial stages of World War II. After German forces invaded the Soviet Union in June 1941, Lithuania remained under German control until 1944. During this time, a puppet German regime ruled the state, and most of the Lithuanian Jewish population perished in the Holocaust.

In the summer of 1944 the Red Army forced the Germans to withdraw from Lithuania, and Soviet authorities again took control and subjected the country to strong rule in order to end any remaining resistance to their authority. This tactic did not work out as the Soviets had planned, since a well-organized armed resistance nonetheless emerged. The ensuing guerilla war claimed approximately 50,000 lives on each side. In response, Soviet authorities deported some 10 percent of the Lithuanian population to Siberia. Resistance to Soviet rule ended in 1952.

The remainder of the 1950s through the 1960s was a period of relative political and social calm in Lithuania. During this time, the Soviet Union carried out forced agricultural collectivization and heavy industrialization. It also established its own political institutions in Lithuania, based on command-style socialism, and co-opted Lithuanian culture. This period was followed by a growing nationalist movement that began in the 1970s, which expressed clear opposition to the Soviet system.

The social and political climate began to change under Soviet leader Mikhail Gorbachev in the late 1980s. His policies of glasnost and perestroika had a tremendous impact on the Soviet Union and other states under its control. Soviet political oppression lessened dramatically, and prodemocracy movements emerged in Lithuania and other Baltic and East European countries. Soon enough, Gorbachev's reforms had set the stage for a centrifugal explosion of the Soviet system, a development far beyond his original intentions.

In Lithuania, the first mass prodemocracy demonstration, organized by the Sąjūdis Lithuanian Reorganization Movement, took place on 24 June 1988 at Gediminas Square in Vilnius. The group demanded wholesale political and economic reforms. A second major demonstration occurred on 9 July and involved more than 100,000 protesters. On 23 August, a third mass

demonstration occurred in Vilnius during which more than 200,000 people gathered to mark the forty-ninth anniversary of the German-Soviet Non-aggression Pact. The Lithuanian Supreme Council, an official parliamentary commission of Lithuanian legislature, declared that the pact was an international crime and that the Soviet annexation of Lithuania was therefore illegal. In late 1988 the Congress of the Soviet Union confirmed the decree of the Lithuanian Supreme Council by acknowledging that the pact had indeed been illegal.

On 23 August 1989, nearly 2 million people from Lithuania, Estonia, and Latvia formed a living chain to mark the fiftieth anniversary of the Nazi-Soviet pact. The chain stretched some 400 miles from Vilnius, through Riga, and ended in Tallinn. That same year, the Sąjūdis movement formally demanded independence for Lithuania. In the 1990 parliamentary elections, the Sąjūdis movement won 101 of 141 seats. This impressive electoral mandate led to the reestablishment of the independent Republic of Lithuania on 11 March 1990.

The Soviets, who refused to acknowledge that they had lost control over their Baltic client states, responded with an economic blockade on Lithuania that lasted eighteen months. The Soviets also murdered numerous government employees, seized government buildings, and resorted to other terror tactics. On the evening of 12 January 1991, they killed thirteen unarmed civilians who were protecting Lithuania's radio and television transmission tower and the parliament building. That night came to be known as Bloody Sunday. Faced with overwhelming Lithuanian opposition, the Soviets officially recognized Lithuania's independence on 6 September 1991.

Today, Lithuania is a member of the United Nations (UN), the European Council (EC), the International Monetary Fund (IMF), the European Union (EU), and the North Atlantic Treaty Organization (NATO). Ironically perhaps, Russia became Lithuania's largest trading partner.

Liu Shaoqi
(1898–1969)

General-secretary of the Chinese Communist Party (CCP) during 1949–1968 and chairman of the People's Republic of China (PRC) during 1959–1968. Born in Ningxiang, Hunan Province, on 24 November 1898, Liu Shaoqi enrolled in Moscow's communist University of Toilers of the East and joined the CCP in 1921. He returned to China in 1922 and was assigned to organize the labor movement, becoming chairman of the All-China Federation of Labor in 1931.

Throughout the Sino-Japanese War and the Chinese Civil War, Liu served successively as head of the North China, Central Plains, and Central China Bureaus, engaging in underground and organizational works and helping to ensure eventual victory in both wars. After the PRC's birth in October 1949, Liu became the second vice chairman of the state and concurrently the general secretary of the CCP. In April 1959 he succeeded Mao Zedong as the PRC's chairman. During Liu's chairmanship, the Sino-Soviet split became increasingly irreconcilable, taking on a heavy ideological tone. Liu viciously attacked the Soviets' revisionism and rapprochement with the West, insisting that permanent revolution should be the ultimate goal of the communist bloc.

Meanwhile, Liu became active in diplomacy as he tried to enhance the PRC's international status vis-à-vis the Soviet Union. In 1963 he toured non-communist nations in Asia, becoming the first PRC chairman to visit countries outside the communist bloc.

Liu's pro-Maoist position, however, did not save him from the ultraleftist Cultural Revolution (1966–1976). Indeed, his growing influence and power ultimately aroused Mao's suspicion. In October 1968 Liu was relieved of all his posts, and the chairmanship was passed on to the defense minister, Lin Biao, in 1969. Liu died in prison in Kaifeng, Henan, of medically neglected diabetes on 12 November 1969.

Lodge, Henry Cabot, Jr.
(1902–1985)

Prominent Republican senator from Massachusetts and longtime U.S. diplomat. Born in Nahant, Massachusetts, on 5 July 1902, Henry Cabot Lodge Jr.

was the grandson of Senator Henry Cabot Lodge. The younger Lodge graduated from Harvard University in 1924 and worked as a journalist until 1931. After serving in the Massachusetts state legislature during 1933–1936, he was elected to the U.S. Senate in 1936.

Following the Japanese attack on Pearl Harbor in December 1941, Lodge and Republican Senator Arthur Vandenberg of Michigan forged a bipartisan consensus behind President Franklin D. Roosevelt's wartime policies. Lodge thoroughly rejected the traditional isolationist position of the Republican Party that had, ironically, been championed by his grandfather, who had led the fight against the League of Nations in 1920. Lodge won reelection in 1942, but he resigned his Senate seat in 1944 to serve in the U.S. Army as a lieutenant colonel.

In 1946 Lodge was again elected to the Senate. Paired again with Vandenberg, Lodge supported President Harry Truman's foreign policies by voting for both the Marshall Plan and U.S. entry into the North American Treaty Organization (NATO). During his second term, Lodge became convinced that the United States needed a president who could overcome latent Republican isolationism. He therefore backed General Dwight D. Eisenhower in the 1952 campaign, serving as Eisenhower's campaign manager. Ironically, while Eisenhower won in a landslide, Lodge lost his Senate seat to John F. Kennedy.

Lodge served as U.S. ambassador to the United Nations (UN) during 1953–1960. He ran for vice president alongside Richard M. Nixon in 1960, an election they lost to Kennedy and Lyndon B. Johnson. After that, Lodge became a consultant to *Time* magazine until President Kennedy named him U.S. ambassador to the Republic of Vietnam (RVN, South Vietnam) in August 1963. Lodge, reacting to increasing American disaffection with the South Vietnamese government, was involved in supporting the South Vietnamese generals who toppled President Ngo Dinh Diem in a coup in November 1963. Lodge was recalled by President Johnson in January 1964 but returned as ambassador in 1965, serving until 1967. Lodge then was U.S. ambassador to the Federal Republic of Germany (FRG, West Germany) during 1968–1969.

Republican President Richard M. Nixon appointed Lodge to head the U.S. delegation to the Vietnam peace negotiations in Paris in January 1969. In 1970 he was named Nixon's special representative to the Vatican, a position he held until 1977. Lodge died on 25 February 1985 in Beverly, Massachusetts.

Henry Cabot Lodge Jr., originally an isolationist, in the years following World War II became a proponent of American internationalism and a determined opponent of Soviet expansion. Lodge served as U.S. ambassador to the United Nations (UN), the Republic of Vietnam (RVN, South Vietnam), and to the Federal Republic of Germany (FRG, West Germany). (Yoichi R. Okamoto/Lyndon B. Johnson Library)

Lon Nol (1913–1985)

Cambodian Army chief of staff (1955–1966), minister of defense (1955–1966), premier (1966–1967, 1969–1970), and president (1972–1975). Born on 13 November 1913 in Prey Veng Province, Lon Nol was educated at a lycée in Saigon during 1928–1934 and joined the French colonial civil service thereafter.

By 1951 Lon Nol had been a provincial governor, an army officer, and chief of police. In 1955 Cambodian ruler Prince Norodom Sihanouk appointed him both army chief of staff and minister of defense. Initially, Lon Nol was a trusted advisor to the prince. However, Lon Nol and other conservatives opposed Sihanouk's policies.

As the Vietnam War escalated, Sihanouk sought accommodation with the Democratic Republic of Vietnam (DRV, North Vietnam) in order to assure Cambodia's neutrality. This involved allowing the North Vietnamese to expand their logistics net to their People's Army of Vietnam (PAVN, North Vietnamese Army) and Viet Cong (VC, Vietnamese Communist) forces in South Vietnam through eastern Cambodia (the Sihanouk Trail) as well as sending supplies through the port of Sihanoukville. Sihanouk's toleration of North Vietnamese violations of its sovereignty greatly antagonized the governments of the United States and the Republic of Vietnam (RVN, South Vietnam), and Sihanouk eventually broke off relations with both countries. As opposition to his policies grew, he appointed Lon Nol premier in September 1966, a post he held until April 1967.

Lon Nol was often accused of plotting to overthrow Sihanouk, but he was out of the country during October 1969–February 1970 undergoing medical treatment in France. He did meet with Sihanouk in France in January 1970 and reportedly persuaded the prince to adopt new, tough measures against communist forces operating in their Cambodian sanctuaries against South Vietnam.

In February 1970 the small Cambodian Army shelled some PAVN and VC camps in Cambodia. In March a series of anti-Vietnamese demonstrations began in Cambodia, and Lon Nol, now in Cambodia, sent Sihanouk, who was still abroad, a telegram demanding a sharp increase in the size of the Cambodian Army. Sihanouk was outraged by this, but on 18 March the Cambodian National Assembly voted to remove Sihanouk as head of state. All indications point to Lon Nol as a reluctant participant in the change of power.

The North Vietnamese were determined to retain their valuable Cambodian sanctuaries, and fighting soon began between the PAVN and the poorly equipped and abysmally trained Cambodian Army. Increasingly, the Khmer Rouge (Red Khmer, Cambodian Communists), led by Pol Pot, took the lead in fighting the Cambodian Army.

Lon Nol reestablished relations with the United States, and Cambodia received significant U.S. military and financial aid. Cambodian nationalist resolve could not overcome poor training, however. In March 1972, Lon Nol suspended the constitution, imposed martial law, and took over full power as president of a Cambodian republic.

Despite direct American support in the form of air strikes against communist positions inside Cambodia (which had the ancillary effect of driving the communists deeper into the Cambodian interior), the Cambodian Army proved no match for the communist forces. Lon Nol also proved to be surprisingly inept as a leader. Although suffering from serious health problems, he rejected suggestions that he step down. He did not leave Cambodia until 2 April 1975, a few weeks before the Khmer Rouge entered the capital of Phnom Penh. After receiving medical treatment in Hawaii, he settled in California. Lon Nol died in Fullerton, California, on 17 November 1985.

Prime minister of Cambodia Lon Nol. The former minister of defense, Nol came to power at the height of the Vietnam War as the United States intensified its bombing campaign by attacking North Vietnamese sanctuaries in Cambodia. (Hulton Archive/Getty Images)

U.S. secretary of defense (1951–1953). Born in Huntsville, Texas, on 14 September 1895, Robert Lovett moved in 1909 with his family to New York. He attended Yale University, temporarily dropping out to serve as a naval aviator after the United States entered World War I. In the early 1920s he joined and soon became a partner in the venerable investment bank Brown Brothers, later Brown Brothers Harriman.

**Lovett, Robert
Abercrombie**
(1895–1986)

Robert Lovett served in the U.S. Department of War (later the Department of Defense) and the State Department over several decades, spanning World War II and the Korean War. He played an important role as secretary of defense during 1951–1953. (Library of Congress)

Lovett left office when the Truman administration ended, but successive presidents repeatedly sought his views on assorted foreign policy issues.

In 1940 Lovett's continuing interest in aviation and his concern to build up U.S. aerial production capacities led Secretary of War Henry L. Stimson to appoint him assistant secretary of war for air. For almost five years Lovett supervised the immense World War II buildup of American airpower and helped the Army Air Forces to retain some autonomy, a policy that later made it easier for the Army Air Forces to become an independent service arm.

After the war Lovett returned to private life until 1947, when his former superior George C. Marshall, to whom he was particularly close and whom President Harry S. Truman had just appointed secretary of state, persuaded Lovett to become undersecretary of state. He remained in office until late 1948, overseeing the development of the Marshall Plan and the North Atlantic Treaty Organization (NATO). In September 1950, when Marshall became secretary of defense during the Korean War, Lovett once again served as his deputy, supervising a major military buildup and succeeding Marshall when the latter retired in late 1951.

Lovett left office when the Truman administration ended, but successive presidents repeatedly sought his views on assorted foreign policy issues, regarding him as a key member of the Wise Men, the establishment figures who presided over the mid-twentieth-century expansion of American international power. In the mid-1950s Lovett presciently warned that the Central Intelligence Agency (CIA) had become overly enamored of covert operations. During the 1962 Cuban Missile Crisis President John F. Kennedy consulted Lovett, who counseled moderation. He was one of the senior advisors who, by late 1967, was disillusioned with the U.S. involvement in Vietnam, even though he did not attend the meeting of such Wise Men

in March 1968 that ultimately counseled President Lyndon B. Johnson to withdraw American forces from Vietnam. Lovett died in Locust Valley, Long Island, New York, on 14 September 1986.

Accomplished playwright, editor, journalist, U.S. congresswoman, diplomat, political activist, and wife of magazine magnate Henry R. Luce. Clare Boothe Luce was born Anne Clare Boothe on 10 April 1903 in New York City. She had a peripatetic childhood, living in New York, Chicago, Memphis, and France. Originally drawn to acting, she enrolled briefly in a New York City drama school but dropped out after less than a year. In 1923, at age twenty, she married a well-to-do clothing manufacturer she had met while working on women's rights issues. Her husband was twenty-four years her senior, and the marriage ended in 1929. Luce subsequently threw herself into writing and editing, working for *Vogue* and *Vanity Fair* magazines. In 1935 she wed Henry Luce, founder of *Time* and *Life* magazines, among others.

Luce then turned to her love of the theater. She had quit her editorial position in 1934 to devote her full energies to theatrical writing, which resulted in a number of well-received plays that appeared on Broadway. Beginning in 1940 she traveled extensively for *Life* magazine, and in 1941 she and her husband traveled to China as roving reporters. In 1942 Luce won a seat in the U.S. House of Representatives from Connecticut. She was the state's first woman elected to Congress. A staunch Republican, she was highly critical of President Franklin D. Roosevelt and the Democrats. During her two terms in office (1943–1947), Luce was often critical of Democratic foreign policy but nevertheless voted with it most of the time. She was also a key player in the creation of the Atomic Energy Commission (AEC), which brought nuclear energy under full civilian control in 1946. Before her term expired, she had already begun to sound the alarms about communist subversion, a precursor of McCarthyism that exploded onto the scene in 1950.

After exhaustively campaigning for Dwight D. Eisenhower in the 1952 election, Luce was rewarded when the new president named her ambassador to Italy, a post she held during 1953–1956. As such, she helped mediate the

dispute between Italy and Yugoslavia over Trieste. In 1959, Eisenhower appointed her to the ambassadorship of Brazil. However, after an acrimoniously partisan Senate confirmation process during which Luce quipped that a leading Democrat acted as if he had been “kicked in the head by a horse,” she resigned the position just days after being confirmed.

Luce continued her writing, painting, and political activism, becoming increasingly identified with the far right wing of the Republican Party. In 1964 she considered a run for the U.S. Senate but was dissuaded from doing so by party leaders. She then largely retired from the public spotlight until 1981, when President Ronald Reagan appointed her to the President’s Intelligence Advisory Board. She left the board in 1983. Luce died in Washington, D.C., on 9 October 1987.

Luce, Henry Robinson (1898–1967)

U.S. publishing magnate, influential opinion-maker, and prominent internationalist. Born on 3 April 1898 in Dengzhou, Shantung Province, China, the son of a Presbyterian missionary, Henry Luce enrolled at the elite Hotchkiss Preparatory School in Connecticut, graduated from Yale University in 1920, and studied at Oxford during 1920–1921. A brilliant student, he edited Yale’s newspaper with fellow publishing enthusiast Briton Hadden. In 1923, Hadden and Luce launched *Time* magazine, which quickly became a major success. When Hadden died in 1928, Luce became head of the burgeoning publishing empire.

Luce married playwright and future Republican politician Clare Boothe in 1935. The next year he brought out *Life*, the first successful photojournalism magazine. Keenly attuned to popular trends, in 1954 he launched *Sports Illustrated*, appealing to Americans’ love of entertainment sports.

Luce believed that Americans knew too little about the outside world, so he emphasized international news coverage in many of his magazines. His pro-American, procapitalist reading of global events strongly influenced the American public’s perceptions of the larger world. In the 1920s and early 1930s he was attracted to fascism, and his magazines published admiring portrayals of Italy’s Benito Mussolini and Spain’s Francisco Franco. Later, however, Luce opposed the Axis powers. In an influential editorial titled “The American Century” in the February 1941 issue of *Life*, he called for U.S. entry into World War II and the need to accept global responsibilities.

Luce's strong anticommunism, devotion to the Republican Party, and youthful experiences in China shaped his support for Jiang Jieshi and the Guomindang (GMD, Nationalist) cause. Jiang appeared on more *Time* magazine covers than any other world leader. Like the so-called China Lobby, Luce refused to recognize the 1949 success of the Chinese Revolution, and his enormous influence helped preclude any alternative U.S. policy toward China for a generation. In the 1950s and early 1960s, he promoted the Republic of Vietnam's (ROV, South Vietnam) president Ngo Dinh Diem as America's new democratic champion in Asia. Luce and his publications backed both the Korean War and the Vietnam War. Luce died on 28 February 1967 in Phoenix, Arizona.

Congolese independence leader and the first prime minister of the Democratic Republic of the Congo (June–September 1960). Born in Onalua, Belgian Congo, on 2 July 1925, Patrice Lumumba attended a Protestant mission school and worked for a number of years as a post office clerk. In October 1958 he formed the first nationalist political organization in the Congo, the Mouvement National Congolais (Congolese National Movement). In October 1959 he was jailed for instigating riots in Stanleyville but was released to attend the January 1960 Round Table Conference in Brussels, convened to discuss Congolese independence.

Upon the independence of the Congo in June 1960, Lumumba became the new nation's first prime minister. Only a few days later, however, Congolese soldiers mutinied, and the mineral-rich province of Katanga announced its secession. Belgium then dispatched troops to the Congo and supported the Katanga secessionist movement. Hoping to avoid a showdown and possible civil war, the United Nations (UN) dispatched a peacekeeping force to the Congo at the behest of Lumumba's government.

Lumumba's relationship with UN Secretary-General Dag Hammarskjöld was tense, and UN forces were overly assertive and patronizing. Furthermore, the UN refused to intervene in the Katangan secessionist crisis and Belgian troops remained in the country. Thus, in August 1960 Lumumba broke relations with Hammarskjöld, threatened to demand the withdrawal

of UN forces, and turned to the Soviet Union for assistance in the growing crisis. This action galvanized President Dwight D. Eisenhower's administration to support the assassination of Lumumba, although Belgian plans to get rid of the radical upstart were already under way.

On 5 September 1960, Congolese President Joseph Kasavubu summarily dismissed Lumumba as prime minister, a move of questionable legality that enraged Lumumba and his supporters. In early December, Army Chief of Staff Joseph Mobutu ordered Lumumba arrested, an act carried out with the help of foreign intelligence sources that allegedly included the United States. In January 1961 Lumumba was transferred to Katanga, where he had many Belgian and Congolese enemies. On 17 January 1961 he was murdered in Katanga. While in 2001 the Belgian government acknowledged some responsibility for Lumumba's assassination, his killing has never been fully documented.

Small West European nation bordered by Belgium to the west and north, France to the south, and Germany to the east. The Grand Duchy of Luxembourg, with a 1945 population of some 290,000 people, covers just 998 square miles, making it slightly smaller than the U.S. state of Rhode Island. The people of Luxembourg speak German, French, and the national language, Letzeburgesch.

Luxembourg gained its independence after the Napoleonic Wars of the early nineteenth century. In the 1867 Treaty of London the country's autonomy was reaffirmed, and the European powers declared Luxembourg a neutral nation. Over time the nation developed a representative assembly serving under a constitutional monarchy.

During World War I and World War II, the Germans violated Luxembourg's neutrality. Following World War II, the nation shed its neutral stance and joined in several alliances. Together with the Netherlands and Belgium, Luxembourg formed the Benelux Accords. This agreement tied the three nations together in an economic union. In 1948 Luxembourg, Britain, France, the Netherlands, and Belgium signed the Brussels Pact, which pledged the five nations to collaborate economically, militarily, and socially over a fifty-year period. The signatories banded together out of a common fear of renewed German militarism. The treaty pledged that the five nations would take whatever steps necessary to combat a future attack by the Germans. One year later, in 1949, Luxembourg signed the charter establishing the North Atlantic Treaty Organization (NATO). Luxembourg also received financial aid via the U.S.-sponsored Marshall Plan during 1948–1952 to spur postwar economic recovery.

Although a change in the nation's constitution introduced compulsory military service during 1944–1967, throughout the Cold War Luxembourg contributed little in terms of military forces to NATO. Luxembourg's tradition of neutrality and antimilitarism and its small population virtually assured a small military force. In 1979, for example, Luxembourg had no air force and had an army of only 660 men. NATO forces were nonetheless stationed in Luxembourg throughout much of the Cold War.

Luxembourg's economy grew steadily in the post–World War II era. Much of this was centered in metallurgical industries. In 1957 Luxembourg

Luxembourg

became one of the six founding members of the European Economic Community (EEC), which later became the European Union (EU). During the 1950s the country attracted foreign investors by offering enticing tax incentives. As a result, the people of Luxembourg enjoyed one of the highest standards of living in Europe. In 2002 Luxembourg adopted the euro as the nation's official currency.

Lysenko, Trofim Denisovich (1898–1976)

Soviet biologist responsible for a theory of genetics that came to be known as Lysenkoism. Born on 29 September 1898 in Karlovka, Ukraine, to a peasant family, Trofim Lysenko attended the Kiev Agricultural Institute. In 1927 while he was working at an experimental agricultural station in Azerbaijan, the Communist Party newspaper *Pravda* trumpeted his success in developing a method of planting a winter crop of peas to sustain cattle. The achievement proved short-lived, for the crops failed in succeeding winters, but Lysenko was by then firmly established as a scientist in the Soviet style, and other triumphs soon followed.

Lysenko developed, for example, a number of theories to shorten the growing season and enhance production. One was cooling seed grains before they were planted. He claimed that this not only increased yield but that these improved qualities were then passed on. In effect, this notion of acquired characteristics was a revival of the discredited theories of seventeenth-century French scientist Jean Baptiste Lamarck, who had argued for evolution but also claimed that acquired characteristics might be inherited. According to such a theory, the giraffe, for instance, had evolved from antelopes that had stretched their necks to reach the leaves in higher branches of trees.

In 1935 the government made Lysenko a member of the All-Union Institute of Selection and Genetics and gave him his own journal, *Vernalization*, to publicize his theories and purported successes. During 1936–1938 Lysenko was the director of the institute, and from 1938 he was president of the All-Union Academy of Agricultural Sciences. In 1939 he was elected a full member and Presidium member of the USSR's Academy of Agricultural

Sciences. During 1939–1956 and 1961–1962 he was president of the Lenin Academy of Agricultural Sciences, and during 1940–1964 he was director of the Institute of Genetics of the Academy of Sciences.

Lysenko became a centerpiece of Soviet science, in part because he represented a new kind of practical, peasant-based science divorced from the world of academics in their laboratories. This fit well with Soviet dictator Josef Stalin's trumpeting of practice as more important than theory. Probably the chief reason for Lysenko's advancement, however, was his ability to motivate the peasantry, which was suffering under Stalin's policy of forced agricultural collectivization.

In a 1948 speech that Lysenko claimed had been approved by the Central Committee of the Communist Party of the Soviet Union, he blasted genetic theories accepted in the West as "reactionary and decadent" and Western scientists as "enemies of the Soviet people." As president of Lenin Academy of Agricultural Sciences, Lysenko carried out his instructions to purge Soviet science of "harmful" ideas. Many scientists chose to admit their "errors" and fell into line. Others who refused lost their jobs. Many were also imprisoned and executed, the most prominent of the latter being biologist Nikolai Vavilov.

The science of genetics particularly suffered, for the notion of acquired characteristics fit nicely into communist theory and the project of creating a "new Soviet citizen" within a generation or two. Such ideas were ridiculed by scientists in the West, and indeed under Lysenkoism much of Soviet science, and especially agriculture, reverted back to the era of the Middle Ages.

Lysenko retained his position after Stalin's death in 1953. Under Nikita Khrushchev, however, mainstream Soviet scientists at last were given the opportunity, previously denied, to criticize Lysenko and his theories. Physicist Andrei Sakharov openly attacked Lysenko in the course of a 1964 speech before the General Assembly of the Academy of Science. Calls for the restoration of true scientific methods in biology and in agricultural science followed, and that same year Lysenko was removed from his post and assigned to an experimental farm. In 1965 a commission of scientists sent to Lysenko's farm produced a devastating critique of his methods. This report completed the ruin of his reputation when it was made public. Lysenko died in Moscow on 20 November 1976.

M

U.S. Army general and commander of the U.S. Occupation forces in Japan and of United Nations (UN) forces in the Korean War during 1950–1951. Born on 26 January 1880 at an army post near Little Rock, Arkansas, Douglas MacArthur was the son of General Arthur MacArthur, the U.S. Army's highest-ranking officer during 1906–1909. In 1903, the younger MacArthur graduated from the U.S. Military Academy, West Point, and then served as an engineering officer in the United States, the Philippines, and Panama. In 1913 he began a four-year stint at the War Department General Staff.

After the United States declared war on Germany in World War I, MacArthur went to France to fight with the 42nd Division in the Champagne-Marne, St. Mihiel, and Meuse-Argonne operations. From 1919 to 1922, Brigadier General MacArthur was superintendent at West Point before serving two command tours in the Philippines. Promoted to general, he became U.S. Army chief of staff in 1930. In 1935, he accepted a position as military advisor to the Philippine government, organizing Filipino defense forces over the next six years.

Recalled to service with the U.S. Army in July 1941, MacArthur became commander of U.S. Army Forces in East Asia. After Japan attacked Pearl Harbor, he commanded the defense of the Philippines before his departure for Australia in March 1942. He then supervised Allied military operations in the Southwest Pacific theater. Promoted late in 1944 to general of the army, he became commander of U.S. Army Forces in the Pacific in April 1945. He then became Supreme Commander for the Allied Powers (SCAP) in August to accept Japan's surrender and supervise the occupation. Although at times autocratic, he efficiently enacted a series of political, economic, and social reforms designed to eliminate Japanese militarist, ultranationalist, and feudal habits before implementing the reverse course that transformed Japan into a Cold War security partner of the United States.

In his capacity as SCAP, MacArthur presided nominally over the U.S. occupation of Korea. He rarely played a direct role in determining policy there, but he was a consistent advocate of early U.S. military withdrawal. Never enthusiastic about President Harry S. Truman's efforts to provide military

MacArthur, Douglas
(1880–1964)

General Douglas MacArthur enjoyed a long and distinguished army career but was also one of the most controversial soldiers in U.S. history. MacArthur commanded the Southwest Pacific Theater during World War II. President Harry S. Truman appointed MacArthur to head the United Nations Command during the Korean War but then dismissed him for insubordination, a decision that was correct but widely unpopular at the time. (National Archives and Records Administration)

and economic aid to the Republic of Korea (ROK, South Korea), MacArthur outlined a strategy in 1949 excluding it from guarantees of U.S. protection. That same year, the general lobbied for a U.S. defense commitment to Guomindang (GMD, Nationalist) Chinese leader Jiang Jieshi after the Chinese communists forced his flight to Taiwan. A dedicated anticommunist, MacArthur's efforts to boost Jiang's Nationalist government on Taiwan against the People's Republic of China (PRC) intensified the Cold War in postwar Asia.

When the Democratic People's Republic of Korea (DPRK, North Korea) attacked South Korea in June 1950, President Truman immediately committed ground troops in response to MacArthur's recommendation. Named head of the United Nations Command (UNC), he pressed for the full use of U.S. military power in Korea. After his controversial Inchon landing succeeded in September 1950, he enthusiastically embraced the Truman administration's decision to eliminate North Korea's communist regime. But by then MacArthur's relations with Truman were strained because of the general's continued pressure for stronger action to help the Chinese Nationalists topple the PRC.

During October 1950 as UN forces pushed northward, MacArthur downplayed the danger of Chinese involvement. At the Wake Island Conference, he assured Truman that the PRC's threat was a bluff and even if carried out would not impede achievement of U.S. war aims. After China's massive intervention in late November, MacArthur blamed the retreat and other battlefield problems on restrictions against attacking China, while rejecting the wisdom of seeking an armistice. But in March 1951, the front stabilized near the prewar border along the 38th Parallel. Informed of Truman's impending cease-fire initiative, MacArthur torpedoed it by issuing a public demand that Chinese forces surrender or face attacks upon their homeland. Then came release of his letter to a congressman characterizing Truman's policy in Korea as appeasement. MacArthur's insubordination and attempts to undermine Truman's conduct of the war prompted the president to relieve him of his command on 11 April 1951.

Politically ambitious, MacArthur already had increased Cold War tensions when he sought the Republican presidential nomination in 1948. After Truman fired him, MacArthur looked for vindication and took his case directly to the American public. Despite broad popular affection for the general as a war hero and frustration regarding Korea, neither average citizens nor most civilian and military officials favored a wider Asian war. During the U.S. Senate's investigation of MacArthur's firing, the Joint Chiefs of Staff (JCS) voiced opposition to his plan to escalate the war. In 1952, when the American people elected a general as president, it would not be MacArthur but rather Dwight D.

Eisenhower. MacArthur then dropped out of public life, making only occasional public appearances. He died at Walter Reed Medical Center in Washington, D.C., on 5 April 1964.

Machine guns are relatively heavy, rapid-firing small arms that can provide continuous or frequent bursts of automatic fire until their ammunition is expended. Firing rounds of 15mm or less in diameter, machine guns, unlike automatic cannon, do not shoot explosive shells, but their high rates of fire make them ideal for suppressing an enemy unit's movements or fire. That enables them to dominate infantry combat except in the presence of tanks or artillery fire, and they can be found in virtually every tactical military unit and on nearly all combat vehicles. It also made them a key component in the tactical doctrines of both the Western and Soviet blocs.

During the Cold War, both sides equipped their combat vehicles with machine guns. Their infantry doctrines differed slightly in machine gun employment, however. The West used machine guns as platoon- to company-level fire support weapons, while the Soviet bloc deployed them down to squads, the lowest tactical infantry component.

All modern machine guns are air-cooled, that is, their barrels are exposed to the air and designed to be swapped out with a cooler barrel if the installed barrel becomes overheated. Many older machine guns had a water jacket around the barrel so that the weapon could be fired continuously without interruption. Few water-cooled machine guns remain in service today, but they were found in most Soviet bloc militaries to the very end of the Cold War.

Machine guns are categorized by their caliber, method of employment, or construction. The three categories of machine gun are heavy, medium, and light. Heavy machine guns (HMGs) fire the .50-caliber (12.7mm) cartridge and, when not mounted on a vehicle, require at least two people to operate them. Those not mounted on a vehicle are mounted on a carriage or tripod. The world's most commonly employed HMG is the .50-caliber M-2

Machine Guns

A U.S. Army soldier, wearing goggles and carrying an M-60, 7.62mm machine gun, runs with his comrades through blowing sand during a joint U.S.-Egyptian military training exercise in 1988. (U.S. Department of Defense)

Browning HMG, which entered service in 1933, although its basic design dates back to 1918. Built in the United States and under license in a dozen other countries, the M-2 is found in many infantry units as tripod-mounted battalion weapon but is more commonly seen mounted on military vehicles, tanks, and naval vessels. Its primary counterpart is the Soviet-designed Degtyarev DShK 1938/46 HMG. The DShK 1938/46 also uses a 12.7mm cartridge and can be mounted on a wheeled carriage but is more commonly mounted on military vehicles.

The Soviets introduced the heaviest machine gun to see service during the Cold War, the 14.5mm KPV HMG, which employed the same round as the Soviet Draganov antitank rifle of World War II. This heavy and very powerful weapon proved deadly against unarmored vehicles and most buildings and was fairly effective as an antiaircraft weapon when employed in quad mountings as the ZPU-4. It was the standard armament for the BTR-50 and BRMD armored vehicles and can now be seen mounted on trucks and other vehicles in such combat zones as Afghanistan, Iraq, Somalia, Sudan, and Angola. Soviet satellite countries imported large numbers of DShK 1938s and KPVs and manufactured thousands under license. They remain in service with the Russian, Chinese, and many Middle Eastern militaries today.

Medium machine guns (MMGs) and light machine guns (LMGs) fire the much smaller, traditional rifle ammunition, that is, less than .50-caliber

(12.7mm). MMGs are crew-served, tripod or carriage mounted, air-cooled weapons intended to provide continuous suppression fire. They largely have been removed from service because their weight, which equals that of an HMG, inhibits their mobility in heavy terrain without providing the penetrating firepower of HMGs. The Chinese and Vietnamese armies are the only militaries that use these weapons today.

MMGs were replaced in most Western armies by LMGs that fire the same rifle-caliber round and can be mounted on a vehicle or tripod or equipped with a bipod. Those that could be easily adapted to so many uses and platforms were often called general-purpose machine guns to separate them from those employed only as squad-level weapons or coaxial machine guns on armored vehicles. Tripod-mounted LMGs employ a crew of three, while the same machine gun, equipped with a bipod, is worked by a crew of two to three men, varying in different armies.

The tripod provides a more stable firing platform, enabling the gunner to engage targets more accurately at longer range than can be achieved by firing from the prone position with a bipod. Squad automatic weapons (SAWs) essentially are LMGs that fire the same short rounds as modern assault rifles. Most modern armies center their smallest tactical units, the fire team (United States) or squads (most other countries), around SAWs.

Both sides entered the Cold War equipped with weapons developed or produced during World War II. However, by the mid-1950s, both sides introduced machine guns derived from the lessons learned in that war and the lesser conflicts that followed. By 1954, Western nations centered their various machine gun models on the standard $7.62 \times 51\text{mm}$ cartridge ammunition of the North Atlantic Treaty Organization (NATO). They derived their machine gun designs from the German MG-34 and MG-42 of World War II, however. The U.S. M-60, West German MG-3, Swiss SIG MG-710, and Belgian FN MAG are all descendants of those German weapons. The American M-60 saw the widest service during the Cold War, followed by the FN MAG. In Western nations, the bipod-equipped variants were used as platoon weapons, while company weapons platoons mounted the same machine guns on tripods for longer-range support.

In Soviet doctrine, machine guns were found at every level of infantry unit, down to the squad level. Their equivalent to the NATO M-60/Belgian FN MAG was the PK, which used the same long 7.62mm cartridge as the Dragánov sniper rifle. Like its Western counterparts, it came in both tripod (PKMB) and bipod (PK) versions. The Soviets also designed an LMG around the Soviet Union's shorter-range $7.62 \times 39\text{mm}$ (M-43) cartridge, the same cartridge as the AK-47 assault rifle. The resulting Degtyarev RPD became the most produced LMG of the Cold War era. Found in every squad of every Soviet bloc ground and internal security unit as well as virtually all insurgent forces, it was widely imported and manufactured under license. Romania, the German Democratic Republic (GDR, East Germany), the People's Republic of China (PRC), and the Democratic People's Republic of Korea (DPRK, North Korea) copied and manufactured the gun. It was replaced in the early 1960s by the RPK, which uses the same round as the then-new AKM

In Soviet doctrine, machine guns were found at every level of military unit.

assault rifle. The RPD's and RPK's effectiveness as squad-level weapons triggered the Western development of SAWs.

One of the most notable developments in small arms during the Cold War was the 1963 introduction of the Stoner 63 system. An American, Eugene Stoner, assembled a weapons kit, or set of weapons parts that can be used to transform one basic weapon to perform six different tasks. By exchanging barrels, stocks, and magazines, the basic weapon can be changed into an assault rifle, an LMG, an MMG, and a vehicle-mounted machine gun. The U.S. Stoner 63A first utilized the 7.62mm NATO cartridge and later the 5.56mm NATO as well as the Belgian FN M-246 (M-1N1N1). His weapons system never saw widespread service, but it was highly prized by U.S. Navy Special Forces units during the Vietnam War.

Maclean, Donald (1913–1983)

British spy and member of the Cambridge Five spy network. Born on 25 May 1913 in London, Donald Duart Maclean was to become legendary as a member of a group of five Cambridge University students who converted to Marxism in the 1930s and then spent all or a portion of their professional lives spying for the Soviet Union. Maclean excelled at the Greshams School, and in 1931 he enrolled at Trinity Hall, Cambridge University, and studied foreign languages. There he became associated with the fellow students who would come to be known as the Cambridge Five. In the midst of the Great Depression of the 1930s, he saw communism as the remedy for the plight of the British working class and was more than willing to spy for the Soviet Union. Taking first-class honors from Cambridge in 1934, that same year he immediately joined the British Foreign Office, where he remained for seventeen years. In 1951 he was appointed head of the American Department of the Foreign Office.

Maclean's Foreign Office career abruptly ended in 1951. British MI5 had recently concluded that the Venona decrypts indicated that the coded messages sent under the cryptogram "Homer" had come from Maclean. Kim

Philby, another of the Cambridge Five, was working in the United States as a liaison with the Central Intelligence Agency (CIA) and learned that Maclean was to be interrogated by MI5. Philby manipulated the recall to London of fellow British spy Guy Burgess, then at the British embassy, in order to warn Maclean that his cover had been blown. Maclean, accompanied by Burgess, fled to the Soviet Union in May 1951. In contrast to Burgess, Maclean accepted his new Soviet life and worked within it. In fact, he cooperated with Soviet officials, became a Soviet citizen, was made a colonel in the Komitet Gosudarstvennoi Bezopasnosti (KGB), and worked as a foreign policy analyst under the name of Mark Frazer until his death in Moscow on 6 March 1983.

British Conservative Party politician, minister of housing (1951–1954), minister of defense (1954–1955), foreign secretary (1955), chancellor of the exchequer (1955–1957), and prime minister (1957–1963). Harold Macmillan, half-American by parentage, was born on 10 February 1894 in London into the prosperous Macmillan publishing family. He was educated at Eton and Balliol College, Oxford, but wartime service prevented him from finishing his degree. He saw combat in World War I as a captain and was wounded three times. He then worked for the family firm.

Elected to Parliament from Stockton-on-Tees in 1924, Macmillan held his seat until 1929 and again from 1931 to 1964. His reading of Britain during the 1930s led him to a progressive, mildly statist form of conservatism, the philosophy of which was expressed in his book *The Middle Way* (1937). In 1942, Prime Minister Winston Churchill appointed Macmillan resident minister at Allied Forces Headquarters in the Mediterranean, where he formed a friendship with U.S. General Dwight D. Eisenhower.

Beginning in 1951, Macmillan served as a successful minister of housing before moving to defense in 1954 and then the foreign office in April 1955. He moved to the treasury in December 1955, a post he held until 1957. As

chancellor of the exchequer during the 1956 Suez Crisis, Macmillan had to convey to Prime Minister Anthony Eden the severity of the economic pressure being applied to the United Kingdom by the United States, which had furiously condemned Britain's role in the crisis.

Despite having prevaricated during the crisis—initially he was very hawkish—Macmillan ascended to the premiership upon Eden's forced resignation in January 1957. Macmillan's most immediate task was to mend fences with the United States, and he traveled to meet his old friend Eisenhower, now president of the United States, in Bermuda later in 1957.

Decolonization, particularly in Africa, was a major theme during Macmillan's premiership, and in 1960 he toured that continent, delivering his famous "Wind of Change" speech in South Africa, a formal acknowledgment of the growth of African national consciousness. He also developed a generally cordial relationship with U.S. President John F. Kennedy. During the 1962 Cuban Missile Crisis there were frequent phone calls between the White House and 10 Downing Street, with Kennedy ostensibly seeking advice although in reality seeking affirmation for his policies. Yet at the December 1962 Nassau meeting with Kennedy, the two principals engaged in robust diplomatic exchanges as Macmillan pressed the Americans to provide Polaris missiles to Britain. Perhaps his greatest foreign policy triumph came in the summer of 1963, when he signed the Nuclear Test Ban Treaty with the Americans and Soviets.

In 1963 Macmillan was greatly embarrassed by the Profumo Affair, when his defense minister, John Profumo, confessed to lying to Parliament about having shared the same mistress as the Russian defense attaché in London, Evgeny Ivanov. That same year French President Charles de Gaulle rather capriciously vetoed Britain's belated application to join the Common Market (European Union).

During Macmillan's successful 1959 election campaign, he had declared that "most of our people have never had it so good," yet in the early 1960s there were indeed serious economic problems, which Macmillan addressed with improvised institutional initiatives including the dismissal of seven cabinet members in the so-called Night of the Long Knives in 1962. With his popularity waning and the economic scene not much improved, Macmillan became ill in the summer of 1963 and resigned as prime minister in October. Made Earl of Stockton in 1984 during the Margaret Thatcher government, he took great pleasure in criticizing her policies. Macmillan died on 29 December 1986 in Chelwood Gate, Sussex.

President Richard M. Nixon's plan to bluff the government of the Democratic Republic of Vietnam (DRV, North Vietnam) into ending the Vietnam War. Nixon had been vice president under President Dwight D. Eisenhower and as president sought to utilize Eisenhower's 1953 tactic in Korea. Shortly after he had become president, Eisenhower had let it be known that if the Korean stalemate continued, he would seek to win the war militarily, even with nuclear weapons. An armistice was concluded three months later.

Nixon ignored other factors leading to the armistice, including the death of Soviet dictator Josef Stalin. Nixon believed that Eisenhower's bluff, which he called the Madman Theory, had been instrumental in the armistice. As he told his aide Bob Haldeman, "I want the North Vietnamese to believe I've reached the point where I might do *anything* to stop the war. We'll just slip the word to them that, 'for God's sake, you know Nixon is obsessed about communism. We can't restrain him when he's angry—and he has his hand on the nuclear button'—and Ho Chi Minh himself will be in Paris in two days begging for peace."

Nixon's strategy did not work with Hanoi, and ultimately Nixon fell back on, and intensified, the same failed policies of President Lyndon Johnson's administration, especially the use of airpower. As Nixon's national security advisor, later secretary of state, Henry Kissinger noted in his book, *White House Years*, "unfortunately, alternatives to bombing the North were hard to come by."

Madman Strategy

Magsaysay, Ramon (1907–1957)

Filipino politician, secretary of national defense (1950–1953), and president of the Philippines (1953–1957). Born the son of a schoolteacher on 31 August 1907 in Iba, Zambales Province, Ramon Magsaysay in 1927 enrolled at the College of Liberal Arts at the University of the Philippines and went on to obtain a bachelor's degree in commerce from Jose Rizal College in 1932. After graduation, he joined a bus company in Manila as a mechanic and rose to be the company's manager.

Magsaysay fought against the Japanese following their invasion of the Philippines beginning in December 1941 and became a captain in the Philippine Army's 31st Division. In April 1942 he joined a group of U.S. Army officers who continued guerrilla warfare against the Japanese and became known as the Zambales Guerrillas. The Japanese military listed Magsaysay as Japan's "Enemy Number One." He led his followers in liberating Zambales ahead of the arrival of American forces on 29 January 1945, and he became the military governor of Zambales the next month.

Intelligent and a dynamic speaker and debater, Magsaysay was elected to the Philippine Congress from Zambales on the Liberal Party ticket in April 1946 and was reelected in 1949. In 1950, President Elpidio Quirino appointed him secretary of national defense. Magsaysay helped improve army morale and played a leading role in the defeat of the communist Hukbalahap (Huk) guerrilla insurgency and in the capture of its entire politburo within a month of assuming office. In combating the Huk insurgency, Magsaysay worked closely with U.S. Army Colonel Edward Lansdale. Magsaysay's land program is also credited with playing an important role in disarming a number of the guerrillas.

A man of great conviction, Magsaysay fought corruption in politics. He resigned his cabinet post after a falling out with Quirino in 1953 and switched to the Nacionalista Party. Magsaysay then won the 1953 presidential elections against Quirino.

In foreign policy, President Magsaysay's staunch anticommunism won him American support and led ultimately to the formation of the 1954 South-east Asia Treaty Organization (SEATO), with Manila as its headquarters. On the home front, Magsaysay embarked on major land reform initiatives and began governmental restructuring. His career was abruptly ended when he was killed in a plane crash near Cebu in the Philippines on 17 March 1957.

Last premier of the German Democratic Republic (GDR, East Germany). The career of Lothar de Maizière is perhaps the most unusual of any Soviet bloc politician. Born in Nordhausen, Germany, on 2 March 1940, he started off as a violinist, studying at the College of Music in Berlin and earning a position with the Berlin Symphony Orchestra. He then entered law school at Humboldt University. In 1957, he joined the Christian Democratic Union, one of the five bloc parties allowed to operate in the GDR, as well as the Synod of Protestant Churches. He became vice president of the latter organization in 1985.

When Erich Honecker's regime collapsed on 9 November 1989 and Hans Modrow formed a new communist reform cabinet, Maizière became minister for religious affairs and the deputy premier. He resigned both posts in January 1990, however, advocating the union of the two Germanies. Campaigning on a reunification platform, he won election to the East German parliament in the first and only free elections held in that state. He became premier of a coalition government, succeeding Modrow. Within months, he negotiated the end of the GDR.

Assigned to the post of minister without portfolio in the unification government of Helmut Kohl, Maizière once again resigned, this time over allegations that he had worked earlier in his career for the East German Ministry of State Security (Stasi). Maizière never faced any formal charges, however. He currently resides in Berlin.

Maizière, Lothar de
(1940–)

Archbishop of the Orthodox Church of Cyprus and first president of Cyprus (1959–1977). Born the son of a shepherd in Pano Panayia, Cyprus, on 13 August 1913, Makarios III's birth name was Mikhail Khristodolou Mouskos. He became a novice monk in the Kykkos monastery, adopting the name of

Makarios III,
Archbishop
(1913–1977)

Archbishop Makarios III headed the Cypriot Orthodox Church from 1950 to 1977. Although he sought to unite Cyprus with Greece, the proposed partitioning of the island between the Greek and Turkish communities prompted him to sign an agreement that made Cyprus an independent nation in 1959. Makarios was president of Cyprus from 1959 to 1977. (Library of Congress)

Makarios, and studied theology at the University of Athens and Boston University. Ordained in 1946, he was elected bishop of Kition in 1948. In 1950 he organized a plebiscite among Greek Cypriots, who represented 80 percent of the island's population, which indicated strong support for union with Greece (enosis). Makarios was elected archbishop of Cyprus on 18 October 1950 as Makarios III and became known as a champion of enosis.

In February 1954 Makarios III met with Greek Prime Minister Alexander Papagos, who tacitly supported enosis. In April 1955 Makarios lent his support to General Georgios Grivas, leader of the terrorist National Organization of Cypriot Fighters (EOAK), to begin an armed campaign against British forces, which still controlled the island. Makarios III's support of terrorism led British authorities to exile him in 1956 to the Seychelles. In 1957 he left the Seychelles and took up residence in Athens, where he kept up his enosis campaign.

In 1958, however, Makarios seemed to change his attitude toward enosis and suggested in an interview that he was prepared to accept Cypriot independence. After the Greeks and Turks decided to move forward with Cypriot independence in February 1959, he was elected president on 13 December 1959, with a Turkish Cypriot as vice president. Makarios initially tried to unite the Greek and Turkish communities, but his efforts were stymied by deep-seated ethnic hostilities and individuals who still wished to go forward with enosis. In November 1963 Makarios sought amendments to the constitution, a request that led to violent clashes between Greeks and Turks on the island.

In December 1967 he was forced to accede to a Turkish Cypriot Provisional Administration in charge of Turkish affairs.

In February 1968 Makarios won reelection to the presidency of Cyprus, but in 1973 the three other Cypriot bishops asked him to resign. Makarios refused, standing successfully for a third term in 1973. His time in office was marked by repeated assassination attempts by enosis supporters who claimed that he had betrayed the cause.

In July 1974 a Greek-sponsored coup deposed Makarios, and he was forced to flee the country, first to Malta and then to London. Turkey used this as a pretext to invade the northern third of Cyprus, proclaiming a separate state in the north. Makarios returned to Cyprus as president in December 1974 and died on 3 August 1977 in Nicosia.

Afrikaner nationalist politician and first prime minister of the apartheid government of South Africa (1948–1954). Born on 22 May 1874 in Riebeeck West, South Africa, Daniel Malan earned an undergraduate degree at Victoria College, Stellenbosch, and a doctorate in theology from the University of Utrecht, Holland, in 1905. Upon his return to South Africa a decade later, he was ordained a minister in the Dutch Reformed Church in 1905 and joined the new National Party in July 1915. Malan then went on to edit the party's newspaper, *De Burger*, and entered parliament in 1918.

When the National Party first came to power in 1924, Malan became minister of internal affairs, education, and public health. However, he refused to follow the leader of the National Party into a merger with the South African Party, and in 1934 he took the lead in creating a new “purified” National Party, which won the 1948 general election on a platform that included apartheid, a comprehensive system of rigid racial segregation.

Malan, a strong anticommunist, became prime minister in May 1948 and took advantage of the Cold War fears of South Africa's Western allies, none of whom came out strongly against the new apartheid policies that his government introduced. In 1950 Malan's government pushed through parliament the wide-ranging Suppression of Communism Act, which was to be used to suppress opposition to apartheid. Before the act became law, the Communist Party of South Africa had dissolved itself, to emerge some years later as the underground South African Communist Party.

Although the apartheid laws embarrassed many Western nations, Britain and the United States nevertheless saw South Africa under Malan as a relatively strong state friendly to the West. In addition, the West took advantage of South Africa's bountiful natural resources, most notably its supply of uranium, and realized that the country occupied a strategic position on the sea route around the African continent. In the Cold War context, therefore, the leading Western powers tolerated South Africa's apartheid regime because of its geopolitical importance.

Malan left office and retired from politics in November 1956. He died in Stellenbosch on 7 February 1959.

Malayan Emergency (1948–1960)

Twelve-year guerrilla war that began on 18 June 1948. The conflict was an indigenous attempt by the Malayan Communist Party (MCP) to overthrow British colonial rule. Expected to last no more than a few months, the insurgency continued until 31 July 1960, three years after Malaya had gained its independence. The Malayan Emergency was Britain's longest colonial conflict and turned out to be far more costly in human and material terms than anyone could have foreseen.

The war's immediate catalyst was the murder of three rubber plantation managers in Perak, Malaya, on 16 June 1948. Two days later the British high commissioner, Sir Edward Gent, declared a state of emergency. The MCP guerrillas in the mobile corps committed the murders three months after the party had called for an armed insurrection against British rule. The conflict was called an "emergency" for economic reasons, as London insurance companies would only cover property losses to Malayan rubber and tin estates during riot or commotion in an emergency but not in an armed insurrection or civil war.

The Malayan Emergency was rooted primarily in postwar economic and political dislocations in Malaya. Despite the importance of these local factors, however, the predominant explanation for both the origins of the insurgency and the British determination to defeat it was the Cold War paradigm of communist containment. The inaugural conference of the Cominform in September 1947 and the Calcutta conference of the Indian Communist Party in February 1948, which adopted Andrei Zhdanov's two-camps thesis, were presumed to be linked to the armed rebellions against colonial rule in Burma, Indonesia, Malaya, and the Philippines.

Britain coveted its role in Southeast Asia, as it relied on the region for both economic and strategic reasons. Britain's massive military commitment to defeat the insurgency (by October 1950 nearly 50,000 British troops were deployed) at a time of severe postwar fiscal austerity had a significant economic dimension. After the Japanese defeat in 1945, the British were determined to return to Malaya, and Malaya's dollar-earning potential made British control over its colonial possession absolutely essential. In dollar terms, rubber sales exceeded in total value all other domestic exports from Great Britain to the United States. Interruption of that supply would inflict significant damage to the British economy. When the insurgency commenced, Britain was

A Malayan man showing a soldier his identity card, which all locals must carry, 1949. This was during the twelve-year Malayan Emergency (1948–1960), when the Malayan Communist Party attempted to end British colonial rule. (Bert Hardy/Getty Images)

struggling to maintain the value of its currency. This made earnings from the Sterling Area, of which Malaya was the linchpin, all the more vital. Crushing the insurgency would ensure the maintenance of British economic interests.

But the insurrection was not easy to quell. Initially, the British response was fitful, uncertain, and inept. Not until 1950, when Lieutenant-General Sir Harold Briggs became director of operations, did the British initiate a more systematic and coordinated approach to the crisis. Britain's new program, in which the insurgents were detached from their supply sources and their support bases, provided a key breakthrough in the rebellion. Through a major relocation process, which prefigured the American policy of strategic hamlets in the Republic of Vietnam (ROV, South Vietnam), more than half a million Chinese squatters living near guerrilla areas were moved into 450 so-called New Villages. The villages hampered MCP operations and increased their vulnerability to the military operations of British-controlled security forces.

This population control, initiated by Briggs, was harsh but effective. It was prosecuted even more vigorously by General Sir Gerald Templer, who was appointed high commissioner with full powers over the military, police, and civilian authorities in early 1952. Templer also fought the counterinsurgency on other fronts. He developed an efficient, synchronized, and expanded intelligence apparatus; invented and implemented the concept of hearts and

minds; enlarged the intelligence budget so that informers could be paid; and coordinated the use of sophisticated black propaganda and psyops by MI6 personnel.

Aerial warfare was refined as well. Safe conduct passes accompanied by promises of monetary rewards were air-dropped to encourage or accelerate defections. Aerial drops of millions of strategic leaflets, such as handwritten letters and photographs from surrendered guerrillas, were used in conjunction with voice aircraft to personalize propaganda. British aircraft also dropped 1,000-pound bombs, chemical defoliants, and napalm on MCP jungle camps.

By 1954, when Templer departed, these measures had transformed the conflict. The insurgents had been forced back into the jungle, where they struggled to sustain themselves. In 1955 the MCP offered, in vain, to negotiate a settlement. In 1957, upon Malaya's independence, the insurgency lost its motive as a war of colonial liberation. In 1958, after mass defections, the MCP demobilized, and by 1960 the movement was limited to a small nucleus hiding on the Malayan-Thai border, from which it conducted hit-and-run raids along the northern Malay Peninsula for the next twenty-five years. A final peace settlement was signed on 2 December 1989.

The Malayan Emergency cast a long shadow over the new nation. Its mythology has come to dominate the modern history of Malaya, and it became a benchmark of the Cold War in Southeast Asia. For Americans embarking on military involvement in Vietnam and wishing to apply successful British strategies, the Malayan Emergency became the quintessential counter-insurgency primer.

Malaysia

Southeast Asian nation on the Malay Peninsula and also including Sarawak and Sabah in the northern portion of Borneo. Malaysia comprises 127,316 square miles, making it slightly larger than the U.S. state of New Mexico. Malaysia is bordered by Thailand to the north, the South China Sea to the east and south, and the Strait of Malacca to the west. In 1945, Malaysia had a population of some 6 million people. As with many other Southeast Asian states, Malaysia gained independence during the Cold War. Its multiethnic

and religiously diverse population complicated development of a truly Malaysian identity, and like other countries in the region it endured revolution and internal conflict. But unlike some Southeast Asian nations, Malaysia emerged from its troubled past as one of the most stable, economically advanced countries in Asia.

The Malay Peninsula was for centuries the crossroads of Eastern and Western civilizations. Independent sultanates interacted with Portuguese, Dutch, British, and Siamese (Thai) interests in the region for nearly 300 years. It was not until the late nineteenth century, however, that most sultanates were united under British rule as the Federated States of Malaya. Within the so-called residential system, the British controlled government administration, while Malay rulers retained sovereignty. In effect, this co-opted the sultans into the British Empire.

Although anticolonial movements existed before, it was not until World War II that nationalism swept Malaya. The Japanese conquest of Malaya in early 1942 signaled the decline of the British Empire in Asia, and radical Malay nationalists heralded the Japanese as liberators from colonial rule. The Japanese generally respected Islam, the predominant religion in Malaya, by allowing clerical councils considerable latitude. Sultans retained their authority and in many instances openly cooperated with the Japanese authorities.

However, many Chinese and Indians in Malaya were killed, forced into slave labor, or starved to death by the Japanese. The radically different treatment that these groups received only aggravated ethnic tensions in Malaya, and the Chinese and Indians considered the Malay population complicit with Japanese occupation policies. Some, mainly Chinese, joined the Malayan Communist Party (MCP) and resisted the Japanese. The MCP was loosely allied with the Western powers but was also anticolonial and opposed to the restoration of British rule.

Even before the war had ended, Britain began reorganizing Malayan states to better suit ethnic and religious divisions in the territories. In April 1946 the Malayan Union was formed, joining the peninsular states with the Straits Settlements of Penang and Malacca, while Singapore, Sarawak, and North Borneo became Crown colonies. All were under the authority of a governor-general. Malay leaders initially opposed this reconfiguration, but the British convinced them that Malay-dominated independence would be granted. Moreover, the British promised economic recovery premised on Malaya's rubber and mineral wealth.

In July 1946 the British government began constitutional talks with the newly formed United Malays National Organization (UMNO). Debate centered on the authority of sultans and on British proposals to extend citizenship to all ethnic groups in a multiracial union. The talks produced the Federation of Malaya, inaugurated in February 1948. Britain maintained its colonial administration, while Malay rulers kept control of individual states. Citizenship was restrictive and heavily favored the Malays, but through this collaboration the British hoped to avoid a more radical nationalist movement as witnessed in Indochina, Burma, and especially Indonesia.

MALAYAN INSURGENCY, 1948 – 1960

The restoration of Dutch rule in Indonesia after World War II had provoked violent revolution there, which the British feared would lead to Pan-Malay nationalism. After Indonesia won independence in 1949, the worry became communism, which gained support among its Chinese population. Both British and Malay rulers feared that with a large Chinese population of its own, the federation could face a communist insurgency such as Indonesia had experienced.

In fact, the MCP was composed mostly of Chinese and opposed both British rule and Malay domination. Few Malays joined the movement, but there were recruits from Indonesia. Beginning in June 1948 with the murder of three estate managers, the MCP launched a widespread insurgency through its armed wing, the Malayan Races Liberation Army (MRLA). For the British, this began a twelve-year period of conflict known as the Malayan Emergency.

There is debate over whether the insurgency was part of an international campaign of revolutions orchestrated by the Soviet Union and China or was stimulated by the marginalization of Malaya's Chinese population and poor economic conditions. There are also questions about how and why the Malayan Emergency lasted so long, especially considering that MCP leadership was notoriously divided. Clearly, British officials failed to anticipate the insurgency and were slow to react, but international pressures were also a factor. Britain was hard-pressed economically after the war, and it abandoned large parts of its empire, including India and Burma. And defense spending rose sharply after the June 1950 outbreak of the Korean War. In short, the problem in Malaya revealed the larger limitations of Britain's imperial power.

At first, British and Commonwealth forces struggled against the insurgency. The October 1951 assassination of Henry Gurney, Britain's high commissioner in Malaya, marked a particularly low point. But the approach that Gurney and his successor, Sir Gerald Templer, took in fighting the Malayan Emergency was ultimately successful. Economic and social progress was seen as the key to undermining communism's appeal, so Templer embarked on major socioeconomic reforms. The resettlement of Chinese squatters also disrupted the MRLA's network. Above all, reforms to citizenship law helped integrate non-Malays, easing Chinese alienation. Multiracial political parties, rather than those based strictly within communities, were encouraged. But doubtful that this would actually happen, British administrators supported the Malayan Chinese Association (MCA) and Malayan Indian Congress (MIC), anticommunist groups that wrestled away from the MCP the hearts and minds of non-Malays.

By 1953 counterinsurgency operations were proving successful, and by mid-1954 the strategy of political cooperation also seemed to be working. In July 1954, the Alliance Party—uniting UMNO, the MCA, and the MIC—was born. It dominated national elections in July 1955, committed fully to fight the insurgency, and moved quickly with the British to plan Malaya's independence. The communist strategy had clearly backfired. Rather than dividing Malaya, the Malayan Emergency brought ethnic groups together in a staunchly anticommunist alliance linked to Britain. With the signing of

the Anglo-Malayan Defence Agreement in 1957, Britain continued counter-insurgency efforts while moving toward Malayan independence, which was finally achieved on 31 August 1957.

There was only slight support for the MCP from the Soviet Union and China, as Indonesia and Indochina received the most attention from Moscow and Beijing. Conversely, the United States supported Britain's counter-insurgency efforts, which furthered the Anglo-American special relationship. This was particularly the case with one of the leaders of the counterinsurgent strategy, Sir Robert Thompson, who held a variety of posts in Malaya, including secretary for defense (1959–1961), and later advised the United States in Vietnam. With the disintegration of the MRLA, the Malayan Emergency ended in 1960. Malaya had survived the communist threat.

In 1963 Britain yielded Singapore, Sabah, and Sarawak to the renamed Federation of Malaysia. It then backed Malaysia in its confrontation with Indonesia, which opposed the federation's acquisitions of Sabah and Sarawak in Borneo. As part of his Crush Malaysia campaign, Indonesia's President Sukarno broke off diplomatic relations and withdrew from the United Nations (UN). War seemed a real possibility, but Britain stood fast behind Malaysia, clearly sobering Indonesia. In this Britain retained some of its imperial glory in Southeast Asia while allowing for a relatively peaceful process of decolonization.

The Chinatown area in Kuala Lumpur on 17 May 1969, following days of racial rioting between Chinese and Malay mobs that left one hundred persons dead. (Bettmann/Corbis)

There were, however, other problems facing Malaysia. Secessionist movements in Penang, Johor, and Kelantan complicated the federation. Singapore, largely Chinese in population, withdrew from the federation to become an independent country in 1965 because of disputes involving revenue sharing and political representation. As always, the balance of power between Malays and non-Malays remained a constant worry. Malaysia's first prime minister, Tunku Abdul Rahman (1957–1970), survived these challenges by maintaining the multiracial Alliance Party. Malaysia even managed considerable foreign policy successes, such as gaining an elected seat to the UN Security Council (1965) and helping to form the 1967 Association of Southeast Asian Nations (ASEAN).

Following the May 1969 elections, however, violent race riots broke out, and Rahman was accused of abandoning Malay constituencies in favor of the Chinese and Indians. UMNO was seriously divided, with some members defecting to the opposition Parti Islam se Tanah Malaya (PAS, Pan-Malayan Islamic Party). Many Chinese joined the Democratic Action Party (DAP), which became the main vehicle for political participation by non-Malays. The Alliance Party quickly fell apart. Rahman resigned as prime minister in September 1970 and as UMNO president in June 1971.

The 1969 riots did, however, force examination of government and legal structures in Malaysia. Parliament was temporarily disbanded and replaced by the National Operations Council, a sixty-seven-member body representing the major ethnic groups, trade unions, professions, and religious bodies. The council worked to secure the rights and representation of non-Malays while guaranteeing the special position of Malay language, culture, and the Islamic faith. Economic prosperity was considered the key to combating racial and ethnic tensions. Yet urban centers, where most Chinese and Indians lived, were better off than rural areas, where the Malay majority resided. The council therefore adopted policies to advance the *bumiputra* (sons of the soil), the predominantly Malay lower classes.

Under Prime Minister Mahatir Mohammad (1981–2003), economic development for Malays became the overriding concern. This focus, however, came at the expense of the non-Malay community, which was checked by the domination of UMNO. Thus, although ostensibly a democracy, in effect Malaysia emerged in the 1980s as a unitary state. Behind the veneer of a multiracial federation, Malaysia had become a predominantly Malay country. Through the draconian 1960 Internal Security Act (ISA), a vestige of British law from the Malayan Emergency, Mahatir undermined all opposition. Human rights violations against non-Malay activists, particularly during the late 1980s, went largely ignored by the world community. Instead, Malaysia's moderate Islam, economic prosperity, and leading role in ASEAN lent it credibility as one of Southeast Asia's most economically successful and developed countries.

Malcolm X (1925–1965)

Malcolm X was a militant African American leader and chief spokesman for the Nation of Islam. He is shown here during a press conference in 1964. (Library of Congress)

African American nationalist leader who became a militant champion of civil rights in the 1960s and greatly influenced black militant and separatist groups, including the Black Panthers. Born on 19 May 1925 in Omaha, Nebraska, the son of a black itinerant minister, Malcolm Little moved with his family in 1929 to East Lansing, Michigan. In 1942 he dropped out of school and moved to Boston. In the years that followed, he became involved in criminal activities and in 1946 was sentenced to ten years in prison for burglary.

While in prison, Little became an adherent of the religious teachings of the Nation of Islam, a black nationalist sect that preached black power and denounced whites as “devils.” After his release from prison in 1952, Little dropped his surname and adopted “X,” which signified the lost name of his African ancestry. Malcolm X soon became the Nation of Islam’s most successful spokesman and organizer. As the civil rights movement gained momentum in the early 1960s, he repeatedly attacked the nonviolent, civil disobedience philosophy of civil rights leader Martin Luther King Jr.

In December 1963 Nation of Islam leader Elijah Muhammad suspended Malcolm X from the organization after a period of growing antagonism between the two men. Muhammad believed that the outspoken and charismatic Malcolm X was attempting to push him aside. This suspension resolved Malcolm X to found his own organization, the Muslim Mosque, in March 1964. Unlike Muhammad, Malcolm X believed that the civil rights struggle should be transformed into an international Pan-African struggle for human rights, an idea that he further developed during a pilgrimage to Mecca, Saudi Arabia, in April 1964. Upon his

return, he took a far more conciliatory stance toward whites and intended to bring the plight of African Americans to the United Nations (UN) in an attempt to coax African nations to indict the United States for human rights violations. This plan was ultimately unsuccessful. On 21 February 1965, Malcolm X was assassinated in New York City by three black gunmen whose identities remain unknown.

Soviet politician and premier. Born in Orenburg, Russia, on 13 January 1902, Georgy Malenkov served in the Red Army from 1918 to 1921 and joined the Communist Party of the Soviet Union (CPSU) in 1920. After graduation from technical school in 1925, he worked as an administrator for the CPSU Central Committee and in the Moscow party apparatus until 1941. During this period he handled personnel matters and the implementation of the Stalinist purges of the 1930s. Elected to the Central Committee and its secretariat in 1939, he became a candidate member of the Politburo by 1941.

During World War II, Malenkov served as a member of the Council of State Defense and as senior political officer. In 1943 he supervised economic recovery efforts in liberated Soviet territory, serving in this capacity until his election as a full Politburo member and deputy chairman of the Council of Ministers in 1946. He also helped engineer the purge of his rival and CPSU chief ideologist Andrei Zhdanov in 1948.

As Malenkov's political fortunes continued to rise during the next five years, he was named chairman of Council of Ministers (premier) and, briefly, first secretary of the Central Committee after Josef Stalin's death in March 1953. Malenkov was, however, soon compelled by his Politburo colleagues to surrender the post of first secretary to Nikita Khrushchev, although the two cooperated in opposing the attempted seizure of power by Deputy Chief of the Council of Ministers Lavrenty Beria in June 1953, which led to the execution of Beria. Nevertheless, rivalry between Malenkov and Khrushchev over economic and other policy issues became a struggle for power. Khrushchev gained the upper hand in the end, and Malenkov was forced to resign as premier in February 1955. Nikolai Bulganin replaced him as premier, although

Malenkov, Georgy Maksimilianovich
(1902–1988)

Malenkov remained in the Presidium (Politburo) and became a deputy premier responsible for electric power.

Following Khrushchev's 1956 de-Stalinization speech, Malenkov joined with fellow Stalinist Presidium members Vyacheslav Molotov, Lazar Kaganovich, and Dmitri Shepilov in an attempt to oust Khrushchev in June 1957. Successful in the Presidium, the so-called Anti-Party Group failed when the matter was taken to a plenum of the Central Committee, where Khrushchev received vital support from Marshal Georgi Zhukov, minister of defense. In July, Malenkov lost his seats in the Presidium and the Central Committee and was named manager of a hydroelectric power station in Kazakhstan. In 1961, the CPSU expelled him from its ranks and forced him into retirement. He lived in obscurity until his death in Moscow on 14 January 1988.

Malik, Jacob Aleksandrovich (1906–1980)

Soviet diplomat. Born in Ostroverkhovka, Russia, on 6 December 1906, Jacob Malik graduated from the Kharkov Institute of Economics in 1931. He worked as a Komsomol (Communist Youth League) activist in the Ukraine before entering the Moscow Institute of Diplomatic and Consular Service. After graduation in 1937, he worked for two years in the press department of the Commissariat of Foreign Affairs before being appointed counselor at the Soviet embassy in Japan. In 1942 he became ambassador to Japan, serving until 1945. From May to July 1945, he was involved in negotiations concerning a Japanese effort to prevent Soviet entry into the Pacific War and to secure Soviet mediation with the Allies.

After the war, Malik served as an advisor to the Allied Control Commission for Japan and was named a deputy foreign minister in August 1946. In May 1948 he assumed the ambassadorship to the United Nations (UN), which he held until 1952. From January to August 1950, the USSR boycotted UN Security Council meetings to protest the organization's refusal to seat the People's Republic of China (PRC). Malik was thus unable to exercise a veto when the United States gained approval for military assistance to the Republic of Korea (ROK, South Korea) following the South Korean invasion by the Democratic People's Republic of Korea (DPRK, North Korea) in June 1950.

In 1951 Malik offered a cease-fire proposal that led to armistice talks, and he was involved in negotiations for a Japanese peace treaty. In 1952 he was named a candidate member of the Communist Party of the Soviet Union (CPSU) Central Committee, a position he would hold until his death. He served in Moscow as first deputy foreign minister from October 1952 until his appointment as ambassador to Great Britain in March 1953. In 1960 he returned to Moscow as first deputy foreign minister until his reappointment as ambassador to the UN in 1968. Failing health and injuries sustained in an automobile accident led to his retirement at the end of 1976. Malik died in Moscow on 11 February 1980.

Marshal of the Soviet Union. Born to a poor peasant family near Odessa on 23 November 1898, Rodion Malinovsky enlisted in the Russian Army at the outbreak of World War I. Badly wounded in 1915, he spent several months recuperating before reassignment as a machine gunner with the Russian Expeditionary Corps in France in April 1916. He was decorated for bravery and again wounded. His unit mutinied in the spring of 1917, however, and Malinovsky was transferred to North Africa.

Malinovsky returned to Russia via Vladivostok in August 1919. He made his way along the Trans-Siberian Railway to Omsk, where he joined the Red Army and fought against the White forces. He then served as chief of staff of III Cavalry Corps. In 1926 he joined the Communist Party and a year later entered the Frunze Military Academy for a three-year officers' training program. He next served as a military advisor to the Republican forces during 1937–1938 in the Spanish Civil War. Returning to the Soviet Union, he became a senior instructor on the faculty of the Frunze Military Academy.

**Malinovsky, Rodion
Yakovlevich**
(1898–1967)

In March 1941 Major General Malinovsky assumed command of the new XLVIII Rifle Corps on the Romanian border. In August, following the German invasion of the Soviet Union, he had charge of the Sixth Army in the Ukraine, where he had no choice but to withdraw before the advancing Germans. Promoted to lieutenant general that November, the next month he took command of the Southern Front. Following the ill-fated Kharkov Offensive in June 1942 for which he shared blame, he was reassigned to rear-echelon duty.

During July and August 1942, Malinovsky headed the Don Operational Forces Group before being named in August to command the Sixty-Sixth Army. He also developed a long association with Nikita Khrushchev, then a political officer reportedly assigned by Josef Stalin to watch Malinovsky. He next commanded the Voronezh Front in October and the Second Guards Army in November. In the latter capacity he played a key role in the Battle of Stalingrad, in December defeating Army Group Don, the German relief force under Field Marshal Erich von Manstein.

Malinovsky was promoted to colonel general in February 1943, commanding the Southern Front that month and the Southwest Front in March. In April he was promoted to general of the army. He played a major role in the Battle of Kursk in July 1943 and then spearheaded the drive across the Ukraine, taking Odessa in April 1944. His command was redesignated the 3rd Ukrainian Front in October 1943 and the 2nd Ukrainian Front in May 1944. From the Ukraine, he led Soviet forces into Romania, Hungary, Austria, and Czechoslovakia. In September 1944 he was promoted to marshal of the Soviet Union.

When the war in Europe ended, Malinovsky took command of the Transbaikalian Front in the Far East, pushing into Japanese-held Manchuria. A prominent member of the Soviet military hierarchy after the war, he headed the Far East Command during 1947–1953 and the Far East Military District during 1953–1956. He was deputy minister of defense during 1956–1957 and then succeeded Marshal Georgi Zhukov as minister of defense. In this post Malinovsky introduced strategic missiles into the Soviet arsenal and oversaw Soviet military modernization.

During the Cuban Missile Crisis, Khrushchev, now premier of the Soviet Union, asked Malinovsky how long it would take U.S. forces to crush Cuba. Malinovsky replied with an estimate of “two or three days,” a statement that Khrushchev passed along to a furious Fidel Castro. Malinovsky died in office of cancer in Moscow on 31 March 1967. Marshal Andrei Grechko succeeded him as minister of defense.

French writer and cabinet minister, widely celebrated as a twentieth-century Renaissance man. Born in Paris on 3 November 1901, Georges-André Malraux from childhood suffered from Tourette's syndrome. He took courses at the Institute of Oriental Languages but did not graduate. At age twenty he married Clara Goldschmidt, a German Jewish heiress; they divorced in 1946. After their marriage they traveled in Europe and to Cambodia on an archaeological expedition. In Cambodia, Malraux was arrested and sentenced to prison for discovering and then stealing Khmer sculptures. Influential friends won his release.

Fascinated by Asian culture and civilization and already writing literary reviews, Malraux published his first book, *Le Tentation de l'Occident* (The Temptation of the West, 1926), in which he discussed the meeting and clash of civilizations. Further travel and study in Indochina and China led him to become active in leftist causes such as the Young Annam movement that was pledged to win Indochina dominion status.

A gifted and prolific writer of novels and books on art, Malraux earned lasting literary renown with his book *La Condition humaine* (Man's Fate, 1933). Much of his writing supported leftist politics, including the demand for an end to colonialism. With the outbreak of civil war in Spain in 1936, he organized an international air unit to aid the republican cause. Although he exaggerated his own role, he was twice wounded in the fighting. His novel about his experiences, *L'Espoir* (1937, published in English in 1938 as *Man's Hope*), was soon made into a movie.

At the outbreak of World War II, Malraux became an officer in the French Army. Wounded and captured by the Germans in 1940, he escaped and joined the French Resistance. Taken prisoner again in 1944, he again escaped. He ended the war leading a volunteer brigade and fighting in Alsace and western Germany.

Following the war, Malraux, until this point sympathetic with the communists, denounced alliances with them. Greatly impressed by the role played by great men in history, he became an avid admirer of General Charles de Gaulle, who must have appeared to have been a character from one of his own novels. De Gaulle appointed Malraux his minister of information, but he left office when de Gaulle resigned in January 1946.

Now a committed Gaullist and French nationalist, Malraux was active in the establishment of the Rassemblement

**Malraux,
Georges-André**
(1901–1976)

Acclaimed French author, adventurer, and statesman
Georges-André Malraux. (Library of Congress)

du Peuple Français (RPF, Rally of the French People), which sought the general's return to power. Malraux continued to write. Turning to the history of art and aesthetics, during 1947–1949 he published the three-volume *Psychologie de l'art* (Psychology of Art). He also spoke out on international issues, and the beginning of the Algerian War in 1954 brought out his deep anticolonialism.

When de Gaulle returned to power in 1958, Malraux joined his cabinet, first as minister of information and then as France's first minister of cultural affairs (1960–1969). He remained in the government until de Gaulle's final resignation in 1969. Malraux used his position to promote the role of the arts in French society and, despite tight budgets, was able to accomplish a great deal. Among his achievements were the cleaning and refurbishment of important Paris monuments.

Following his departure from government, Malraux continued to write. He published his *Anti-Mémoires* (Anti-Memoirs) in 1967. Malraux died in Paris on 23 November 1976.

Malta

Group of five small islands in the central Mediterranean, some 60 miles south of the southeastern tip of Sicily. Malta, with a 1945 population of some 287,000 people, covers an area of 122 square miles. Located astride major Mediterranean shipping lanes, throughout the centuries Malta has been strategically important.

Long a Christian outpost against the Muslim Turks, Malta came under British rule at the beginning of the nineteenth century, and the Royal Navy subsequently established a major naval base there. Britain granted the islands a degree of self-government in 1887 and full responsible government in 1921, only to take the latter away in 1933 when London feared pro-Italian sentiment. During World War II, Malta came under heavy air attack from the Axis powers, but the locals and British forces persevered.

In 1947, London restored self-government to Malta. In 1959, following long and heated disagreements between Britain and the left-wing Labour

Party in Malta headed by Prime Minister Dom Mintoff, London again suspended the constitution.

Following the drafting of a new constitution in 1961, Britain granted Malta full independence on 21 September 1964. A mutual defense treaty gave Britain the right to retain military bases on the islands for another decade in return for modest economic loans and grants. The North Atlantic Treaty Organization (NATO) Mediterranean naval headquarters also remained in Malta, having been set up there in the late 1950s.

The Maltese economy struggled despite the large naval presence and tourism, and in 1971 Mintoff's Labour Party returned to power. Mintoff immediately insisted that Britain and/or NATO pay much more for facilities in Malta. The prime minister employed various intimidation tactics and asserted that the country's dependence on Western defense was irrelevant, or even detrimental, to its own security. In 1972, Britain and Malta managed to reach a temporary defense agreement. However, NATO's Mediterranean headquarters moved to Naples, and in 1979 British forces departed the island for good. Malta then became an active member in the Non-Aligned Movement and opted for neutrality to secure its independence, a policy that has been enshrined in the country's constitution since 1987. In May 1987, sixteen years of Labour Party rule came to an end with the election of Eddie Fenech Adami as prime minister. Adami also ended the close ties with Libya that had developed earlier in the decade. Malta applied to join the European Union (EU) in 1990 and became a member in 2004.

Summit conference between U.S. President George H. W. Bush and Soviet President Mikhail Gorbachev held on 2–3 December 1989 just outside Valletta Harbor, Malta. The summit was preceded by meetings earlier that year between U.S. Secretary of States James Baker and Soviet Foreign Minister Eduard Shevardnaze. In September 1989, Baker and Shevardnaze planned a summit between Bush and Gorbachev, although Bush and Gorbachev had also discussed a meeting earlier that year.

**Malta Meeting,
Bush and Gorbachev**
(2–3 December 1989)

In their talks, Bush pressed Gorbachev on a number of military-related issues. In response, Gorbachev pledged to end military aid to Nicaragua, renounced any future Soviet interests in Central America, discussed the issue of renewed Strategic Arms Reduction Talks (START), and alluded to the possibility of a Conventional Forces in Europe (CFE) treaty (which was signed in 1990). Gorbachev also reassured Bush that the Soviet Union would never initiate a war with the United States.

The issue of Soviet involvement in Afghanistan was a particularly sensitive subject. Gorbachev wanted to assist Afghanistan's despotic Mohammad Najibullah and opposition forces to open a peace dialogue, but the Americans were apprehensive of further Soviet intervention. Earlier that year, Baker and Shevardnaze had concluded that United Nations (UN) assistance would be more helpful in Afghanistan. Despite their differences, both sides agreed that neither superpower should impose a decision upon the Afghan people.

Eastern Europe and economic concerns were also discussed at the meeting. While Gorbachev wanted to maintain socialism in Eastern Europe, he recognized that far too many people were disillusioned with it. In order to maintain links—both political and economic—with Eastern Europe, however, the Soviets needed the West's help in stabilizing the area. Consequently, Gorbachev told Bush that he welcomed American influence in Eastern Europe. German reunification, for example, was accompanied by American economic aid. Bush offered Gorbachev American economic assistance and supported Soviet applications to join institutions such as the International Monetary Fund (IMF) and the World Bank. Although no major breakthroughs occurred at the Malta meeting, it was nonetheless symbolic of the final thawing of the Cold War.

The late 1980s was a period of fragmentation for the Soviet Union. Communist rule was steadily eroding in many satellite states, which badly weakened Soviet geopolitical power. By 1989, communist parties had been irrevocably weakened in Poland, the German Democratic Republic (GDR, East Germany), Czechoslovakia, Hungary, and Bulgaria. In Romania, communist leader Nicolae Ceaușescu was executed in December 1989 and the entire Politburo was arrested. Popular military fronts had emerged in Lithuania, Moldavia, the Ukraine, the Caucasus, and Central Asia. The Soviets had also abandoned their revolutionary efforts in the developing world. The Communist Party of the Soviet Union (CPSU) and Gorbachev also faced severe difficulties. Many political leaders feared that perestroika would fail, and rumors were circulating about a possible coup against Gorbachev.

The Bush administration debated whether it should continue pressuring the Soviets to make further military concessions or adopt a more accommodating approach. Some, including Bush, wanted to ensure that Gorbachev remained in power because his reforms paralleled U.S. interests. Others, such as Secretary of Defense Richard Cheney and Deputy National Security Advisor Robert Gates, believed that any policy deviation would be a mistake. They expected perestroika to fail and thought that Gorbachev's overtures

might have been a maneuver to split the Western alliance. This view may have had some merit. In December 1988 Gorbachev announced major troop reductions, which in turn led to West European demands for increased diplomatic concessions by the United States. Western Europe, Solidarity leaders in Poland, and reformers in Hungary wanted the Bush administration to negotiate in areas other than arms control and criticized American aid programs for being insufficient.

Malvinas War

South African antiapartheid nationalist leader and president of South Africa (1994–1999). Born in Transkei, South Africa, on 18 July 1918, Nelson Rolihlahla Mandela attended the University College of Fort Hare and the University of Witwatersrand, qualifying in law in 1942. He subsequently set up the first black law practice in Johannesburg with his colleague and fellow activist Oliver Tambo. In 1942 Mandela joined the African National Congress (ANC) and in 1944 cofounded the ANC Youth League. He became ANC national secretary in 1948.

Initially opposed to working with other antiapartheid groups, during the 1952 Defiance Campaign Mandela changed his mind and thereafter advocated united action across South Africa's racial divides to challenge apartheid policies. In December 1952 he was convicted under the 1950 Suppression of Communism Act and received a nine-month suspended sentence. Despite government-imposed restrictions limiting his movement and banning

Mandela, Nelson
(1918–)

African National Congress leader Nelson Mandela in London, 1962. Mandela went on to become president of South Africa during 1994–1999. (Mary Benson/Corbis Sygma)

For their efforts to end apartheid, both Mandela and de Klerk shared the 1993 Nobel Peace Prize.

him from political meetings, he continued to work as an ANC leader and was responsible for the development of a contingency plan under which the ANC would continue to work clandestinely in the event of a state crackdown. In December 1956 he was among 156 activists charged with treason against the state. The subsequent Treason Trial, in which Mandela and the others were charged with plotting a revolution, lasted until 1961. Mandela was acquitted.

After the March 1960 Sharpeville massacre in which sixty-seven blacks were killed during an antiapartheid demonstration, the government banned the ANC and other dissident groups. A year later, to evade arrest, Mandela went underground. In June 1961 the ANC launched an armed struggle against the state, with Mandela now leading the Umkhonto we Sizwe (Spear of the Nation), the ANC's armed wing. Mandela coordinated a sabotage campaign and planned for a guerrilla insurgency. In January 1962 he secretly left the country and traveled to Ethiopia, Algeria, and London to solicit support and receive guerrilla training. When he returned to South Africa that summer, he was captured on 5 August.

In the case that followed, Mandela was convicted on charges of incitement and illegally leaving the country and was sentenced to five years in prison. While he was in prison, police raided the ANC's underground headquarters, and many ANC leaders were arrested. This development brought Mandela back to court in the Rivonia Treason Trial, in which he was sentenced to life imprisonment on 12 June 1964. Mandela spent eighteen years at Robben

Island Prison, off Cape Town, before being transferred to Pollsmoor Prison in 1982.

Amid growing external and internal pressures, South Africa's apartheid regime began to unravel in the late 1980s. Finally, on 18 February 1990, Mandela was released by President F. W. de Klerk, just days after de Klerk had lifted the ban on the ANC and other antiapartheid groups. Mandela succeeded the ailing Tambo as president of the ANC in 1991, the same year in which the government repealed the last of the apartheid laws. For their efforts to end apartheid, both Mandela and de Klerk shared the 1993 Nobel Peace Prize.

In May 1994, following the country's first national elections in which all races could vote, Mandela became the first black president of South Africa, a post he held until 1999.

U.S. State Department official, presidential advisor, and one of the U.S. government's most important post–World War II Latin American policymakers. Born on 11 November 1912 in Laredo, Texas, Thomas Mann graduated from Baylor University in 1934 with BA and LLB degrees and then practiced law. He began working for the Department of State in 1942 as a special assistant to the U.S. ambassador to Uruguay.

In 1952 as deputy assistant secretary of state for Inter-American Affairs, Mann argued that the disparity of wealth between the United States and

Latin America would spur anti-Americanism and economic nationalism and that communists would exploit these circumstances. Willing to cast aside the U.S. nonintervention pledge, he concluded that Washington must intervene in Latin America if communism threatened to gain a foothold there.

Although he had been one of the creators of the multilateral Inter-American Development Bank, in 1959 Mann articulated his fears that plans for a large U.S. aid program for Latin America would raise unreasonably high expectations that could not be met, resulting in disillusionment and increased anti-Americanism in the region. Indeed, his misgivings were largely borne out in the Alliance for Progress, launched by President John F. Kennedy in 1961, that disproportionately benefited the wealthy.

From December 1963, under President Lyndon B. Johnson, Mann held two important posts. He was both assistant secretary for Inter-American Affairs and head of the Agency for International Development, which ran the Alliance for Progress. At the same time, he was made a special assistant to the president. In March 1965 Mann became undersecretary of state for economic affairs. He essentially directed U.S. policy in Latin America.

Following President Johnson's cue, the so-called Mann Doctrine shifted the emphasis of the Alliance for Progress more in the direction of anticommunism and the protection of U.S. investments. In 1965 Johnson appointed Mann undersecretary of state for economic affairs.

That same year, however, key congressmen asserted that the administration's April 1965 intervention in the Dominican Republic, carried out with Mann's strong support, had greatly overstated the communist threat. With the 1966 appointment of Lincoln Gordon as assistant secretary of state for Inter-American Affairs, Mann's influence over Latin American policy effectively ended. He resigned from the Department of State in May 1966, yet many of his policies would be adopted by future administrations.

From 1967 to 1971 Mann served as president of the Automobile Manufacturers Association. He died on 23 January 1999 in Austin, Texas.

**Mannerheim, Carl
Gustav Emil, Baron**
(1867–1951)

Finnish military officer, regent (1918–1919), commander in chief of the Finnish Army (1917–1918, 1939–1944), and president of Finland (1944–1946). Born into a Swedish-speaking Finnish noble family on 4 June 1867 in Askainen, Finland, Carl Mannerheim was determined to become a military officer. He entered the Nicholas Cavalry School in St. Petersburg, Russia, in 1887 and was commissioned in the Russian Army in 1889. He served until 1917, seeing action in the Russo-Japanese War (1904–1905) and World War I and rising to the rank of lieutenant general by 1917.

The Russian Revolution of 1917 estranged Mannerheim, who returned to newly independent Finland in December, at which time he became commander in chief of Finnish forces fighting the Red Army and led his forces to victory in 1918. Elected regent in December 1918, he toyed with the possibility of attempting to oust from power Russian leader Vladimir Lenin's Bolshevik government, but his plans never materialized. Mannerheim withdrew from politics in 1919 after being defeated in the presidential elections.

During 1931–1939 Mannerheim served as chairman of the Finnish National Defense Council. He was commander in chief of the Finnish Army during both the Winter War (1939–1940) and the Continuation War (1941–1944) against the Soviet Union. He was advanced to the rank of field marshal in June 1942.

On 4 August 1944, as Finland was being defeated by Soviet Army forces, Mannerheim became president of Finland. The new president concluded an armistice with the Soviet Union in September 1944. He then turned his attention to German troops remaining on Finnish soil, waging the so-called Lappland War against them. Mannerheim worked diligently to redeem his nation's reputation with the Soviet Union and to preclude a communist takeover of his country. As such, he carried out Finland's armistice obligations to the letter, including the dismantlement of his beloved Defense Corps and the timely payment of war reparations. Reluctantly, Mannerheim appointed J. K. Paasikivi prime minister on 17 November 1944, marking the beginning of a decline in the president's influence.

The 1944 armistice had obligated the Finns to hold trials for those responsible for the Continuation War. In all, fourteen Finnish leaders were tried and convicted. Recognizing Mannerheim's popularity and his diligence in carrying out the terms of the armistice, the Kremlin did not demand that he be brought to trial. In poor health, Mannerheim resigned on 4 March 1946 and retired to Switzerland. He never returned to Finland and died on 28 January 1951 in Lausanne, Switzerland.

Mao Zedong

(1893–1976)

Chairman and cofounder of the Chinese Communist Party (CCP) and founder and chairman of the People's Republic of China (PRC). Born in Shaoshan, Hunan Province, on 19 November 1893, Mao Zedong graduated from the Hunan First Normal School in 1918. He then went to Beijing to work in the Beijing University Library, where he learned Marxist ideology and developed his revolutionary plan to save China. Mao helped found the CCP in Shanghai in 1921. In 1924, following the Comintern's instructions, Mao joined the Guomindang (GMD, Nationalist) party, forming the first United Front aimed at Chinese national unification. In so doing, he bought time for the infant CCP to grow under the GMD shield. However, the United Front broke down in mid-1927 when GMD leader Jiang Jieshi decided to purge the Chinese communists, thereby beginning the CCP-GMD power struggle that lasted for two decades.

Mao Zedong led the communists in the civil war against the Nationalists in China and was the leader of the People's Republic of China (PRC) from 1949 to 1976. Although remembered as one of the great Chinese leaders who made China a major player on the world stage, he was also responsible for the disastrous Great Leap Forward and Cultural Revolution. (Illustrated London News Picture Library)

Following the breakdown of the United Front, Mao and other frustrated Chinese communists worked on their own to develop a unique Chinese path to carry out the socialist revolution. In January 1935 Mao became the CCP chairman, a post he held until his death. His ascension to power is attributed to his ideological and tactical pragmatism, which rejected the rigid application of Soviet orthodox thinking and instead emphasized the uniqueness of Chinese history and culture. After expelling Jiang's GMD government from the mainland, Mao proclaimed the establishment of the PRC on 1 October 1949, officially ending the Chinese Civil War. Mao's reign can be divided into three periods: 1949–1957, 1958–1965, and 1966–1976.

The first period was characterized by imitation of the Soviet model in reconstructing China and consolidating the CCP's power. On foreign policy matters, Mao coined the three principles of make another stove, clean the house and then invite the guests, and lean to one side. According to the first two principles, Mao was determined to start anew by pursuing an anticolonial and anti-imperialist policy to eliminate China's century-old semicolonial status, imposed by imperial powers since the mid-nineteenth century. Because the PRC's birth coincided with the Cold War, Mao's policy of lean to one side signaled a pro-Soviet and anti-American stance. His first foreign policy initiative was a visit to Moscow in December 1949, culminating in the Sino-Soviet Treaty of February 1950.

The PRC's anti-American stance was vividly showcased over the question of Taiwan, where Jiang's GMD government still retained power, as well as in the Korean War, the Geneva Conference, the first and second Taiwan

Strait crises, and the Bandung Conference, at which Mao attacked America for its “imperialist” designs in the Taiwan Strait.

Domestically, Mao selectively transplanted the Soviet model. Politically, he preferred a democratic dictatorship, along the principles of democratic centralism and coexistence with other revolutionary parties and noncommunist classes, to the Soviets’ proletarian dictatorship. Mao wished to avoid the Soviet political purges of the 1930s. Yet he ensured that real power and leadership rested in the hands of the CCP, as the terms “dictatorship” and “centralism” suggested.

In economic matters, Mao strictly adhered to the Soviet model, with Soviet technical and material assistance. In early 1950, he ushered in land reform, which involved government confiscation and the redistribution of agrarian land to peasants. This stage was completed in late 1953 and was succeeded by collectivization aimed at boosting agricultural production. In 1953, Mao launched the First Five-Year Plan, which strove to develop heavy industries and was completed a year ahead of schedule.

To consolidate his control over the country, Mao adopted mass socialization by encouraging the formation of numerous mass organizations in the early 1950s to mobilize the population to participate in such movements as the Resist-America Aid-Korea Campaign, the Three-Anti Movement to combat corruption and wasteful bureaucracy, and the Five-Anti Movement against bribery, tax evasion, fraud, theft of government property, and leakage of state economic secrets.

The second period of Mao’s rule demonstrated his determination to establish a unique brand of Chinese socialism, designed to wean China from Soviet aid. The year 1958 began with the Second Five-Year Plan, which was much more ambitious than the first. To accelerate China’s industrialization, Mao launched the three-year Great Leap Forward program at year’s end, a radical measure designed to catch up with and surpass British industrial output. To this end, he ordered the establishment of nationwide People’s Communes, which was also an essential step in facilitating the socialist transformation of China.

The Great Leap Forward, however, was doomed to failure, as the PRC was not ready for such a radical transformation. The results were measured in massive manpower and property losses. Another adverse impact was the growing division within the PRC leadership. Realizing his miscalculation and hoping to avoid becoming the scapegoat for further losses, Mao gave up his PRC chairmanship to Liu Shaoqi in April 1959 while retaining the chairmanship of the CCP. In September 1959, Mao relieved Peng Dehuai of his post as defense minister because of his opposition to the Great Leap Forward. The failure of the Great Leap Forward convinced moderate leaders such as Deng Xiaoping and Zhou Enlai that socialization should be slowed down, a view that made both men targets of the Cultural Revolution in later years. To compensate for the economic dislocation and destruction of the Great Leap Forward, Mao reluctantly agreed to relax economic socialization by dismantling the communes and using material incentives to revive the

Mao incited the Red Guards to criticize old customs and practices by employing such means as violence, public trials, and mass rallies.

Chinese economy, cures proposed by Liu and Deng. By the mid-1960s, China's economy had been restored to its 1957 level.

Mao's drive for independence also resulted in the collapse of the Sino-Soviet alliance. His insistence on proceeding with the radical Great Leap Forward alarmed Soviet leader Nikita Khrushchev, who decided to stop assisting the PRC's national reconstruction in 1958. This forced Mao to pursue a lone course in implementing both the Second Five-Year Plan and the Great Leap Forward.

Mao's unilateral initiation of the Second Taiwan Strait Crisis in September 1958 prompted Khrushchev to withhold nuclear information. The Sino-Soviet split became official after Mao passed the chairmanship to Liu, who intensified the ideological attack against Soviet revisionism and Khrushchev's advocacy of de-Stalinization and peaceful coexistence with the West. By 1963, Sino-Soviet unity had all but disappeared. To compensate for the loss of Soviet aid, Mao promoted closer PRC ties with Asian and African countries. His success in this enabled the PRC to become an influential leader in the developing world, transforming the bipolar Cold War world into a tripolar one.

The decade-long Cultural Revolution constituted the third period of Mao's era, during which the PRC experienced violent chaos and disorder. Determined to reassert his personal authority and monolithic leadership over the country, Mao launched the Cultural Revolution in 1966 through his wife Jiang Qing. By reviving the class struggle and Marxist-Leninist teachings, he purged all potential opponents, including old comrades, from both the government and the CCP. To ensure his personal control, Mao packed the party and the government with his supporters, such as his wife and Hua Guofeng, both of whom were made Politburo members. Outside the government, Mao incited the Red Guards, radical youths indoctrinated with Maoism, to criticize old customs and practices by employing such means as violence, public trials, and mass rallies. The Red Guards were also sent into the countryside to encourage the so-called cult of Mao. This ten-year period constituted the darkest days of the PRC's history, characterized by a reign of red terror that badly bruised Mao's revolutionary legacy.

The Cultural Revolution also had a direct bearing on the PRC's foreign policy. On the one hand, the revolution aroused grave hostility and suspicion from the PRC's allies, who either severed diplomatic relations with the PRC or recalled their foreign service delegations. Combined with the Sino-Soviet split, the Cultural Revolution almost completely isolated the PRC within the international community. On the other hand, the Cultural Revolution made possible the normalization of U.S.-Chinese relations because of their mutual desire to enhance each other's bargaining position vis-à-vis the Soviet Union. In February 1972, Mao received U.S. President Richard M. Nixon in Beijing, which culminated in American diplomatic recognition of the PRC in 1979. This rapprochement marked the end of China's diplomatic isolation.

Mao died in Beijing on 9 September 1976. Shortly after his death, in October 1976, Hua, now the premier, seized power and ended the Maoist era by officially terminating the Cultural Revolution.

Filipino politician and authoritarian president of the Philippines (1965–1986). Ferdinand Marcos was born on 11 September 1917 in Sarrat, Ilocos Norte Province. His father was a politician, his mother a teacher. In December 1938, while a student at the University of the Philippines College of Law, Marcos was arrested for the 1935 assassination of his father's political rival, Julio Nalundasan, and found guilty of murder. Marcos, considered a brilliant law student, composed an 830-page brief for the Supreme Court while in prison. Citing trial errors, the Supreme Court reversed the conviction, and Marcos left prison in October 1940. He fought against the Japanese occupation of the Philippines but was captured and imprisoned by the Japanese.

Following the war, Marcos began his political career as an aide to President Manuel Roxas during 1946–1947. In 1949 he won election to the Philippine House of Representatives as a Liberal Party candidate. In 1959 he was elected a senator. Abandoning the Liberal Party for the Nationalist Party, he was elected president of the Philippines in November 1965.

The Americans saw in Marcos a potential ally in the escalating Vietnam War. Marcos in fact agreed to send some Filipino forces to the Republic of Vietnam (ROV, South Vietnam) as a show of support for anticommunism in Southeast Asia. Although as a senator he had opposed earlier requests to send troops to Vietnam, as president he agreed to send 2,000 noncombat soldiers, claiming that he could send no more because of Filipino opposition to the war. In return, the United States increased its financial aid to the Philippines.

In 1969 Marcos launched simultaneous campaigns to crush the ongoing communist Hukbalahap insurgency and the Muslim Moro uprising in Mindanao. In November that same year he became the first president of the Philippines to win reelection, although his second term was marked by increasing civil unrest. In September 1972 he imposed martial law following a

series of bombings in the capital city of Manila, the discovery of an assassination plot, and an alleged communist conspiracy to seize power.

Although Washington undoubtedly knew of the rampant government corruption and the president's exaggeration of the threat of a communist coup, it continued to support the regime in order to ensure Filipino support of its own Cold War aims, including endorsement of the continued lease of important U.S. military bases in the islands. U.S. officials hoped, vainly as it turned out, that Marcos would implement reforms to reduce the grinding poverty of millions of Filipinos, which the United States believed was fueling the resistance movements. Although Marcos ended martial law in 1981, he carried on his increasingly autocratic rule.

In the early 1980s, President Ronald Reagan's administration continued to back Marcos, despite his dictatorial ways and abuse of human rights. The 21 August 1983 assassination of Marcos's political rival Benigno Aquino, however, united the anti-Marcos opposition and marked the beginning of the end for his rule.

In the snap election of February 1986, Aquino's widow, Corazon Aquino, ran against Marcos. Marcos claimed a dubious victory amid widespread accusations of electoral fraud, which emboldened his opponents to drive him from power. In February 1986, as angry mobs converged on the presidential palace, Marcos and his wife Imelda fled to Hawaii. In October 1988, a U.S. federal court indicted the Marcoses on racketeering charges. Ferdinand Marcos died in Honolulu on 28 September 1989.

Mariel Boatlift

(April–September 1980)

Mass exodus of Cuban refugees to the United States occurring between April and September 1980. The Mariel Boatlift, the product of more than

In 1980, some 125,000 Cuban refugees poured into the United States during the so-called Mariel Boatlift, Fidel Castro's invitation to Cuban Americans to travel to Mariel Harbor and take any of their friends and relatives to the United States. Although an apparent sign of relaxed restrictions, it later became evident that the event was orchestrated to purge Cuba of political dissidents. (U.S. Coast Guard)

two decades of hostility between the United States and Cuba, brought more than 125,000 Cubans from the Cuban port of Mariel to southern Florida.

After the United States severed diplomatic relations with the communist island-nation of Cuba in 1961, travel and migration between the two countries essentially stopped. When U.S. President Jimmy Carter assumed office in January 1977, he sought to improve relations with Latin America, and Cuban leader Fidel Castro responded to the overture.

In 1979, Castro permitted Cuban Americans to return to Cuba. After witnessing the abject poverty in which many Cubans lived, however, many of these visitors returned to the United States with a determination to do something about it. Meanwhile, Castro faced growing dissent sparked by housing and job shortages as well as a stagnant economy.

On 4 April 1980, presumably to get rid of troublemakers, Castro ordered guards removed from the Peruvian embassy in Havana, and within hours

thongs of Cubans requested political asylum. This move should have served as a warning to Washington, but the signal went largely unnoticed.

Soon afterward, the United States found itself in the midst of a major refugee crisis when Castro allowed any person wishing to leave Cuba free access to depart from the port of Mariel, located about 28 miles west of Havana. On 19 April 1980, the Cuban government announced that Cuban Americans could travel to Cuba to pick up refugees, going so far as to contact Cuban Americans directly to encourage them to make the journey. Cuban Americans immediately set sail for their relatives in virtually any vessel that appeared even marginally seaworthy. Thousands of fishing boats, yachts, and other small craft departed from Key West and Miami, Florida, for Mariel.

The vessels were typically loaded up with more refugees than they were designed to carry safely. The first refugees arrived on 21 April. By the time the boatlift came to an end, more than 125,000 Cubans had made the journey to the United States. Miraculously, only 27 people perished at sea, due chiefly to search and rescue efforts of the U.S. Coast Guard.

The vast majority of the Cuban immigrants entered the United States in violation of American law, as they were undocumented. But President Jimmy Carter's administration refused to return the refugees for humanitarian as well as legal and political reasons. The decision not to interdict boats meant that the United States had little choice but to accept the Mariel Cubans. Castro also required boats to accept additional passengers, some of whom had been recently released from prison or mental asylums. More than 23,000 of the arriving Marielitos admitted previous criminal convictions, although many of those convictions were for offenses that would not have warranted detention under U.S. law. Only 2 percent, or 2,746 Cubans, were classified as criminals under U.S. law and were not granted citizenship. Still, reports that criminals and the mentally ill were among those thousands arriving daily fueled a major public backlash. By the time Castro stopped the Mariel Boatlift, the Carter administration, already under great duress because of the Iranian Hostage Crisis, appeared to have botched the situation. It had failed to capitalize on the propaganda value of Cuba's internal problems and seemed entirely unable to control immigration. The Mariel Boatlift certainly added to the American public's frustration with Carter's administration and indirectly led to his November 1980 electoral defeat by Ronald Reagan.

Market socialism is a hybrid economic system combining elements of a socialist, command-style economy with a capitalist, free-market economy. Debates over the implementation of market socialism began as a theoretical construct, but it gained acceptance with the introduction of market elements in Yugoslavia after 1948. More recently, economic reform in one-party communist states, particularly in the People's Republic of China (PRC), Vietnam, and Laos, has been labeled market socialism.

When traditional Marxists proposed the nationalization or collectivization of the means of production, adherents of market-driven economies claimed that an economy without free markets would be unable to perform the foremost task of an economy, namely the optimal allocation of resources. In 1908 the Italian economist Enrico Barone introduced the so-called socialist calculation debate by describing a process in which a minister of production, by solving a set of equations, could achieve the same end as that of a market-driven economy. Other Marxist economists argued that socialism would surpass capitalism because it would not be subject to business cycles and economic downturns. However, Ludwig von Mises, one of the famed Austrian School economists, argued that socialist states' attempts to calculate correct prices for goods would be distorted, since there would effectively be no market for capital goods, that is, means of production.

Other socialist economists refuted the von Mises argument by describing a socialist pricing system in which prices for capital goods would be fixed by authorities as if they were market prices, based upon a reiterative process of *tatonnement*, or the synchronization of supply and demand. Centrally planned economies later used this reiterative process, matching plans at different levels of planning. But a more general critique of socialist economies emerged from the work of another Austrian economist, Friedrich August von Hayek, who became one of the greatest defenders of market economies throughout the Cold War. He argued that while in theory the socialist state could simulate the mathematical equations of a market-driven system, it would be virtually impossible for a state to collect information on millions of prices and consumer preferences, such as market economies provide automatically. Hayek's work on the economics of information was never satisfactorily refuted by proponents of socialism.

The debate over market socialism became politically relevant when Yugoslavia's leader Josip Broz Tito broke with the Soviet Union in 1948. After World War II Yugoslavia had introduced a centrally planned economy. But in 1950 the Basic Law on the Management of State Economic Enterprises by Working Collectives was introduced to encourage workers' input. Thus, collectivization continued, but planning became decentralized via so-called labor-managed collectives. Tito also abandoned agricultural collectivization. Yugoslavia subsequently enjoyed a much higher living standard than other socialist states. Yugoslavian economic success also depended on greater openness, which allowed for economic aid from the United States and assistance from the International Monetary Fund (IMF).

In July 1965 another major Yugoslavian reform reduced state influence over investment, taxes, and prices. Nevertheless, the Yugoslavian system of market socialism did not solve the more intractable problems of socialist economies, such as the soft budget constraint (soft taxes, soft subsidies, and soft credit) and the virtual absence of corporate bankruptcy or the dismantlement of unprofitable companies. In truth, labor-managed firms were more fiction than fact, as the persistent influence of state-mandated decision making rendered decentralization unattainable. Additionally, the influence of workers on decision making spawned problems of inequality, since it created a strong position for insiders interested in maximizing productivity per employee rather than overall profit.

The breakdown of socialist economies in the late 1980s led to the abandonment of market socialism by Yugoslavian successor states. Other states with nominal market socialism, such as Hungary, also abandoned the system in favor of free-market economies, although the former Soviet Union's early stage of transition to capitalism was termed market socialism.

The early 1980s witnessed the emergence of new economic variants in which economic transition under communist one-party systems was carried out, notably in the People's Republic of China (PRC) and Vietnam. These new systems were also labeled market socialism. In lieu of the dismantlement of state-owned enterprises (SOEs), these economies permitted the growth of a private sector alongside the SOEs, producing a dual economy. While these economies achieved quite spectacular successes as measured by their robust growth rates, special problems still persisted. These included low levels of new development and unresolved difficulties in functioning of the SOEs.

Markos, Vafiades
(1906–1992)

Political and military commander of the communist National Liberation Front during the Greek Civil War (1946–1949). Born in Theodosia, now Tosia,

Anatolia (present-day Turkey), on 28 January 1906, Vafiades Markos did not receive a formal education. He worked at a succession of manual labor jobs and immigrated to Greece during the war between Greece and Turkey following World War I.

Markos joined the Greek Communist Party in 1927 and was arrested several times for organizational activities on behalf of the Federation of Greek Communist Youths (OKNE). Markos escaped internal exile following the German invasion and occupation of Greece in 1941 and quickly rose to a leadership position in the communist-led guerrilla resistance movement, becoming commander of the Greek Popular Liberation Army (ELAS).

General Markos played a minor but nonetheless crucial role in the early history of the Cold War. With the withdrawal of Axis forces from Greece at the end of World War II, civil war broke out between the Democratic Revolutionary Army (DSE), commanded by Markos, and the rightist Greek government that returned from exile, supported by the British.

The imminent threat of a successful communist takeover in Greece raised the specter of a domino effect in the region, with the potential to destabilize Turkey and the Middle East. When the British government informed Washington that it could no longer maintain economic and military support for the rightist Greek regime of Georgios Papandreou, the United States stepped in and, under the 1947 Truman Doctrine, extended \$400 million in aid to Greece and Turkey.

In December 1947 Markos became both president and minister of war in the Temporary Democratic Government (known as the government of the mountains). The DSE collapsed in 1949 after the withdrawal of Yugoslavian support and a disastrous shift in tactics away from guerrilla operations. Denounced by DSE leader Nikos Zachariadis, Markos was relieved of his duties. In October 1950 he was expelled from the party and placed under house arrest in Albania and then in Moscow. After thirty-five years in exile, he returned to Greece in 1985. Markos died in Athens on 22 February 1992.

Marshall's personal knowledge of American officers, many of whom he had trained, helped him select numerous commanders for both the European and Pacific theaters.

Military Institute in 1901 and was commissioned a second lieutenant of infantry the following year. His assignment to the Philippines was followed by postings within the United States, including from 1906 to 1910 at Fort Leavenworth Infantry and Cavalry School, first as a student and then as an instructor. From 1913 to 1916 he served once more in the Philippines.

After American intervention in World War I, in June 1917 Marshall went to France as a training officer to the 1st Division. Promoted to lieutenant colonel in 1918, he became the First Army's chief of operations, winning general admiration for his logistical skills in arranging for the movement of hundreds of thousands of troops across the battlefield. After working on occupation plans for Germany, in spring 1919 he became aide to General John J. Pershing, then army chief of staff.

Between the wars Marshall spent three years in Tianjin, China, with the 15th Infantry Regiment and five years as assistant commandant in charge of instruction at the Infantry School in Fort Benning, Georgia. He won promotion to colonel in 1932, holding assorted commands in the continental United States.

In 1938 Marshall became head of the War Plans Division in Washington, in quick succession rising to deputy chief of staff with promotion to major general and then, in spring 1939, chief of staff of the army. He was promoted to temporary general that September. With war raging in Europe, Marshall threw himself into rebuilding the American defense establishment. Increasingly assisted by pro-Allied civilians such as Secretary of War Henry L. Stimson, Marshall instituted and lobbied for programs to recruit and train new troops; expedite munitions production; assist Great Britain, China, and the Soviet Union to resist their enemies; and coordinate British and American strategy. He presided over an increase in the U.S. Army from a mere 190,000 men in September 1939 to more than 8.157 million men and women by April 1945. His personal knowledge of American officers, many of whom he had trained, helped him select numerous commanders for both the European and Pacific theaters.

Marshall was a strong supporter of opening a second front in Europe, a campaign ultimately deferred until June 1944. Between 1941 and 1945 he attended all the major wartime strategic conferences, including those at Placentia Bay, Washington, Quebec, Cairo, Tehran, Malta, Yalta, and Potsdam. President Franklin D. Roosevelt and his successor President Harry S. Truman relied heavily on Marshall's advice. Marshall's greatest disappointment was perhaps that he never received field command of the European invasion forces. Roosevelt gave him that choice but also told him that he would prefer that Marshall remain chief of staff, a post he continued to hold throughout the war. He was not only highly effective in supervising the massive American war effort but also enjoyed excellent relationships with key senators and congressmen, who almost without exception admired and respected his professional abilities and personal integrity.

In 1945 Marshall participated in discussions as to whether to drop the newly developed atomic bomb. Eager to end the Pacific war expeditiously,

he supported its use. When the war ended, Marshall publicly advocated that in the interests of national security, his country needed to maintain a far larger, more professional, and better-equipped permanent defense establishment than in the past. He clearly anticipated that the United States would in the future play a far greater international role and might have to do so almost anywhere in the world.

Marshall retired in November 1945, whereupon President Truman promptly dispatched him to China, where he spent a year unsuccessfully attempting to mediate the civil war between the Nationalist government and communist rebels. In January 1947 Marshall became secretary of state. Soviet-American relations were then on a steep downward trajectory. Shortly afterward, in February 1947, Truman delivered his famous Truman Doctrine speech, calling for aid to help Greece and Turkey resist internal and external communist threats and placing this in the context of an all-embracing U.S. commitment to oppose communism throughout the world, the expression of what would soon become known as the strategy of containment.

Marshall and his aides, including Undersecretaries of State Dean G. Acheson, William L. Clayton, and Robert A. Lovett, developed and lobbied Congress for policies that would put this strategy into practice. Marshall's most visible accomplishments were the European Recovery Program (Marshall Plan), a coordinated \$13 billion five-year strategy to rehabilitate the economies of Western Europe that he announced in June 1947, and American membership in the North Atlantic Treaty Organization (NATO), the first permanent security pact the United States had ever entered.

Marshall left office in January 1949, shortly afterward heading the American Red Cross. At the outbreak of the Korean War in June 1950, Truman persuaded him to accept the position of secretary of defense, in which capacity Marshall again built up American manpower and war production and pushed for selective service legislation. He also strongly supported Truman's dismissal for insubordination of General Douglas MacArthur, commander of United Nations (UN) forces in Korea, a decision that later exposed Marshall to vehement and politically motivated accusations of procommunist sympathies from Senator Joseph R. McCarthy and his followers, as did his failure to preserve China from a communist takeover in 1949.

Marshall again left office in September 1951, succeeded as secretary of defense by Robert A. Lovett, his protégé and disciple. In December 1953 Marshall's efforts for European recovery won him the Nobel Peace Prize. He died at Walter Reed Hospital in Washington, D.C., on 16 October 1959. An architect of the American century of U.S. international dominance, Marshall

One of the most distinguished public servants in U.S. history, General George Catlett Marshall was chief of staff of the U.S. Army during World War II and was widely recognized as the "Organizer of Victory." During the Cold War he served as both secretary of state and secretary of defense. He is remembered for implementing the Marshall Plan for the recovery of postwar Western Europe, which won him the Nobel Prize for Peace. (Library of Congress)

epitomized the intimate links between his country's diplomatic and military policies.

Marshall Mission to China (1945–1947)

During December 1945–January 1947 former U.S. Army Chief of Staff General George C. Marshall traveled to China as a special U.S. emissary on the instructions of President Harry S. Truman. Marshall's mission was to mediate a truce between the Guomindang (GMD, Nationalist) government of Jiang Jieshi and the insurgent communist forces of Mao Zedong, thereby establishing peace and forming a workable government comprised of both parties, which had been intermittently engaged in a civil war since 1927. Marshall's efforts were not motivated by humanitarian peacemaking alone. They aimed to avert further civil war that might culminate in a communist victory and thereby obviate the need for U.S. military intervention by establishing a stable government to prevent Soviet intervention in China. Yet neither the Nationalists nor the communists turned out to be sufficiently committed to the success of Marshall's efforts.

Their long-term goals simply did not embrace mutual accommodation, and in the short term they each used the cover of the Marshall mission to their advantage. Marshall arrived in China on 20 December 1945 and initially achieved impressive results, as a cease-fire was established on 10 January

1946. That same month, a Political Consultative Council, with representatives from all of China's warring parties, agreed to the outlines of a new, more democratic political system that would be discussed further via the National Assembly. Finally, in February, the communists agreed to merge their military with the Nationalist army on the condition that military and political reorganization proceeded simultaneously.

The fly in the ointment, however, turned out to be North China and Manchuria. U.S. policy was to transport Jiang's troops there to take over from the defeated Japanese and establish order. Understandably, Mao viewed this with considerable suspicion. Moreover, Soviet forces had entered Manchuria to fight the Japanese in August 1945 but had withdrawn in April 1946, leaving behind a vacuum into which the warring factions expanded. When the communists captured Changchun on 18 April 1946, Jiang expanded the conflict, and despite Marshall's efforts to secure a cease-fire, China was once again engaged in civil war. Early victories against the communists emboldened Jiang, and he laid down unacceptable political terms as the price for reestablishing the cease-fire. A brief lull in June offered some hope, but by July Marshall had concluded that Jiang was not interested in a long-term cease-fire; rather, he was set on wiping out the communists.

Marshall sought to rescue the mission from complete collapse with the assistance of U.S. Ambassador to China John Leighton Stuart, who was trusted by the communists, and by cutting off U.S. arms shipments to Jiang. Simultaneously, President Truman called for progress, without which U.S. policy toward China might change. On 30 September 1946, however, Jiang announced an attack on Kalgan, a town in Inner Mongolia held by the communists. Nationalist forces captured it in October, conceding to a cease-fire a month later. On his own terms, Jiang also summoned the National Assembly. The communists, understandably, stayed away.

By October, Marshall had concluded that a political solution was impossible. He had also concluded that U.S. military intervention was not a viable solution. American diplomacy in China had reached the end of the road. Marshall returned to the United States in January 1947 as the Chinese Civil War continued.

Marshall Plan

Massive U.S. economic aid program for Western Europe begun in 1947 and designed chiefly to rebuild war-torn economies and serve as a bulwark against communist encroachment. In the wake of World War II, Europe experienced a severe economic crisis because of the crippling effects of nearly six years of war. The United States had attempted to promote European recovery through limited reconstruction loans, relief assistance, German war reparation transfers, and new multilateral currency and trade arrangements. By the winter of 1947, however, it was apparent that these piecemeal stabilization efforts were not working. Millions of West Europeans were unemployed, inflation and shortages were rampant, and malnutrition had become a widespread concern.

The central problem facing Europe was low industrial productivity. Industrial and agricultural production lagged behind prewar levels, as the wartime destruction or disruption of factories and equipment had led to dramatically decreased industrial output. Adequate funds were not available for reconstruction and replacement, and none of the nations involved had the wherewithal to raise large amounts of capital. To make matters worse, basic building-block industrial materials such as steel and coal were scarce.

The growing economic troubles fed frustration, hopelessness, and despair. And many Europeans had begun to seek out political solutions to their troubles. Alienated from capitalism, some began turning to communism as

an alternative. In France, Italy, and Germany, the crisis had eroded government support and lent credence to communist promises of economic stability. In Great Britain, serious financial woes forced policymakers to reduce international agreements that had helped resist the spread of communism. Only by eliminating the economic conditions that encouraged political extremism could European governments withstand the influence of communism, and nobody seemed to understand that better than the Americans.

U.S. policymakers believed that rejuvenated West European economies would provide a strong demand for American goods and help maintain the United States as the world's leading economic power. They also envisioned Western Europe as an integral part of a multilateral economic system of free world trade crucial to the liberal-capitalist world order that Washington had in mind for itself and its allies. Clearly, unity and prosperity in Western Europe would create an economy able to generate high productivity, decent living standards, and political stability.

The European Recovery Program, which came to be known as the Marshall Plan in honor of Secretary of State George C. Marshall, would serve to strengthen shaky pro-American governments and ward off the inroads being made by domestic communist parties and other left-wing

organizations sympathetic to the Soviet Union. U.S. Undersecretary of State Dean G. Acheson, who helped formulate the plan, argued that American foreign policy had to harness American economic and financial resources to preserve democratic institutions and to expand capitalism abroad. He also saw the Marshall Plan as necessary for long-term national security. Thus, the plan emerged as an all-embracing effort to revive the economies of Western Europe. The plan was unprecedented in terms of the massive commitment of American dollars, resources, and international involvement.

First formally proposed by Secretary of State Marshall on 5 June 1947 in a speech at Harvard University, the plan applied to all of Europe. Aid was not directed against communism specifically but was directed toward the elimination of dangerous economic conditions across all of Europe. Accordingly, the United States controversially planned to reconstruct Germany as an industrial power. Marshall had concluded that German resources, manpower, expertise, and production were absolutely essential to European recovery. For success, the plan had to allow full German participation but at the same time prevent German industrial power from becoming a future threat to peace.

Additionally complicating matters was Marshall's belief that the objective of the Soviet Union was to delay European economic recovery and therefore exploit the consequent misery and political instability. Yet Marshall did not want his nation to assume the responsibility for permanently dividing Europe. Thus, to avoid having the plan viewed as anti-Soviet, he invited the Soviet

Union and its East European satellite states to participate in implementation of the plan. Nations eligible to receive economic assistance would be defined by those countries that were willing to cooperate fully with the American proposal. All the while, U.S. policymakers fully counted on Moscow's rejection.

President Harry S. Truman believed that the United States should not unilaterally devise a plan for recovery and force it upon the Europeans. Instead, the particular aid initiatives came from the Europeans and represented not a series of individual requests but rather a joint undertaking by all of the countries in need of American assistance. In other words, the Americans wanted a lasting cure for Europe's problem and not a mere quick fix. America's role would be to assist in the drafting of a program and to support that program with American resources.

The Soviet Union together with Poland, Czechoslovakia, France, Great Britain, and twelve other European nations gathered at the first planning conference, convened in Paris on 27 June 1947. Soviet Foreign Minister Vyacheslav Molotov demanded that each country be allowed to fashion its own plan and present it to the United States. Georges Bidault and Ernest Bevin, the foreign ministers of France and Britain, respectively, opposed Molotov. Bidault and Bevin, in line with American wishes, stressed that the Marshall Plan had to be a continent-wide program in order to take advantage of the economies of the continent as a whole, or, seen in another light, to take advantage of the economies of scale rendered only through a jointly administered effort. As the United States had predicted, the Soviets quickly withdrew, denouncing the plan as an imperialist, anti-Soviet tool. Molotov warned that if Germany were to be revived, then the continent would be divided. Poland, Czechoslovakia, Hungary, and Romania still expressed interest in the Marshall Plan, but the Soviet Union pressured them into withdrawing.

The Soviets left Paris chiefly because participation in the plan would have required the disclosure of extensive statistical information about the Soviet Union's financial condition and also would have given the Americans some control over Russia's internal budget. Additionally, George Kennan, father of the U.S. containment policy and director of the State Department's policy planning staff, had earlier made it clear that aid would not be advanced to nations that refused to open their economies to U.S. exports. These requirements were unacceptable to the Soviets, as Kennan realized. The Soviets were not willing to abandon the exclusive orientation of their economy.

The Soviets kept their finances a well-guarded secret and set about weakening the Marshall Plan. In response, they formed the Cominform on 6 July 1947 to help coordinate international propaganda aimed at torpedoing the plan. On 12 July 1947, the Soviet Union negotiated trade agreements with its communist satellites that diverted to Eastern Europe a substantial amount of trade that had previously gone to Western Europe. Finally, later that year, the Soviets proposed the Molotov Plan for East European recovery as an alternative to the Marshall Plan.

Lengthy negotiations thus ensued without the Soviets or their client states. Participating nations laid the groundwork for the recovery plans and requested \$28 billion to be spent over the course of four years. On 15 March 1948, the U.S. Senate endorsed the plan by a 69–17 vote after the House had approved it by a 329–74 margin but only allocated \$17 billion in aid. The Marshall Plan passed despite growing conservative objections to international agreements. The communist-led overthrow of the Czechoslovakian government and the Soviet Union's badgering of Finland for military bases had apparently convinced U.S. legislators of the seriousness of the Soviet threat.

When the plans were finalized, the United States created the Economic Cooperation Administration (ECA) and named Paul Hoffman as its head. The ECA made the ultimate determination of specific aid and projects to be undertaken. The fundamental way in which the Marshall Plan contributed to increased European productivity was by furnishing capital, food, raw materials, and machinery that would have been unavailable without American help. The ECA made U.S. funds available to foreign governments to buy goods that were primarily obtained from their own private agricultural and industrial producers. The ECA also authorized purchases in other countries, especially Canada and Latin America. These policies also helped to reduce excessive demand on raw materials in the United States, thereby protecting the U.S. economy from inflationary pressures. The plan additionally benefited non-European countries and contributed to the development of multilateral trade. Recipients of the largest amounts of aid were Britain, France, Italy, the Federal Republic of Germany (FRG, West Germany), and the Netherlands.

Participating European governments sold American-financed goods to their own people. The payments received were placed in special funds that were employed where they could best serve economic recovery and ensure financial stability. Italy used its funds for public works projects, such as replacing bombed-out bridges. The British reduced government debt to check inflation.

A shipment of cornmeal arrives in Reykjavík. Bread and butter were the most urgent food needs in the Europe of 1948. By the end of 1951, \$1.5 billion worth of bread grains had been sent to Western Europe, while fats and oils accounted for \$345 million. (National Archives and Records Administration)

During 1948–1952, approximately \$13.5 billion in Marshall Plan aid went to the revitalization of Western Europe and guided it onto the path of long-term economic growth and integration. By 1950, industrial production in Marshall Plan countries was 25 percent higher than 1938 levels, while agricultural output had risen 14 percent from the prewar level. The volume of intra-European trade among Marshall Plan beneficiaries increased dramatically, while the balance-of-payments gap dropped significantly. Britain had sufficiently recovered by January 1951 so that Marshall Plan aid was suspended at that time, a full year and a half before the scheduled termination of the program. It should be noted, however, that the onset of the Korean War in June 1950 and the autumn 1950 decision to deploy American troops to Western Europe to bolster North Atlantic Treaty Organization (NATO) defenses also contributed to increased European productivity.

The Marshall Plan also advanced European unification and integration. The Americans sought a single large market in which quantitative restrictions on the movement of goods, monetary barriers, and trade tariffs had been largely eliminated. The creation of an integrated free market modeled after the United States would encourage the growth of consumer demand and large-scale industry. It would also permit more efficient use of materials and labor while stimulating competition. The West Europeans removed a number of economic barriers and established subregional agreements such as the European Coal and Steel Community (ECSC). The success of the Marshall Plan ultimately paved the way for the establishment of the Common Market in 1958.

The Marshall Plan did not cure all of Europe's problems. Productivity advanced considerably but leveled off by 1952, the last year of the plan. Europe's dollar gap had also begun to widen. The Korean War and concomitant rearmament program diverted resources and manpower to defense production, thereby creating scarcities of certain commodities. As a result, inflation became problematic.

The intensification of the Cold War and the onset of the Korean War hastened the end of the Marshall Plan. The Mutual Security Act of 1951, signed in the wake of the Korean War, provided a new strategy for European recovery that largely superseded the Marshall Plan. The act made military security rather than economic self-reliance the major objective of American policy in Western Europe. Aid recipients had to sign new agreements assuring the fulfillment of military obligations and promising to maintain European defensive strength. The ECA was abolished in favor of a Mutual Security Agency that was responsible for supervising and coordinating all foreign aid programs—military, technical, and economic.

Masaryk, Jan

(1886–1948)

Czechoslovakian diplomat and foreign minister (1940–1948). Born in Prague on 14 September 1886, the son of Professor Tomáš G. Masaryk, founder and first president of Czechoslovakia, Jan Masaryk graduated from Charles University in Prague in 1907. He then studied at Boston University and worked in various jobs before returning to Prague in 1913. During World War I, he served in the Austro-Hungarian Army at the same time his father was working abroad to bring about the dismantling of the Austro-Hungarian Empire.

Following the war and the creation of the new state of Czechoslovakia, Masaryk entered its diplomatic service, becoming chargé d'affaires in Washington, D.C., in 1919. Two years later he was appointed secretary to Czechoslovak Foreign Minister Edvard Beneš. In 1925 Masaryk became ambassador to Great Britain, serving there until the 1938 Munich Agreement, after which he resigned in protest.

In July 1940, President Beneš appointed Masaryk foreign minister of the London-based Czechoslovak government-in-exile. During the war, Masaryk delivered regular radio messages beamed to occupied Czechoslovakia to bolster civilian morale. He also carefully pursued Beneš's policy of cooperation with both the Soviet Union and the Western powers.

In May 1945 Masaryk accompanied Beneš on the latter's visit to Moscow to meet with Soviet leaders and assure them that Czechoslovakia intended to be a bridge between East and West. Masaryk continued as foreign minister even after the communists won a plurality of votes in the May 1946 elections and pursued his effort to retain strong ties with both the communist bloc and the West.

In July 1947 the Czechoslovak government, then led by communist Prime Minister Klement Gottwald, announced its intention to participate in the U.S.-sponsored Marshall Plan. Several days later, when Gottwald, Masaryk, and other Czechoslovak leaders visited Moscow, Josef Stalin forced them to rescind their decision, marking Czechoslovakia's official entrance into the Eastern bloc. Although disappointed and opposed to the communist-dominated government, Masaryk remained the foreign minister, respecting the wishes of President Beneš, even after the communist coup in February 1948.

Two weeks after the communist takeover, on 10 March 1948 Masaryk's body was found in the courtyard of the foreign ministry building in Prague. Communist authorities ruled the death a suicide, but many believed that he was murdered. During the 1968 Prague Spring, the case was reopened. Following the subsequent Warsaw Pact invasion, the case was again closed, but after the 1989 Velvet Revolution another investigation was launched, which in January 2004 concluded that Masaryk had indeed been murdered.

French Army general who played an important role in the Algerian War. Born on 5 May 1908 in Châlons-sur-Marne, France, Jacques Massu graduated from the French military academy at Saint-Cyr in 1928 and embarked on a series of assignments in France's African colonies. During World War II, as a battalion commander in the Free French Forces, he fought in North Africa and in the 1944 campaign in France, when he participated in the liberation of Paris.

Following World War II, Colonel Massu fought in the Indochina War (1946–1954). He was then transferred to Algeria, where fighting had begun in November 1954. He was promoted to brigadier general in June 1955 and commanded the elite 10th Parachute Division in the 1956 Suez invasion.

In January 1957 French Governor-General in Algeria Robert Lacoste invested Massu with full power to break a general strike proclaimed in Algiers by the rebel National Liberation Front (FLN), part of the Battle of Algiers that had begun on 30 September 1956 with the detonation of explosive devices at three locations throughout the city. Massu and his men operated with ruthless efficiency, including the use of torture, to break the general strike and destroy the FLN terrorist cells and organization in Algiers. The Battle of Algiers, certainly the most dramatic episode of the Algerian War (1954–1962), ended in March 1957.

Fearful that the government in Paris was about to grant Algeria its independence, Massu took a leading role in the May 1958 coup in Algiers by rightist European settlers and army officers that resulted in the return to power of General Charles de Gaulle. Following Massu's remarks to a journalist in December 1959 that the army had perhaps erred in bringing de Gaulle back to power, de Gaulle recalled Massu to France. De Gaulle soon forgave Massu, however, assigning him command of the French army garrison at Metz. Massu continued as a staunch Gaullist and refused to lend his support to army uprisings against de Gaulle in Algeria in January 1960 and April 1961. Massu retired from the army in July 1969 as a full general.

As with many French veterans of the Algerian War, Massu spent the remainder of his life trying to come to terms with the tactics employed by the French Army in the conflict. In the 1970s, he was one of his own fiercest defenders, writing a book challenging events depicted in the influential 1966 film *The Battle of Algiers*. But in 2001 he struck a more conciliatory tone, raising doubts over the effectiveness of torture in military operations and encouraging increased openness on the consequences of France's Algerian occupation. Massu died in Loiret, France, on 26 October 2002.

Mau Mau

Militant indigenous social movement that sought to end British colonial rule in Kenya during the late 1940s and 1950s. The Mau Mau emerged in the second half of the 1940s as a response to the British colonial government's policy to restrict access by the African Kenyan population to fertile land. Members of the Kikuyu tribe particularly suffered under this arrangement, and many of them began to reject constitutional politics as a means to redress their grievances. The growing Mau Mau movement frequently punished or killed those Africans who remained loyal to the colonial government.

The roots of the Mau Mau lay in the early twentieth century, when British authorities decided to provide land for white settlers in Kenya's White Highlands region. In the aftermath of World War II, Kikuyu peasants and tenant farmers who had traditionally been denied access to land by white settlers grew increasingly bitter about this trend toward privatization. During the war years, moreover, unemployment had increased dramatically in the area around the colony's capital, Nairobi, adding to the growing frustration among members of ethnic groups such as the Kikuyu, Embu, and Meru. In the minds of many Africans, the Kikuyu-dominated Kenya African Union (KAU), a political party that fought for an end to colonial rule, had not adequately dealt with these problems. As a result, militant members of the KAU in the Nairobi River Valley and Central Province began to advocate a more radical plan of action, which sought land for the dispossessed, Kikuyu unity and self-help, and an end to colonial rule by means of violence if necessary.

When British authorities first learned of this movement in 1948, they dubbed the militants "Mau Mau," but the origins of the term are not clear. In fact, "Mau Mau" has no meaning in any Kenyan language. Many militants referred to their movement as *ithaka na wiathi*, which means "land and moral responsibility" or "freedom through land." While the colonial government considered the Mau Mau a monolithic movement, it lacked a unified leadership and consisted of numerous separate groups. Nevertheless, the term "Mau Mau" stuck and came to signify savagery and cultism for colonial authorities and white settlers. In particular, the movement's central initiation ritual, the so-called oath-taking, worried the British, as it required members to pledge their

Kikuyu women, previously Mau Mau adherents, renouncing their Mau Mau oath during a cleansing ceremony in Nyeri, Kenya, in 1952. (Library of Congress)

lives to the putatively subversive cause of the Mau Mau. Although the Mau Mau was officially declared illegal in 1950, the secretive movement continued to grow and intimidated or killed white settlers and those Africans who refused to take the oath. By September 1952, several hundred blacks had been arrested for alleged membership in the Mau Mau.

The assassination of Kikuyu Chief Waruhiu on 7 October 1952 led the colony's governor, Sir Evelyn Baring, to declare a state of emergency and marked the beginning of a four-year armed struggle involving Mau Mau guerrillas, Kenyan loyalists, and British colonial troops. British efforts to suppress the movement also included the arrest of KAU President Jomo Kenyatta, other nationalist leaders, and thousands of Mau Mau supporters. By early 1953, almost 18,000 Africans had been sent to trial for alleged activities in the militant movement. Despite these repressive measures, the Mau Mau groups continued their activities. In March 1953, Mau Mau fighters launched their first military offensive, massacring the residents of the loyalist village of Lari. Nevertheless, the British offensive, code-named Operation ANVIL, which lasted from 24 April to 9 May 1954, demonstrated the superiority of British troops, who arrested 19,000 men during large-scale raids of private buildings in Nairobi. Sporadic fighting continued after ANVIL, but the number of Mau Mau fighters had been reduced to approximately 5,000.

The capture of guerrilla leader Dedan Kimathi in late October 1956 marked the end of major combat operations against the Mau Mau. Although Kenyan militants had been defeated militarily, fear of new uprisings compelled British authorities to initiate political reforms during 1957–1958. In January 1960, the state of emergency officially ended. By the end of the conflict, Mau Mau guerrillas had killed more than 1,800 Africans and 32 European settlers. Official estimates put the number of Mau Mau casualties at 10,500, while colonial and British troops lost approximately 600 soldiers. Kenya finally gained independence in 1963.

May, Allan Nunn (1911–2003)

British physicist and one of the first Cold War spies to work for the Soviet Union. Born in Birmingham, England, on 2 May 1911, Nunn May's academic prowess won him numerous school and university scholarships, including one to Cambridge. While attending that university, from which he graduated and gained his doctorate, he was drawn to leftist causes, joining both the Communist Party and the Association of Scientific Workers.

Upon the outbreak of World War II, May allowed his Communist Party membership to lapse and began working on the British atomic weapons program, known as the Tube Alloys Project. In 1943 he relocated to the Chalk River Laboratory near Montreal, Canada, that had become an annex of the U.S. Manhattan Project. That same year, Soviet military intelligence recruited him as a spy. Operating under the code name "Alek," May supplied his handler, Pavel Angelov, and controller, Colonel Nikolai Zabolotin (Soviet military attaché in Ottawa), with a range of atomic secrets, including details about the Trinity and Hiroshima bombs, the output of plants, and microscopic samples of Uranium-235. Historical evidence now seems to suggest, however, that despite May's extensive and advanced knowledge of the atomic bomb, the information he passed on was of a general nature and therefore not particularly useful to the Soviets.

In May 1945 Igor Gouzenko, a Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB) intelligence officer, defected to the West. During debriefings, Gouzenko revealed the nature of the atomic spy ring, directly implicating May. But because British intelligence hoped that May might offer further

insight into Soviet penetration of the Allied atomic bomb program, he was permitted to return to King's College, London University. He was finally arrested in March 1946 and was charged under the British Official Secrets Act. He confessed and served six years of a ten-year prison sentence. Upon his release in December 1952, he was blacklisted. But in 1961 he was invited by President Kwame Nkrumah to work in Ghana. In 1978 May returned to Cambridge, where he died on 12 January 2003.

Polish journalist, dissident, politician, Solidarity leader, and prime minister of Poland (1989–1990). One of the leading members of the Catholic anti-communist opposition in Poland, Tadeusz Mazowiecki was born on 18 April 1927 in Płock to a family of Polish intellectuals. He graduated from Warsaw University in 1947 with a law degree and served as head of a Warsaw publishing agency during 1947–1948 but was forced out of the position because of his Catholic views.

In 1949 Mazowiecki commenced political activity and work as a journalist in the PAX organization, which tried to reconcile Catholicism with communism. After a disagreement with PAX leadership, he was forced out of the organization in 1955. In 1956 he cofounded the Catholic Intelligentsia Club and in 1958 created the monthly magazine *Wież*, one of the few independent Polish periodicals.

During 1961–1971 Mazowiecki was a deputy in the Polish parliament. As a member of the Catholic parliamentary club *Znak* (“the sign”), he became known for his fiery speeches demanding freedom of speech, religious tolerance, political pluralism, and autonomy for universities. Beginning in 1976 he became associated with the democratic opposition movement, which among other things criticized a change in the constitution that confirmed the centrality of the Communist Party in Polish affairs.

In August 1980 Mazowiecki became the head of a group of advisors to striking shipyard workers in Gdańsk. The following year he was appointed editor of the periodical *Solidarnosc* and was recognized as one of the most important members of the Solidarity labor union. After Polish Premier Wojciech Jaruzelski declared martial law in 1981, Mazowiecki was jailed in December 1981 and released in December 1982.

Mazowiecki, Tadeusz
(1927–)

During 1983–1989 Mazowiecki was among the most prominent advisors to Solidarity leader Lech Wałęsa and actively participated in the Round Table debates during February–April 1989. In August 1989 Mazowiecki was elected prime minister, and in September 1989 he created a coalition cabinet dominated by Solidarity. His government initiated the final dismantling of the communist system, a transition to parliamentary democracy, a free market economy, and the reorientation of Polish foreign policy toward the West.

In November 1990 Mazowiecki ran for president of Poland but lost. He then founded his own party, the Democratic Union. He served as an envoy for the United Nations (UN) Human Rights Commission in the former Yugoslavia in 1992. Mazowiecki retired from public life in 1995.

McCarthy, Eugene Joseph

(1916–2005)

U.S. political leader, U.S. senator, author, and critic of the Vietnam War. Born in Watkins, Minnesota, on 29 March 1916, Eugene McCarthy was a former seminarian who earned a BA in English from St. John's University, Collegeville, Minnesota, in 1935 and an MA in political science at the University of Minnesota at Minneapolis in 1939. He returned to St. John's to teach economics and other subjects during 1940–1943. During 1944 he worked as a civilian in the Military Intelligence Division of the War Department. During 1946–1949 he taught at the College of St. Thomas in St. Paul, Minnesota.

Active in politics as a member of the Democratic-Farmer-Labor Party of Minnesota, McCarthy first won election to Congress in 1948. He served ten years in the House of Representatives (1949–1959). He took a strong stand against the spread of communism and supported Harry S. Truman's response to the invasion of the Republic of Korea (ROK, South Korea) by the Democratic People's Republic of Korea (DPRK, North Korea) in 1950. Elected to the U.S. Senate in 1958, McCarthy served two terms.

McCarthy voted for the August 1964 Gulf of Tonkin Resolution that gave President Lyndon B. Johnson authority to pursue the Vietnam War. In April 1965, McCarthy joined the Senate Foreign Relations Committee, where he continued to support Johnson administration policies toward Vietnam. By 1966, however, McCarthy was openly doubting that the Vietnam War would contain communism. Instead, he argued that the Democratic Republic of Vietnam (DRV, North Vietnam) was intensely nationalist and

independent of the People's Republic of China (PRC). He also challenged the morality of the war, especially the bombing of North Vietnam.

On 30 November 1967, McCarthy announced his campaign for the Democratic Party nomination for president, although he tempered his criticisms with votes for war-related authorizations and appropriations in 1967 and 1968. He asserted that civil rights laws and social welfare legislation would strengthen the United States domestically and globally. His antiwar stance, multi-issue platform, and television persona led large numbers of idealistic antiwar students to volunteer for his campaign.

Six weeks after the 1968 Tet Offensive, McCarthy embarrassed President Johnson in the New Hampshire Democratic Primary by winning 80 percent of the delegates and 42 percent of the nonbinding presidential preference votes, although it is clear that many people who voted for McCarthy were not opposed to the war but did so simply to register their dissatisfaction with Johnson's prosecution of it. McCarthy's success confirmed perceptions of Johnson's vulnerability and led to both Robert Kennedy's decision to enter the race and the president's withdrawal. At the 1968 Democratic Convention, McCarthy received a fourth of the delegates.

McCarthy did not run for reelection to a third term in the Senate in 1970. In 1972, he sought but did not receive the Democratic Party's presidential nomination. In the 1976 U.S. presidential election, McCarthy received some 757,000 votes as a write-in candidate. He subsequently continued to write and speak out on major issues. McCarthy died in Washington, D.C., on 11 December 2005.

Eugene McCarthy's opposition to the Vietnam War electrified the nation's youth and brought thousands into active involvement in Democratic Party affairs in 1968. (Library of Congress)

**McCarthy, Joseph
Raymond**
(1908–1957)

U.S. Republican politician, junior senator from Wisconsin (1947–1957), and instigator of the anticommunist Red Scare phenomenon in the early 1950s known as McCarthyism. Born on 15 November 1908 in Grand Chute, Wisconsin, the son of a dairy farmer, Joseph McCarthy in 1935 earned a law degree from Marquette University and was admitted to the bar that same year. This legal training was, however, simply a gateway to a career in politics.

In 1939 McCarthy won election to a Wisconsin circuit judgeship in a campaign that introduced all the ugly characteristics of his later public battles. He falsely portrayed his opponent and incumbent officeholder Edgar Werner as senile and corrupt. With the outbreak of World War II, McCarthy enlisted in the Marine Corps. He performed competent but unexceptional work as an intelligence officer in the Pacific theater, a role that he later embellished to include fictionalized bombing raids against strongly defended Japanese islands. “Tail-Gunner Joe,” as he liked to be called, spun his fantasies so well that he was awarded, with dubious entitlement, the Distin-

Wisconsin Senator Joseph McCarthy delivers a televised speech in 1953. (Library of Congress)

guished Flying Cross. While still on active duty in 1944, he campaigned unsuccessfully in the Republican primary for one of Wisconsin's U.S. Senate seats, but two years later he made a successful challenge for the other seat in a barnstorming campaign across the state.

McCarthy's first few years in the Senate were underwhelming. In search of a cause that might win him power and celebrity, not to mention a second term, he latched onto the Red Scare investigations that were being popularized so theatrically by groups such as the House Un-American Activities Committee (HUAC). On 7 February 1950 McCarthy made a speech to a Republican women's group in Wheeling, West Virginia, in which he claimed, quite dramatically, to have a list of 205 officials in the U.S. State Department who were either communists or communist sympathizers. As with so many of McCarthy's allegations, the list was bogus, and the number of those suspected changed almost daily. Nonetheless, the effect was sensational. The press gave it extensive coverage, and the ploy turned the previously obscure senator into a household name.

McCarthy followed up his feat with a series of other lurid and spurious charges, often changing the details without explanation or apology when their hollowness became clear. He had mastered the use of the multiple untruth, and before long the term "McCarthyism" had become a byword for the sort of crude finger-pointing and false accusations at which its originator excelled.

The peak of McCarthy's career came in late 1952 when, after winning a landslide reelection, he was named chairman of the Senate Committee on Government Operations and its Subcommittee on Investigations. This gave him a broad mandate to probe suspected communist infiltration of public offices and invested him and his chief counsel, Roy Cohn, with sweeping and sinister authority. However, hubris and overreach led quickly to disaster. In late 1953 McCarthy launched a major inquiry into alleged subversive activity in the U.S. Army, some of the hearings being nationally televised. These led to the harassment and bullying of several high-ranking army officers. This proved too much for President Dwight D. Eisenhower, who had long detested McCarthy personally but who had been up to that point too timid and wary of challenging him in public.

In April 1954, on Eisenhower's insistence, a thirty-six-day televised hearing was held to investigate McCarthy's allegations. His uncouth behavior, bullying of witnesses, and long-winded speeches came across poorly on television, and his popularity plummeted, especially after a celebrated dressing-down by army counsel Joseph Welch on 9 June. The furious attorney pointedly asked McCarthy, "Have you no sense of decency, sir?" By December 1954, McCarthy faced Senate censure for disreputable behavior, and his reputation speedily unraveled. He was also stripped of his committee assignments. His final unhappy years were spent in futile excoriation of the enemies and traitors whom he believed had undone him. McCarthy died of alcohol-related liver disease in Bethesda, Maryland, on 2 May 1957.

McCarthy Hearings

Series of hearings held by the notorious red baiter Senator Joseph R. McCarthy, junior Republican senator from Wisconsin, during 1950–1954, ostensibly to expose communists in America. The most dramatic of McCarthy's myriad hearings were nationally televised during 22 April–17 June 1954. The so-called Army-McCarthy Hearings marked the end of the senator's demagogic reign during the post-World War II Red Scare that came to be known as McCarthyism.

In February 1950 McCarthy made a stunning and completely unsubstantiated public accusation that the U.S. State Department was riddled with 205 communists or communist sympathizers. By constantly changing his stories and the numbers of alleged communists in high places, he became a household name and made a career out of being the nation's top anti-communist whistle-blower for the next four years. As the nation fell under the spell of McCarthy, with the help of a transfigured national press, hundreds of loyal government employees lost their jobs and had their lives ruined during the period known as McCarthyism. Labor organizers, writers, artists, teachers, Hollywood actors, and even the U.S. military were all targets of McCarthy's anticommunist witch-hunt. Educators with liberal sympathies were labeled a threat and found their academic freedom severely restricted. McCarthy even went so far as to accuse World War II army hero and Secretary of Defense General George C. Marshall of harboring "a communist conspiracy so immense as to dwarf any previous such venture in the history of man." McCarthy particularly targeted Foreign Service officers in the State Department, which greatly weakened the department's Asian desk.

McCarthy, although not universally loved by the Republican Party, was allowed to pursue his tenuous claims because such activity gave the Republicans a potent weapon against President Harry S. Truman and the Democrats, whom they believed had botched U.S. foreign policy particularly in China and Korea. When Republican Dwight D. Eisenhower won the pres-

U.S. television's first major sensation involving government operations was the series of Senate subcommittee hearings chaired by communist-hunter Senator Joseph McCarthy. The highlight came in a 1954 series of televised hearings about the supposed communist infiltration of the U.S. Army. Here, McCarthy responds to charges that a photo of army personnel, submitted as an exhibit at the hearings, has been altered. (AP/Wide World Photos)

idency in 1952, he chose not to confront McCarthy directly, although he despised him. Eisenhower instead hoped that McCarthy would eventually go too far and destroy himself. He did just that in 1954.

During 1953–1954, McCarthy chaired the Senate Committee on Government Operations and its Subcommittee on Investigations. During his tenure as chairman, the subcommittee held countless hearings around the nation and investigated myriad charges of communist subversion and espionage in the federal government and defense industries. In addition to McCarthy's favorite foil, the State Department, the Voice of America, the U.S. Information Libraries, the Government Printing Office, and the Army Signal Corps all fell victim to the subcommittee's inquiries. McCarthy routinely bullied his witnesses and often threatened them with prosecution for contempt of Congress. Unfortunately, many who fell within the senator's cross-hairs lost their jobs and careers or were blacklisted when they refused to cooperate with him.

“[McCarthy] had a stubble of a beard, he leered, he sneered, he had a nasty laugh. He bullied and shouted. He looked evil.”
—John Steinbeck

In 1954, McCarthy accused the U.S. Army of harboring communist spies, a patently outrageous claim. In retaliation, army leaders produced a detailed chronology of the actions taken by McCarthy’s chief counsel Roy M. Cohn to pressure army officials to ensure preferential treatment for one of his own staff members, G. David Schine, who had recently been drafted. Senator McCarthy responded that the army was holding Schine hostage to prevent him from fully investigating communist subversion within the military. McCarthy’s clash with the army led Congress to vote on an investigation into each party’s claims. The resulting Army-McCarthy Hearings were televised nationwide to a large and captivated audience and allowed many Americans to see firsthand the bullying and brutish behavior of the Wisconsin senator.

McCarthy did not come across well on television, and his appeal diminished quickly as it became apparent that he was little more than a bully and a liar. As novelist John Steinbeck observed at the time, McCarthy “had a stubble of a beard, he leered, he sneered, he had a nasty laugh. He bullied and shouted. He looked evil.”

The most famous dramatic showdown of the hearings came in June 1954, when McCarthy unleashed his wild accusations on a young lawyer assisting Joseph Welch, who was representing the army. “Until this moment, Senator,” Welch seethed, “I think I really never gauged your cruelty or your recklessness. . . . Have you no sense of decency, sir?” At this, the gallery burst into applause, and McCarthy looked wounded and confused, asking what had just happened. Just as television had helped him gain notoriety, the medium also brought about his downfall. As Missouri Senator Stuart Symington said to McCarthy, “The American people have had a look at you for six weeks. You are not fooling anyone.”

Meanwhile, Congress moved in for the kill. In a 67–22 vote in December 1954, the Senate formally censured McCarthy for contemptuous behavior and bringing disrepute to Congress. McCarthy was stripped of his committee assignments and faded into political obscurity. He died only three years later, at age forty-nine, from alcohol-related liver disease.

After the excesses of McCarthyism, the U.S. Supreme Court changed the law to give witnesses testifying before congressional committees more protection in order to prevent the abuses of McCarthyism from reoccurring. To this day McCarthy’s name is synonymous with unsubstantiated accusations and innuendo, intolerance, fear-mongering, and browbeating.

Era of intense anticommunist sentiment, sometimes referred to as the Second Red Scare, that dominated American politics and society, resulting in civil liberty encroachments and widespread paranoia. As the Cold War settled in during the late 1940s, Americans became increasingly concerned with the perceived communist threat at home. President Harry Truman initiated his Loyalty Program in 1947, aimed at rooting out communists from the federal government, and politicians in both major parties began vying with one another in an attempt to prove their patriotism and anticommunist mettle. Senator Joseph R. McCarthy, a Wisconsin Republican looking for a political opportunity and instant fame, seized the moment and turned the politics of anti-communism into a high art form, in the process becoming one of the nation's most notorious demagogues. McCarthy did not begin the Second Red Scare, but his name became synonymous with it, and his actions coarsened political discourse, cheapened basic constitutional freedoms, and ruined the careers of many innocent individuals. McCarthyism began in earnest in 1950 and ended in 1954, when McCarthy was finally censured for his reckless activities.

McCarthy, who won election to national office in 1946, had experienced a most uninspiring career in the Senate. Facing the potential prospect of losing his seat in the 1952 elections, he decided to take advantage of the anti-communist atmosphere. Thus, during a February 1950 speech in Wheeling, West Virginia, he claimed—quite dramatically—that he held in his hand a list of 205 communists working in the State Department. This captured the immediate attention of the American press, which gave McCarthy wide coverage, and he soon became a household name.

By employing what one historian has termed “multiple untruths,” McCarthy's mostly bogus claims went largely unquestioned by the press and even by his own political colleagues. He gained the most notoriety through his myriad hearings, during which he accused hundreds of writers, actors, teachers, scholars, and others of having communist sympathies. The outbreak of the Korean War in June 1950 added immense fuel to the fires of McCarthyism. Indeed, it is difficult to imagine McCarthy's enormous popularity had the war not occurred. His antics created a supercharged atmosphere of paranoia and hysteria seldom seen in American society.

For a time, McCarthy was so powerful and so feared that few people seriously scrutinized his allegations or the corrosive results of his hearings, some of which were conducted through the House Un-American Activities Committee (HUAC), although the vast majority were conducted on his own via a Senate subcommittee. By bombarding witnesses with vast amounts of conflicting, unsubstantiated, and ever-changing information, McCarthy evaded serious challenges to his credibility. His clever use of “multiple untruths” combined with his courtship of the American press made it nearly impossible to pin him down on any particular allegation, although in retrospect it may be said that almost none of his charges resulted in the discovery of the “vast communist conspiracy” that he claimed resided in the top echelons of government. McCarthy's accusations resulted in the blacklisting of a host

of Hollywood actors and screenwriters, as most studios feared the repercussions of the senator's indictments. In 1952, McCarthyism had become so entrenched that when the senator implied that General George C. Marshall, chief of staff of the U.S. Army in World War II and an icon of that conflict, had ties to communism, nobody, including General Dwight D. Eisenhower, publicly rebuked McCarthy for such a patently absurd accusation.

The age of McCarthyism had serious ramifications and enormous reach. For example, when a group of teachers in New York came under fire for their alleged "communist leanings," the U.S. Supreme Court upheld the McCarthyites' attacks in *Adler et al. v. Board of Education of the City of New York*. Reviewing the case in 1952, the Court ruled that schoolteachers did not have the right to work on their own terms and that past and present associations were relevant because of teachers' responsibility for shaping the minds of their students. McCarthyism also had a devastating impact on the State Department. McCarthy's accusations against the department's Asian experts left a void in the department's ability to correctly analyze developments in East and Southeast Asia.

In 1954, during the nationally televised Army-McCarthy Hearings in which the Wisconsin demagogue tried to claim communist subversion in the U.S. Army, the subterfuge of McCarthyism was finally laid bare. McCarthy's bizarre allegations, bullying of witnesses, and generally boorish behavior shocked many Americans. The national press finally undermined the senator's credibility, while the reputation and gravitas of the U.S. Senate was seriously undermined. After the hearings were suspended, McCarthy was formally censured by his Senate colleagues and stripped of his committee assignments. The fall of McCarthy in 1954 was as spectacular as his rise, but the long shadows of McCarthyism would not be soon forgotten. Many of McCarthy's victims never did revive their ruined careers, and the McCarthy era serves as a cautionary tale of how intolerance mixed with fear-mongering can chisel away at the most basic of constitutional rights.

McCloy, John Jay
(1895–1989)

U.S. assistant secretary of war (1941–1945), president of the World Bank (1946–1948), and U.S. high commissioner for Germany (1949–1952). Born in

Philadelphia on 31 March 1895, John J. McCloy lost his father at age seven. Propelled upward by his ambitious mother, McCloy attended the Peddie Institute, Amherst College, and Harvard Law School. During World War I he interrupted his studies to serve in the U.S. Army, becoming a captain of artillery and acquiring an internationalist outlook.

In 1924 McCloy joined the prestigious New York corporate law firm of Cravath, de Gersdorff, Swaine, and Moore, rising to partner in 1929. He spent several years representing Bethlehem Steel in the Black Tom case, in which that firm sought and in 1939 eventually obtained \$20 million in damages from the German government for sabotaging an American munitions plant during World War I.

In 1940 McCloy joined the War Department as a consultant to Secretary Henry Lewis Stimson, a lifelong hero and role model. Appointed assistant secretary the following year, McCloy was involved in virtually every major political and military wartime decision until he left that position in November 1945. He staunchly advocated the wartime internment of Japanese Americans and throughout his life would claim that national security reasons had amply justified the consequent infractions of civil liberties. He supported War Department proposals envisaging Germany's economic reintegration into Europe, helping to thwart Treasury Department plans to partition the country and destroy its industry. In 1945 he unsuccessfully opposed employing atomic weapons against Japanese cities, something he always contended had been unnecessary.

McCloy left the War Department in 1945, briefly heading the World Bank from 1946 to 1948. From 1949 to 1952 he was American high commissioner in the Federal Republic of Germany (FRG, West Germany) and was responsible for implementing that country's return to independent statehood. Controversially, he decided to pardon various German industrialists including Alfred Krupp, whom the Nuremberg tribunals had convicted of war crimes, a decision that many ascribed to Cold War expediency. McCloy staunchly backed his longtime French friend Jean Monnet's efforts to bring about West European political and economic integration, considering this essential to heal long-standing Franco-German antagonisms and strengthen Europe economically.

McCloy was president of the Chase Manhattan Bank from 1953 to 1960, after which he returned to law. He remained one of the Wise Men, recognized foreign policy experts whom successive presidents consulted on a wide range of international issues. The journalist Richard H. Rovere even termed him the "chairman" of the American Establishment. From 1961 to 1974 McCloy was a presidential advisor on arms control. Although he did not attend the meeting of senior advisors that counseled President Lyndon B. Johnson

John J. McCloy, who served in several key U.S. posts including high commissioner for Germany (1949–1952). (Yoichi R. Okamoto/Lyndon B. Johnson Library)

in March 1968 to withdraw U.S. forces from Vietnam, by that juncture McCloy was already known to be disillusioned with the American commitment to that country. He died in Stamford, Connecticut, on 11 March 1989.

McGovern, George Stanley

(1922–)

U.S. Democratic Party politician, congressman (1957–1961), senator (1963–1981), and presidential candidate (1972). Born on 19 July 1922 in Avon, South Dakota, George McGovern attended Dakota Wesleyan University during 1940–1942. He then enlisted in the U.S. Army and flew more than thirty combat missions in the European theater of operations as a lieutenant piloting B-24 bombers. He returned to Dakota Wesleyan after the war and graduated in 1946. He earned a PhD in history from Northwestern University in 1953 and returned to Dakota Wesleyan as a professor, remaining there until 1956.

McGovern entered Democratic Party politics in 1953, was first elected to Congress in 1956, and retained his seat until 1961. He lost a senatorial bid in 1960. President John F. Kennedy then appointed McGovern to head the Food for Peace program, an initiative to use U.S. food surpluses to fight world hunger. McGovern resigned this post in 1962 to seek South Dakota's other senatorial seat, winning a narrow election victory that November and taking office in January 1963.

McGovern emerged in the mid-1960s as a leading critic of American Cold War policies. He presciently warned against further American involvement in Southeast Asia, and after a 1965 trip to the Republic of Vietnam (RVN, South Vietnam) he publicly advocated a political rather than military solution to what he viewed as a civil war.

In 1970, along with Senator Mark Hatfield, McGovern introduced the Hatfield-McGovern Amendment that called for the removal of U.S. military forces from South Vietnam by the end of 1971 and for the end of all funding to South Vietnam. The amendment failed to win approval.

McGovern won the Democratic nomination for president in the 1972 election and campaigned as an antiwar candidate. He called for a blanket amnesty for draft resisters and for drastic cuts in military spending. Incumbent President Richard M. Nixon ridiculed McGovern's positions, labeling him a radical and out of touch. Nixon easily defeated McGovern in the November election. In 1980, McGovern was defeated for reelection to the Senate. He retired from active politics in January 1981.

A prolific author and acknowledged expert on world hunger and food problems, McGovern worked with the United Nations (UN) in many capacities. He was awarded the Presidential Medal of Freedom in 2000.

U.S. secretary of defense. Born in San Francisco, California, on 9 June 1916, Robert McNamara was an Army Air Corps officer in World War II, when he used statistical techniques acquired at the Harvard Business School to improve the logistics, planning, and analysis of strategic bombing raids over Europe and Japan. Joining the Ford Motor Company after the war, in November 1960 he was appointed president but left almost immediately when President John F. Kennedy recruited him as secretary of defense.

McNamara moved at once to enlarge his personal staff and centralize decision making in the secretary's office, developing and employing a planning-programming-budgeting system (PPBS) in efforts to enhance cost-effectiveness by eliminating duplication, waste, and overlapping programs

**McNamara, Robert
Strange**
(1916–)

President of Ford Motor Company when he was named U.S. secretary of defense in 1961, Robert McNamara held that post for seven years under Presidents John F. Kennedy and Lyndon B. Johnson. McNamara was one of the principal architects of U.S. policy in Vietnam. (Yoichi R. Okamoto/Lyndon B. Johnson Library)

among the three services and subjecting proposed weapons systems to close cost-benefit analysis. These and other efficiency measures, including proposals to close unneeded military bases and consolidate the National Guard and Army Reserves into one system, provoked fierce opposition from many military men and from powerful congressional and civilian lobbies.

McNamara supported the 1963 Partial Nuclear Test Ban Treaty, which he hoped would facilitate Soviet-American arms limitation talks, even as he supported developing a U.S. second-strike capability, the ability to retaliate ferociously even after absorbing a massive nuclear attack. He also broke with President Dwight D. Eisenhower's emphasis on threatening massive retaliation in all crises to support expanding the military by 300,000 men to develop flexible-response capabilities, a mobile striking force prepared for conventional or guerrilla warfare. Defense Department budgets rose from \$45.9 billion in 1960 to \$53.6 billion in 1964. Another reason for this surge was McNamara's early decision to increase land-based U.S. intercontinental ballistic missiles (ICBMs) to 1,000, a move that may have triggered a similar Soviet buildup and arms race. He publicly defended the nuclear strategy of mutual assured destruction (MAD), arguing that it served as a deterrent to nuclear war.

McNamara made an early mistake in endorsing the disastrous April 1961 Bay of Pigs invasion of Cuba. During the October 1962 Cuban Missile Crisis, however, he was generally credited with devising the relatively moderate naval quarantine response strategy that Kennedy decided to follow. During the Kennedy presidency McNamara's reputation soared, only to fall dramatically and permanently under Kennedy's successor, Lyndon B. Johnson.

Growing American involvement in the Republic of Vietnam (RVN, South Vietnam), which McNamara endorsed, undercut his efforts at rationalization. Military intellectuals later criticized McNamara's decision to permit the demands of the Vietnam War to denude American North Atlantic Treaty Organization (NATO) forces. Under Kennedy, McNamara backed moderate increases in American advisors and military aid programs to Vietnam. Despite his deepening pessimism and personal doubts, however, to Congress McNamara presented an unequivocal picture of unprovoked North Vietnamese aggression. In July 1965 McNamara endorsed requests by General William C. Westmoreland for an increase of 185,000 American troops in Vietnam, but President Johnson rejected as politically unacceptable his accompanying recommendations to call up reserve forces and increase taxes for the war.

To Congress
McNamara
presented an
unequivocal picture
of unprovoked
North Vietnamese
aggression.

McNamara always doubted both the effectiveness and the morality of the heavy U.S. bombing raids, but Johnson and the military chiefs frequently overruled him. By 1966 McNamara had become increasingly pessimistic over the war's outcome, especially when antiwar protests intensified and he became a prime target for ferocious criticism, although as late as mid-1967 he appeared on occasion to believe that the war could be won. Within the Johnson administration, McNamara's growing emphasis upon seeking a negotiated settlement in the war that he still publicly defended decreased his influence, and in late 1967 Johnson rejected his recommendations to freeze U.S. troop levels, cease bombing North Vietnam, and transfer ground combat duties largely to the South Vietnamese Army. McNamara announced his impending resignation in November 1967, leaving three months later to become president of the World Bank.

McNamara remained at the World Bank until 1982, dramatically expanding its lending and development programs. During Ronald Reagan's presidency, McNamara was one of several leading American diplomats who openly sought a pledge by the United States that it would never be the first state to use nuclear weapons. In 1986 he published proposals designed to reduce the risk of conflict. In 1995 he finally published his memoirs and concurrently became heavily involved in continuing efforts by Vietnamese and Western scholars and officials to attain greater understanding of each other's position in the Vietnam conflict. In 2003 he cooperated in producing a documentary, *The Fog of War*, on his experiences from World War II onward.

McNamara remains controversial. His persistent refusal to characterize the American decision to intervene in Vietnam as inherently immoral and unjustified, as opposed to mistaken and unwise, still generates passionate and often highly personal criticism from former American opponents of the war.

**Medvedev, Roy
Aleksandrovich**
(1925–)

Soviet revisionist historian. The twin brother of Soviet geneticist Zhores Medvedev, Roy Medvedev was born in Tbilisi, Georgia, on 14 November 1925. His father, a Red Army officer, was arrested in 1938 during Soviet dictator Josef Stalin's Great Purges and died working in the Kolyma mines.

Drafted into the Red Army in 1943, Medvedev fought on the Caucasus Front. He left the army at the end of the war. During 1946–1951 he studied history in the Philosophical Faculty of Leningrad University. During 1951–1957 he taught history and served as director of a village school. He joined the Communist Party of the Soviet Union (CPSU) in 1952. During 1957–1971 he worked for the Prosveshchenie publishing house. He then was employed by the Academy of Pedagogical Science, but during the early 1960s he became disillusioned and entered the world of antigovernment samizdat (underground publishing).

In 1967 Medvedev published a bombshell book critical of Stalin's rule, published in the West as *Let History Judge: The Origins and Consequences of Stalinism*. For this he was stripped of his CPSU membership. Medvedev has written some thirty-five books, most of which have been translated into other languages. Among his published works are books written with his brother, including *Khrushchev: The Years in Power* (1978). In 1970 he also published, along with dissident physicist Andrei Sakharov, an open letter critical of the Soviet government.

Since 1971 Medvedev has been a freelance journalist and author. He rejoined the CPSU in 1989 and was elected as a member of the Congress of People's Deputies for the 1989–1991 term. He then served as a member of the Supreme Soviet and subsequently was cochairman of the Socialist Party of Russian Workers.

Soviet geneticist and dissident writer. The twin brother of Soviet historian Roy Medvedev, Zhores Medvedev was born in Tbilisi, Georgia, on 14 November 1925. His father, a Red Army officer, was arrested in 1938 during Soviet dictator Josef Stalin's Great Purges and died working in the Kolyma mines. Zhores Medvedev studied at the Timiriazev Academy of Agricultural Sciences and the Moscow Institute of Plant Physiology, earning a degree from both in 1950.

Medvedev is perhaps best known for his attacks on Soviet geneticist Trofim Lysenko and the latter's theory that acquired characteristics might be inherited. Perhaps Medvedev's best-known work, *The Rise and Fall of T. D. Lysenko*, was published in 1969. For this and other activities critical of the government, Soviet authorities confined him in a psychiatric hospital in 1970. He was released only after a campaign mounted by the world scientific community as well as some Soviet scientists. In 1973, while he was on a trip to Britain, Soviet authorities stripped him of his Soviet citizenship, forcing him into exile in London.

A prolific author, Medvedev has written some fifteen books related to agriculture, biochemistry, biology, the history of science, and history, many of them published in the West. He was the first to reveal to the West the Soviet nuclear accident at Chelyabinsk in the Ural Mountains in September 1957. He discussed this in detail in *Nuclear Disaster in the Urals* (1979), and in 1990 he chronicled the Chernobyl disaster as well. Medvedev has also written books with his brother, including *Khrushchev: The Years in Power* (1978). Now retired, Medvedev is a freelance scientist and journalist.

Meir, Golda

(1898–1978)

Golda Meir was a prominent Israeli political leader and the first woman to hold the office of prime minister of Israel (1969–1974). She was forced to resign in the aftermath of the 1973 Yom Kippur (Ramadan) War, which had caught Israeli leaders by surprise. (Library of Congress)

Israeli diplomat, Labor Party politician, foreign minister (1956–1965), and prime minister (1969–1974). Born Goldie Mabovitch in Kiev, Russia (now Ukraine), on 3 May 1898, she immigrated with her family to the United States in 1906. Intent on becoming a teacher, she enrolled at the Wisconsin State Normal School in 1916 but stayed there just one year, never finishing her degree. That same year she became an active member in the Zionist labor movement. There she met Morris Meyerson, whom she married in 1917. Golda Meyerson and her husband immigrated to Palestine in 1921, where she became active in Hista'drut, the Jewish labor movement. During the 1930s and early 1940s Meyerson busied herself working in the Zionist movement. In 1940 she became head of the political department of Hista'drut.

After helping raise funds for Jewish settlement and before Israel's War of Independence (1948), Meyerson twice met secretly with Jordan's King Abdullah in an unsuccessful effort to prevent war. During the war, she traveled to the United States and there raised \$50 million for Israel. Following the war, Israel's first prime minister, David Ben-Gurion, sent her to Moscow as Israel's ambassador, and at his urging she adopted the Hebrew surname Meir (which means to burn brightly).

Elected to parliament in 1949 on the Labor Party ticket, Ben-Gurion immediately appointed Meir minister of labor. She served in that position until 1956, gaining a reputation as a strong and decisive leader, particularly in resettling the hundreds of thousands of Jewish refugees who immigrated to Israel during these years. Meir went on to serve as foreign minister during 1956–1965, working to strengthen Israel's relationship with the United States and with the new nations of Africa, to which she dispatched a series of aid missions. In part because of her efforts, U.S.

arms sales to Israel increased steadily in the 1960s, particularly after the 1967 Arab-Israeli War.

On 26 February 1969, the ruling Labor Party appointed Meir prime minister. She faced daunting challenges, including Israeli national security imperatives and Middle Eastern instability. Her efforts to trade recently conquered land for peace with Egypt, Syria, and Jordan failed, and terrorist attacks and cross-border raids into Israel increased. Skirmishing with Egypt escalated into the War of Attrition, which lasted through August 1970. The following month, Syria invaded Jordan to support a Palestinian rebellion but withdrew its forces after Meir threatened to attack Syria.

Tensions with Egypt and Syria increased steadily until the morning of 6 October 1973, when Israel's director of intelligence warned of an imminent attack. Concerned about Israel's international reputation, Meir rejected proposals to launch a preemptive attack as Israel had done in 1967. That afternoon Egyptian and Syrian forces invaded Israeli territory, driving back the surprised and outnumbered Israeli Army. Following a series of early defeats, Israeli counteroffensives finally subdued both Arab armies, and a U.S.-imposed cease-fire ended the war on 24 October.

Although the war was won, the early setbacks, heavy casualties, and surprise of the invasion tarnished Meir's administration. She resigned on 3 June 1974 and returned to private life. Meir died on 8 December 1978 in Jerusalem.

Turkish politician and prime minister. Adnan Menderes was born in 1899 into a wealthy family of landowners in Aydin, Turkey (then the Ottoman Empire). He attended Izmir American College and later the Faculty of Law at Ankara University, graduating in 1935. During Turkey's Independence War (1919–1922), he participated in the local resistance against the Occupation Forces and later received an honorary medal. In 1930 he founded the local chapter of the Free Party that advocated liberal economic principles. When the party closed down in the same year, he joined Mustafa Kemal Atatürk's Republican People's Party (RPP) and was elected to the parliament on its ticket in 1931.

Menderes, Adnan
(1899–1961)

Although Menderes served in various parliamentary committees, he gained a nationwide reputation only in 1945 when he vehemently criticized the government's proposal to redistribute big landowners' property to the peasants. His ideas sparked interest among the elites who were unhappy with the RPP's single-handed rule. When his opposition found more popular currency, he was expelled from the party along with two other major political figures. In 1946 he cofounded the Democrat Party (DP) that defeated the RPP in the 1950 national election and brought him to the premiership.

Menderes continued to follow the RPP's pro-Western policies. He supported Turkey's participation in the Korean War and its accession to the North Atlantic Treaty Organization (NATO). On the other hand, he tried to establish closer relations with Muslim countries and relaxed the strict controls over the practice of religion. Unlike the RPP governments, his administration advocated economic liberalism and launched various modernization projects especially in agriculture. The projects were mostly financed with international loans that gradually overwhelmed the economy. Despite his decreasing popularity, Menderes remained in power until 27 May 1960, when his government was overthrown and his party was closed down by a military coup d'état.

The DP came to power with the support of peasants, petty merchants, and the middle class, but it soon alienated the secular groups as well as the military with its pro-Islamic and authoritarian policies. Menderes intensified the censorship over the press after the 1954 elections and jailed many journalists who criticized his administration. When the military intervened in 1960, he was arrested and tried for embezzling state funds and corruption, among other charges. At the end of an eleven-month trial, he and two other ministers were executed on the island of Imrali on 17 September 1961 and buried there. In 1990, their bodies were brought to a mausoleum in Istanbul with a state funeral led by Turkish President Turgut Özal.

Mendès-France, Pierre (1907–1982)

French premier (1954–1955). Born in Paris on 11 January 1907, Pierre Mendès-France was a brilliant student. He earned a diploma from the École Libre des Sciences Politiques and a doctor of laws degree from the Faculty of Law

and was admitted to practice law at age twenty-one, then the youngest lawyer in France.

Elected to the Chamber of Deputies as a Radical-Socialist in 1932, Mendès-France was its youngest member. He was next undersecretary for finance in Léon Blum's second government but joined the French Air Force as a lieutenant in September 1939 at the outbreak of World War II. He flew in Syria and in the campaign for France. Briefly imprisoned by the Vichy government following the French military defeat, he escaped abroad and joined the Free French in London. He was a captain in a bomber squadron when, in November 1943, General Charles de Gaulle named him minister of finance in the Free French government at Algiers.

As minister for national economy in the provisional government at the end of the war, Mendès-France wanted to issue new bank notes and freeze accounts as a means to halt inflation, end the black market, and uncover information on profiteering from collaboration with the Germans. He also proposed an austerity program. Many opposed this draconian economic plan, including Finance Minister René Pleven, and in a fateful decision de Gaulle rejected it, whereupon Mendès-France resigned.

Mendès-France later became executive director for France in the International Bank for Reconstruction and Development in Washington, French administrator of the International Monetary Fund (IMF), and representative to the United Nations (UN) Economic and Social Council. Over the next two decades he was often in opposition to government policies, warning against the dangers of drift (*immobilisme*). He was also critical of France's failure to grant independence to the protectorates of Morocco and Tunisia, and he opposed the Indochina War.

In May 1954 the French were defeated in the Battle of Dien Bien Phu, forcing Premier Joseph Laniel from office. Mendès-France assumed the premiership on 18 June. He neither smoked nor drank, his preferred beverage being milk. Even rarer for a French politician was his candid approach to problem solving. His goal was to reinvigorate and modernize the French economy, but he was forced to spend most of his energies on foreign affairs.

On 20 June 1954 Mendès-France announced his intention to end the war in Indochina within thirty days or resign. He won his controversial gamble at the Geneva Conference on the last day of the deadline. With the war terminated, he set in motion events that led to independence for Morocco and Tunisia in 1956. Also controversial was his failure to support the European Defense Community (EDC), which was defeated in the Chamber while he was premier.

French Premier Pierre Mendès-France. A trained economist and leader of the Radical-Socialists, Mendès-France became premier of France in June 1954 following the French military defeat in Indochina. He sought to modernize the French economy but was forced to concentrate on foreign affairs and ended his nation's involvement in Indochina. (Library of Congress)

When he attempted to bring about domestic reform, attacking alcoholism and attempting to modernize the economy by opening it up to free competition, Mendès-France encountered stiff opposition. Hated by many as a Jew, as a reformer, for his opposition to the EDC, and as “the gravedigger of the French Empire,” the Chamber ousted him from power on 5 February 1955. The Radical-Socialist Party then split, and Mendès-France lost his post as party leader.

Although brief, Mendès-France’s premiership was one of the most notable in the history of the Fourth Republic. The failure of his experiment disillusioned many young French reformers and helped pave the way for de Gaulle’s return to power in 1958. Mendès-France remained in the Chamber of Deputies until defeated for reelection in 1958. Reelected in 1967, he was defeated in the Gaullist landslide the following year. Mendès-France died in Paris on 18 October 1982.

Mengistu, Haile Mariam (1937?–)

Ethiopian Army officer and military ruler of Ethiopia (1974–1991). Born around 1937 at Jimma in southwestern Ethiopia to a family of the low-caste Amhara clan, Haile Mengistu was forced by poverty to enlist as a teenager at half-pay in the boys’ unit of the Ethiopian Army. At age eighteen he transferred to the regular army and attended the Holeta Military Academy. Commissioned as a second lieutenant in 1962, Mengistu, as with many Ethiopian officers, was sent for further training to the United States, where he experienced racial discrimination.

Rising through the ranks of the army, Mengistu was a leading figure in the group of officers that overthrew Ethiopian Emperor Haile Selassie in September 1974. Mengistu considered himself a socialist and sought to establish a people’s republic. Elected chairman of the new ruling committee, or Derg, which made him the de facto chief of state, he achieved sole control of the government in February 1977 when he had his political rivals killed.

Mengistu ended the special relationship between Ethiopia and the United States, turning to the Soviet Union for support and aid. This assistance enabled him to consolidate his hold on power, crush a rebellion in Eritrea, and repel the Somali invasion of the Ogaden in 1978. Soviet support also enabled Mengistu to retain power during the turbulent 1980s, when a devastating famine in 1984 drew attention to his failed agricultural policies, rebellion in Eritrea and Tigray flared, and increasing internal unrest prompted challenges to his regime.

After 1989 and the end of the Cold War and termination of Soviet aid, Mengistu's hold on power weakened. Unable to meet the combined challenge of the Eritrean and Tigray People's Liberation Fronts, Mengistu fled into exile to Zimbabwe in May 1991. In 1994 a trial began in Addis Ababa of Mengistu and seventy-two of his former aides concerning the deaths of nearly 2,000 people in the 1977–1978 terror campaign. In a December 2006 verdict, Mengistu, sometimes known as the “Butcher of Addis Ababa,” was found guilty (in absentia), as were all but one of the defendants.

Indian nationalist, champion of the Non-Aligned Movement, and Indian foreign minister (1957–1962). Born on 3 May 1896 in Calicut, the son of a well-to-do lawyer, V. K. Krishna Menon would play a crucial role in the early formulation and implementation of India's foreign policy. He studied law at University College, London, and in 1934 obtained an MA degree from the London School of Economics. In Britain, beginning in 1924, he became an indefatigable lobbyist for Indian independence, working mainly through the India League. It was largely due to his ceaseless lobbying efforts that Britain's Labour Party became sympathetic to the cause of Indian independence.

Menon was a close confidant of India's first prime minister, Jawaharlal Nehru. The Non-Aligned Movement in which he, with Nehru, became an important player was an instrument for negotiated peace settlements in a number of Cold War conflicts. In 1947 Menon became the first high commissioner for India in London, in which post he remained until 1952. Effectively his country's ambassador, he devised a formula that enabled India to be a member of the Commonwealth while being a republic.

**Menon, Vengalil
Krishnan Krishna**
(1896–1974)

V. K. Krishna Menon, head of the Indian delegation to the United Nations (UN), addresses the UN General Assembly on 24 June 1955. Echoing the earlier demands of Soviet Foreign Minister Vyacheslav Molotov, Menon called for prohibition of nuclear weapons and the freeing of all colonies. (Bettmann/Corbis)

As the head of the Indian delegation to the United Nations (UN) from 1952 to 1956, Menon achieved notable success. During the Korean War (1950–1953), the Indochina War (1946–1954), and the Suez Crisis (1956), Menon, in a series of informal discussions with the belligerents' representatives, succeeded to a large extent in bringing about settlements between the opposing parties. He took passionate stances in favor of disarmament and decolonization, causes to which he was deeply committed. He also spoke in favor of admitting the People's Republic of China (PRC) to the UN.

Menon was appointed minister without portfolio with cabinet rank in 1956. In 1957 he won a seat in the lower house of the Indian Parliament, whereupon Nehru appointed him minister of defense, a position he held until 1962 when he resigned in the aftermath of the Sino-Indian War, which was a defeat for India. Menon's career never recovered from this blow, and he occupied himself with academics and law until his death on 6 October 1974 in New Delhi.

Australian Liberal Party politician and prime minister (1939–1941, 1949–1966). Born on 20 December 1894 in Jeparit, Victoria, Australia, Robert Menzies was educated at Wesley College and the University of Melbourne. He entered the Victorian parliament in 1929 and the federal parliament in 1934, becoming prime minister in 1939. Two years later he was forced to resign because of dissatisfaction with his leadership. In 1944 he founded the Liberal Party, which he led to victory in the 1949 federal elections. He was duly elected prime minister, and his second premiership was far more successful than the first. He won a record seven general elections and cast a long political shadow over postwar Australia.

During Menzies' second premiership, which coincided with the chilliest period of the Cold War, Australian troops were dispatched to participate in the Korean War (1950–1953) and then to Malaya, the Australia–New Zealand–United States (ANZUS) Pact and Southeast Asia Treaty Organization (SEATO) agreements were signed, and Australia's involvement in the Vietnam War began. Although Menzies' anticommunism was genuine and, at times, visceral, he skillfully exploited Cold War fears to advance his political agenda. In 1950 he introduced the controversial Communist Party Dissolution Bill. He disliked the illiberal idea of outlawing a political party but believed that the threat to liberalism posed by communism must be eliminated. The legislation was unparalleled in Australian political history, as it reversed the accepted judicial principle that an accused person was innocent until proven guilty. Despite the Australian High Court's subsequent ruling against the act's constitutionality, Menzies persisted in his efforts to stamp out indigenous communism.

In late 1950, with the Korean War raging, Menzies warned darkly of the likelihood of a third world war within three years. In this looming apocalyptic conflict, he prognosticated that the communists would become fifth columnists. In 1951, his government held a national referendum seeking constitutional power to ban the Communist Party and communist activities. The referendum was defeated by a narrow margin.

**Menzies, Robert
Gordon**
(1894–1978)

The issue of Cold War communism again exploded in 1954 when Soviet intelligence operative Vladimir Petrov defected and Menzies appointed a Royal Commission to investigate allegations of Soviet espionage. The Petrov Affair precipitated a split in the Labour Party and led to the formation of the staunchly anticommunist Democratic Labour Party in 1955, the electoral consequences of which kept Menzies' Liberal Party in power for the next seventeen years.

Menzies retired from politics in January 1966. He died on 15 May 1978 in Melbourne.

Mexico

Latin American nation comprising 769,000 square miles, bordered by the United States to the north and Guatemala and Belize to the south. A culturally and geographically diverse nation, Mexico's climate zones range from high desert to tropical jungle, and its population is 90 percent Roman Catholic. During World War II, Mexico cooperated closely with the Allied powers to meet the Axis threat. In fact, Mexico was one of only two Latin American nations to provide combat forces during the war. Mexico even permitted the United States to draft Mexican citizens residing in the United States and to recruit in Mexico itself, resulting in some 250,000 Mexican citizens serving in the U.S. armed forces. After 1945, Mexico, with a population of 22 million, saw its ties to the United States weaken, especially in foreign affairs. Throughout the Cold War, in fact, Mexico often found itself at odds with U.S. foreign policy.

In the postwar world, Mexico wanted to maintain close economic ties with the United States but was not enthusiastic about maintaining close military ties in the name of hemispheric defense. While U.S. policy focused on containing communism, Mexico was more concerned with issues of economic development. Mexico did not view the Soviet Union as a particular threat, and furthermore, the Mexican government boasted a long and successful history of quashing indigenous communist movements. Traditional Mexican foreign policy principles often worked against U.S. Cold War policy. Mexican policy revolved around self-defense, belief in the equality of

all nations, peaceful resolutions to conflicts, participation in international organizations, nonintervention, and the search for counterbalances to U.S. domination.

Mexico's response to the Korean War showcased the divergent concerns of the United States and Mexico in the early Cold War. Mexico supported the U.S. position within the United Nations (UN). Nevertheless, the Mexican government steadfastly resisted U.S. pressure to commit troops to the conflict. The United States wanted Mexico to commit one military division to the war, hoping that Mexican participation would encourage troop commitments by other Latin American countries. The U.S. request was unrealistic, however, given Mexico's limited resources and combat experience. Furthermore, Mexico did not view the Korean War solely through the eyes of communist containment.

Mexico also disagreed with U.S. Cold War policy toward Latin America. Mexico's own history made it generally sympathetic to left-wing revolutions, even when communists played a prominent role. And Mexico's traditional foreign policy principles prevented it from supporting U.S. efforts to block such revolutions. The Mexicans refused to support America's covert Central Intelligence Agency (CIA) operation in Guatemala, which ousted that nation's leader in 1954. Fidel Castro's successful 1959 revolution in Cuba also put Mexico and the United States at loggerheads. Even when Castro proclaimed himself a Marxist-Leninist in 1960, the Mexicans continued to defend Cuba's right to self-determination.

Mexico's independent position in foreign affairs reflected its political stability and economic growth in the quarter-century following World War II. Political stability was the product of the dominant role played in Mexican politics by the Partido Revolucionario Institucional (PRI), the official party that controlled all branches and all levels of government. While other parties were permitted, the only real contests for political power took place within the PRI itself, not between the PRI and other parties.

The Mexican government had committed itself to an economic development policy that after World War II became known as import-substitution industrialization. This policy encouraged domestic industrialization through a variety of measures such as tariffs and import quotas. In the 1940s and 1950s, this approach produced spectacular economic growth known as the Mexican economic miracle.

Although the economic policy had nationalist elements, the role of U.S. investors in the economy increased. At the same time, U.S. influence in cultural affairs became so great that Mexicans began to complain about U.S. cultural imperialism even as they embraced fast-food franchises and other aspects of American popular culture. By the late 1960s, the end of the economic boom and growing demands for democratization forced a rethinking of Mexico's foreign and domestic policies.

In the 1970s, Mexico diverged even further from U.S. Cold War foreign policies. Mexican President Luis Echeverría (1970–1976) wanted Mexico to assume leadership among developing nations and was a major player in establishing the Latin American Economic System, aimed at promoting and

Mexican President Luis Echeverría, shown here at a press conference in Rome on 11 November 1979 after he spoke to the United Nations World Food Conference. (Bettmann/Corbis)

protecting Latin American regional economic interests. In 1973 the Echeverría administration refused to recognize the American-backed military regime in Chile that had overthrown the Marxist Salvador Allende. Mexico also prompted the Organization of American States (OAS) to soften its stance toward Cuba. In 1975 the OAS passed a resolution allowing each member to determine its own relationship with Cuba.

U.S.-Mexican disagreement continued under Echeverría's successor, José López Portillo (1976–1982). By then, Mexico's growing oil industry allowed it to pursue an even more independent foreign policy. Americans and Mexicans parted company once more, this time over U.S. policy in Central America. The 1979 Sandinista victory in the Nicaraguan Civil War had greatly alarmed the United States because of its communist leanings. By January 1981, U.S. President Ronald Reagan's administration transformed Nicaragua into a Cold War litmus test, vowing to overturn the Sandinistas. Much to America's dismay, Mexico began providing the Sandinista government with food, oil, and credit. López Portillo further strained relations with the United States by recognizing the Marxist guerrillas in El Salvador as a representative political force.

Mexico's assertive independence was, however, short-lived. As oil prices declined sharply in the early 1980s, Mexico found itself in the midst of a serious economic crisis by 1982. For the remainder of the 1980s, Mexico's finan-

cial problems dictated closer ties with the United States. As the Cold War came to a close, Mexico looked to the United States to help jump-start and modernize its economy. It thus moved briskly toward linking its economic future with the United States through the North American Free Trade Agreement (NAFTA) and other bilateral and hemispheric economic arrangements.

British counterintelligence agency, charged with preserving internal security. Created in 1909, MI5 played important roles in World War I and World War II against German intelligence networks in Britain. MI5 enjoyed particular success during World War II, when it apparently neutralized or turned all German agents in Britain and helped preserve the security of Operation OVERLORD, the Allies' June 1944 invasion of France.

MI5 was responsible for countering internal subversion and espionage and for directing counterintelligence operations against potential British enemies. As such, there was a long-standing rivalry between MI5 and MI6, the agency charged with gathering overseas intelligence. During the Cold War, MI5 targeted in particular the Communist Party in Britain. Although MI5 enjoyed numerous successes, the defection to the Soviet Union of MI6 agent Kim Philby in January 1963 was a blow to the prestige of British intelligence operations in general. MI5's reputation was itself damaged in the Profumo Affair of that same year, when it was revealed that MI5 had been slow to warn that Minister of War John Profumo and Captain Yevgeny Ivanov shared a common mistress in Christine Keeler. MI5 suffered an additional embarrassment in 1979 when Prime Minister Margaret Thatcher revealed that an MI5 operative, Sir Anthony Blunt, had been a Soviet spy and had probably warned Philby, allowing him to elude arrest and escape to the Soviet Union. MI5 saw its reputation further tarnished by charges that it had worked to undermine

MI5

Harold Wilson's Labour government, believing it to be insufficiently anti-communist, and that its longtime director Sir Roger Hollis was a Soviet mole. Charges against Hollis have never been proven, however.

MI6

Operating under the British Foreign Office, MI6 is the government agency responsible for gathering overseas intelligence relating to British security. It thus corresponds to the U.S. Central Intelligence Agency (CIA). Founded in 1909, MI6 began as the International Section of the Secret Service Bureau. From 1921 it was known as the Secret Intelligence Service. Since the British government refuses to acknowledge its existence, it has no formal public name. During World War II, MI6 had responsibility for the Code and Cypher School at Bletchley Park outside of London that produced radio-derived ULTRA intelligence that was so vital in the Allied victory in the war.

MI6 played a substantial role in the Cold War. The organization was able to turn Komitet Gosudarstvennoi Bezopasnosti (KGB) agent Colonel Oleg Penkovsky, who provided vital intelligence information on the Soviet Union in the early 1960s. Colonel Penkovsky smuggled photographs of some 5,000 secret Soviet documents before he was discovered and executed by Soviet authorities in 1963.

MI6 had its embarrassments as well. In 1963 one of its top agents, Kim Philby, fled to Moscow and was exposed as a Soviet spy and member of the Cambridge Five spy ring. Later it was revealed that Philby, who had been British intelligence liaison officer with the CIA, had been able in 1951 to warn another member of the Cambridge Five ring, Guy Burgess, that he was under investigation. Burgess and yet another member of the group, Donald Maclean, then fled to the Soviet Union. Another embarrassment for MI6 occurred when it sent navy diver Commander Lionel Crabb on a never-explained mission around the hull of the *Ordzhonikidze*, the Soviet ship that had brought Soviet leaders Nikolai Bulganin and Nikita Khrushchev to Britain on a state visit. Crabb's disappearance led to a parliamentary inquiry and the dismissal of a number of MI6 employees.

King of Romania (1927–1930, 1940–1947) and pretender to the throne since 1947. Born in the royal castle at Sinaia on 25 October 1921 to Romania's Crown Prince Carol and Princess Helen of Greece, Michael succeeded his grandfather Ferdinand I as king in 1927, bypassing his father, who had renounced his claim to the throne in 1925 in order to pursue a liaison with the socialite Magda Lupescu. This brief regency ended in 1930 with the return of his father, who engineered his own accession as Carol II, pursuing self-indulgent policies and political gestures and ultimately creating a royal dictatorship in 1938 meant to counter the growing influence of defense minister Ion Antonescu and the fascist Iron Guard. After the Soviet Union's occupation of Bessarabia and the ceding of Transylvania to Hungary, in September 1940 Carol was obliged to abdicate in favor of Michael, then nineteen years old. It was Antonescu, however, who held real power in Romania.

Michael and Helen, now effectively wards of the state, spent most of the war years at Sinaia, visiting the capital only for command figurehead appearances with Antonescu. On 23 August 1944, with the Soviets poised for invasion of Romania, Michael and a sympathetic military element managed a coup that deposed Antonescu and a number of ministers, who soon were turned over to the Soviets. In September 1944 Michael traveled to Moscow to sign an armistice with the Allies, ending the war for Romania and paving the way for the Romanian communists to fully emerge and claim power. By force of will, Michael maintained a presence in Romania until he was pressured to abdicate and sent into exile in December 1947. He has since made his home in Switzerland, working with an American brokerage firm and acting as a goodwill

Michael I, King of Romania (1921–)

Michael I was the king of Romania from 1927 to 1930 and then from 1940 to 1947. Although he severed Romania's relationship with the Axis powers during World War II, he was unable to prevent the nation from coming under communist control after the war. Forced to abdicate the throne in 1947, he moved with his family to Switzerland. (Library of Congress)

ambassador on behalf of Romania since the fall of the regime of Nicolae Ceaușescu.

Middle East

The Middle East was both an important focal point and a flash point of the Cold War, and it remains such today. During the Cold War, Israel and the Arab states fought three major wars. The two superpowers of the United States and the Soviet Union and the former colonial powers of Britain and France, both of which retained important interests in the region, all intervened there. The period also was characterized by rising Arab nationalism in the new, fully independent nation-states that emerged following World War II.

Although some scholars identify the Middle East in cultural terms to include those countries embracing Islam, the Middle East generally is delineated by geography to consist of those countries of southwestern Asia west of Afghanistan and Pakistan. Under this definition, the Middle East includes Turkey, Israel, Syria, Lebanon, Jordan, Iraq, Iran, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates, Oman, Yemen, and Egypt.

Most of the Middle East was dominated by the Ottoman Empire until the end of World War I. Turkey joined the Central Powers at the outbreak of that war and, as a result, in the Treaties of Sèvres (August 1920) and Lausanne (July 1923), it was shorn of its non-Ottoman possessions and was left with Anatolia in Asia Minor and a small portion of the Balkans in Europe, extending from Istanbul on the north side of the Bosphorus and the Sea of Marmora.

Britain and France had both been intensely involved in the Middle East. The British were anxious to control the Suez Canal, safeguarding their imperial lifeline to India. From 1882 the British had controlled Egypt. At the beginning of the twentieth century, oil also became a major consideration in the Middle East. Petroleum was immensely important to the industrialized West, and the Middle East held the world's largest known crude oil reserves.

At the conclusion of World War I, both France and Britain secured Middle Eastern mandates, subject only to the oversight of the League of Nations. In accordance with the Sykes-Picot Agreement reached between the two powers during the war, Britain gained mandates over Iraq and Palestine, while France secured mandates over Syria and Lebanon. In these cir-

cumstances, modern Iraq, Kuwait, Jordan, Syria, Lebanon, and Israel came into being.

One vexing problem had arisen during the war. While the British government had encouraged the Arabs to rebel against Ottoman control (the Arab Revolt), it had also sought to secure the support of world Jewry for the Allied war effort. Indeed, in 1917 the British government had issued the Balfour Declaration, promising a homeland for the Jews in Palestine. Zionists, who sought to secure the creation of a Jewish state in Palestine, now found themselves confronting rising Arab nationalism.

In the decades after World War I, increasing numbers of European Jews settled in Palestine. There they bought land but in the process also displaced Arabs. Caught in the middle and with rising Arab-Jewish communal violence, the British found the situation increasingly difficult to control.

The Middle East was immensely important to the Allies during World War II. In order to secure the Suez Canal, the British established in Egypt their largest overseas base. The importance of Egypt and the canal in British strategic thinking is seen in the fact that at the height of the 1940 Battle of Britain, British Prime Minister Winston Churchill diverted scarce military resources to the Middle East. Persian Gulf oil was also of immense strategic importance to the Allied war effort, and Iran became an important supply corridor for U.S. Lend-Lease aid shipped to the Soviet Union.

World War II had immense impacts on the Middle East. During the conflict, nationalist sentiment intensified among the Arab states of the region, leading to full independence for these states. Another new state also appeared in Jewish Israel. During World War II, Nazi policies resulted in the deaths of some 6 million Jews in Europe, and following the war the survivors determined that the Holocaust would never be repeated. Zionists demanded fulfillment of their long-standing call for establishment of a Jewish state in Palestine.

During and immediately after the war, the British government, which was keenly aware of the effects of these demands on intercommunal violence, tried to inhibit Jewish immigration to Palestine. Indeed, patrolling British destroyers turned back boats filled with Jewish refugees endeavoring to reach Palestine. Soon, armed Jewish groups were fighting the British.

The Holocaust had created an immense sense of moral obligation among the Western powers, especially as the United States and other nations, despite mounting evidence of Nazi persecution, had restricted Jewish immigration in the years immediately before the war. The British government, meanwhile, attempted to work out a partition of Palestine, and when this failed the exasperated British turned the matter over to the United Nations (UN). A UN Security Council agreement to partition the former mandate won the support of the Jews but failed to win acceptance from militant Palestinians and the Arab League. Already, considerable violence had begun as militant Palestinians, confident of eventual victory, attacked Jewish settlements. Hard-pressed financially and unable to maintain order, London took the precipitous decision to abandon its mandate on 14 May 1948. The Zionists immediately proclaimed the independence of the Jewish state of Israel.

The Middle East was immensely important to the Allies during World War II. In order to secure the Suez Canal, the British established in Egypt their largest overseas base.

Israel won immediate recognition from both the United States and the Soviet Union. The U.S. decision was rather obvious. The United States contained the world's largest Jewish population, and many wealthy Jews were quite influential politically. Jews in general were an important voting bloc to be solicited by both Democrats and Republicans. President Harry S. Truman was also deeply moved by the suffering of the Jews during the war, and the Jews had proclaimed their intention to establish a Western-oriented, democratic state. At the same time, the United States maintained close ties with the oil-producing Persian Gulf states. Despite being strongly anti-Israel, these states were tied to the United States financially through their exports of oil. Influential Islamic clergy in these states also found Soviet policies toward religion distasteful.

The initial Soviet position of support for the Jewish state was more complex. Many of the Jews who had settled in Palestine were of Russian extraction, and the first agricultural settlers were committed socialists. The Soviets, who had suffered so much in the war at the hands of the Nazis, also identified with what the Jews had experienced. In addition, the Soviets hoped to supplant British influence in the region. The Soviets had actively been seeking a port on the Mediterranean and in the years immediately after World War II brought immense pressure on Turkey in an effort to control the straits connecting the Black Sea with the Mediterranean. They also sought to secure the province of Azerbaijan in northern Iran that they had occupied during the war.

The United States sought to counter Soviet pressure in the region. When Britain announced in 1947 that it could no longer support the Greek government in its war with communist insurgents, the United States took up the gauntlet. In the 1947 Truman Doctrine, President Truman proclaimed U.S. aid for both Greece and Turkey and pledged U.S. support for those countries fighting communist insurgents and outside pressures. The United States also maintained a strong naval presence in its maintenance of the Sixth Fleet in the Mediterranean.

The Israeli declaration of independence was, in any case, immediately followed by the first Arab-Israeli War (1948–1949). Although vastly outnumbered, the Israelis were much better disciplined and organized. They ultimately prevailed over their divided opponents, who had conflicting war aims. At the end of the war, Israeli forces succeeded in driving back the armies of Egypt, Jordan, Iraq, and Syria. In the process, many tens of thousands of Palestinians fled, and the Israelis forced others to leave.

The rise of President Gamal Abdel Nasser in Egypt dramatically changed the Middle East. Nasser was a committed Arab nationalist with Pan-Arab aspirations. His goals greatly alarmed Israeli leaders, for the security of the Israeli state had rested in large part on Arab division. Among his accomplishments, Nasser secured a final British departure from Egypt. He also gained a pledge of U.S. financial support for construction of an immense dam on the Nile at Aswan. But when the West rejected his requests for modern weaponry, the Egyptian leader turned to the Soviet bloc for assistance. The United States feared that this would upset the arms balance in the Middle

East to the detriment of Israel. Nasser's subsequent conclusion of an arms deal with Czechoslovakia led to the withdrawal of U.S. assistance for the Aswan Dam project. The Soviets stepped in to provide technical assistance, but to pay for the dam project Nasser nationalized the Suez Canal in 1956, which had been owned by a private company in which the British government was the largest stockholder.

Nasser's decision to nationalize the canal had immense repercussions, ultimately bringing the British government into a secret arrangement developed by the French and Israeli governments to topple him from power. The Israelis were convinced that as soon as Nasser had integrated modern Soviet weapons into its armed forces, Egyptian forces would invade Israel. Indeed, he had already sponsored terrorist raids across the border into Israel and had closed the Strait of Tiran to Israeli shipping. The secret plan developed by the Israelis, French, and then the British called for Israel to land paratroopers at the canal and also advance into the Sinai. The British and French would then demand that both sides pull back and allow their forces to occupy the canal zone. If, as expected, Egypt refused, British and French forces would invade.

The Suez Crisis was one of the major events of the Cold War. Although Egypt did indeed reject the Franco-British ultimatum and British and French troops attacked Egypt, the three invading powers were soon forced to withdraw under heavy U.S. pressure and Soviet threats. An angry President Dwight D. Eisenhower, caught by surprise by the allied move, insisted on a unilateral withdrawal. Far from toppling Nasser, the Suez Crisis strengthened his position both in Egypt and throughout the Middle East. Britain was the biggest loser. Soviet prestige soared, and the United States also gained credibility, although it continued to be hampered by its unqualified support of Israel, which emerged as a big winner. The UN established observers along the Israeli-Egyptian border, and the blockade of the Strait of Tiran came to an end.

The Soviet Union, meanwhile, allied itself closely with Arab nationalism against the West and Israel. Thanks to expanded Soviet military assistance, by 1966 the Egyptian armed forces appeared to be sufficiently strong to threaten Israel. This fact, the signing of a defense pact between Egypt and Syria in 1966, and increasing Palestinian attacks on Israel from the neighboring Arab states all greatly alarmed Tel Aviv. Then in mid-May 1967, Nasser ordered Egyptian troops into the Sinai Peninsula and demanded the concentration of UN observers there, leading to their withdrawal. Convinced that the Egyptians would soon attack, Israel struck first.

After securing the approval of President Lyndon Johnson's administration in the United States, the Israelis launched a devastatingly effective air strike on 5 June 1967. It was carefully timed so as to destroy the bulk of the Egyptian Air Force on the ground. The Israelis also moved against the Syrians and reluctantly against Jordan, for King Hussein decided to enter the war. The resulting Six-Day War changed the map of the Middle East. Israel took the Sinai Peninsula from Egypt, the West Bank of the Jordan River and East Jerusalem from Jordan, and the Golan Heights from Syria.

The Soviets threatened intervention but in the end did nothing, which greatly diminished their prestige in the Arab world. French President Charles

Overtured vegetable truck on the road to Beer Sheva (Beersheba). The driver was slightly wounded when the truck was fired upon by fedayeen, 7 April 1956. (Israel Government Press Office)

de Gaulle, angered over the preemptive Israeli strike, did cut off French military assistance to Israel, however. The United States, which had done little to assist Israel in the war, nonetheless positioned the Sixth Fleet in the Eastern Mediterranean as a warning to the Soviets, and shortly after the war, the United States substantially increased its military and economic assistance to Israel. The Soviets, meanwhile, made good the military losses sustained by the Arab states.

In 1964, Palestinian nationalist Yasir Arafat had formed the Palestinian Liberation Organization (PLO) as an umbrella organization for disparate Palestinian groups fighting Israel. It began launching terrorist raids of its own with the aim of eliminating the Jewish state. The bulk of the PLO attacks came from Jordan, and soon there was virtually a state within a state. In September 1970 King Hussein moved to expel the PLO, prompting military intervention on the part of Syria, a staunch PLO supporter. Jordan secured pledges of support from Britain and the United States but was able to both expel the PLO and hold off the Syrians without outside assistance.

Nasser died in September 1970 and was followed as president of Egypt by Anwar Sadat, who concluded that the United States was the only country capable of forcing Israel into a negotiated settlement. He therefore ordered Soviet military advisors to leave Egypt, and Soviet bases there closed. These moves failed to win any concessions from either the United States or Israel,

however. Sadat then concluded that only a renewal of the fighting could force a settlement. To enhance the possibility of success, he concluded a secret understanding with Syria for a joint surprise attack on Israel.

The Israeli government was indeed caught completely unawares by the Egyptian attack of 6 October 1973, which occurred at the start of Yom Kippur. Elaborate Egyptian deceptions masked their preparations. What became known as the Ramadan War, the Yom Kippur War, or the War of Atonement began with an Egyptian crossing of the Suez Canal. The Egyptians then set up defensive positions. Their surface-to-air missile (SAM) sites on the other side of the canal devastated reacting Israeli aircraft, and their new handheld Soviet antitank missiles took a heavy toll from responding Israeli armor. In the north along the Golan Heights, Syrian forces almost overran severely outnumbered Israeli defenders. Israeli forces rallied on both fronts, and by the time a cease-fire was declared they had driven the Syrians back and penetrated Syria itself almost to Damascus. On the Southern Front against Egypt, Israeli forces crossed the Suez Canal and were threatening to sever the supply lines to the Egyptian Third Army. A complete victory by either side was not acceptable to the United States or the Soviet Union, and under their joint pressure a cease-fire came into effect, followed by a military withdrawal.

One important side effect of the Ramadan War was the Arab oil embargo of 1973–1974. The major Arab oil-producing states sided with Egypt and Syria and cut off oil shipments to any nation supporting Israel, including the United States. This action exposed the dependence of the Western nations, especially Western Europe and Japan, on Arab oil and greatly strengthened the influence of the Organization of Petroleum Exporting Countries (OPEC) over both the supply and pricing of petroleum. Huge increases in oil and energy prices, combined with shortages of each, badly crippled the West's already fragile economy. But increases in the price of oil gave the oil-producing states of the Persian Gulf vastly increased wealth as well as expanded influence. These states contributed considerable sums to support the Palestinians and directly or indirectly supported Palestinian terrorist attacks on Israel. The oil embargo also increased the world influence of the Soviet Union, the world's largest oil-producing nation.

In November 1977, Sadat took a major step toward reaching a settlement with Tel Aviv by visiting Israel. His initiative ultimately resulted in the 1978 Camp David Accords, which were followed the next year by a comprehensive Egyptian-Israeli Peace Treaty. The administration of President Jimmy Carter in the United States hoped that the treaty would lead to a peace agreement between Israel and Jordan, but the ensuing widespread condemnation of Sadat in the Arab world and his assassination in 1981 largely prevented this. Meanwhile, the hard-line Arab states opposing any accommodation with Israel moved closer to the Soviet Union.

At the same time, increasing Palestinian terrorist attacks from Lebanon led Israel to invade southern Lebanon and establish a defensive zone there. Syria, meanwhile, sent its forces into northern Lebanon. The Syrians subsequently took control of that country, which was sharply divided between Muslim and Christian populations.

Ayatollah Ruhollah Khomeini returns to Tehran on 3 February 1979. He had returned to Iran from exile two days earlier to take control of the revolutionary government. (Bettmann/Corbis)

The oil-producing states, although they provided financial support to the Palestinians and states opposing Israel, took no military action of their own. This enabled them to maintain friendly relations with the West, especially the United States. This situation was particularly true with Iran, ruled by the pro-Western Shah Mohammad Reza Pahlavi. Soviet pressure on Iran following World War II and a close alliance between the Soviet Union and Iraq, Iran's regional rival, also served to cement a bond with the United States. Iran and Iraq were at loggerheads over the Shatt al-Arab waterway that separated the two nations. The shah, however, was increasingly unpopular and out of touch with the aspirations of his people. Opposition to the shah was centered in Islamic fundamentalists opposed to his Westernization and his close ties with the United States. In January 1979 the shah was forced to flee Iran, and the next month the Ayatollah Ruhollah Khomeini returned from exile to establish an Islamic fundamentalist state, which was violently anti-American. In November 1979 Iranian militants overran the U.S. embassy in Tehran and seized 160 Americans as hostages, inaugurating a crisis that probably cost Carter reelection as president.

In 1979 Soviet forces invaded neighboring Afghanistan. The next year Iraq invaded Iran, beginning an eight-year-long (1980–1988) protracted and immensely costly conflict for regional dominance. The war ended in stalemate, but Iran remained committed to the spread of Islamic fundamentalism in the region.

In December 1988, the PLO publicly accepted the existence of Israel, increasing pressure on both sides for a resolution of the Arab-Israeli conflict. The Cold War ended, however, without formal achievement of this goal.

In 1990, believing that the United States would not intervene, Iraqi dictator Saddam Hussein sent his forces into Kuwait and took over that state. Iraq had long claimed Kuwait as a province, and Saddam was angered over slant-drilling into a large Iraqi field by Kuwait as well as by excessive Kuwaiti oil production that tended to drive down the price of oil. Iraq wanted the price of oil as high as possible in order to pay off its massive debts from the Iran-Iraq War. U.S. President George H. W. Bush was convinced that Iraq would soon pressure Saudi Arabia, the world's largest oil producer, so he put together a coalition of powers that ultimately drove Iraq from Kuwait. Bush ended the war early, however, with the result that Hussein remained in power. This ultimately led to a new war with Iraq a decade later.

The Cold War ended with the Middle East as one of the most important areas in the world, not only because of the still-simmering Arab-Israeli feud but also because of the increasing importance of oil in the world economy.

When the Clement Attlee government came to power in Britain in July 1945, British Foreign Minister Ernest Bevin moved to end British colonial rule in much of the Middle East. To that end, he hoped to replace older British protectorate agreements with Iraq, Jordan, and Egypt with bilateral treaties that would reduce British commitments without giving up influence in the region. Talks for new agreements were frustrating, however. The Iraqis backed out at the last minute and did not sign the 1947 Portsmouth Agreement. The Egyptians were also unready to accept Britain's new terms and demanded the removal of British troops. While the Iraqi rejection did not pose any immediate difficulties for the British, Egypt's demand jeopardized Britain's main stronghold in the Middle East.

Britain's inability to reach a bilateral defense agreement with Egypt led Britain and the United States to promulgate regional defense organizations instead. The latter included the Middle East Command (MEC) in October 1951 and the Middle East Defense Organization (MEDO) in 1953. It was believed that the organizations would commit Egypt to regional defense without subjecting it to British dominance. Nevertheless, the Egyptian monarchy and successive revolutionary regimes rejected any formal military link with the West.

Efforts to create a regional defense structure with Egypt at its core ended in May 1953, following a visit by U.S. Secretary of State John Foster Dulles to the Middle East. Discussions with regional leaders—mainly with Egyptian officials—convinced Dulles that there was no chance of including Egypt in a regional defense organization. He suggested that a different country should be the linchpin of the organization, and Iraq seemed a viable alternative.

Middle East Regional Defense Organizations

At the time, Turkey and Iraq were negotiating a mutual defense agreement. Cultural ties between Iraq and Turkey made such a pact a natural union. With tacit encouragement from Washington and with the understanding that the parties to a regional defense organization would be rewarded with military aid, the two governments agreed to expand the treaty and to use it as a platform from which to launch a regional defense organization that would include Turkey, Pakistan, and Iraq. Turkey and Pakistan had signed a defense agreement earlier, so the proposed regional defense organization was a logical extension.

In February 1955 Iraq signed a defense agreement with Turkey, the initial step toward the establishment of what became known as the 1955 Baghdad Pact, which included Iraq, Turkey, Iran, Pakistan, and Great Britain. Washington thereupon announced that it would strengthen the Iraqi Army, which stood on the front line against the Soviet Union.

Iraq took a leading role in the initiative, and not simply from fear of the Soviets. It agreed to take part in a Western-oriented regional defense agreement so as to claim regional dominance over Egypt. At the time, Iraq was the only rival to Egypt's leadership in the Arab world. Indeed, the Iraqis deeply resented the establishment of the Arab League under Cairo's auspices and saw an Iraqi-based defense organization, the headquarters of which was to be located in Baghdad, as an effective counterbalance to Egypt's push for regional hegemony.

Egyptian President Gamal Abdel Nasser did perceive the pact as a challenge to Egypt's position in the Arab world and was still reeling from criticism over the "humiliating clause" in the October 1954 Anglo-Egyptian agreement that would allow British troops access to Egyptian bases in case of war. Thus, the Egyptian leader fought back by suppressing opponents and adopting a strong Pan-Arab line. He devoted considerable energy to preventing any expansion of the Baghdad Pact. Waving the banner of Pan-Arab nationalism and resorting to manipulation and even violence, Nasser spared no effort to ensure that other Arab states did not come under the Iraqi sphere of influence.

Nasser's struggle against the Baghdad Pact stirred trouble for the pro-Western Jordanian and Lebanese regimes. His agitation reached its zenith in July 1958 when the Iraqi regime was toppled by anti-Western elements, and the Jordanian and Lebanese regimes faced a similar danger. The United States and Britain were determined to prevent Jordan and Lebanon from falling under Nasser's influence, and American and British forces were sent to Beirut and Amman, respectively, in July 1958 to prop up the pro-Western governments. In March 1959 the new Iraqi republic withdrew from the Baghdad Pact, which then became known as the Central Treaty Organization (CENTO). In the end, however, Nasser had his way, as the Baghdad Pact lost its main pillar, Iraq, and never expanded in the way that the United States and Great Britain had envisioned.

Japanese conservative politician and prime minister (1974–1976). Born the son of a wealthy landowning family in Donari, Japan, on 17 March 1907, Miki Takeo studied in the United States before graduating with a law degree from Meiji University in 1937. That same year, he was first elected to the Japanese Diet (parliament). Because of his strong opposition to the war with the United States, he was able to continue his political career once the war ended in August 1945.

Referred to as a “Balkan politician” because he headed a small Liberal Democratic Party (LDP) faction, Miki adopted a dovish position within the ruling conservative party. He held many key posts, among them minister of communications (1947–1948) and minister of transportation (1954–1955).

Miki Takeo
(1907–1988)

Miki Takeo, prime minister of Japan, 1974–1976. (Bettmann/Corbis)

While serving as director general of the Economic Planning Agency (June–December 1958), he disagreed with the revision of the United States–Japan Security Treaty and resigned. He was minister of international trade and industry during 1965–1966 and minister of foreign affairs during 1966–1968. Because of Miki's reputation as a politician of great integrity, when Prime Minister Tanaka Kakuei was forced to resign because of criticism of his fiscal policies, Miki was chosen to replace him in December 1974.

When Miki became prime minister, the U.S.-Soviet détente and improved U.S. relations with the People's Republic of China (PRC) had greatly reduced the likelihood of a major war that might have involved Japan. Nonetheless, the Japanese sought to strengthen their defensive posture. Thus, in 1976 the Miki government announced the National Defense Program Outline, a policy designed to strengthen the Japanese armed forces to a level at which they could repel a limited attack without external aid. At the same time, the government mandated a limit on Japan's defense budget spending at 1 percent of gross national product (GNP).

In September 1976, a defecting Soviet fighter pilot landed his MiG-25 fighter aircraft in Hokkaido. Japan allowed U.S. military experts to inspect the plane before returning it to the Soviet Union, an action that greatly strained Japan's relations with Moscow. Also, during Miki's tenure, no substantial progress was made toward a peace treaty with the PRC. Miki was forced to resign in December 1976 after a power struggle within the LDP. He died in Tokyo on 14 November 1988.

**Mikołajczyk,
Stanisław**
(1901–1966)

Polish politician, prime minister of the Polish government-in-exile (1943–1944), and head of the Polish Peasant Party (1945–1947). Born on 18 July 1901 in Holsterhausen, Germany, to peasants who had immigrated to Germany, Stanisław Mikołajczyk's family returned to Poland after his birth, where he attended primary school and completed several courses in agricultural science before dropping out of school. Drawn to politics early, he was an active

member of the Peasant Party from 1924, became a protégé of party leader Wincenty Witos, and was an organizer of the Peasant Youth Union. In 1930 Mikołajczyk became a deputy in the Sejm (Diet), and during 1933–1939 he served as deputy chairman of the Peasant Party’s executive committee, all the while championing the cause of peasant farmers.

Following the defeat of Poland by Germany in September 1939, Mikołajczyk fled first to France and then to Great Britain, where he became one of the leading émigré politicians. In early 1941 Władysław Sikorski, Polish prime minister-in-exile, named Mikołajczyk deputy premier. When Sikorski died in July 1943, Mikołajczyk succeeded him. Although he attempted to follow Sikorski’s lead in cultivating cordial relations with the Soviets, Mikołajczyk was ultimately unsuccessful in this endeavor. He did not support Soviet leader Josef Stalin’s attempt to set postwar Polish borders along the Curzon Line and refused to join the Moscow-backed Lublin Polish government, which had been set up in July 1944. Mikołajczyk nonetheless continued to seek compromise with Stalin, which drew the ire of his opponents in his own government. In November 1944, Mikołajczyk resigned his position.

In the spring of 1945 in a bid to bring a democratic regime to Poland, Mikołajczyk agreed to participate in the communist-dominated Provisional Government of National Unity, serving as deputy prime minister and minister of agriculture. In August 1945, he founded the Polish Peasant Party, which soon emerged as the dominant party in Poland. But the Soviet-backed Provisional Government saw to it that this party never gained an electoral foothold, first by postponing parliamentary elections and then by engaging in massive electoral malfeasance in the rigged January 1947 elections. Realizing that he faced possible imprisonment after the elections, Mikołajczyk surreptitiously left Poland in October 1947 and settled in the United States, where he lived until his death in Washington, D.C., on 13 December 1966.

Soviet politician, Politburo member (1926–1966), deputy prime minister (1937–1955), and chairman of the Presidium of the Supreme Soviet (1964–1965). Born the son of a carpenter in Sanain, Armenia, on 25 November 1895,

**Mikoyan, Anastas
Ivanovich**
(1895–1978)

Deputy Prime Minister of the Soviet Union Anastas I. Mikoyan during a visit to the United States in 1959. (Ed Clark/Time Life Pictures/Getty Images)

Anastas Mikoyan briefly attended a seminary in Tiflis (Tbilisi) before aborting his clerical career to join the revolutionary Bolshevik Party in 1915. After participating in underground party work in Baku, where he narrowly escaped execution, he held party assignments that dispatched him to Nizhny Novgorod and the northern Caucasus, where he fought in the Russian Civil War.

In 1922 Mikoyan was elected to the party's Central Committee. A supporter of Josef Stalin, in 1926 Mikoyan became a candidate member of the Politburo and was appointed commissar for foreign trade. In this post, he raised hard currency for the fledgling Soviet economy in part by selling Russian art treasures to the West. In 1934 he headed the Commissariat of Food Production, introducing modern methods to the industry.

Mikoyan became a full member of the Politburo in 1935 and was deputy prime minister during 1937–1955. Although he played a role in Stalin's show trials in 1937, Mikoyan managed to escape the Stalinist purges himself. During World War II, Mikoyan supervised the procurement and transportation of supplies.

Following World War II, still in the Ministry of Trade, Mikoyan's political star waned, but he was sufficiently trusted to be sent to meet secretly in January 1948 with communist leader Mao Zedong, then on the verge of full power in China. There are indications that Stalin believed Mikoyan was plotting to unseat him and that Stalin was planning Mikoyan's death when the Soviet leader died in 1953.

In the post-Stalin succession struggle in 1953, Mikoyan salvaged his political career by lending his support to Nikita Khrushchev. Even before Khrushchev's denunciation of Stalin in 1956, Mikoyan often referred to the "evils" of Stalin's dictatorship. In 1957 Mikoyan supported Khrushchev against the challenge from the so-called antiparty group and soon became one of Khrushchev's closest advisors. In autumn 1962 Khrushchev dispatched Mikoyan to Cuba, where he had the unenviable task of persuading Cuban President Fidel Castro to accept the terms on which the Cuban Missile Crisis of October 1962 was ended.

In July 1964 Mikoyan was elected chair of the Presidium of the Supreme Soviet, making him titular head of state. As such, he timidly supported Khrushchev's ouster from power in October 1964. With new leadership headed by Leonid Brezhnev, Mikoyan found himself increasingly isolated, and he relinquished his chairmanship in December 1965. He retired from the Politburo in April 1966, although he remained a member of the Communist Party Central Committee until 1976. Mikoyan died in Moscow on 21 October 1978.

The Cold War military balance was as much a comparison of U.S. and Soviet military capabilities as it was a reflection of perceptions, ideas, and assumptions, fueled by the necessity of protecting not just the physical security of a nation but also its core values and way of life as well. This balance, moreover, was an evolutionary process driven by the manner in which leaders on both sides of the Iron Curtain perceived and responded to events on the world stage. While much is known about the decision-making dynamics within the American national security establishment during the Cold War, the same cannot be said for the Soviet Union, even after Russian archives were opened after the end of the Cold War.

The Cold War military balance was defined by three phases. The first phase, marked by the U.S. nuclear monopoly, was ushered in by the use of atomic weapons against Japan in August 1945 that were employed to influence the Japanese decision to surrender. The fact that the beginning of the Cold War coincided with the dawn of the nuclear age ensured that the history of the two would become inextricably intertwined.

As the postwar period progressed, relations between the United States and the Soviet Union rapidly deteriorated. From the Soviet perspective, American insistence upon free elections in what it saw as its sphere of influence in Central and Eastern Europe, the threat of capitalist encirclement by the North Atlantic Treaty Organization (NATO) in 1949, and the American nuclear monopoly combined to portray a hostile picture of the West. In much the same way, Western democracies perceived a growing Soviet threat to liberal capitalist democracies around the globe. Communist threats to both Greece and Turkey in 1947, the communist coup in Czechoslovakia in 1948, and the Berlin Blockade (1948–1949) all seemed to confirm that the Soviets were intent upon world domination.

Yet in spite of this growing hostility, U.S. officials were reasonably confident that as long as the United States held the nuclear monopoly, the threat of Soviet military aggression against core interests was minimal. In the immediate postwar period, this monopoly proved vital in counterbalancing the Soviet Union's massive conventional military advantage, itself a by-product of the war against Germany on the Eastern Front. This correlation of forces ensured that relations between the two Cold War powers remained relatively stable.

August 1949, however, marked a crucial shift in the Cold War military balance. On 29 August the Soviet Union detonated its first atomic weapon,

Military Balance (1945–1990)

years ahead of most predictions. U.S. national security planners came to believe, moreover, that by 1954 the Soviets would possess sufficient nuclear capacity to launch a devastating strike against the United States. With its possession of nuclear weapons, the Soviet Union could initiate a conventional assault on Western Europe and could be relatively secure in the knowledge that a U.S. nuclear response would be thwarted by the threat of a nuclear counterresponse from the Kremlin. If the United States and NATO chose not to increase their conventional forces, Soviet aggression after 1954 would force either free world appeasement or nuclear devastation. This urgency, combined with the outbreak of the Korean War in June 1950, underpinned President Harry Truman's response to the National Security Council's NSC-68 report, which called for a massive conventional and nuclear military buildup. This policy, driven by the shattering of the U.S. nuclear monopoly and the Korean War, ushered in the second phase of the Cold War military balance: American nuclear superiority.

The underlying fear of the consequences that accompanied Soviet nuclear capabilities in the absence of an adequate conventional deterrent defined the Truman administration's new post-1950 defense posture, which redressed the military balance through a vast conventional rearmament program both at home and in Western Europe. Because conventional forces were generally more expensive than nuclear weapons, the Korean War stalemate and the American preoccupation with rearmament led to budget deficits, inflation, rigid governmental controls on prices and wages, materials shortages, and what many considered to be the beginnings of an American garrison state. Capitalizing on these difficulties, Republican presidential candidate Dwight D. Eisenhower based his 1952 election platform on a more cost-effective national security posture. The Korean War seemed to provide ample evidence that the Truman administration's approach was based too heavily on reaction rather than prevention, that it gave too much initiative to the Soviet Union, and that it was not economically sustainable in the long run. Eisenhower, therefore, adopted the so-called New Look defense strategy, predicated on massive retaliation.

Eisenhower administration officials believed that the only way the Soviets could be deterred was to create the perception that the United States would initiate a nuclear response to any level of Soviet aggression, ranging from a limited conventional incursion against a peripheral interest to a full-scale nuclear strike against the United States. To further heighten its perceived credibility, massive retaliation was deliberately cloaked in ambiguity. It was believed that Soviet leaders would refrain from aggression if it was unclear whether an American nuclear response would be automatic. All of this, moreover, could be accomplished at a lower cost than the programs prescribed by NSC-68, meaning, in the words of Defense Secretary Charles Wilson, "more bang for a buck." As a result, the Eisenhower administration invested deeply in building the U.S. nuclear stockpile, although it was not successful in bringing down defense spending in any major or enduring way.

Similar to the way in which the Korean War shaped the perceptions of NSC-68 was the way in which the Soviet launching of *Sputnik 1* (October

Military parade through Red Square in Moscow, 1963. (Library of Congress)

1957) impacted massive retaliation. Because *Sputnik 1* was propelled into space by an intercontinental ballistic missile (ICBM), it demonstrated that the American mainland was vulnerable to direct missile attack. This event, when coupled with the knowledge that the Soviet nuclear stockpile had increased significantly since 1949, forced many defense strategists to rethink the wisdom and prudence of massive retaliation. Although Eisenhower's policy was marginally more cost-effective, the ambiguity upon which much of the deterrent value was based also carried with it a heightened sense of brinkmanship and thus the possibility of nuclear war through miscalculation.

Eisenhower's political opponents, backed by several influential figures within his own military establishment, began calling for a more balanced military capability with a de-emphasis on nuclear weapons. By increasing NATO's conventional strength, the United States and its allies would, in response to Soviet aggression, be able to forgo the unpalatable choices of either nuclear annihilation or appeasement. In what was almost a direct throw-back to NSC-68 and the Truman administration, John F. Kennedy's nomination as the Democratic presidential candidate saw him adopt the new doctrine of flexible response as the basis for national security policy.

Flexible response was put into action in 1961 following Soviet Premier Nikita Khrushchev's ultimatum to end Western access rights to West Berlin. Conscious of the correlation of forces that in conventional terms were decidedly in favor of the Soviet Union and acutely aware that NATO's response to Soviet aggression lay in either humiliation or all-out nuclear war, Kennedy employed the sword and shield concept by increasing the presence of tactical nuclear weapons and initiating a significant buildup of conventional forces in Europe. In turn, Khrushchev quietly dropped his ultimatum.

This shift toward flexible response played a significant role in the Cuban Missile Crisis of October 1962. It meant that NATO's conventional deterrent and its arsenal of tactical nuclear weapons gave time and pause to the escalatory process, maximized the possibility of a diplomatic settlement, and minimized the threat of war by miscalculation. Although the conflict was resolved peacefully, it made clear the dangers of brinkmanship and the threat of full-scale nuclear conflict. With these lessons fresh in their minds, both the United States and the Soviet Union began to seek a Cold War *détente*. The Limited Test Ban Treaty, signed in August 1963, imposed mutual restraint on large-scale atmospheric nuclear tests, and perhaps most significantly, a direct hotline was established between the White House and the Kremlin.

By the beginning of the 1970s, the Cold War military balance entered its third and final stage: rough nuclear parity. As the decade progressed and as both the United States and the Soviet Union increased their nuclear stockpiles, it became clear to both sides that a nuclear war was unwinnable. This underlay the concept of mutual assured destruction (MAD) and, paradoxically, the belief that mutual vulnerability was the key to stability and deterrence. This balance of strategic nuclear parity coupled with the massive conventional forces of the Warsaw Pact and the sword and shield concept embraced by NATO gave rise to the Strategic Arms Limitation Talks (SALT) that began in November 1969 and set the tone for much of the rest of the Cold War.

Yet for a short time it seemed that this balance would be upset yet again. Viewing *détente* as akin to appeasement, in the early 1980s President Ronald Reagan's administration believed that stability lay not in mutual vulnerability or assured destruction but rather in enhanced defense against a nuclear first strike. With this in mind, in 1983 Reagan announced the Strategic Defense Initiative (SDI), a vast scientific and military program aimed at developing a new generation of space-based antiballistic missile (ABM) defenses. The objective of SDI was to create a multilayered defensive shield in space that could destroy hundreds of incoming ballistic missiles through electromagnetic guns and lasers mounted on satellites. It was a system that carried with it immense cost and invited harsh criticism that such a system could never be employed or perfected.

Fearing that it would be at a critical disadvantage in the event of a nuclear war, the Soviet Union responded with its own version of SDI and in doing so triggered a renewed arms race. Significantly enough, however, this occurred at the same time that the Soviet economy began to flounder. It quickly became apparent to Soviet President Mikhail Gorbachev that the

An artist's rendering of the Homing Overlay Experiment (HOE), June 1984. Part of the Strategic Defense Initiative (SDI), it was to intercept and destroy incoming missiles aimed at the United States. A fifteen-foot radial net opens to destroy the incoming warhead by impact at more than 15,000 feet per second. (U.S. Department of Defense)

Soviet economy was unable to sustain high defense spending. Consequently, he moved to implement political and economic reforms that ultimately led to the dissolution of the Soviet Union in 1991 and thus the end of the Cold War military balance.

The American victory in the Cold War, no matter how Pyrrhic, had a lingering effect on the post-Cold War world. For many years, the West faced a marked vulnerability in conventional strength, yet with the demise of the Soviet Union and the ensuing revolution in military affairs, the United States found itself in the position of having overwhelming conventional superiority. Coupled with its superior technological capabilities, the U.S. conventional capability has been central to dealing with asymmetrical threats from terrorists and rogue states in the post-Cold War world.

Military-Industrial Complex

An interlocking alliance among the U.S. military establishment, defense industries, and research-oriented universities that during the Cold War created a separate, stand-alone economy dedicated to national security imperatives. President Dwight D. Eisenhower, in his farewell address of January 1961, was perhaps the first public official to warn of the dangers of the burgeoning military-industrial complex, thereby raising awareness of a process that had begun in earnest a decade before. Eisenhower, like others who worried about this phenomenon, feared that the military-industrial complex had the potential to wield great power by absorbing vast amounts of the nation's resources, granting undue influence to nonelected government officials and corporate executives, and perhaps subverting the democratic process as a result. Eisenhower's warning was in fact somewhat ironic, however, considering that his administration had been instrumental in the growth of the complex.

The military-industrial complex arose in the early 1950s in response to the needs of the Cold War. In America's fight against communism, resources had to be harnessed to develop new military and defense technologies. Much of the research for these endeavors was conducted at large research-intensive universities. The Massachusetts Institute of Technology (MIT) and Stanford University were among the top research schools in these areas. Defense-oriented industries often provided much of the capital and additional resources to fund research and development. In turn, they were usually rewarded with sizable government contracts to produce military hardware and weapons systems that had originated in university laboratories. In almost every case, both

university and industrial research and development (R&D) was initiated by the U.S. Department of Defense. Thus, a tightly connected military-industrial-academic reciprocal relationship was created.

The Cold War military-industrial complex was born out of the decision by President Harry Truman administration's to engage the United States in a massive military rearmament program after the outbreak of the Korean War in June 1950. Between 1950 and 1953, the U.S. defense budget increased almost fourfold, from \$13.5 billion in 1950 to more than \$52 billion in 1953. The vast majority of those funds did not go to the war in Korea but instead were earmarked for long-term rearmament programs designed to keep the United States one step ahead of its Soviet Cold War rival.

Even after Eisenhower tried to rein in defense spending in the mid-1950s, the defense budget fell only slightly and certainly remained at least three times as high as the pre-Korean War level. The Korean rearmament program essentially gave teeth to the National Security Council's seminal NSC-68 report of early 1950 that envisioned a huge military buildup. Pivotal in fueling the military-industrial complex was the late 1950 decision to create a permanent industrial base that would provide the United States with excess industrial capacity that could swing into high gear at the first sign of war. Such a decision resulted in the government-sponsored construction of a military-oriented industrial sector that was of little use for civilian applications.

It is important to note that Eisenhower was against neither the military nor big industry or academia. In fact, he was a proponent of all. As a five-star army general, he appointed mostly businessmen and industrialists to his cabinet, and he briefly served as president of Columbia University. He was also supportive of the scientific community, establishing the new post of special assistant to the president for science and technology in 1957. It was also his administration that embarked on the deployment of intercontinental ballistic missiles (ICBMs), the U-2 reconnaissance plane, and orbiting satellites, all of which utilized the military-industrial complex that he warned against.

But if Eisenhower encouraged the development of these relationships, why did he alert the nation to the dangers inherent in a scientific-technological-industrial elite? The answer to that may be that Eisenhower's address was directed at what science advisor Herbert York called the "hard-sell technologists and their sycophants" who invented the missile gap and tried to exploit *Sputnik 1* and the Gaither Report to instill fear that America was losing ground to the Soviets. Clearly, what Eisenhower was warning against was not so much his own science advisors but rather the scientific-technological elite, special interest groups that had sprung from the emphasis on military research and development in industry and universities.

The U.S. Navy's GEOSAT mission radar altimeter spacecraft undergoes final testing at the Johns Hopkins University Applied Physics Laboratory, 1 January 1985. (U.S. Department of Defense)

The military-industrial complex, which still exists today, has provided many benefits to society. Superior weapons technology, satellites, nuclear reactors, silicon chips, chemotherapies, molecular genetics, and particle physics have all benefited from the military-industrial-academic alliance. In many ways, the military-industrial complex was simply a continuation of the evolving big science of the prewar years. Most Americans viewed this growth as a positive development for national security and economic growth.

On the down side, however, the military-industrial complex has resulted in the creation of a separate economy whose products, such as nuclear weaponry, are not likely to be used commercially and add little or nothing to long-term economic productivity. It also had made some industries too reliant on defense contracts, the results of which were glaringly apparent in the early 1990s when the end of the Cold War brought about sharp cuts in defense spending, fueling unemployment and an industrial downturn. Finally, many of the jobs in the defense-oriented sector are ones requiring advanced education and training, meaning that America's working class has largely been left out of the military-industrial complex's largesse. All in all, the phenomenon first brought to light in the early 1960s has been a mixed blessing.

Yugoslav political leader and Serbian nationalist. Born on 29 August 1941 in the commercial town of Požarevac to the east of Belgrade, Slobodan Milošević graduated with a degree in law from Belgrade University in 1964. He had joined the Communist League in 1959 and began his government career as economic advisor to Belgrade's mayor in 1966, thereafter achieving senior positions in Yugoslav state gas and banking industries from 1969 to 1983.

In 1984 Milošević committed to political life on a full-time basis, heading the local Communist Party organization in Belgrade. In 1986 he was elected president of the Serbian Politburo of the League of Communists, taking advantage of this post to militate for a Serbian agenda within the Yugoslav federation. In April 1987 he first caught the public eye by rallying support for the Serbian minority in Kosovo, and over the coming years he made the Serbian cause his political focus, overpowering opposition elements as Serbia annexed the autonomous regions of the Vojvodina and Kosovo in 1988 and cynically alienating the leadership of Croatia and Slovenia as the League of Communists disintegrated in January 1990.

After employing the Yugoslav Army to put down demonstrations in Belgrade that were prompted by his presidential victory in Serbia's first multiparty elections in December 1990, Milošević proclaimed on 9 March 1991 the Yugoslav federation to be in its "final agony." The secession of Slovenia and Croatia from the federation on 25 June 1991 prompted him to order armed intervention by the Serb-controlled Yugoslav Army. A European Community (EC) accord ended the fighting in Slovenia by 7 July 1991, but warfare persisted in Croatia until efforts by the EC and special United Nations (UN) envoy Cyrus Vance eventually halted hostilities there on 2 January 1992.

Following the Bosnian declaration of independence in March 1992, Serb forces soon began a campaign of ethnic cleansing along the Drina River, culminating with the eventual death or displacement of more than 50,000 non-Serbian

Bosnians. The UN Security Council imposed economic sanctions on Serbia on 30 May 1992, and the following month, amid international outcry over his apparent sponsorship of war atrocities, Milošević declared that Serbia and Montenegro now constituted the new Federal Republic of Yugoslavia (FRY), a mere vestige of the former Yugoslavia. At the August 1992 London Conference on the Former Yugoslavia, Milošević and FRY Prime Minister Milan Panic disagreed over the latter's willingness to accept international criticism of ethnic cleansing and FRY's territorial claims to Serbian areas in neighboring lands. Milošević successfully rebuffed Panic's challenge in the December 1992 Serbian presidential election.

After Bosnian Serbs demonstrated their noncompliance with the Vance-Owen and Contact Group peace plans espoused by Milošević, he instituted a blockade of the Bosnian Republika Srpska in August 1994. In July and August 1995, multiple Serbian and Croatian offensives precipitated the North Atlantic Treaty Organization (NATO) bombing of the Bosnian Serbs. A U.S.-led effort secured a cease-fire in September, and the war was ended by the November 1995 Dayton Peace Agreement in which Milošević was a visible and important player. Yet he had overestimated the degree to which trade and financial sanctions would be lifted. By the winter of 1996–1997, economic hardships endured by Serbia under selective continuing sanctions that blocked its entry into the UN and the World Bank provoked weeks of organized street protests against Milošević, and late 1997 Serbian-Albanian tensions in Kosovo flared into a renewed war of attrition by the summer of 1998. Reports of extensive ethnic cleansing campaigns again brought NATO bombing of Serbia in March 1999, and on 27 May Milošević was indicted by the International Criminal Tribunal for the former Yugoslavia (ICTY). In June 1999 Milošević acceded to the terms ending the latest war, which included a NATO presence in Kosovo.

In September 2000 Milošević lost the FRY presidential election to Vojislav Kostunica and on 6 October 2000 announced his departure from office. Milošević was arrested and detained by FRY authorities on 31 March 2001. Delivered to the ICTY in The Hague on 28 June 2001, he died of natural causes there on 11 March 2006 during his trial for war crimes committed in the killing fields of Croatia, Bosnia, and Kosovo.

Mindszenty, József
(1892–1975)

Hungarian Catholic prelate, writer, dissident, archbishop of Esztergom, and primate of Hungary (1945–1974). Born József Pehm on 29 March 1892 in Csehmindszent, Hungary, he was ordained a priest in 1915 and in 1919 was a vicar in Zalaegerszeg. During his twenty-seven years of service in that city, he founded a parish and a school, built a monastery and a church, renovated the cathedral, and authored several books. In 1942 he adopted the more Hungarian-sounding name of Mindszenty.

In March 1944 Mindszenty was named bishop of Veszprém. He opposed the German occupation of Hungary during World War II and was imprisoned in November 1944. Released in April 1945, he became the archbishop of Esztergom later that year and was elevated to cardinal in 1946.

Mindszenty openly opposed the policies, especially the seizure of church lands and properties, of Mátyás Rákosi, Hungary's deputy prime minister and general secretary of the Hungarian Communist Party. Mindszenty also publicly denounced the secularization campaign and rigged elections of 1947. Arrested on 26 December 1948 and accused of treason, he was subjected to five weeks of torture, whereupon he confessed to the charges against him and was tried and subsequently condemned to life imprisonment.

Mindszenty's 1949 trial and imprisonment caused international indignation. Pope Pius XII raised his own objections, and the United Nations (UN) General Assembly declared it an international crime. In spite of persecution, however, Mindszenty remained committed to the Church and to Christian values. In 1955, because of ill health, he was transported to Felsőpetény, where he was kept under house arrest.

Mindszenty's release was among the demands of the prodemocracy forces during the 1956 Hungarian Revolution. He was set free on 31 October 1956. On 3 November he gave a radio speech in which he criticized Soviet-style land reform and economic policies. On 4 November, warned about Soviet tanks advancing on Budapest, he sought and secured refuge at the U.S. legation in Budapest. He lived in its compound until 1971. In 1962 he was tried in absentia for his role in the 1956 revolution and found guilty of treason.

Following drawn-out negotiations among Washington, the Vatican, and Hungarian officials, on 28 September 1971 Mindszenty was allowed to leave Hungary and settled in Vienna. During his last years, he took on an international role and embarked on missions around the world, also visiting Hungarian enclaves around the globe. Because Mindszenty opposed relations between the Vatican and Hungary, Pope Paul VI requested his resignation as primate in 1973. But Mindszenty refused to resign, believing that such a step would only reward the communist regime for its deplorable behavior.

Cardinal Mindszenty died in Vienna on 6 May 1975. In 1994, Pope John Paul II began the canonization process for him.

Mines and Mine Warfare, Land

Land mines are stationary explosive weapons planted in the path of an enemy to hinder his movement or to deny him access to certain territory. Mines may be considered both offensive and defensive weapons. They are generally concealed and rigged so that they will be initiated by the presence of either enemy troops or vehicles, except in instances where they are exploded by remote control. Land mines produce casualties by direct explosive force, fragmentation, shaped-charge effect, or the release of harassing agents or lethal gas. Land mines include improvised explosive devices (IEDs).

There are two main types of land mines: antitank (AT) and antipersonnel (AP). AT mines are large and heavy. They are triggered when vehicles such as tanks drive over or near them. These mines contain sufficient explosives to destroy or damage the vehicle that runs over them. They also frequently kill people in or near the vehicle. AT mines are laid in locations where enemy vehicles are expected to travel: on roads, bridges, and tracks.

AP mines are triggered much more easily and are designed to kill or wound people. They may be laid anywhere and can be triggered by various means: stepping on them, pulling on a wire, or simply shaking them. AP mines may also be rigged as booby traps to explode when an object placed over them is removed. Generally speaking, AP mines contain small amounts of explosives. They are therefore smaller and lighter than AT mines. AP mines may be as small as a packet of cigarettes. They come in all shapes and colors and are made from a variety of materials.

Mines are normally laid in groups to form minefields. There are several types of these fields. Defensively, the hasty protective minefield provides local, close-in security protection for small units. This minefield employs no standard pattern in laying the mines. An example of a hasty protective minefield would be placing mines to cover a likely avenue of approach by an enemy force. A second type is the point minefield. It is utilized primarily to reinforce other obstacles, such as road craters, abatis, or wire obstacles not associated with hasty protective minefields. A third type is the tactical minefield. Its primary use is to arrest, delay, and disrupt an enemy attack. The field may be employed to strengthen defensive positions and protect their flanks. A fourth type is the interdiction minefield. It is utilized to trap or harass an

The demilitarized zone across Korea remains one of the most heavily mined areas in the world.

enemy deep in his own territory, assembly areas, or defensive positions. Scatterable mines are ideal for this type of minefield.

Modern land mines date from the Russo-Japanese War of 1904–1905, but World War I witnessed continuous use of land mines to protect trench lines. Land mines continued to play an important role during World War II. Two important developments took place in land-mine warfare during that conflict in the appearance of AT mines and the introduction of AP mines employed against infantry and to protect AT mines from detection and removal.

Many current AT mines are derived from those of World War II. For example, the TMM1, produced in the former Yugoslavia, and the PT Mi-Ba, produced by the Czech Republic and Slovakia, are descendants of the German AT Tellermine 43 and 42. The American designs are the M-15 and M-21 series, while the Russians produce a similar mine, the TM-46, the Italians the M-80, and the Chinese the Type 72. These are canister-shaped mines that are buried using tilt-rod fusing and pressure fusing. They range from 10 to 30 inches in diameter and 3 to 7 inches in height. They contain between 7 and 15 pounds of high explosive. Another popular design is the square-shaped AT mine such as the American M-19, Italian VS-HCT2, and Belgian PRB-ATK M3. They are approximately 10 inches square and 4–5 inches high with 5–25 pounds of explosives. Many of these are magnetic-influence mines with pressure as a backup fusing system.

AP mine models introduced during World War II are still in service, with only minor modifications. Examples are the Russian AP mine POMZ (and the later model POMZ-2M, a stake mine consisting of a wooden stake with a cast iron fragmentation body). The Russian PDM-6 AP mine is basically the wooden-cased mine used during the Russo-Finnish War of 1939–1940. Its successors, the PDM-7, PDM-7ts, and PDM-57, are employed worldwide. There are also bounding mines similar to the U.S. M16 series and the Russian OMZ (fragmentation obstacle AP mine, or Bouncing Betty)—canister mines topped with a pressure fuse. Such mines stand 5–7 inches tall (including the fuse) and are 3–4 inches in diameter, with approximately 1 pound of explosives. The improvised version of these AP mines consists of an artillery shell or a mortar bomb buried nose down in the ground. It is similar to IEDs used in both the Vietnam and Iraq wars.

After World War II, the trend in land mines has been toward miniaturization and substitution of metallic parts with those of plastic. For example, the American M14 series first used in Vietnam and the Russian PFM-1 and PFM-1S AP mines first used during the Israeli-Syrian conflict of October 1973 and massively by Soviet troops in Afghanistan are small air-delivered plastic weapons with a low metallic signature. Other common AP mines with low metallic content are the Type-72 series (People's Republic of China, PRC), encountered throughout Southeast Asia, and the PMN (Russia) present in Asia (Afghanistan, China, Iraq, and Vietnam) and in southern Africa, where it is known as the Black Widow. These are all small canister-type mines 2.5–4 inches in diameter and 1.5–4.5 inches in height. They all use pressure fusing and carry 1–4 ounces of explosives.

During the Vietnam War, the Viet Cong constructed antipersonnel mines from such materials as artillery and mortar shells, cartridge cases, and pipe. U.S. forces sustained significant casualties from these weapons. (U.S. Army Center of Military History)

The Korean War (1950–1953) saw widespread use of mines, particularly in the intense, largely static warfare of the second half of the war following the entry of the PRC in the fighting. The demilitarized zone (DMZ) across Korea remains one of the most heavily mined areas in the world. The Vietnam War of the 1960s and 1970s saw an increase in the use of AP mines, offensively as part of ambushes with the American M18 Claymore and with its twins, the Soviet MON 50 and Chinese Type 66. These mines are generally command-detonated. They are all of curved rectangular shape, about 1 inch thick, 3.5 inches tall, and 8–12 inches long, filled with 1.5 pounds of explosives with a layer of metal balls (similar to 00 shotgun shells) faced toward the target area. These mines are never buried but rather are positioned on bipod legs that allow aiming. They were employed in Vietnam offensively but were also defensively employed around firebases (for U.S. and Allied forces) and sanctuaries (for communist forces).

The United Nations (UN) estimates that 24,000 people are killed and at least 10,000 are maimed each year as a result of active and inactive minefields. A high percentage of these casualties are children. The present method

for clearing mines involves painstaking detection and careful destruction of the devices. In 2004 the UN listed thirty-five countries with minefields of more than 1,000 mines. Egypt leads the list with 23 million mines planted, followed by Iran with 16 million; Angola with 15 million; and Afghanistan, the PRC, and Iraq with an estimated 10 million each. It can take one person eighty days to clear 2.5 acres.

Those who clear the mines, known as deminers, are at great risk of becoming victims themselves. More than eighty deminers died in mine-clearing operations in Kuwait following the 1991 Gulf War. French deminers still clear mines and unexploded artillery shells from as far back as the Franco-Prussian War of 1870–1871 and World War I. It is estimated that worldwide up to 85 million AP mines await clearance. In 2004 the UN estimated the cost of laying a single mine at less than \$10 but its removal at \$1,800.

In 1991, nongovernmental organizations (NGOs) and individuals began discussions regarding a ban on AP land mines. In October 1992 the International Campaign to Ban Landmines (ICBL) was formed with the following groups as its founding organizations: Handicap International, Human Rights Watch, Medico International, Mines Advisory Group, Physicians for Human Rights, and Vietnam Veterans of America Foundation. The ICBL called for an international ban on the production, stockpiling, transfer, and use of AP land mines and for increased international resources for mine clearance and mine victim assistance programs.

An international treaty, often referred to as the Ottawa Mine Ban Treaty, was negotiated in 1997. It is formally named the Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on Their Destruction. Among the first governments ratifying the treaty were Belgium, Canada, France, Germany, and the United Kingdom. The treaty went into effect in March 1999. In recognition of its achievements, the campaign was awarded the Nobel Peace Prize in 1997. Signatories to the treaty include all Western Hemisphere nations except the United States and Cuba, all North Atlantic Treaty Organization (NATO) states except the United States and Turkey, all of the European Union (EU) except Finland, forty-two African countries, and seventeen nations in the Asia-Pacific region, including Japan. Important military powers not ratifying the treaty include the United States, Russia, China, India, Pakistan, and North and South Korea.

The treaty binds states to destroy their stockpiled AP mines within four years, and those already in the ground must be removed within ten years. In addition to comprehensively banning AP mines, the treaty requires signatories to perform mine clearance and urges mine victim assistance programs.

Polish troops assigned to the United Nations Disengagement Observer Force (UNDOF) sweep for mines in the Golan Heights in 1974. The UNDOF patrolled the buffer zones between Israel and Syria and Israel and Egypt, established following the 1973 war. (Corel)

Despite the treaty, mines continued to be laid in nations such as Angola, Cambodia, Senegal, and Sudan.

Mines and Mine Warfare, Sea

Naval mine warfare played a critical role in several Cold War conflicts between 1950 and 1990. During this time, especially early on, technological developments in sea mining drew heavily from the technologies and tactics used during World War II. German minefields had so constrained Soviet naval operations in that war that most Soviet mines and mine warfare tactics of the Cold War era were direct derivatives of German mines, mine warfare research, or tactics. Moreover, the Soviet Union maintained the world's largest mine warfare and mine countermeasure capabilities throughout the Cold War. The European members of the North Atlantic Treaty Organization (NATO) also focused considerably on mine warfare.

Mines come in two primary categories, moored and bottom mines, and in two types determined by their method of detonation, contact or influence mines. Contact mines detonate when the target makes contact with it, while influence mines are detonated by the target's influence on the surrounding maritime environment (e.g., its effect on the local magnetic field, sound, or pressure waves generated by the target's movement). Moored mines are tethered to a casing resting on the seafloor. Bottom mines lie directly on the seafloor. Moored mines can be either contact or influence detonated, while all bottom mines are by influence only.

Laying mines is a relatively simple process. Almost any kind of platform (surface ship, submarine, or aircraft) can lay mines. When Iran laid mines in the Persian Gulf in the late 1980s, for example, it used a wide variety of innocuous surface craft, including small dhows (wooden cargo ships) that were indigenous to those waters. The Iranians' purpose was to conceal mining operations from both their enemies and the international community

that had condemned their use. It took the U.S. capture of an Iranian minelayer to prove Iran's clandestine activities. That incident constitutes the basis for one of the concerns of the late and post-Cold War era: terrorist employment of mines to attack shipping.

Unlike mine laying, mine countermeasures are complex and dangerous. Minesweeping is the oldest method, using ships that tow their countermeasure equipment through the area (field) where the mines are suspected or known to be. Minesweepers are constructed of nonferrous materials (wood, reinforced fiberglass, etc.) that use special propulsion systems and are heavily sound-dampened to reduce any influences that might detonate the mines they pass over. Since they precede their sweep gear, however, minesweeping can be a risky operation. The United States pioneered the use of minesweeping helicopters in the late 1970s. Besides being faster and safer than ships, helicopters and their equipment were air transportable, providing greater strategic mobility.

However, the Cold War era was marked by the development of increasingly complex bottom influence mines designed to defeat most minesweeping tactics. By the 1970s, they could be set for specific target types (e.g., cargo ships or aircraft carriers instead of destroyers). Some had counters that allowed a preset number of targets to pass before detonating. Others came with preset activation and deactivation dates, either to ensure safe passage during those periods, to establish a sanitation date, or to complicate mine countermeasures. The best mines combined all of these elements and usually required multiple influences to detonate. Defeating these mines necessitated extensive sweeping over several weeks to provide a reasonable probability, but not certainty, of safe passage.

This technology forced a shift to mine hunting, using precision sonars and other sensors to hunt for mines. This is a particularly slow process, however. Although sensors can detect bottom mines, they also discover other objects of similar shape and dimensions. Moreover, tides, marine life, and bottom materials tend to obscure the mines over time. Hence, every suspected mine has to be investigated individually. Prior to the 1980s, most nations used divers to investigate suspected mines and disarmed those that they found. The inherent dangers involved with such operations inspired the West to investigate safer mine-hunting methods. The United States reportedly employed specially trained mine-hunting dolphins in Vietnam and the Persian Gulf, a method that remains controversial to this day. As the Cold War drew to a close, however, most Western nations, including the United States, relied increasingly on remote underwater robotic systems to detect mines.

Sailors on board the U.S. Navy minesweeper *Mockingbird* (AMS 27) deploy an acoustic hammer box prior to commencing minesweeping operations in Korean waters. The long-serving minesweeper helped pave the way for amphibious landings such as Inchon and Wonsan. (Naval Historical Center)

Mine warfare figured prominently in four of the Cold War era's hot wars: the Korean War, the Vietnam War, the 1967 Arab-Israeli War, and the Iran-Iraq War. The Democratic People's Republic of Korea (DPRK, North Korea) laid thousands of mines off its coast following the 1950 Inchon landing. With America's mine countermeasure units long decommissioned after World War II, the United States reactivated the Imperial Japanese Navy mine-sweeping units, including their crews, to sweep the mines protecting Wonsan and Hangnam. Egypt also laid thousands of mines during the 1967 Arab-Israeli War to close the Suez Canal and Sharm El-Sheik. American mines completely closed Haiphong Harbor in the Democratic Republic of Vietnam (DRV, North Vietnam) and other ports to shipping in 1973. The agreement that ended the Vietnam War called for the United States to clear out the minefields, a process that took more than two months. Several months later, those same mine countermeasure units joined with Egyptian forces to conduct the mine clearing and salvage effort that reopened the Suez Canal after some eight years of closure. Mines were also a large concern during the 1991 Persian Gulf War.

Iranian-sponsored terrorist groups also resorted to the use of sea mines, laying moored contact mines off Lebanon's coast. Although not effective militarily, Iranian mines embarrassed the United States, nearly sinking the frigate USS *Samuel B. Roberts* on 14 April 1988. Lacking effective mine countermeasure units that could operate in the Persian Gulf, U.S. forces had to use the tankers they were escorting as ad hoc minesweepers. Two other U.S. Navy units were damaged by mines during the Persian Gulf War, driving the U.S. Navy to reinvest in new mine countermeasure technology.

Mines remain a major obstacle today. Their existence or suspected presence in a harbor or shipping lane can create an almost paralyzing effect on shipping. Defeating naval mines and, perhaps more importantly, identifying the perpetrators who laid them will be a critical naval mission well into the future.

Missile Gap

Alleged shortfall of American intercontinental ballistic missiles (ICBMs) as compared to those of the Soviet Union during the late 1950s. The alleged missile gap turned out to be illusory. The popular idea of a missile gap be-

tween the United States and the USSR began in earnest after the Soviets' October 1957 launching of the world's first orbiting satellite. While the debate on this matter reached a crescendo in 1960, it had begun as early as 1956, when Democratic Senator Stuart Symington charged that the United States was lagging behind the Soviets in the production of guided missiles. President Dwight D. Eisenhower's administration denied the allegations, but the Democrats refused to let the issue alone. In August 1957 the Soviet Union launched the world's first ICBM and two months later launched the first satellite, *Sputnik 1*, propelled into space by a rocket.

Thus, to many Americans the Soviets seemed to have taken the lead in rocket technology. This development presented not only a public relations problem for the Americans but had national security ramifications as well. Now the United States was faced with the potential of a Soviet ICBM attack. This sense of technological inferiority and vulnerability was further increased by the findings of the 1957 Gaither Committee. Among other things, the Gaither Report argued that the missile gap not only existed but that it was expected to widen, with the Soviets moving well ahead of the Americans in missile and rocket technology. Worse yet, National Intelligence Estimate (NIE) reports seemed to support this evaluation, concluding that the Soviet Union had the capability to manufacture 100 ICBMs in 1960 and some 500 more during 1961–1962. However, these figures were based on nothing more than pure speculation.

President Eisenhower tried to downplay *Sputnik 1* and the Gaither Report's findings, but public reaction was one of fear and outrage. Furthermore, the matter became a partisan political issue, as the Democrats seized upon it as a way to attack the president and the Republican Party for "complacency." Hard-line Democratic Cold Warriors saw these developments as proof that the Eisenhower administration had not been spending enough money on national defense. In fact, the Eisenhower administration had spent a great deal of money on developing guided missiles, especially the Titan, Thor, Polaris, and Minuteman, but did so cautiously, seeking to find a middle ground among defense spending, domestic spending, and balanced budgets.

Even when the Central Intelligence Agency (CIA) presented to Eisenhower ominous estimations of the prospects of Soviet missile programs, the president remained unconvinced. The missile gap debate reignited in 1958, with the publication by Hanson W. Baldwin, military commentator for the *New York Times*, of the book *The Great Arms Race: A Comparison of Soviet and U.S. Power Today*, which criticized Eisenhower's reaction to *Sputnik 1*. This reinforced some voices coming from the Pentagon that were still warning of a missile gap and calling for increased defense spending. Another influential

The second full-powered Atlas intercontinental ballistic missile to be tested leaves its launching pad at the Missile Test Center at Cape Canaveral, Florida, 2 August 1958. (Bettmann/Corbis)

voice that joined the fray was that of the prominent journalist Joseph Alsop, who charged that the Soviet Union “will have unchallengeable superiority in the nuclear striking power that was once our specialty.” Alsop blamed Eisenhower.

The reaction to the column was striking, especially given the upcoming 1958 congressional elections. Eisenhower then launched a countercampaign in which he asserted that no missile gap existed and that the United States still led in the missile race. However, his efforts failed to convince the public. The missile gap furor helped the Democrats retake both houses of Congress in the November 1958 elections. Now the Democrats were poised to push through higher defense appropriations and by doing so to embarrass the president. Indeed, in 1959 Congress voted for a larger defense budget than that requested by Eisenhower.

The controversy did not end there. Among those convinced that the missile gap did exist was Massachusetts Democratic Senator John F. Kennedy. He partially conducted his 1959 senatorial reelection campaign using the missile gap as proof of Republican bungling. Kennedy easily won a second term, but he continued his crusade concerning the gap after reelection, although it appears that much of his evidence of a missile gap came from Alsop’s columns on the matter and not from any hard intelligence sources.

Predictably, the missile gap proved to be a major issue in Kennedy’s 1960 presidential campaign, in which he attempted to portray his opponent, Vice President Richard M. Nixon, as being soft on defense spending and communism. While Kennedy agreed with Eisenhower that the United States was militarily stronger than the Soviet Union, he was also convinced that the U.S. missile program was lagging behind that of the Russians, which would pose grave consequences for the future. Reportedly, Eisenhower had fairly reliable intelligence evidence—much of it gathered by clandestine U-2 reconnaissance overflights of the Soviet Union—suggesting that the United States actually possessed superiority over the Soviets vis-à-vis ICBMs. But national security imperatives bound him to secrecy. Kennedy won a perilously thin victory over Nixon in the 1960 presidential election. Once Kennedy became president, he quickly learned the truth: the missile gap was nothing more than a myth.

Kennedy did not, however, immediately reveal his knowledge about the missile gap. The controversy was quietly resolved during a February 1961 press conference by Kennedy’s secretary of defense, Robert McNamara, who casually mentioned that there was no missile gap. With that, the subject sank into relative obscurity. In fact, Kennedy’s national security policy was conducted on the basis that the United States enjoyed considerable strategic nuclear superiority over the Soviet Union. Some historians claim that this reality informed the outcome of the 1962 Cuban Missile Crisis.

Defensive missile system capable of intercepting and destroying incoming enemy ballistic missiles while in flight. Military planners began to envision antiballistic missile (ABM) systems during World War II when the Germans employed their V-2 rocket against London and other Allied targets. The importance of fielding a capability to defeat enemy missiles was significantly strengthened by the postwar development of intercontinental ballistic missiles (ICBMs) armed with nuclear warheads.

Both the United States and the Soviet Union worked to develop ABM systems in the 1950s, generally using modified surface-to-air missile systems, such as the U.S. Army's Nike Zeus. ABM systems were viewed as a means of protecting valuable resources, including critical military forces and major cities, from destruction. As the technological challenges and cost of ABM operations became apparent and the size of strategic nuclear forces increased, the United States focused primarily on research and development and on improving early warning capabilities, relying on the deterrent effect of a strong nuclear retaliatory force to maintain security from nuclear attack. The Soviet Union deployed a limited system, the Galosh, around Moscow in the early 1960s and retained protection of the capital throughout the Cold War.

In the late 1960s, the United States announced that it would proceed with the Sentinel system to protect American cities from a limited attack by the Chinese. This system was eventually shifted to cover missile fields under the Safeguard program in an effort to gain greater stability for nuclear deterrence. Because of its high cost and technological glitches, Safeguard was only operational at one site in North Dakota for five months beginning in October 1975, although its Perimeter Acquisition Radar was integrated into the national early warning and attack assessment system. Concern over sustaining a stable deterrence posture was reflected in the 1972 Anti-Ballistic Missile Treaty that was negotiated along with the Strategic Arms Limitation Treaty (SALT I), which limited the United States and the Soviet Union to only two ABM sites (further limited to a single site each in a 1974 follow-up protocol).

Missiles, Antiballistic

President Ronald Reagan's administration sought to move away from the complete vulnerability to nuclear attack inherent in the mutual assured destruction (MAD) doctrine and to use new technological capabilities to build a national missile defensive system. This proposed system, called the Strategic Defense Initiative (SDI), eventually became known as "Star Wars" due to components that relied on space-based platforms and new types of weapons such as x-ray lasers to destroy missiles. Reagan argued that an operational ABM system would make nuclear missiles obsolete. After the collapse of the Soviet Union in 1991, the SDI concept was scaled back, although research and development efforts continued and options for protection against limited attacks, especially accidental launches or strikes by rogue states, became the justification for continuing to develop an ABM capability.

Missiles, Cruise

Unmanned, aircraft-like missile systems designed to carry a warhead to a surface target. Cruise missile designs emerged during World War I, but the first effective operational system was the German V-1 Buzz Bomb used during World War II. After World War II, jet-propelled cruise missiles were developed as delivery vehicles for nuclear weapons, allowing strikes at night and in all weather conditions and removing concerns over aircrew survivability. The U.S. military developed a series of surface-to-surface systems such as the U.S. Air Force's intercontinental-range Snark (briefly operational in 1961) and the shorter-range theater nuclear systems Matador and Mace. These systems and the navy's Regulus missile for ship- or submarine-to-shore strikes were replaced by ballistic missiles and aircraft-delivered weapons that offered advantages in survivability, accuracy, and flexibility over the early land-based cruise missiles. The Soviet Union also developed a number of cruise missile systems for surface-to-surface theater delivery of nuclear weapons but also

used cruise missiles in a broad range of ship-, submarine-, and aircraft-launched roles during the 1950s and 1960s.

The U.S. and Soviet militaries both developed cruise missiles for aircraft delivery against strategic targets. Examples of such systems included the Soviet AS-3 Kangaroo and the U.S. Air Force Hound Dog missile in the 1960s. As a strategic weapon, cruise missiles extended the range of manned bombers and could suppress enemy defenses and complicate the defensive plans of the adversary. In the 1980s, the U.S. military fielded a new generation of nuclear air-launched cruise missiles (ALCM) that extended the useful life of the B-52 bomber. The U.S. Navy also fielded a nuclear submarine-launched cruise missile called the Tomahawk, which was eventually deployed in a conventional land-attack version that was also installed on surface ships.

Cruise missile systems initially involved primarily nuclear warheads, but conventional warheads were increasingly used as guidance capabilities improved. A key non-strategic mission was antiship attack, fielded in land-, ship-, submarine-, and air-launched systems. These cruise missiles provided smaller naval forces and coastal defensive positions the ability to challenge larger navies. The Egyptian Navy, using Soviet-made Komar-class boats and Styx ship-to-ship missiles, demonstrated the antiship potential of cruise missiles by sinking the Israeli destroyer *Eilat* in 1967, history's first loss of a ship to a guided missile.

The final significant nuclear role for cruise missiles in the Cold War was the mid-1980s U.S. deployment of mobile ground-launched cruise missiles (GLCM), based on the Tomahawk submarine-launched missile, to bases in Britain and on the European continent in response to the Soviet deployment of the SS-20. Combined with the deployment of the Pershing II ballistic missile, the GLCM deployment contributed to arms control negotiations that resulted in the Intermediate-Range Nuclear Forces Treaty and the removal of GLCM, Pershing II, and SS-20 systems from Europe. Conventional cruise missiles grew in capability and importance during the 1980s. Their increasingly important role was ably demonstrated during the 1991 Persian Gulf War.

Missiles, Intercontinental Ballistic

Long-range, land-based, rocket-propelled ballistic missiles capable of carrying one or more conventional or nuclear warheads. The intercontinental ballistic missiles (ICBMs) deployed by the United States and the Soviet Union during the Cold War, along with the manned bomber and submarine-launched ballistic missiles (SLBMs), made up the strategic nuclear triad of these two superpowers. China later also developed ICBMs.

The land-based ICBMs offered survivability and quick delivery of nuclear weapons over long distances. Throughout the Cold War, the accuracy, reliability, and flexibility of ICBM systems continuously improved. At the peak of the Cold War in 1984, the United States maintained 1,054 ICBMs deployed in underground silos, while the Soviets possessed 1,398 ICBMs deployed in silos and in rail- and road-mobile systems.

Development of the ICBM began shortly after the end of World War II. ICBMs are normally defined as long-range missiles that can attack targets located great distances from their launch sites. In 1966, the Air University Aerospace Glossary defined ICBMs as those missiles with a range of 5,000 miles or more. Other sources have defined the ICBM as a missile with a range of 1,500–2,000 miles. The ICBMs deployed during the Cold War were configured with nuclear warheads.

Initial missile programs, especially in the United States, focused more on air-breathing, jet-powered cruise missiles than ballistic systems. By the late 1940s, however, both the United States and the Soviet Union had determined that ballistic missiles were better for long-range attack missions because flight times, survivability, and accuracy were much better than they were for slower, aerodynamic vehicles. By 1953, the development of smaller, lighter thermonuclear weapons made it possible to construct long-range missiles capable of delivering nuclear payloads. The earliest systems were complicated liquid-fueled missiles that employed liquid oxygen and kerosene or storable hypergolic chemicals (fuel and oxidizer that ignited and burned when mixed without a separate igniter) as propellants. The first versions were deployed on soft, above-ground launchers that required anywhere from fifteen minutes to several hours to prepare for launch. They were guided by ground-based radio guidance systems that limited the number of missiles that could be launched at a single time. The first U.S. operational ICBM system, the Atlas D, was a 75-foot-long missile weighing more than 250,000 pounds. It was housed in either above-ground gantries or ground-level concrete struc-

tures, known as coffins, with three missiles and one guidance system at each complex. The first American ICBM attained nuclear alert (ready) status in October 1959.

Inertial guidance systems replaced the radio systems early in the life of ICBMs, with only the Atlas D and Titan I deployed with radio guidance. The inertial system was more accurate and reliable than radio guidance and allowed missiles to be based individually, providing a higher survivability scenario during a nuclear exchange. The early U.S. liquid-fueled cryogenic missiles were expensive to maintain, had low reliability, and were not exceptionally accurate. These systems, the Atlas and Titan I, carried single four-megaton nuclear warheads. The United States was quick to replace these missiles with the solid-fueled Minuteman missile, and by 1965 all Atlas and Titan I missiles were removed from service, to be replaced by the Minuteman and the hypergolic-fueled Titan II.

These new systems were easier to maintain and required far fewer missile combat crew members and maintenance personnel to keep them on alert. They were also much more survivable, with hardened silos scattered over wide areas, and were accurate to within a few hundred feet of the target. The United States maintained a force of fifty-four Titan II missiles, each with a nine-megaton warhead, on alert from the early 1960s to the mid-1980s. The Minuteman, which was developed in three versions (I, II, and III), first came on alert in 1962.

By 1967, 1,000 Minuteman missiles were on alert at six U.S. bases. The Minuteman I and II had single warheads of about 1.1 megatons, while the Minuteman III featured a multiple independently targeted reentry vehicle (MIRV) system equipped with up to three warheads of either 170 or 340 kilotons of yield. The entire force of Minuteman and Titan II missiles could be launched in a matter of minutes after the decision to execute was made. In the late 1980s, 50 Minuteman missiles at F. E. Warren Air Force Base, Wyoming, were replaced by 50 Peacekeeper missiles, a larger system that could carry up to ten 300-kiloton warheads capable of hitting ten different targets.

The Soviets developed more varieties of missiles than did the Americans, early on relying on both cryogenic and hypergolic storable propellant systems. As with the United States, the Soviet Union quickly realized that the cryogenic systems were slow to launch and hard to maintain, but, unlike the United States, Russia concentrated on ICBM designs in the 1960s through the 1980s that featured storable liquid-fueled systems, with missiles deployed both in underground silos and in mobile launchers. The first Soviet ICBM, the SS-7 (known to the Soviets as R-16), employed storable propellants and was first put on alert on 1 November 1961.

The Soviets were slower to adopt solid-fueled ICBMs but replaced their second- and third-generation liquid-fueled missiles with systems similar to

Launch of an Atlas missile from the U.S. Air Force Missile Test Center, Cape Canaveral, Florida, on 20 February 1958. (U.S. Air Force)

the Minuteman and Peacekeeper systems. Soviet warheads were generally in the 1-megaton range, but two Soviet ICBMs (the SS-9 and SS-18) carried enormous 25-megaton warheads. In 1984, at the peak of the Cold War, the Soviets had 1,398 ICBMs deployed, including 520 SS-11s, 60 SS-13s, 150 SS-17s, 308 SS-18s, and 360 SS-19s.

China tested its first missile in 1960 but did not complete development and testing of an ICBM until 1980. China's first ICBM was liquid-fueled. China did not develop a solid-fueled ICBM until the early 1990s. Compared to the United States and the Soviet Union, the Chinese have maintained a very small ICBM force, with most of the emphasis on countering the threat posed by the Soviet Union rather than any threat by the United States.

Strategic arms limitation and reduction agreements between the United States and Russia resulted in a significant reduction in the number of ICBMs. The United States reduced its force to only 500 Minuteman III missiles, which will eventually have only one warhead apiece. All Minuteman II missiles were removed and the silos destroyed at three bases between 1994 and 1998, and Peacekeeper missiles were removed between 2002 and 2007. At the end of 2002, the Russians maintained a force of 709 ICBMs, a mix of SS-18, SS-19, SS-24, SS-25, and SS-27 liquid- and solid-fueled missiles in silos or mobile launchers.

Missiles, Intermediate-Range Ballistic

Longer-ranged missiles designed for use within a specific theater of war. Intermediate-range ballistic missiles (IRBMs) are generally defined by their range, which is approximately 1,500–3,000 nautical miles (NM). This is compared to medium-range ballistic missile (MRBM) systems of 600–1,500 NM and intercontinental ballistic missiles (ICBMs) of 3,000–8,000 NM. Early

IRBM systems were developed by the United States and the Soviet Union for all-weather and night-delivery nuclear capability, complementing aircraft and cruise-missile delivery systems for nuclear strikes. IRBM nuclear capability was an important component in theater planning, but these systems were also designed to be a backup for ICBM systems, which posed a greater technological development challenge in the 1950s and early 1960s.

The United States developed and deployed two IRBM systems in the 1950s, the U.S. Air Force's Thor and the U.S. Army's Jupiter. The Jupiter missiles were placed at bases in Italy and Turkey as part of the North Atlantic Treaty Organization (NATO) force structure, and the Thor missiles were operated by the Royal Air Force from sites in the United Kingdom. The U.S. systems were quickly made obsolete by advances in ICBM forces, but they were retained for deterrence effect and as symbols of American commitment to the defense of Europe. The Soviets also developed and fielded a series of IRBM systems during the 1950s. These systems, designated SS-4 (often classified as MRBMs) and SS-5, provided an early nuclear delivery capability and remained part of the Soviet force structure into the 1980s, when they were replaced by the SS-20. The Chinese and the French also developed and deployed IRBM systems as part of their nuclear force structures.

IRBM systems played a central role in the Cuban Missile Crisis of October 1962. Soviet IRBMs were placed in Cuba in 1962 in an effort to enhance the delivery capability against the United States, precipitating the most dangerous standoff of the entire Cold War. After the Soviets removed their missiles from Cuba, the Americans removed their Jupiter missiles from Italy and Turkey in a publicly unacknowledged trade-off and an expedient elimination of obsolete weapons. The Thor missiles were also removed from Britain in 1963.

The U.S. military moved away from land-based IRBMs in the 1960s, turning to submarine-launched ballistic missiles (SLBMs) and long-range aircraft for deep theater nuclear delivery capabilities, complemented by shorter-range tactical nuclear weapons. The Soviet military retained its IRBM capabilities throughout the Cold War because of the proximity of targets and its strategy for nuclear employment in theater operations. Soviet modernization of its IRBM force with the much more accurate and multiwarhead-capable SS-20 missiles in the late 1970s resulted in a brief arms race in Europe, as the United States responded with the deployment of Pershing II ballistic missiles and ground-launched cruise missiles to counter the potential first-strike capability of the new Soviet missile force. The U.S. deployment of new nuclear delivery systems in Europe resulted in considerable political protest and resistance, but the move produced arms control discussions with the Soviets that led to the Intermediate-Range Nuclear Forces (INF) Treaty. The

Launch of a Thor intermediate-range ballistic missile, 23 November 1981. (U.S. Department of Defense)

INF Treaty, signed in 1987, eliminated all theater nuclear delivery systems in Europe with ranges between 270 and 3,000 NM.

Missiles, Pershing II

American intermediate-range ballistic missile (IRBM) system. The Pershing II missile was the culmination of the Pershing missile program begun in 1956. The Pershing II system was a nuclear-capable tactical army support weapon deployed in the Federal Republic of Germany (FRG, West Germany) for use by both the U.S. Army and the German Air Force. Manufactured by the Martin Marietta Corporation, the Pershing II relied upon cutting-edge radar guidance technology, which rendered it the most accurate tactical missile of its time. Each missile was 34 feet long, weighed 16,500 pounds, had a range of 1,100 miles, and was armed with a single W-85 maneuvering reentry vehicle (MARV) thermonuclear warhead of 5–50 kilotons variable yield.

The Pershing II served as the North Atlantic Treaty Organization (NATO) frontline deterrent in the event of a Warsaw Pact conventional or nuclear attack against Western Europe. The missile was also designed to counterbalance new Soviet Russian SS missile systems that became operational in the late 1970s. The Pershing II was successfully tested in 1977, and NATO approved its deployment in February 1979.

NATO's deployment announcement drew immediate criticism from Germany's Green Party and other European antinuclear organizations. Large demonstrations were held throughout Western Europe to protest the placement of the Pershing II missiles. There were also smaller protests in the United States. Nonetheless, the first Pershing II missiles arrived in West Germany in December 1983 and were fully operational two years later. In 1985

The U.S. Army launches a Pershing II missile from Cape Canaveral, Florida, on a long-range flight down the Eastern Test Range on 2 June 1983. (U.S. Department of Defense)

a Pershing II exploded, killing three people and injuring fourteen more, and this spurred more angry European protests.

In 1987, President Ronald Reagan signed the Intermediate-Range Nuclear Forces (INF) Treaty with the Soviet Union. All IRBMs with a range of between 300 and 3,400 miles were thereby abolished, ending the Pershing II missile program.

Missiles, Polaris

U.S. Navy submarine-launched ballistic missile (SLBM) carried in nuclear-powered submarines. The SLBM system constituted the initial seaborne leg of what became America's nuclear triad and was part of its nuclear deterrence strategy. This strategy called for the United States to have a survivable nuclear retaliation capability in order to deter a potential Soviet first strike. Bombers and land-based intercontinental ballistic missiles (ICBMs) in hardened silos provided the other legs of the triad, each with its particular advantages and disadvantages. The submarine-based element offered stealth, denying the Soviets knowledge of the number and locations of the embarked missile systems. It was a sound enough strategy, but the Polaris leg was almost scrapped.

Lockheed Missile and Space Division engineers lower a Polaris missile into a fiberglass sleeve aboard the ballistic missile submarine *George Washington* at Port Canaveral, Florida, in 1960. Lockheed aided the U.S. Navy in its preparation for submerged launchings on the Atlantic Missile Range during the Cold War. (Naval Historical Center)

The U.S. Navy of the 1950s favored cruise missiles over ballistic missiles. Cruise missiles were cheaper and easier to install on ships and submarines, and the technology was already well understood. However, ballistic missiles offered more range, greater accuracy, and faster response times, and perhaps more importantly, there was no known defense against ballistic missiles at the time. By 1956, the U.S. Navy began to examine the challenges of installing a missile system aboard ships and submarines. The initial proposal to install Jupiter missiles was rejected because of the dangers of storing the missiles' liquid-oxygen oxidizer component in an enclosed hull for any significant period of time. Solid rocket fuel was the chosen option, and the primary contractor, Lockheed, concentrated on developing new and more powerful solid rocket fuels for the project. The first test flight took place in 1959, and the Polaris missile entered service aboard the U.S. Navy submarine *George Washington* in 1960. The first improved model, the A-2 Polaris, became operational in 1961. It had a range of 1,700 nautical miles and could deliver a single 800-kiloton nuclear warhead within 3,800 feet of the target.

To save money, the navy chose to modify an attack submarine design to carry the missiles. It recognized early that diesel-electric submarines lacked the range and operational capabilities to be effective ballistic-missile platforms. Research and development experience with early nuclear-powered submarines had demonstrated that they had the power to support the missile system and the under-

water endurance to prevent the Soviets from detecting the launch platform. Hull testing with the *Albacore* had also indicated the best hull form. Navy engineers took the design for the new class of attack submarines with an *Albacore* hull and simply inserted a missile compartment to hold sixteen Polaris missiles. Thus was born the George Washington-class of nuclear-powered ballistic-missile submarines. Close coordination between the missile and submarine design teams precluded any major problems with construction. The lead submarine unit was completed in time to join the missile test program in late 1959.

The Polaris missile system was the cornerstone of the U.S. Navy's ballistic missile system throughout the 1960s, not leaving service until 1974. It was the first missile to be fired from a submerged submarine and the first to use a cold-launch system. That is, a missile's rocket engine did not ignite until after it left the launch tube. A compressed-air slug lifted the missile out of the tube and above the ocean's surface. The rocket engine ignited after the missile broke the ocean's surface. That system saved the navy the challenge, expense, and dangers of containing a rocket ignition within the submarine's hull. It proved reliable in service and has been the standard method for all submarine-launched missiles developed during and after the Cold War.

- Spinardi, Graham. *From Polaris to Trident: The Development of U.S. Fleet Ballistic Missiles*. Cambridge: Cambridge University Press, 1994.

The Polaris was the first missile to be fired from a submerged submarine and the first to use a cold-launch system.

The UGM-73 Poseidon C-3 submarine-launched ballistic missile (SLBM) served as the primary sea-based nuclear weapon in the U.S. nuclear triad from its initial operational date in 1971 until its replacement by the Trident C-4 SLBM in the early 1980s. A direct successor to the Polaris A-3 missile, the Poseidon was a two-stage, solid-propellant missile weighing 65,000 pounds, with a firing range of approximately 2,500 nautical miles. Thirty-four feet long and 72 inches in diameter, the Poseidon was 10 percent longer and 40 percent wider than its forerunner. However, advancements in fire-control and shock-attenuation systems enabled it to be housed and fired from Polaris launch tubes.

A single Poseidon missile carried up to fourteen of the Mk-3 reentry vehicles, each with a 50-kiloton thermonuclear payload. This capability marked a substantial advantage over the three 200-kiloton warheads carried

Missiles, Poseidon

A direct successor to the Polaris A-3 missile, the Poseidon was a two-stage, solid-propellant missile weighing 65,000 pounds, with a firing range of approximately 2,500 nautical miles.

on the Polaris. Although not a major leap in terms of overall kilotons, the Poseidon's greatest advantage over its predecessor was the ability to target its warheads against geographically distinct targets, using a system known as multiple independently targeted reentry vehicle (MIRV). The advent of MIRV technology in the Poseidon and its land-based counterpart, Minuteman III, altered the national nuclear strategies of both the United States and the Soviet Union, most notably by convincing each country of the ultimate futility of developing costly antiballistic missile (ABM) systems. This realization was codified by the 1972 Anti-Ballistic Missile Treaty that emerged from the Strategic Arms Limitation Talks (SALT I) of 1969–1972.

The first Poseidon missile was launched from a test pad at Cape Kennedy, Florida, on 16 August 1968, with the first submerged launch completed from the U.S. Navy submarine *James Madison* on 17 July 1970. The *James Madison* deployed with sixteen operational Poseidon missiles in March 1971, initiating a class of fleet ballistic-missile submarines distinguished from its precursor Lafayette-class by the ability to carry the Poseidon, although eventually all Lafayette-class submarines were retrofitted to accommodate Poseidon as well. Beginning in 1979, Ohio-class submarines carrying the Trident C-4 (later D-5) missile began to replace the James Madison and Lafayette classes, with the last Poseidon submarine decommissioned in September 1992. Over the course of its operational lifetime, the Lockheed Missile and Space Company produced approximately 620 Poseidon UGM-73 missiles.

Missiles, Submarine-Launched Ballistic

The submarine-launched ballistic missile (SLBM) was the most secure leg of the American and Soviet Cold War nuclear triads, the other two components of which were land-based intercontinental ballistic missiles (ICBMs) and manned bombers. SLBMs were effectively the United Kingdom's sole strategic nuclear weapon system after 1968 and one of two French weapons systems. Initially armed with comparatively small single warheads having low accuracy when first deployed in the 1950s and 1960s, SLBMs became increasingly accurate and powerful throughout the Cold War period.

The primary advantage of the SLBM over other delivery nuclear systems was derived from the comparative invulnerability of its submarine launch platform. In theory, a nuclear-powered ballistic missile submarine (SSBN) was secured by its nearly silent operation and an endurance limited only by its crew's capacity to stay at sea.

The development of the SLBM overcame daunting technological challenges including concerns over proper guidance, warhead size, and underwater launches. Unlike land-based missiles, the dynamic launching point of the SLBM demanded the development of sophisticated inertial guidance systems that could mark the weapon's precise launch point. Furthermore, most SLBMs used stable, solid fuels, both for safety at sea and to guarantee the ability to launch without vulnerable missile-fueling time. Additionally, limited space and weight required the development of comparatively efficient warheads. Finally, underwater launching avoided the time and vulnerability entailed in surfacing.

The world's first fully effective SLBM to overcome all these obstacles, the U.S. Polaris A-1 missile, grew out of the U.S. Navy's early postwar ambivalence about nuclear weapons. The navy's initial position, which found full expression during the 1949 Revolt of the Admirals (when the U.S. Air Force had sole delivery capability) was that atomic weapons were ruthless and barbaric. This position abruptly changed in the early 1950s as atomic weapons were first deployed on carrier-borne aircraft and the navy's Regulus cruise missile. The February 1955 Killian Report's recommendation to push forward with both sea- and land-based intermediate-range ballistic missiles (IRBMs) gave the necessary impetus to the development of an SLBM. After an initial flirtation with a solid-fueled version of the U.S. Army's Jupiter missile, the navy's Special Projects Office pursued the Polaris program beginning in late 1956. After surmounting numerous technological obstacles and sixty-two test launches, including the first underwater launch on 20 July 1960, the Polaris became operational at the end of that year with sixteen missiles aboard the SSBN *George Washington*. The Polaris A-1 was capable of carrying a 600-kiloton (kt) warhead with a firing range of 1,200 miles.

The Polaris A-1 was supplemented in 1962 by the Polaris A-2, which had a slightly longer range, allowing for Mediterranean operation, and a larger warhead. The Polaris A-3, which became operational in 1964, was the first multiple reentry vehicle (MRV) system. The A3 had three 200 kt warheads, providing strike capability against projected Soviet antiballistic missile (ABM) technology, and a range of 2,500 nautical miles. The Poseidon C-3 SLBM, deployed in 1971, used ten 40 kt warheads in a multiple independently targeted reentry vehicle (MIRV) designed to overwhelm Soviet ABMs around Moscow and came equipped with increased accuracy providing very limited

The test-firing of a Trident intercontinental ballistic missile from a U.S. submarine, SSBN *Nevada*, on 30 September 1986. (U.S. Department of Defense)

capability against hardened targets. The final iterations of U.S. SLBMs, the Trident C-4 and Trident II D-5, deployed in 1979 and 1989, respectively, provided the hard-target kill capability that had been long sought-after.

Soviet SLBM development followed a similar track but lingered several years behind equivalent U.S. technology. The first Soviet SLBM, the liquid-fueled SS-1b, a modification of the land-based SS-1 Scud, could only be fired from a surfaced submarine and had a range of only 90 miles. Follow-on systems in the 1960s, including the SS-N-6 IRBM, could be fired while submerged and carried megaton-range warheads but were liquid-fueled and grossly imprecise, with accuracies measured in kilometers. The next decade saw intercontinental range (SS-N-8) and MIRV development (SS-N-18). Only in the 1980s did the Soviets deploy technologically equivalent solid-fueled missiles, the SS-N-17 and SS-N-20.

While France developed its own domestic solid-fueled SLBMs from the 1970s on, Britain adopted the U.S. Polaris in the late 1960s. After indigenously adapting the Polaris warhead in the Chevaline Program to defeat Soviet ABMs, Britain again turned to the United States in the 1980s with the purchase of the Trident SLBM. The only other SLBM-armed nation, the People's Republic of China (PRC), deployed a solid-fueled, single-warhead weapon in the late 1980s.

The principal effect of SLBMs on nuclear strategy was to provide the technological means for a credible last-ditch deterrent. In the United States, the low accuracy and small warheads of the earliest missiles pushed the navy in 1957 to advocate finite deterrence, which called for maintaining only a small and secure second-strike capability, a role for which the Polaris was perfectly suited. Although this idea did not become the basis of deterrent policy, SLBMs formed the most secure (if least accurate and slowest reacting) leg of the American and Soviet nuclear triads. Their relative economy, compared to manned bombers and ICBMs, provided France and Britain with a sufficient nuclear deterrent, in the latter's case as the only operational strategic system after 1969. However, in reality these advantages were offset by relatively low accuracy and yield. Furthermore, SSBN maintenance requirements would have found a substantial number of them in port, vulnerable to surprise attack.

French political leader and president of France (1981–1995). Born in the town of Jarnac near Cognac (Charente), France, on 26 October 1916, François Mitterrand studied at the Sorbonne and the École Libre des Sciences Politiques in Paris, earning degrees in law and political science.

Mitterrand began his military service in 1938 and was a sergeant when World War II began. Wounded in May 1940 during the Campaign for France, he was taken prisoner by the Germans but after several attempts escaped at the end of 1941. He then made his way to Vichy, where he found a position on the Commission for War Prisoners. In 1943 he joined the Resistance, claiming that Vichy's anti-Semitism left him no choice. Under the nom de guerre of Morland, Mitterrand became a Resistance leader.

After the war Mitterrand founded and headed an organization of former prisoners and deportees. He also took up journalism and politics, joining the small centrist Democratic and Socialist Union of the Resistance (UDSR). Although he lost his first election attempt in 1946, shortly thereafter he won election to the Chamber of Deputies from Nièvre in Burgundy, holding that seat until 1958. In 1947 he became the youngest cabinet minister in a century as minister of veterans' affairs. He went on to serve in eleven different governments during the Fourth Republic as minister of overseas territories (1950–1951), of the interior (1954–1955), and of justice (1956–1957). After 1953 he also headed the UDSR.

Mitterrand's service in so many different cabinets earned him the reputation of a political opportunist, but he opposed the return to power of Charles de Gaulle in 1958, charging that it was a coup d'état and a threat to democracy. Mitterrand failed to win election in 1958, but the next year he was elected both to the Senate and as mayor of Château-Chinon in Burgundy. He won election to the National Assembly in 1962 and thereafter until 1981.

Mitterrand ran unsuccessfully for the French presidency in 1965 as the candidate of the moderate Left and secured communist support in the second round of balloting. He then capitalized on his strong election showing to organize the Federation of the Democratic and Socialist Left (FGDS) for the 1967 legislative elections. The FGDS

Mitterrand, François

(1916–1996)

President of France from 1981 to 1995, François Mitterrand was the first socialist to win election as president during the Fifth Republic. (Embassy of France)

included his new party, the Convention of Republican Institutions (CIR), which won 192 seats, reducing the Gaullist majority to 6 seats. However, the FDGS disintegrated in the Gaullist June 1968 landslide that followed the Events of May, and Mitterrand did not run for the presidency in 1969.

Mitterrand then merged his own CRI with the Socialist Party (PS) and, despite his own lack of socialist credentials, assumed the leadership of the PS in 1971. He again ran for the presidency in 1974 but lost by a single percentage point to Valéry Giscard d'Éstaing. Meanwhile, in 1977 the socialists broke with the communists, enhancing Mitterrand's position as a moderate.

Mitterrand won the French presidential election of May 1981, ending twenty-three years of conservative control. He then called a general election in which the PS won an absolute majority in the new assembly. As president, Mitterrand carried out a sweeping legislative agenda. He nationalized major industries and financial institutions; raised worker benefits and reduced the workweek to thirty-six hours; increased the minimum wage and benefits for single mothers, retirees, and the handicapped; established a ministry of women's rights; liberalized abortion rights; and abolished the death penalty. He also increased defense spending with the creation of a rapid reaction force and the modernization of the nation's nuclear strike force. France also continued nuclear testing. Sharply increased government spending, however, created great budget deficits and an economic turndown, forcing Mitterrand into an austerity program in 1982 and decreased social spending.

In foreign affairs, Mitterrand supported European integration. He also backed Britain in the 1982 Falklands War, and he established a close working relationship with U.S. President Ronald Reagan. Mitterrand's state visit to Israel in 1981 was the first by a French president.

The 1986 legislative elections produced a Gaullist majority and forced Mitterrand to name rightist Jacques Chirac as premier. The resulting cohabitation, as it came to be known for a socialist president and a Gaullist premier, worked surprisingly well and pleased the French electorate. Mitterrand concentrated on international affairs, only occasionally intervening in domestic issues. He defeated Chirac in the 1988 presidential elections, winning 54 percent of the vote.

Mitterrand concentrated on foreign policy issues, including the Maastricht Treaty, construction of the cross-Channel tunnel with Britain, and support for both the 1991 Gulf War, in which French military forces participated, and the North Atlantic Treaty Organization (NATO) intervention in Bosnia. Mitterrand was also much interested in building and transforming the Paris skyline with such pet projects as the new d'Orsay Museum, the renovation of the Louvre Museum, and the construction of the Bastille Opera and La Défense, much to the dismay of many traditionalists. His second presidential term also brought scandal, including fresh controversies over his wartime record and revelations of a daughter by a longtime mistress. Consumed by prostate cancer, Mitterrand resigned the presidency in May 1995 and died in Paris on 8 January 1996.

Congolese politician and dictator (1965–1997). Born Joseph Désiré Mobutu on 14 October 1930 in Lisala in the former Belgian colony of the Congo (Zaire), Mobutu Sese Seko was educated in Belgian missionary schools. Expelled from school in 1950, he served in the colonial army during 1950–1956. After he left the service, he became a journalist for the *L'Avenir* news journal.

Mobutu was appointed army chief of staff by the Congo's first prime minister, Patrice Lumumba, in 1960. On 14 September 1960, after a showdown between Lumumba and President Joseph Kasavubu, Mobutu announced that he was neutralizing both leaders by launching a coup. Not yet strong enough to form his own government, he grudgingly accepted Kasavubu as president. Relations between Mobutu and Lumumba steadily worsened, however, and Mobutu was among those who plotted the assassination of Lumumba in January 1961.

Following Lumumba's murder, Mobutu remained out of the political limelight for several years while consolidating his power base behind the scenes. On 25 November 1965, he staged a second coup, bringing him to sole power. He formed his own political party, the Mouvement Populaire de la Révolution (MPR, Popular Movement of the Revolution); outlawed all other political parties; and dealt harshly with opponents.

As part of his national authenticity movement, Mobutu changed the name of the Congo to Zaire in 1971 and changed his own name to Mobutu Sese Seko the following year. In a bid to rid Zaire of colonial influences, he mandated that all citizens drop their Christian names in favor of Africanized ones. As head of state Mobutu promised stability and order, and although there was little internal dissent during his repressive reign, rebellions in the Shaba

Mobutu Sese Seko (1930–1997)

President Mobutu Sese Seko of Zaire. During the Cold War, the United States feared communist expansion into Africa by the Soviet Union and therefore supported the junta led by Mobutu in 1965. Mobutu consolidated his power, created a single-party state, and ruled Zaire until he was overthrown in 1997. (U.S. Department of Defense)

Mobutu ruled for thirty-two years as an iron-fisted autocrat, years that have become known as the kleptocracy based on evidence that he stole billions of dollars from his own people.

Province during 1977–1978, which were brutally repressed, demonstrated that serious opposition to his rule existed.

Only those loyal to Mobutu served in the civil administration; most were susceptible to bribery, cronyism, and corruption. Nevertheless, Western aid, especially from the United States and Belgium, filled Mobutu's coffers, and he obliged with strong pro-Western, anti-Soviet policies. But he also had an independent streak; he shrewdly catered to the West by taking advantage of Cold War rivalries while maintaining his own cult of personality at home.

Mobutu ruled for thirty-two years as an iron-fisted autocrat, years that have become known as the kleptocracy based on evidence that he stole billions of dollars from his own people. Under the guise of Zairianization, Mobutu nationalized between 1,500 and 2,000 foreign-owned industries and channeled the profits from these to his own personal accounts. Not surprisingly, rural areas and the nation's vast peasantry remained wholly neglected.

After the Cold War wound down in the early 1990s, the United States tried to push Mobutu to accept political and economic reforms. He was reluctant to do so and found himself alone facing the rebel forces of Laurent Kabila. In the meantime, the country's economy was in shambles, and Mobutu was powerless to reverse the economic slide. In May 1997 he was forced to relinquish power and was expelled from the country by Kabila's forces. Mobutu died in Rabat, Morocco, on 7 September 1997.

Modrow, Hans
(1928–)

Premier of the German Democratic Republic (GDR, East Germany). Born on 27 January 1928 in what is now Jasenitz, Poland, Hans Modrow served in the German Army during World War II. He was interned as a prisoner of war in 1945.

Released in 1949, Modrow joined the new Socialist Unity Party (SED) that dominated the government of East Germany. Political work in Berlin led to his appointment in 1973 as first secretary of the Dresden Communist Party organization, where he gained a reputation for honesty. He migrated toward the reform wing of the party in the late 1980s and refused to suppress the public protests that emerged in Dresden in 1989. When Willie Stoph resigned as premier on 13 November 1989, Modrow took his place at the head of the government, hoping that he could sustain the East German government through reform.

Modrow's regime did not last long. Internally divided and under pressure to unify with the Federal Republic of Germany (FRG, West Germany), Modrow's government allowed the first—and last—free elections in East Germany. Modrow lost the election to Lothar de Maizière, who had been a member of Modrow's cabinet from November 1989 to January 1990. It was thus Maizière who oversaw the process of reunification.

Modrow, however, continued on in politics as a member of the reformed communist party, the Party of Democratic Socialism (PDS). He was elected to the parliament in 1992 as a representative from Berlin, a PDS stronghold. Despite being found guilty in 1993 of election fraud committed during the Dresden municipal elections of May 1989, he went on to win election as a member of the European Parliament in 1998. Modrow still holds that post and, since 2003, serves as honorary chairman of the PDS.

Presently known as the Republic of Moldova, during the Cold War it was known as the Moldavian Soviet Socialist Republic (MSSR) and was one of the fifteen constituent republics of the Soviet Union. Moldavia covers 13,100 square miles and is sandwiched between Ukraine to the east and Romania to the west. In 1945 the population of Moldavia was approximately 2.2 million people.

Moldavia became part of the Russian Empire during the Napoleonic Wars in May 1812 and was renamed Bessarabia. In 1918 Moldavia was reunited with Romania but was annexed by the Soviet Union in June 1940, in accordance with terms of the German-Soviet Nonaggression Pact of 23 August 1939. Upon annexation, Moldavia's southern counties were ceded to Ukraine, thus cutting off its access to the Black Sea, while a part of the former Soviet Autonomous Republic of Moldavia (created by Moscow in October 1924) merged with Moldavia.

In order to integrate Moldavia into the Soviet system, the country was subjected to a process of deliberate denationalization. In 1941 an estimated

Moldavia (Moldova)

250,000 Moldavians were forcibly relocated to the Russian steppes. Other forced deportations occurred during 1944–1964. Moscow colonized Moldavia with ethnic Ukrainians and Russians, with some 250,000 of them immigrating to Moldavia during 1946–1953. Romanians always considered Moldavians as ethnically and culturally Romanian, but to justify the Moldavian annexation, the Soviets argued that Moldavian inhabitants were a distinct ethnic group. To emphasize this premise, Moscow insisted that the Moldavian language—which in its spoken form is indistinguishable from Romanian—be written in the Cyrillic alphabet. The Soviets also reinterpreted Moldavian history by falsely linking its culture with that of Russia. In the economic sphere, the main trends in Moldavia involved agricultural collectivization and the establishment of state farming cooperatives along with the accelerated development of state-owned industries.

Although local government did exist in Moldavia, most important decisions were made in Moscow. Even the Communist Party of Moldavia was merely a branch of the all-union government, and few Romanian Moldavians attained high positions within it. Among the key figures in the party were Russians, Ukrainians, and Russified Transdnestrian Romanians. Among officials were subsequent Soviet leaders Leonid Brezhnev and Konstantin Chernenko.

Following Soviet leader Mikhail Gorbachev's reforms and driven by the newly formed Popular Front of Moldavia, the republic government passed a law on 31 August 1989 that made Moldavian the official language of the MSSR, mandated the use of the Latin alphabet, and asserted its ties to Romania. In the aftermath of the failed August 1991 coup against Gorbachev, the Republic of Moldavia declared its independence, which was then quickly recognized by the international community.

Mollet, Guy

(1905–1975)

French socialist politician, minister for European Relations (1950–1951), and premier (1956–1957). Born on 31 December 1905 in Flers (Orne), Guy Mollet, the son of a textile worker, graduated from the University of Lille and then taught English at a Lycée in Arras. In 1921 he joined the French Social-

ist Party (SFIO), becoming its regional secretary for the Strait of Dover (Pas de Calais) in 1928.

Mollet joined the French Army at the beginning of World War II and was wounded and captured by the Germans in 1940. Released in 1941, he returned to Arras and joined the French Resistance. Immediately after the war, he was elected mayor of Arras, a position he held until his death. He represented the Strait of Dover in both the 1945 and 1946 constituent assemblies.

In March 1946 Mollet was elected secretary-general of the SFIO, a position he would hold until 1969. He served in Premier Léon Blum's government as minister of state during 1946–1947. Mollet was appointed minister for European Relations in René Pleven's cabinet during 1950–1951 and was vice premier in Henri Queuille's government in 1951. Mollet was also French representative to the Council of Europe and president of the Socialist Group. During 1951–1969, he served as vice president of the Socialist International.

In January 1956 Mollet became premier of France. His domestic program included improved old-age pensions and annual paid vacations for workers. Although he preferred to deal in domestic issues, foreign affairs dominated his tenure. In July 1956 Egyptian President Gamal Abdel Nasser nationalized the Suez Canal. France joined Britain and Israel in a military campaign to seize control of the canal. The Suez Crisis turned out to be a fiasco for the participants, as Britain, France, and Israel were forced to withdraw under heavy pressure from U.S. President Dwight D. Eisenhower's administration. British Prime Minister Sir Anthony Eden was forced to resign, but Mollet remained in power despite widespread opposition from within the SFIO regarding his decision to send troops to Egypt.

Mollet also prosecuted the Algerian War to suppress nationalists there led by the National Liberation Front (FLN). Unable to convince the National Assembly to raise taxes in order to fund enhanced military operations in Algeria, he resigned as premier in May 1957.

Mollet was among those French politicians who supported the return to power of General Charles de Gaulle in the crisis of May 1958, and Mollet backed de Gaulle's subsequent constitutional reforms creating a more powerful executive. During 1958–1959 Mollet served in the interim de Gaulle government as minister of state but broke with de Gaulle in 1962 in order to work on building a viable left-wing opposition movement. Mollet never fully embraced the demarche with the Communist Party that this would entail, however.

Mollet retired from politics in 1969 when the SFIO was absorbed into the Federation of the Democratic and Socialist Left. He died in Paris on

French Premier Guy Mollet, shown here during a 27 February 1956 radio address on the Algerian War. (Bettmann/Corbis)

3 October 1975. Mollet acquired a posthumous reputation as having been a rightist machine politician who betrayed socialism by fighting Algerian independence and supporting de Gaulle.

**Molotov, Vyacheslav
Mikhaylovich**
(1890–1986)

Soviet foreign minister (1939–1949, 1953–1956). Born Vyacheslav Skriabin in the village of Kukarka, in Viatsk Province, on 9 March 1890, he attended secondary school in Kazan and the polytechnic in St. Petersburg. In 1905 he joined the Bolshevik faction of the Social Democratic Party, changing his name to Molotov, which means “the hammer.” He participated in the 1905 Revolution. In 1909 he was arrested and sent into internal exile for two years. Upon completion of his sentence, he moved to St. Petersburg, where he joined the staff of *Pravda* and became a close friend of Josef Stalin, one of the editors of the Bolshevik newspaper. Arrested several more times, Molotov managed to escape and was at large at the time of the Bolshevik Revolution in November 1917.

Following the revolution, Molotov took charge of nationalization programs in various parts of Russia. In 1920 he became secretary of the Communist Party of Ukraine and in 1921 secretary of the Central Committee of the Russian Communist Party and a candidate member of the Politburo. In 1926 he became a full member of the Politburo and in 1930 premier. He slavishly assisted Stalin in carrying out the massive purges of the party and armed forces in the 1930s. Well known for his absolute loyalty to Stalin, Molotov’s only sign of rebellion came in 1948 when he abstained from a Politburo vote to arrest and imprison his wife.

In May 1939 Molotov replaced the internationalist Maksim Litvinov as commissar for foreign affairs, an appointment that signaled Stalin’s intention to seek accommodation with Nazi Germany. On 23 August 1939, Molotov and German Foreign Minister Joachim von Ribbentrop signed the Soviet-German Nonaggression Pact in Moscow that allowed Germany to invade Poland and begin World War II. In November 1940 Molotov went to Berlin to confer with German leaders about redefining German and Soviet spheres

of influence, but the negotiations failed, and Germany invaded the Soviet Union in June 1941.

During the war, Molotov helped develop the alliance among the Soviet Union, Britain, and France, and he attended the Allied conferences at Tehran, Yalta, and Potsdam as well as the 1945 San Francisco Conference that drafted the United Nations (UN) Charter. Stalin determined Soviet foreign policy, but Molotov implemented it, usually taking an intransigent line in negotiations with his Western counterparts for which he earned the nicknames of “Stonebottom” and “Old Iron Pants.” Clashes between Molotov and U.S. President Harry S. Truman at Potsdam helped set the tone for the Cold War.

Molotov was the chief architect of Soviet control over Eastern Europe, and he took a hard line toward the West. He also took a leading role in the Soviet effort to develop an atomic bomb. The Molotov Plan, the Soviet counterpart to the Marshall Plan, bore his name. Molotov also took a hard line toward Yugoslavia that led to the break between that nation and the Soviet Union in 1948. He continued as foreign minister until 1949, when he was demoted following the so-called Leningrad Affair in which doctors and party officials implicated in the plot to kill Andrei Zhdanov were purged. There is absolutely no indication that Molotov was ever involved in any effort to unseat Stalin.

Following Stalin’s death in March 1953, Molotov was reinstated as foreign minister. He supported early accommodations in the Cold War, such as the armistice in Korea and the 1954 Geneva Conference ending the Indochina War. There were sharp limits to his concessions to the West, however. He soon clashed with Soviet leader Nikita Khrushchev and his policy of peaceful coexistence with the West, leading Khrushchev to dismiss him as foreign minister in June 1956. In June 1957 Molotov was expelled from the Politburo and the Central Committee and from his government posts. For the next five years, he held such unimportant posts as ambassador to Mongolia (1957–1960) and Soviet representative on the International Atomic Energy Agency in Vienna (1960–1961). His implacable opposition to Khrushchev led the latter to expel Molotov from the Communist Party in 1962. Molotov then retired on a modest pension to a small Moscow apartment. He remained in disgrace until Konstantin Chernenko rehabilitated him in 1984. Molotov died in Moscow on 8 November 1986.

Molotov Plan (1947)

Soviet proposal to organize and fund the economic recovery and reconstruction of its East European satellite states through a series of bilateral agreements. Prompted by and a counterproposal to the 1947 Marshall Plan, the 1947 Molotov Plan was an attempt to prevent Central and East European states from accepting U.S. Marshall Plan aid. The Molotov Plan was also designed to bind the region more closely to the Soviets. Named for Soviet Foreign Minister Vyacheslav Molotov, the plan led to the 1949 establishment of the Council of Mutual Economic Assistance (Comecon).

When U.S. leaders unveiled the Marshall Plan in June 1947, they made it clear that the program would be open to all European nations, not just those in Western Europe. At the same time, they predicated participation in the plan regarding full cooperation and full disclosure, which they knew the Eastern bloc was unlikely to do. Initially, Czechoslovakia, Hungary, and Poland as well as the Soviet Union had exhibited interest in participating in the Marshall Plan. After Molotov left the 1947 Paris Conference, however, the Soviets balked at the plan's guidelines and feared that participation in it would open Eastern Europe to Western influence. Thus, they withdrew from the negotiations and forbade their satellites from signing on to the program.

Molotov subsequently alleged that the Marshall Plan was a disguise for U.S. dominion over Europe and the reintegration of Germany into the capitalist camp. Because of the attractiveness of the Marshall Plan and the dire economic situation in Central and Eastern Europe, an alternative proposal from the Soviet Union became a political necessity. In early 1948 East European states, including Bulgaria and Romania, concluded bilateral treaties of friendship, cooperation, and mutual assistance with the Soviet Union. In January 1949 they became member states of Comecon, which was established to carry out the economic, ideological, and political integration of Soviet bloc nations.

Mongolia

Landlocked Central Asian nation of 604,207 square miles, about the size of the U.S. state of Alaska. Mongolia, with a 1945 population of approximately 7.74 million people, is bordered by Russia to the north and the People's Republic of China (PRC) to the south. Mongolia was a strategic buffer as well as a potential battlefield between the PRC and the Soviet Union during the Cold War. Mongolia and the PRC's Inner Mongolia Autonomous Region were originally one unified state, which became part of imperial Qing China during the seventeenth century in two stages. Inner Mongolia referred to the southern half of this formerly unified Mongolian state, while the northern part became Outer Mongolia.

Following the anti-Qing revolution in October 1911, both Outer and Inner Mongolia declared their independence. Inner Mongolia's independence was short-lived, however; it was retaken by the new Chinese leaders, the Guomindang (GMD, Nationalists), who proclaimed the Republic of China (ROC) on 1 January 1912. GMD troops also tried to reoccupy Outer Mongolia but were driven out in 1921, a result of the Russian Bolsheviks' assistance to the Outer Mongolian independence cause. On 11 July 1921 the Outer Mongolians regained their independence and in 1924 proclaimed the Mongolian People's Republic (MPR), with power resting in the hands of the Soviet-sponsored Mongolian People's Revolutionary Party (MPRP). The country was renamed Mongolia, as it is known today. Backed by the Soviet Union, Mongolia's independence was twice reaffirmed by the successors of Qing China: in January 1946 by the ROC and in October 1949 by the PRC, removing the Chinese threat of redeeming Mongolian sovereignty.

Owing to its geographical location, Mongolia's foreign policy direction was entirely shaped by the Sino-Soviet relationship. During the period of Sino-Soviet harmony throughout the 1950s, Mongolia was able to maximize its national interests. Through the 1946 Mongolian-Soviet Treaty of Friendship and Mutual Assistance and the 1952 Sino-Mongolian Agreement on Economic and Cultural Cooperation, Mongolia gained a vast labor supply as well as economic, material and technical assistance. With Soviet approval, Mongolia followed the PRC's lead in building up its international status. In 1955, Mongolia pledged to support the PRC's Five Principles of Peaceful Coexistence, first publicized in the Bandung Conference, in developing diplomatic relationships with noncommunist developing-world nations. In 1961, Mongolia gained United Nations (UN) membership.

As the Sino-Soviet split crystallized in the early 1960s, Mongolia's buffering role was enhanced when the PRC and the Soviet Union competed

over the country. In 1960 the PRC concluded with Mongolia the Treaty of Friendship and Mutual Assistance, and in 1962 the China-Mongolia Border Treaty delimited formal boundaries and resolved territorial disputes. On the other hand, the Soviet Union renewed and replaced the 1946 treaty with a twenty-year treaty in 1966. This treaty contained a defense clause, entitling Mongolia to Soviet defense assistance in case of an external invasion, implicitly referring to the PRC. Mongolia chose to side with the Soviet Union, owing in part to the Soviets' record of assistance in its independence movement and in part to the renewed fear of a PRC push to reclaim the lost Outer Mongolia, a perception stemming from the Cultural Revolution (1966–1976).

In accordance with the 1966 treaty terms, in 1967 the Soviets began to deploy troops in Mongolia with the aim of shifting the Soviet defense line southward along the Mongolian-PRC border. When the Sino-Soviet split culminated in a serious border incident in March 1969 along the Amur and Ussuri Rivers, the Soviet Union had already stationed a total of four divisions of ground troops (two tank and two motorized) and unspecified air force units in Mongolia. Some of them were equipped with intermediate-range ballistic missiles with nuclear and chemical warheads, targeting the PRC's nuclear installations in the western province of Xinjiang.

Although the border conflict ended in September 1969, the likelihood that Mongolia would become a battlefield for a Sino-Soviet nuclear confrontation remained high. The Soviet Union continued its deployment in Mongolia. In 1970, a coordinated air system was created in Mongolia to control about 1,000 Soviet combat aircraft stationed there. This military presence ensured Mongolia's consistently pro-Soviet and anti-PRC foreign policy until the mid-1980s, when Soviet leader Mikhail Gorbachev decided to restore Sino-Soviet relations and withdraw troops from Mongolia. Free of Soviet pressure, Mongolia normalized its relationship with the PRC at the end of 1986 and established normal ties with the United States in January 1987.

In terms of domestic politics, Gorbachev's political and economic liberalism unleashed the MPRP's political opponents, who championed more democracy. Inspired by the Tiananmen Square protests of spring 1989, the prodemocracy and anti-MPRP Mongolians staged a series of demonstrations, beginning in December 1989 and ending in the MPRP's fall from power in March 1990. In July 1990, a multiparty election was held that created a coalition government.

In January 1992 a new constitution came into force, replacing the People's Republic with a hybrid parliamentary-presidential state. The new constitution forbade the presence of foreign troops, ensuring the true independence and sovereignty of Mongolia.

U.S. covert operation, begun in 1961, to overthrow the Cuban government and assassinate Cuban leader Fidel Castro. Following the failed April 1961 Bay of Pigs invasion, communications between Castro and Soviet Premier Nikita Khrushchev increased dramatically. Castro requested additional Soviet military support, and the Kremlin acted on his appeal. Within a year, Moscow had approved a \$148 million arms package, although Khrushchev stalled the support.

After a clandestine meeting between Richard Goodwin, President John F. Kennedy's representative to the Inter-American Economic and Social Council

MONGOOSE, Operation

Plans for sabotage and counter-intelligence included the injection of untraceable poison into Castro's favorite brand of cigars, the poisoning of Castro's food and drinks, and the retrofitting of Castro's fountain pen with a hidden needle capable of injecting a lethal toxin.

in Uruguay, and Ernesto "Che" Guevara on 22 August 1961 in which Goodwin laid out ways that Cuba could improve relations with the United States, he reported that he saw Guevara's views as a sign of a deteriorating Cuban economy and impatience with Moscow. As a result, various U.S. agencies began discussing programs to sabotage the Cuban economy, and Kennedy began exploring options to eliminate Castro. Kennedy's brother and attorney general, Robert Kennedy, did not want to involve the Central Intelligence Agency (CIA) because of the Bay of Pigs debacle. In November 1961, he approached President Kennedy with a plan that would establish an interagency project against Cuba that would not rely on CIA experts. On 30 November, President Kennedy named Brigadier General Edward Lansdale chief of operations for the project.

The interagency committee, known as Special Group, included Robert Kennedy and Treasury Secretary C. Douglas Dillon. The inclusion of Kennedy and Dillon changed the group's name to the Special Group Augmented (SGA). SGA members were CIA Director John McCone, National Security Advisor McGeorge Bundy, Alexis Johnson from the State Department, Roswell Gilpatric from the Defense Department, General Lyman Lemnitzer of the Joint Chiefs of Staff, and General Maxwell D. Taylor. Also in attendance at meetings, although they were not members, were President Kennedy, Secretary of State Dean Rusk, and Secretary of Defense Robert McNamara.

In February 1962, Khrushchev finally agreed to provide arms support to Cuba after receiving intelligence reports that the White House was planning to destroy Castro.

Lansdale devised a two-phase plan to implement Operation MONGOOSE. The plan included paramilitary, sabotage, and political propaganda programs. The SGA ordered an intensification of sabotage and intelligence activity, while President Kennedy continued to waver on the necessity of military action. Without the support of U.S. forces, the stability of Operation MONGOOSE began to weaken. Instead, the CIA turned to the Mafia for assistance in assassination plots, and Lansdale used his experience in psychological warfare to devise strategies for propaganda. Plans for sabotage and counter-intelligence included the injection of untraceable poison into Castro's favorite brand of cigars, the poisoning of Castro's food and drinks, the retrofitting of Castro's fountain pen with a hidden needle capable of injecting a lethal toxin, airdropping anti-Castro propaganda over Cuba, spraying a television studio where Castro was about to appear with a hallucinogenic drug to undermine his popularity, contaminating Cuban sugar, and counterfeiting Cuban money and ration books.

In the spring of 1962, Robert Kennedy asked the SGA to consider the role of the Soviet Union as a factor in determining the outcome of MONGOOSE. The group did not, however, act on this directive, as the idea of a Soviet military base on Cuba was too remote to consider. Yet only a few months earlier, Khrushchev had agreed to begin building up Cuban forces. Ultimately, SGA's nonchalance was a factor in the development of the October 1962 Cuban Missile Crisis.

Lansdale's project was shut down in October 1962 following the Cuban Missile Crisis, but similar CIA psychological warfare projects against Castro continued well into 1963. These operations failed to win over a skeptical Cuban population.

French commissioner general for planning during 1945–1952, first president of the European Coal and Steel Community (ECSC) during 1952–1955, and generally regarded as the father of European unity. Born on 9 November 1888 in Cognac, France, Jean-Omer-Marie-Gabriel Monnet was the son of a prosperous vintner. After joining the family business at age sixteen, he traveled extensively in Great Britain, Europe, North America, and the Middle East.

During World War I, Monnet held various positions in the Allied purchasing, shipping, and supply bureaucracy. From 1919 to 1922 he was deputy secretary-general to the new League of Nations and was instrumental in organizing an international loan that facilitated Austrian postwar economic reconstruction. From 1923 until the late 1930s, he was a partner in various American financial firms, raising further international European reconstruction loans in the 1920s and attempting to do the same in China for much of the 1930s.

An early opponent of Adolf Hitler, from the 1938 Munich Agreement until the defeat of France in June 1940 Monnet sought to facilitate major French armaments purchases in the United States. After the fall of France, he unobtrusively became a key member of the Washington-based British Supply Commission, relentlessly lobbying President Franklin D. Roosevelt and his administration for sharp increases in industrial war production and enormously expanded aid to Great Britain. Monnet spent most of 1943 in Algiers helping to organize a united front for France's liberation including both Vichy and Gaullist Free French forces, an organization that General Charles de Gaulle soon dominated. Monnet returned to the United States in October 1943 as France's commissioner-at-large to negotiate presidential

recognition of de Gaulle's position, a formal Lend-Lease agreement, and relief and reconstruction aid for liberated France.

Returning to France in November 1945, as commissioner general for planning Monnet speedily devised the Monnet Plan for French economic revival and modernization, a program driven by a mixture of democratic planning and foreign economic assistance. Convinced that only full-scale European cooperation would prevent future devastating wars, from 1945 onward he quietly but relentlessly crusaded for this, playing central roles in the establishment in 1951 of the ECSC, of which he became the first president, and its 1957 successor the European Economic Community (EEC), which ultimately evolved into the European Union (EU). Monnet's long-standing friendships with key American officials including John Foster Dulles, John J. McCloy, George W. Ball, and numerous others helped him to win American support for these endeavors. From 1955 Monnet, universally considered the preeminent founder of a unified Europe, headed the Action Committee for the United States of Europe, working constantly to strengthen existing institutions. Monnet died at Montfort-l'Amaury, Yvelines, Ile de France, on 16 March 1979.

Monnet Plan

Proposed in 1945 by French statesman Jean Monnet and implemented during 1947–1952, the Monnet Plan (Le Plan, or The Plan) was part of the post–

World War II reconstruction of France and Western Europe. The Monnet Plan anticipated American funding and from 1948 was financed by capital made available to France under the Marshall Plan. Basically an arrangement for industrial modernization, the Monnet Plan set goals for six basic economic sectors: coal, iron and steel, electricity, cement, agricultural machinery, and transport.

On 4 December 1945 Monnet, who as head of the French Supply Commission coordinated imports from the United States to France under the Lend-Lease program, submitted to General Charles de Gaulle, head of the provisional French government, a set of proposals to modernize and rebuild the French economy. The memorandum urged the linking of reconstruction to modernization, with the ultimate goal of raising the French standard of living and securing France a place in international affairs. Modernizing would entail raising productivity in both industry and agriculture through improved production methods and better equipment. The proposal also urged the coordination of previously existing plans that covered individual sectors of industry. Moreover, it demanded the collaboration of workers, citizens, and industrialists.

Following adoption of Monnet's proposals by the French Council of Ministers, an executive order of 3 January 1946 authorized the establishment of the Commissariat Général du Plan (Planning Commission) and the committees of modernization that were attached directly to the head of government. Vertical committees were set up by sectors (e.g., iron and steel), and horizontal committees were established to troubleshoot specific problems (e.g., labor). Upon its establishment, Monnet became the head of the Commissariat. The newly established commissions prepared the first plan in 1946, and it was adopted by the Council of Ministers on 14 January 1947.

Numerous past French projects had involved economic planning in the interwar period. Only in the 1940s, however, did plans take the form of documents outlining objectives and the means to achieve them. The Monnet Plan combined the economic traditions of liberalism with those of central planning. The reconstruction of a neoliberal economic order relied on the power of the state. Although political groups in postwar France agreed on the necessity for economic recovery, they disagreed on the strategies to achieve it. Acceptance of the Monnet Plan was dependent not so much on domestic economic necessities but rather on the French government's foreign economic objectives within Europe, especially vis-à-vis Germany. The French government considered Germany's economic weakness vital to the successful restoration of France's economic and political strength in Europe. Paris considered unrestricted access to the coal and coke resources of the Ruhr as critical to jump-starting French steel production. In this way, the Monnet Plan was a forerunner of the 1950 Schuman Plan and the European Coal and Steel Community (ECSC), which were designed to carefully monitor the economic power of the Federal Republic of Germany (FRG, West Germany).

From its inception, the Monnet Plan anticipated American funding. Hence, approval of the plan by U.S. policymakers was critical to its realization. Previous professional commitments, among them his collaboration with

the Lend-Lease administration, had helped Monnet create a network of contacts with U.S. politicians and administrators. Assuming a prime role in the bilateral French-American talks that resulted in the Blum-Byrnes Accords (May 1946), Monnet promoted his modernization plan in Washington. For President Harry Truman's administration, the restoration and modernization of France was part of the larger economic reconstruction of a democratic and capitalist Western Europe that they hoped to enlist in the fight against Soviet communism. The Truman administration, initially concerned with the plan's prioritization of heavy industry and its neglect of financial and monetary stability, endorsed the plan after timetable adjustments and the inclusion of financial considerations had been made.

The Monnet Plan met almost all its goals, thanks in large part to Marshall Plan assistance. The Monnet Plan restored French economic confidence and encouraged the private sector to invest in new, more modern enterprises. The lessons of the plan proved essential to Monnet and his advisors in conceiving the Schuman Plan declaration of 9 May 1950, which paved the way to the founding of the ECSC.

Monrovia Group

One of two main factions in the Pan-African movement of the early 1960s, created in May 1961 in response to the formation of the other leading faction, the so-called Casablanca Group. The Monrovia Group was made up of twenty African nations, including Nigeria, Ethiopia, Liberia, and Sierra Leone. In general terms, it favored a less formal confederation of newly independent African states and a more voluntary approach to participation in cultural and economic exchange (and less socialism) than did the Casablanca Group.

In January 1961, Moroccan King Muhammad V invited the leaders of Ghana, Guinea, Egypt, Mali, Libya, and the Algerian government-in-exile to Casablanca to discuss African unity. This meeting was partly a response to an earlier gathering in Brazzaville, Congo, the previous month. The so-called Brazzaville Group promoted a loose confederation of independent African

states, but not the kind of political integration supported by certain radical forces on the continent, and supported United Nations (UN) intervention in the crisis then plaguing the Congo. Furthermore, the Brazzaville members had excluded those radical forces, specifically Ghana's Kwame Nkrumah and Egypt's Gamal Abdel Nasser, and rejected Morocco's claim to Mauritania, which had recently sought UN recognition.

In response to this, Morocco's ruler invited those same radical leaders to a conference in the hope of gaining their support for his claims on Mauritania. This meeting, which was dominated by the charismatic Nkrumah and Nasser, promoted a strong political union for Africa's newly independent states. Specifically, it accepted in principle Nkrumah's ideas of a United States of Africa, based on the American model. It also favored socialist, centralized economic planning; industrialization; and a continental defense structure. In addition, the group recognized Morocco's claim to Mauritania (to the delight of their host), rejected the promotion of regional groups over a continental confederation, supported Algerian independence and the withdrawal of UN peacekeepers from the Congo, and declared Israel as "a base for imperialism."

In keeping with the factionalism that marked the Pan-African movement at this time, still another bloc was created in response to the formation of the Casablanca Group. In May 1961, twenty African states (including the members of the Brazzaville Group) gathered in the Liberian capital of Monrovia to discuss African unity, but this group was considered more moderate in its approach and intentions. The Casablanca Group was excluded as being too radical and ambitious (particularly Nkrumah and Nasser), and with the exception of Tunisia, North Africa was not represented.

Following the first Monrovia meeting, a war of words broke out between the two factions, as the press and politicians from both sides accused the other of being tools of imperialism or harboring secret designs to dominate the continent. As a result, a general climate of mutual distrust ensued.

When a second meeting of the Monrovia Group was held in Lagos, Nigeria, in January 1962, the rest of the Casablanca Group refused to attend when the Algerian government-in-exile was not invited. Over the course of 1962, however, two of the main problems dividing the groups were resolved. Algeria received its independence in July 1962, about the same time that the conflict for control in the Congo reached a resolution with the establishment of a central government. Furthermore, by this time it had become increasingly apparent that the two factions shared many goals, including the promotion of independence for the remaining European colonies in Africa, nonalignment in the Cold War, and some form of continental cooperation in trade and foreign policies.

After lobbying by such influential African leaders as Sekou Toure of Guinea and Ethiopia's Emperor Haile Selassie, the two groups finally came together in a meeting of thirty-two African nations in May 1963 in Addis Ababa, where they agreed to a compromise plan for achieving greater African unity. The result was the creation of the Organization of African Unity (OAU) and the demise of the Casablanca and Monrovia Groups.

Moro, Aldo

(1916–1978)

Italian political leader Aldo Moro. A former premier and Italy's most influential politician, Moro was kidnapped and his five bodyguards shot to death by six Red Brigade terrorists in March 1976. Held for fifty-four days, Moro was then executed. His body was found in the trunk of a car in Rome. The event touched off massive public demonstrations in Italy. (Bettmann/Corbis)

Italian Christian Democratic Party (DC) politician and prime minister (1963–1968, 1974–1976). Born on 23 September 1916 in Maglie, Italy, Aldo Moro attended the Archita High School in Taranto and in 1938 earned a degree in law from Bari University. The following year he was named president of the Catholic student organization Federazione Universitaria Cattolica Italiana (FUCI), which he headed until 1942. In 1941 he began teaching law and politics at Bari University.

Moro was active from an early age in the DC and in 1946 was elected to the Constitutional Assembly, helping to draft Italy's new constitution. In the April 1948 elections he was elected to the Chamber of Deputies and served as undersecretary of the Foreign Ministry during 1948–1950. In 1955 he was named minister of justice, a post he held until 1957. During 1957–1958 he served as minister of education, and in 1959 he was elected secretary of the DC, the most powerful position in the party. At the same time, he continued his university career, receiving an appointment at the Rome University in 1964 to teach law and penal procedures.

In November 1963 Moro became prime minister, forming a coalition government with the Socialist Party. He led two other governments until 1968, a remarkably long tenure by Italian standards. During 1970–1972 and again during 1973–1974, he was foreign minister, returning to lead yet two more governments during 1974–1976 (his fourth and fifth).

As foreign minister, Moro was particularly active in promoting the settlement of pending disputes with Yugoslavia and Ethiopia and was also committed to European integration. While heading his fourth government, he was also rotating president of the European Community (EC)

and as such signed the Helsinki Final Act. He pursued a balanced policy between the Arab countries and the West, hoping that Italy might avoid becoming a battleground for terrorism from outside. In his domestic policies, he favored the inclusion of the growing Italian Communist Party (PCI) in the government.

As Italy was rocked by terrorism from both the extreme Right and Left, Moro lent his name to another short-lived government from February to April 1976. That July, he was elected president of the DC. On 16 March 1978, on his way to parliament, he was kidnapped by the terrorist organization *Brigate Rosse* (Red Brigades). After fifty-four days in the Red Brigades' so-called people's prison, during which time Moro wrote several letters and a long memorandum, members of the Red Brigades executed him on 9 May when negotiations between them and the Italian government collapsed. Moro's body was found in an automobile in Rome.

The Kingdom of Morocco is located in northwest Africa. It borders on the Mediterranean Sea to the north, the Atlantic Ocean to the west, Western Sahara to the south, and Algeria to the east. Morocco has an area of 172,414 square miles, slightly larger than the U.S. state of California. Until the early twentieth century, Morocco was relatively isolated from spheres of European, Middle Eastern, or sub-Saharan African influence, resulting in a strong Berber and Arab Islamic national character. During 1912–1956 Morocco was a French and Spanish protectorate. Its 1945 population was approximately 8.5 million people.

Occupied by U.S. forces in November 1942, Morocco contributed approximately 350,000 troops to fight in the liberation of France and Western Europe. Despite deep ties to France and the French culture, the Moroccan people increasingly embraced nationalism. In January 1943, U.S. President Franklin D. Roosevelt traveled to Casablanca, where he met with Winston Churchill for ten days to plan strategy. At that time Roosevelt also met with Moroccan Sultan Sidi Mohammed (1927–1961) and proclaimed American support for Morocco's eventual independence.

With growing nationalist sentiment in Morocco, the French government exiled the sultan and his family, first to Corsica and then to Madagascar

Morocco

during 1953–1955. In the wake of the Indochina War and with the outbreak of rebellion in Algeria in 1954, France granted independence to both Morocco and Tunisia in 1956, although Spain continued to control the Western Sahara region until the mid-1970s and still retains the small enclaves of Cuentra and Melilla along the Mediterranean coast.

Returning from exile a national hero in November 1955, the sultan became King Mohammed V upon independence on 2 March 1956. The king was both the nation's spiritual leader, as a direct descendent of the Prophet Muhammad, and its political head of government. In this period, Morocco maintained close ties to the United States.

Upon Mohammed V's unexpected death in March 1961, his son, Crown Prince Moulay Hassan, became king as Hassan II and ruled for the next four decades until his death in July 1999. Hassan, while lacking the charisma and unifying ability of his father, was nonetheless an effective leader, able to balance relations with the West, whose economic and political aid helped modernize his country, and the Middle East, whose Islamic heritage was his basis for power.

Although the Moroccan government was ostensibly a constitutional monarchy, in reality Hassan controlled nearly all sectors of government, including the military. Strongly opposed to communism, he oppressed the leftist Union Socialiste des Forces Populaires (Socialist Union of Popular Forces) for much of the 1960s. Notwithstanding, Morocco enjoyed cordial relationships with communist countries such as the Soviet Union and the People's Republic of China (PRC).

In 1970 a new constitution providing for a unicameral legislature came into being, but this failed to placate political and military opponents of Hassan's centralized authority. Army elements led by General Muhammad Oufkir staged two unsuccessful coups, one in July 1971 and another in August 1972, that the king barely survived. To strengthen his position, Hassan embarked on an effort to secure the Western Sahara. In November 1975 he called upon 200,000 of his countrymen to take part in the Green March, in which they peacefully crossed into Western Sahara to demonstrate Moroccan determination to regain that territory, which historically had been part of Morocco. Despite widespread international criticism, Morocco annexed the phosphate-rich region upon its abandonment by Spain a few months later. This action led to a protracted guerrilla war with the Saharawi resistance, known as the Polisario. In this struggle, the United States supported Morocco, the result of the long-standing alliance between the two countries. As part of this arrangement, U.S. forces enjoyed access to bases in the country, although they relinquished control of their last air base in Africa, at Kenitra, to Morocco in October 1978.

The early 1980s saw increasing domestic difficulties, including the cost of war in Western Sahara, a sluggish economy, rising inflation, and a severe drought. In 1981 these problems contributed to food riots in Casablanca in which some one hundred people died. A \$1.2 billion loan from the International Monetary Fund (IMF), changes in the tax structure, improvements

The so-called Green March into the Spanish Sahara, 6 November 1975. (Nogues Alain/Corbis Sygma)

in agriculture, and increased revenue from trade and tourism ameliorated many of these problems in the second half of the decade.

Hassan pursued a conciliatory foreign policy. In the 1980s he worked to secure Arab recognition of Israel and an end to the Arab-Israeli conflict. In July 1986 he held two days of talks on Palestinian issues with Israeli Prime Minister Shimon Peres. Hassan also sought to improve relationships among other Arab states as a result of the Cold War. In 1984 he organized the Islamic Congress of Casablanca and created the Arabic-African Union with Libya. During the 1991 Persian Gulf War, Morocco aligned itself squarely with the United States and sent troops to defend Saudi Arabia.

During Hassan's reign, literacy, women's equality, and economic well-being all increased substantially. The social and economic disparity between urban and rural populations decreased through improved education, health care, and communication. But rising Islamic fundamentalism posed difficult challenges for Morocco in the late 1980s and early 1990s. These problems continue to the present under the leadership of Hassan's son and successor, King Mohammed VI. Challenges include continued fighting in Western Sahara, reducing constraints on private activity and foreign trade, and achieving sustainable economic growth.

Moscow Meeting, Brezhnev and Nixon (22–30 May 1972)

Summit meeting between U.S. President Richard Nixon and Soviet leader Leonid Brezhnev during 22–30 May 1972, marking a historic turning point in U.S.-Soviet relations with the first presidential visit to the Soviet Union since the presidency of Franklin D. Roosevelt. Nixon's nine-day summit meeting with Brezhnev solidified the superpower détente, underway since the late 1960s. Among the numerous agreements signed during the summit, the most important were the Treaty on the Limitation of Anti-Ballistic Missile Systems (ABM Treaty) and the accompanying Interim Agreement on Certain Measures with Respect to the Limitation of Strategic Offensive Weapons (Strategic Arms Limitation Agreement, SALT I Interim Agreement). These agreements completed the first stages of the larger SALT discussions.

Crucial to understanding the nature of the Moscow summit is the international situation in which it occurred. In the early 1970s, relations between America and the Soviet Union improved dramatically because of the relaxation of tensions in Europe in the aftermath of the Soviet suppression of the 1968 Prague Spring in Czechoslovakia. In the spirit of détente, the Nixon administration embarked on a policy of multilateral disarmament agreements, such as the 1971 signing of the Seabed Treaty. Détente ultimately served not only U.S. interests but also Soviet security interests. Despite relaxed tensions in Europe, Asian events might have had a damaging effect on American-Soviet relations. The 1971 India-Pakistan War and the Vietnam War were additional irritants. To the Soviets, détente outweighed these concerns, and a secret trip to Moscow by Nixon's national security advisor, Henry Kissinger, in April 1972 finalized the summit plans.

In addition to the fruitful Moscow discussions and daily signatures of agreements between the conferees, Nixon made trips to Leningrad and Kiev and gave a live radio-television address to the Soviet people. His address highlighted the shared historical struggles of the two nations and reiterated their mutual responsibilities as global superpowers. During the summit, Nixon and Brezhnev discussed the status of the international community and a plethora of bilateral issues in hopes of continuing and furthering

détente despite the differing ideologies of the two superpowers. The two leaders agreed that smaller third-party states should not interfere with maintaining détente. Bilateral negotiations included the limitation of strategic armaments; commercial and economic agreements; cooperation in health issues; environmental cooperation; scientific, educational, and cultural cooperation and exchanges; and cooperation in space exploration. The results of these negotiations provided the necessary framework for a joint space venture in 1975, large U.S. grain sales to the Soviets, and, most importantly, the SALT agreements.

The majority of the summit concentrated on the SALT agreements. The Nixon administration had inherited a legacy of outdated doctrines pertaining to U.S. nuclear strategy. The antiquated policy of maintaining nuclear superiority over the USSR was no longer practical. Thus, through détente it was now possible to conduct negotiations limiting the growth of the superpower nuclear arsenals. In a first step toward the realization of SALT, on 26 May Nixon and Brezhnev signed the ABM Treaty and Interim Agreement. The ABM Treaty limited the deployment of antiballistic missiles for each nation to two sites. The SALT Interim Agreement froze the number of intercontinental ballistic missiles (ICBMs) possessed by each country.

In a move to reaffirm both American and Soviet commitments to détente, the two powers signed the Basic Principles of Mutual Relations between the United States of America and the Union of Soviet Socialist Republics. This document contained twelve principles and served to encapsulate the spirit of the Moscow summit and the evolving superpower détente. Some of the more important principles included the notion of peaceful coexistence and the promise of future summit meetings.

Moscow Meeting, Gorbachev and Reagan

(29 May–2 June 1988)

Summit meeting between U.S. President Ronald Reagan and Soviet leader Mikhail Gorbachev held in Moscow during 29 May–2 June 1988. It was the fourth such meeting between Reagan and Gorbachev since 1985. For Reagan, the conference coincided with congressional hearings on the Iran-Contra Affair. Because of this, some critics speculated that the president was trying to divert attention from the scandal by creating a newsworthy achievement at the meeting. The major accomplishment of the summit was the signing of the already-ratified 1987 Intermediate-Range Nuclear Forces (INF) Treaty on 1 June 1988. It did not represent a breakthrough in arms control.

From the Soviet perspective, the 1988 summit greatly enhanced Gorbachev's domestic and international prestige. This was because of the obvious close relationship between the two leaders and Reagan's international reputation as an anticommunist hard-liner. Gorbachev's heightened prestige gave him important political capital, which was needed as he continued to move forward with his perestroika and glasnost reforms.

The meeting was carefully crafted to focus on the INF Treaty. The treaty had been forged at the December 1987 Washington summit meeting between the two leaders and was approved by North Atlantic Treaty Organization (NATO) leaders in March 1988 and by the U.S. Senate on 29 May 1988. The treaty called for the destruction of 2,611 intermediate-range ballistic missiles (IRBMs) with flight ranges of 300–3,400 miles. Included in the treaty were U.S. Pershing II missiles and ground-launched cruise missiles as well as Soviet SS-4, SS-12, SS-20, and SS-23 missiles. It also specified very detailed on-site inspection and verification procedures. In accordance with the treaty, by 1991 both countries would have eliminated all intermediate-range nuclear missiles.

The summit also resulted in a wide variety of smaller agreements. These covered a spectrum of topics such as student exchanges, nuclear power research, maritime rescues, fisheries, transportation, and radio navigation. Typical of these agreements was the Bilateral Ballistic Missile Launch Agreement. It called for both nations to inform the other no less than twenty-four hours in advance of any ballistic missile launch.

During the summit, Gorbachev surprised the American delegation on the first evening by handing Reagan a proposed joint declaration regarding peaceful coexistence, which Reagan declined to endorse. The declaration would have bound both countries to a pact of nonaggression and prohibited the use of force to resolve disputes. Reagan's advisors believed that the statement was too ambiguous.

Analysts were surprised by the degree of progress made toward future nuclear weapons reductions, as indicated by points of agreement on land-based mobile missile systems and air-launched cruise missiles. However, the conference revealed that the two nations were still far apart on other important arms control subjects, such as sea-based cruise missiles and the Strategic Defense Initiative (SDI).

In general, the summit was a success but did not produce any dramatic or unexpected results. Gorbachev expressed his disappointment that opportunities for more dramatic progress had been missed. For his part, Reagan continued to send a clear message regarding the importance of human rights and political reform in the Soviet Union. Indeed, his meetings with Russian religious leaders and Soviet dissidents underscored this point. A modest but important accomplishment of the meeting was to provide an effective bridge to future summits between Gorbachev and President George H. W. Bush.

Summit meeting between U.S. President Richard M. Nixon and Soviet Premier Leonid Brezhnev held during 27 June–3 July 1974 in Moscow and Yalta during the period of détente between the two Cold War superpowers. One of the major objectives and achievements of détente was to limit the ongoing nuclear arms race. This was embodied in the 1972 Strategic Arms Limitation Talks II (SALT) Treaty. The summer 1974 meeting was the first summit meeting between the two leaders since June 1973, when Nixon hosted Brezhnev in the United States. The meeting was a part of a continuing dialogue between the two countries designed to decrease tensions and foster greater East-West cooperation.

Ultimately, the United States sought to move beyond the achievements of SALT I and II to address the limitation of multiple independently targeted reentry vehicles (MIRVs) carrying nuclear warheads. The Americans were also interested in extending the five-year SALT I interim agreement that would expire in 1977. Unfortunately, the last meeting between Nixon and Brezhnev was overshadowed by U.S. domestic events, specifically ongoing congressional investigations of the Watergate scandal, which would soon implicate Nixon. In fact, Nixon's domestic problems had become a factor in his motivation to meet with the Soviet leader. The president hoped that a successful meeting might distract the public's attention from the growing Watergate crisis.

**Moscow and Yalta
Meeting, Brezhnev
and Nixon**
(27 June–3 July 1974)

The 1974 meetings took place in Moscow, Minsk, and Yalta. U.S. Secretary of State and National Security Advisor Henry Kissinger accompanied the president throughout the summit. Alexei Kosygin, head of the Council of Ministers, and Soviet Foreign Minister Andrey Gromyko accompanied Brezhnev. Although Nixon and Brezhnev got along famously on a personal level, very little of substance was produced during the meeting beyond discussion of rather routine cultural, scientific, and economic exchanges.

The major achievement of the conference was the Threshold Test Ban Treaty (TTBT), which limited the two nations' nuclear weapons tests to a maximum of 150 kilotons. The agreement also required advance notification of nuclear tests and an exchange of data, making seismic test monitoring possible. Another significant accomplishment was agreement on a formal protocol to the 1972 Anti-Ballistic Missile (ABM) Treaty, which reduced the number of ABM sites allowed each country from two to one.

One of the reasons that the 1974 meeting did not produce major new arms control agreements as some had expected was division within the Nixon administration. This split concerned the effects that the SALT II Treaty would have on U.S. offensive nuclear capability. The American military had made great strides in MIRV technology in the two years since the SALT negotiations began. Some people in Congress and the Pentagon did not want that potential advantage negotiated away. Others, including Kissinger, did not see any inherent value in achieving a strategic advantage in nuclear weapons. This issue remained unresolved during the conference and thus precluded any bold U.S. proposals in the area of arms control.

Nixon, facing impeachment by Congress in light of damaging evidence that tied him directly to the Watergate scandal, resigned from office on 9 August 1974. If he had hoped that the summit with Brezhnev would convince the American people that his personal diplomatic skills were more important than his abuse of power and criminal activity, he was mistaken. Still, the June–July 1974 meetings were not a failure. The TTBT was finally ratified by the U.S. Senate (after many modifications) in 1990. And protocols were set for a miniconference on SALT II, to take place in November 1974. Most importantly, the policy of détente was sustained and continued through the Gerald Ford and Jimmy Carter administrations.

Iranian nationalist and prime minister of Iran (1951–1953). Born on 19 May 1882 in Tehran to a prominent family, Mohammed Mossadegh studied at the Institute of Political Science in Paris during 1909–1911 and earned his law degree from the University of Lausanne, Switzerland, in 1913. The following year he returned to Iran, and in 1917 he was named deputy finance minister. He became finance minister in 1921 and foreign minister for a brief time in 1923. Later that same year, he withdrew from politics in protest over Shah Mohammad Reza Pahlavi's repressive and pro-British policies. For most of the next two decades Mossadegh worked mainly in the private sector, and his political forays were quite limited.

Mossadegh was elected to parliament in 1944 on the National Front Party ticket and went on to lead a nationalist movement that sought to remove British control over Iranian oil. He became prime minister in the spring of 1951. His first actions in office were directed at enforcing the Iranian parliament's Oil Nationalization Bill, which called for seizing control of the British-owned Anglo-Iranian Oil Company. His next battle was with the shah over control of the military. Although the shah reigned over the nation, his only constitutional power was direct control over the nation's armed forces. Mossadegh wanted control of the military to be vested in the cabinet, a request that the shah refused.

In 1952, Mossadegh resigned in protest but became prime minister again within weeks, following popular uproar over his apparently forced resignation. Besides raising the hackles of British oil interests, his socialist domestic reforms had begun to alarm the United States. An attempted coup in March 1953 failed, as did a similar attempt on 16 August. Three days later, however, another effort to unseat Mossadegh by force succeeded, with the backing and aid of the U.S. Central Intelligence Agency (CIA). On 20 August Mossadegh was placed under arrest, and the shah, who had fled several days earlier, returned to assume control of the government. The shah now exercised sweeping authority. Mossadegh was tried, convicted, and sentenced to three years in prison. Upon his release, he remained under house arrest until his death in Tehran on 4 March 1967.

**Mountbatten, Louis,
1st Earl Mountbatten
of Burma**
(1900–1979)

British admiral, last British Viceroy to India (1947), and governor-general of independent India (1947–1948). Born on 25 June 1900 into the British royal family at Windsor Castle, London, as Louis Francis Albert Victor Nicholas of Battenberg, his mother was a granddaughter of Queen Victoria. At age thirteen Mountbatten enrolled in the Royal Naval College, and during World War I he served on ships prior to receiving his commission as a sub-lieutenant in 1918. During 1918–1920 he attended Christ's College, Cambridge University. In 1920 he resumed his naval career, being promoted to lieutenant commander in 1928 and captain in 1937.

With the outbreak of World War II, Mountbatten saw combat at sea, was recognized for valor, and was promoted to commodore (1941) and acting vice-admiral (1942). He was named chief of combined operations in 1941, a position that brought with it membership on the British Chiefs of Staff and the joint Anglo-American Chiefs of Staff. In October 1943 British Prime Minister Winston Churchill appointed Mountbatten supreme allied commander in the Southeast Asia theater, a post he held until 1946.

Lord Louis Mountbatten, British admiral and statesman (1900–1979). (Illustrated London News Picture Library)

With the end of the war, the British Labour government moved to grant independence to India. Yet Indian society had become increasingly polarized between Hindu and Muslim nationalists. The Hindus wanted the new Indian state to be a single entity, while the Muslims wanted the country divided into two nations, a predominantly Hindu India and a predominantly Muslim Pakistan. In the end, independent Indian and Pakistani states emerged in 1947. Mountbatten entered into this volatile situation in 1947 as the last viceroy of India. His task was to preside over the absolute end of British rule in India and to bring about the transition to independence in the most orderly fashion possible. Scattered violence continued to mar the independence process, however, and Mountbatten served an additional year (1947–1948) as governor-general of India. After first being named a viscount, he was named an earl in 1948.

In 1948 Mountbatten returned to the Royal Navy, was promoted to admiral in 1953, and served as 4th sea lord and commander of the Mediterranean Fleet during 1952–1955. He became 1st sea lord in 1955, serving until 1959, and he was chief of the defense staff during 1959–1965. In 1956 Mountbatten was promoted to admiral of the fleet. He retired from the navy in 1965.

On 27 August 1979 Mountbatten was assassinated by Irish Republican Army (IRA) terrorists, who blew up his yacht in Donegal Bay, near his summer home in Sligo in the Irish Republic. His teenage grandson, another youth, and his daughter's mother-in-law were also killed, and several other Mountbatten family members were seriously injured.

Mountbatten was assassinated by Irish Republican Army (IRA) terrorists, who blew up his yacht in Donegal Bay, near his summer home in Sligo in the Irish Republic.

Southeast African nation covering 304,494 square miles, roughly twice the size of the U.S. state of California. The Republic of Mozambique, with a 1945 population of approximately 6 million, borders on Swaziland to the south; South Africa and Zimbabwe to the west; Zambia, Malawi, and Tanzania to the north; and the Indian Ocean to the east. Portuguese navigator Vasco de Gama explored Mozambique in 1489, and Portugal colonized the land in 1505.

Mozambique fell into ruinous conditions during 1500–1640 as Portugal's power waned. With limited Portuguese influence, Mozambique experienced an extended period of sharecropping that kept most farmers in a state of serfdom. Also, from the mid-eighteenth to the mid-nineteenth centuries, large numbers of Africans were shipped as slaves, mainly to the Macarena Islands and Brazil. By 1891, political policies of the Portuguese shifted the administration of much of Mozambique to a large, private trading organization known as the Mozambique Company, under a charter granting sovereign rights for fifty years. The Mozambique Company was one of two concession companies to which Lisbon entrusted the administration of Portuguese East Africa, although it was controlled and financed mostly by the British. Because policies in Mozambique were designed to benefit white settlers and the Portuguese homeland, little attention was paid to national integration, economic infrastructure, or education.

After World War II, Portuguese dictator António de Oliveira Salazar insisted on holding on to Mozambique and the other Portuguese colonies. A drive for Mozambican independence soon developed, and in 1962 several anticolonial political groups formed the Front for the Liberation of Mozambique (Frelimo), a leftist, anti-Portuguese guerrilla movement under the leadership of Eduardo Mondlane.

Mozambique

Mondlane helped initiate an armed campaign against Portuguese colonial rule in September 1964. After ten years of sporadic warfare and Portugal's return to democracy, Frelimo took control of the capital city of Maputo in a coup in April 1974. Within a year, almost all Portuguese colonists had departed. Mozambique became independent on 25 June 1975.

Mondlane responded to Mozambique's lack of resources and abysmal economy by moving into alignment with Cuba and the Soviet Union. After he was assassinated in 1969, Frelimo established a one-party Marxist state under President Samora Machel. Racial violence soon ensued, and many Europeans fled the country. Meanwhile, Frelimo banned private land ownership, nationalized all industries, and put in place educational and health reforms. The new government, sporadically supported by the Soviet Union, was economically dependent on South Africa with its hostile apartheid government. It also had to fight the Mozambique National Resistance Movement (RENAMO), an anticommunist political organization of guerrillas sponsored by the white minority government of Rhodesia (Zimbabwe) and financed by South Africa. In 1979 Rhodesia invaded Mozambique, igniting even more violence that wrought havoc and killed scores of civilians.

In 1982, RENAMO launched a series of attacks on transport routes, schools, and health clinics, and Mozambique descended into civil war. In 1984, the South African regime agreed to stop sponsoring RENAMO under the Nkomati Accord if the Mozambican government expelled exiled members of the African National Congress (ANC) residing there. The ANC was a governing party in South Africa founded to defend the rights of the black majority. However, South Africa continued funneling financial and military resources to RENAMO until a permanent peace accord, the General Peace Agreement, was reached in 1992. In the meantime, years of violence, civil war, political instability, and gross government inefficiency all but ruined the Mozambican economy. Indeed, in 1990 Mozambique was estimated to be the world's poorest nation.

In 1994 Mozambique held national elections, which were accepted by most parties as free and fair. Frelimo won, under Joaquim Chissano, while RENAMO ran as the official opposition. By the mid-1990s Frelimo, which had cast aside its earlier Marxist leanings, had made progress on the economic front by introducing free-market mechanisms, cutting inflation, and stabilizing the currency.

Mozambique Civil War (1977–1992)

Major armed conflict in southeastern Africa. After World War II, Portuguese dictator António de Oliveira Salazar continued to believe that Mozambique and other Portuguese overseas possessions should remain under Portuguese control. In Mozambique, however, Eduardo Mondlane led a revolt against Portugal. He also founded the Front for the Liberation of Mozambique (Frelimo), an anti-Portuguese liberation movement.

On 25 September 1964, Frelimo soldiers, with logistical assistance from the surrounding population, attacked the Portuguese administrative post at Chai in Cabo Delgado Province. This raid marked the beginning of the struggle against Portuguese colonial rule in Mozambique. Although Mondlane was assassinated in 1969 and Salazar devoted considerable resources to suppress the insurrection, colonialism in Mozambique collapsed in 1974.

When Mozambique finally declared its independence from Portugal in 1975, the leaders of Frelimo soon established an autocratic one-party state allied with the Soviet bloc. Upon coming to power, they eliminated political pluralism, religiously affiliated educational institutions, and the role played by traditional societal authorities. In 1977, with a Marxist state firmly in place, an anti-Frelimo political group came into being, known as the Mozambique Resistance Movement (RENAMO). It received significant support and funding from the white minority government of neighboring Rhodesia (Zimbabwe) as well as from South Africa and the United States. When in 1977 RENAMO launched a series of attacks on transport routes, schools, and health clinics, the country fell into a full-fledged civil war.

RENAMO's fighters sought to disrupt Mozambique's communications and transportation infrastructure in order to overthrow the Marxist government. In this it had considerable success. Indeed, during most of the long civil war that followed, the government was unable to exercise effective control outside urban areas, and much of the countryside remained cut off from the capital. The conflict gradually shifted to a guerrilla war. After Zimbabwean nationalists took control of their country in 1980, RENAMO relied primarily on South African support to wage a campaign against the Frelimo government.

In 1983, Frelimo President Samora Machel (1983–1986), facing mounting internal economic troubles, sabotage from neighboring South Africa, and the side effects of the long Rhodesian Civil War, conceded that socialism had failed in Mozambique and acknowledged the need for major political and economic reforms. He then negotiated the Nkomati Accord with the South African government, signed on 16 March 1984. Essentially a non-aggression pact, the accord called for an end to Mozambique support for the African National Congress (ANC) in South Africa and for South Africa to

Young Frelimo soldier during the Mozambique Civil War, 1987. (Patrick Durand/Corbis Sygma)

cease supplying RENAMO. Mozambique generally complied with the agreement, but South Africa, engaged in fighting a growing Marxist threat in the region, did not abide by it and continued to supply the rebels. Thus, the war continued.

In 1986 Machel, returning from an international meeting in Zambia, died in a plane crash on South African territory. The accident was attributed to error on the part of the Soviet pilot, but there is still speculation that South African authorities had a hand in it. Following Machel's death, Joaquim Chissano became president of Mozambique. Chissano, who was one of the original founders of the Frelimo movement, sought to continue the economic and social reforms begun by Machel.

In 1990, with the apartheid regime crumbling in South Africa and support for RENAMO waning in South Africa as well as in the United States, the first direct talks began between the Frelimo government and RENAMO. The Italian government and Catholic Church officials served as mediators and facilitators. In November 1990 a new constitution was adopted in which Mozambique became a multiparty state with periodic elections and guaranteed democratic rights. On 4 October 1992 in Rome, President Chissano and RENAMO leader Afonso Dhlakama signed a peace agreement negotiated by the United Nations (UN). It formally took effect on 15 October. A UN peace-keeping force (ONUMOZ) supervised implementation of the Rome General Peace Accords and a two-year transition to democracy.

In 1994 Mozambique held internationally supervised elections, which were accepted by most parties as being both free and fair. Chissano won the election, and his government began the arduous process of reviving the economy and developing the country's extensive resources. His policies included programs to promote rural marketing, provide greater access to credit, and raise the productivity of small-scale farmers.

Black South African nationalist, prime minister (1980–1987) and executive president of Zimbabwe (1987–). Born on 21 February 1924 at Kutama Mission in the Zvimba District of Southern Rhodesia (now Zimbabwe), Robert Mugabe earned a BA degree from Fort Hare University in South Africa in 1951. He then pursued additional studies in education and worked as a teacher in Ghana during 1958–1960.

Mugabe returned to Southern Rhodesia in 1960 a Marxist and joined Joshua Nkomo's National Democratic Party (NDP). In December 1961 the NDP was banned, and Mugabe became secretary-general of its successor, the Zimbabwean African People's Union (ZAPU), located in Tanzania. Deepening personal and ideological differences with ZAPU led Mugabe to leave the party in 1963. He immediately joined, as secretary-general, the newly formed Zimbabwean African National Union (ZANU). He returned to Rhodesia in 1964 and was imprisoned until 1974, when he was released by Ian Smith's white minority government.

Mozambique's independence in 1975 provided ZANU with a secure base in a neighboring country, and Mugabe quickly developed a close relationship with Mozambican President Samora Machel. From 1976 Mugabe was recognized as the head of the Zimbabwean African National Liberation Army (ZANLA) and emerged as a leading contender for the top leadership position within an ever-fragmenting nationalist movement. Supported by the People's Republic of China (PRC), ZANU became the leading guerrilla force in Zimbabwe. The escalating war gave rise to sustained regional and international attempts to secure a negotiated settlement between the Smith regime and the two main nationalist groups, ZANU and the Zambia-based ZAPU.

During the September 1979 Lancaster House talks, which led to the end of white rule in Rhodesia, Mugabe was persuaded to accept the terms of a political settlement. Unable to resolve long-standing differences with Nkomo, ZANU ran as an independent party (ZANU-PF) in the February 1980 elections. On 18 April 1980, Zimbabwe declared its independence, with Mugabe as prime minister.

In late 1987, the position of prime minister was substituted for that of executive president, which combined the posts of head of state and head of government. Mugabe thus gained more power. His attempts to introduce land reform brought disaster. Farm productivity plummeted, resulting in widespread food shortages. His regime has also grown more repressive and corrupt, drawing the ire of Zimbabweans and regional leaders alike.

Mulroney, Martin Brian (1939–)

Canadian politician and prime minister (1984–1993). Born into an immigrant Irish Catholic working-class family on 20 March 1939 in Baie-Comeau, Quebec, Brian Mulroney attended a private high school in New Brunswick and then St. Francis Xavier University in Nova Scotia. He received a BA degree in political science in 1959. He also earned a law degree from Laval University in 1964. That same year he moved to Montreal and worked for that city's largest law firm. A successful labor lawyer and a skilled negotiator, he gained popularity and became a public figure when he was appointed to the Quebec Royal Commission of Inquiry into Union Freedom.

Brian Mulroney, prime minister of Canada during 1984–1993. His government pursued deregulation of key industries and reform of the tax structure as well as continuing efforts to unify Canada while recognizing Quebec as a distinct society. (Brian Mulroney, Ogilvy Renault S.E.N.C.)

Mulroney subsequently entered the business world as executive vice president and then president of the Iron Ore Company of Canada. In 1976, while still engaged in business, he campaigned for the leadership position of the Progressive Conservative Party but lost to Joe Clark. Mulroney became the party's leader on 11 June 1983, this time defeating Clark, and entered the Canadian House of Commons. After Mulroney's party won the greatest majority in Canadian history, he was sworn in as Canada's eighteenth prime minister on 17 September 1984.

Among the accomplishments of Mulroney's first term was the negotiation of a free trade agreement with the United States, thanks largely to his close relationship with President Ronald Reagan. Mulroney's bilingual past and fluent French aided his brokering of the Meech Lake Accord (1987), which recognized Quebec as a distinct society within Canada, although the accord failed to pass.

Mulroney's second term, which began in 1988, saw high unemployment and an economic downturn in Canada. Several scandals also plagued his administration. Mexico's inclusion with Canada and the United States in the North American Free Trade Agreement (NAFTA) in 1992 proved unpopular. That same year, a second attempt to unify the country's constitution, the Charlottetown Agreement, was ultimately defeated in a national referendum. In the midst

of economic recession and massive layoffs, Mulroney resigned as both prime minister and leader of the Progressive Conservative Party on 24 February 1993.

In 1995 the new government charged Mulroney with accepting millions of dollars in kickbacks from an airline deal but on 6 July 1997 it offered an apology and settled out of court. In May 2002 Mulroney was awarded the prestigious Order of Quebec.

A sea-based nuclear weapons-sharing arrangement promulgated by the United States during 1960–1965 among its North Atlantic Treaty Organization (NATO) allies. In a move to counter and contain nuclear weapons development by Great Britain and France as well as to improve cohesion among all the nations of NATO, the United States in December 1960 proposed the development of a multinational seaborne alternative to the land-basing of medium-range ballistic missiles (MRBMs) in Europe. Indeed, as France distanced itself from routine military participation in NATO during these years and as Cyprus became a crucible for Greek and Turkish disagreement, NATO badly needed a unifying force, which the Multilateral Force (MLF) attempted to provide.

Initially conceived as a force comprising five U.S. Navy ballistic-missile submarines (SSBNs) operated by crews drawn from various NATO states that would fire its weapons only upon reaching a unanimous committee vote, the MLF elicited a largely skeptical response from most NATO members. But it was bolstered by nuclear delivery system provisions set forth in the 1962 Nassau Agreement, alarming not only some NATO partners but the Soviet Union as well by placing the Federal Republic of Germany (FRG, West Germany) closer to putative control over nuclear weaponry.

Concerns voiced in the U.S. Congress and by nuclear propulsion proponent Vice Admiral Hyman Rickover over the perceived operational and security risks that multinational manning might visit upon complex vessels such as Polaris submarines led President John F. Kennedy's administration in February 1963 to propose a much less costly and more easily developed

Multilateral Force, NATO

alternative. The proposal called for a purpose-built fleet of twenty-five apparent merchant ships, each armed with eight Polaris missiles, and formally established that October as the MLF template by a participant NATO Working Group comprising the United States, Great Britain, West Germany, Italy, Belgium, Greece, and Turkey. Military, security, and legal subgroups addressed such issues as basing for the fleet, crew training and discipline, and the all-important firing protocol. The anonymity of these ships, roving the Atlantic and Mediterranean shipping lanes with their international crews and concealed ballistic missiles, would have created an almost insurmountable barrier to their timely positive identification by the Soviets, who condemned the MLF as an exercise in piracy.

A crew drawn from seven NATO participants reported aboard the U.S. missile destroyer *Biddle* in mid-1964 for what would constitute the only deployment of the MLF: the Mixed Manning Demonstration, an eighteen-month trial of the multinational crew concept. This test was carried out against the backdrop of doubts and misgivings about the transfer of U.S. nuclear weapons and personnel to an international force, the British Labour Party's opposition to the MLF, and resentment by the smaller NATO contingents of the apparent control of MLF policy by the United States and Germany.

President Lyndon B. Johnson's administration, tired of the political and military complexities of promoting the MLF as the Vietnam War deepened, gladly greeted Britain's late 1964 counter-MLF proposal for a European-derived Atlantic Nuclear Force (ANF) within NATO. The British proposal thereby dissolved the increasingly problematic MLF before it could be chartered, leaving its Mixed Manning Demonstration to carry through what became essentially a NATO friendship cruise.

Multiple Reentry Vehicles

The section of a ballistic missile—either an intercontinental ballistic missile (ICBM) or a submarine-launched ballistic missile (SLBM)—that separates from the rocket upon reentry into Earth's atmosphere and unleashes several

reentry vehicles, each carrying a nuclear payload, over the same target. Usually, a multiple reentry vehicle (MRV) drops several warheads in a specific pattern over the same area to increase the damage to a particular target.

This kind of weapons system has obvious advantages over a single-warhead device delivered to the same area. It greatly diminishes the likelihood of a failed mission, because if one or even two bombs fail to detonate, the remaining live warheads can accomplish the task. Finally, MRVs can address inaccuracy issues by offering payload redundancies. The United States first deployed MRVs in the mid-1960s on Polaris A-3 SLBMs. The Soviet Union first began using MRVs on their SS-9 Mod 4 ICBMs.

In the late 1960s and early 1970s, the MRVs were eclipsed by a new type of MRV, the multiple independently targeted reentry vehicle (MIRV). As nuclear delivery systems' reliability, payloads, and accuracy all markedly increased, the need for hitting one target with multiple warheads became far less important. Instead, scientists and defense experts now sought to get more bang for the buck by placing multiple warheads on a single missile capable of striking multiple targets. Most U.S.-built MIRVs carried anywhere from three to twelve independently targeted warheads. The Soviets more than matched the American MIRVs.

MIRVs accomplished two key goals: first, they rendered antiballistic missile (ABM) systems relatively useless, as an onslaught of incoming MIRVed missiles would likely overcome any ABM site; and second, MIRVs were more efficient and cost-effective in the long run because significantly fewer missiles were needed to carry out a nuclear attack. Although the precise details of the functioning of MIRVs are a well-kept secret, it is believed that MIRVs can release decoys designed to fool enemy radars and interceptors. Over the years, MIRVs became ever more accurate as scientists made use of Global Positioning Satellites (GPSs) and custom-integrated circuits that make constant in-flight adjustments to ensure that MIRVs hit their targets dead on.

Munich Analogy

Historical analogy positing that appeasement only invites further aggression. In the belief that they were preventing a war with Germany, British Prime Minister Neville Chamberlain and French Premier Édouard Daladier, during a September 1938 conference in Munich, Germany, ceded German-speaking areas of Czechoslovakia to German dictator Adolf Hitler. Seemingly emboldened by the British and French concession at Munich, six months later Hitler sent in German troops to occupy the remainder of Czechoslovakia. The acquisition of Czechoslovak military hardware, especially artillery but also tanks and aircraft, in addition to war industries immensely benefited the German war machine. On 1 September 1939, German forces invaded Poland, starting World War II.

Cold War–era politicians often used the Munich example as a reason to stand firm in the face of foreign hostility. They applied the Munich Analogy especially in the face of perceived Soviet aggression. The Munich reference illustrates both the power and limitations of analogical reasoning. The 1947 Truman Doctrine and the U.S. intervention in the Korean War in June 1950 assumed that communist aggression had to be countered in order to forestall a third world war. President John F. Kennedy, whose Harvard undergraduate thesis “Why England Slept” (1940) dissected the causes of laggard British rearmament before World War II, invoked the lessons of the 1930s during the 1962 Cuban Missile Crisis.

But the Munich Analogy can be carried too far. British Prime Minister Anthony Eden conflated Egyptian nationalism with fascism, which set the stage for Britain’s disastrous participation in the 1956 Suez Crisis. President Lyndon Johnson’s misapplication of the analogy to Vietnam rationalized a strategically dubious conflict and ignored the profound dissimilarities between Nazi Germany and the Democratic Republic of Vietnam (DRV, North Vietnam) and the goals of their governments. The Vietnam War did not fully discredit this analogy, however, as President George H. W. Bush carelessly likened Iraqi President Saddam Hussein to Hitler prior to the 1991 Persian Gulf War.

U.S. diplomat and State Department official. Born in Milwaukee, Wisconsin, on 28 October 1894, Robert Murphy attended Marquette University and George Washington University, where he earned a law degree in 1917 and that same year joined the foreign service. His first postings were as a consul in various European cities. Beginning in 1930, he served in various capacities in Paris, leaving there as chargé d'affaires in 1941.

Murphy's hitherto typical career took a dramatic turn when he was asked by President Franklin D. Roosevelt to be his representative to French North Africa, with the purpose of obtaining the defection of French forces from the collaborationist Vichy regime. Following this mission, Murphy was involved in the planning for the Allied invasion of North Africa in 1942. Following the German defeat of May 1945, he became a political advisor in Germany and later director of the Office for German and Austrian Affairs.

During 1949–1952 Murphy served as U.S. ambassador to Belgium and then in 1953 to Japan. He completed his government service as deputy undersecretary of state during 1954–1959. President Dwight D. Eisenhower called him out of retirement in 1960 to assess the turbulent situation in the newly independent Congo, and during the Eisenhower era Murphy became a top diplomatic troubleshooter for the U.S. government. In 1953, Eisenhower sent Murphy to Seoul, the Republic of Korea (ROK, South Korea), to convince Syngman Rhee to sign the armistice ending the Korean War. The following year, Murphy traveled to Belgrade to encourage Marshal Josip Broz Tito to reach an agreement with Italy over Trieste. During the 1956 Suez Crisis, Murphy was dispatched to London to evaluate the position of the British government.

Perhaps most significantly, during the American intervention in Lebanon in 1958, Murphy acted as a personal representative of President Eisenhower. Murphy established communications with all of the opposing factions, helped to ensure the safety of the 14,000 U.S. Marines in Beirut, and promoted a peaceful handover of power and an end to the crisis. Before returning to the United States, he visited Baghdad and Cairo in an effort to calm the tensions that had erupted in the Middle East during the tumultuous summer of 1958.

Following his retirement from government, Murphy served as the director of several companies, including Morgan Guaranty Trust Company and Corning Glass Works. He died in New York City on 9 January 1978.

Music

Significant cultural trends complemented the major political developments of the Cold War in the United States, and nowhere was this fact more evident than in popular music. During the Cold War, music evolved at a dizzying rate: blues begat rock and roll, big band swing gave way to bebop jazz quartets, folk music gained considerable popularity, and funk would turn to disco in the 1970s. By the time the Berlin Wall came down in autumn 1989, several new musical genres had emerged that would have been wholly unrecognizable to listeners in the immediate post–World War II era.

The 1940s witnessed the last hurrah of the big band era, when swing reigned with artists such as Glenn Miller, Woody Herman, Count Basie, and Duke Ellington. Toward the end of the decade, rhythm and blues (R&B) and blues gained in popularity with the raw sounds of T-Bone Walker, Memphis Slim, and John Lee Hooker. Hank Williams also boosted the popularity of country-western music with what he called the “moanin’ blues,” featuring his twangy country voice over blues chord progressions.

The 1950s were perhaps the most significant years in the history of modern popular music. Jazz artists such as Miles Davis and Charlie Parker took the big band sound and distilled it into smaller jazz quartets. The end result was bebop, a more dynamic articulation of jazz that focused on improvisation and the individual soloist. The popularity of R&B also increased during the 1950s. The Platters, Fats Domino, and Ray Charles each had numerous hits throughout the decade, indicating that African American music, thought to be an urban and Southern phenomenon, was gaining popularity with crossover audiences. The emergence of rock and roll in the middle of the decade elucidates the extent to which white musicians appropriated African American music such as the blues and R&B.

The term “rock and roll” was first coined in 1951 by Cleveland disc jockey Alan Freed. Soon after, the sounds of Elvis Presley—largely credited as the first rock-and-roll pioneer—could be heard on radio stations throughout the United States, although some radio stations in the South refused to play it because of the obvious African American influence. Presley’s first hit, “That’s Alright Mama,” represented a fusion of R&B, soul, and country-

Music of the Cold War

<i>Decade</i>	<i>Most Popular Styles/Genres</i>	<i>Examples</i>
1940s	Big Band/swing	Glenn Miller, Woody Herman, Count Basie, Duke Ellington
	Blues/R&B	T-Bone Walker, Memphis Slim, John Lee Hooker
1950s	Jazz	Miles Davis, Charlie Parker
	R&B	The Platters, Fats Domino, Ray Charles
	Rock 'n roll	Elvis Presley, The Comets
	Country	Johnny Cash, Patsy Cline
	Latin	Perez Prado, Tito Puente
1960s	Jazz/fusion jazz	John Coltrane, Miles Davis
	Latin	Stan Getz, Joao Gilberto
	Rock 'n roll	The Beatles, The Rolling Stones, The Kinks
	Protest-oriented	Bob Dylan, Jefferson Airplane, Country Joe and the Fish, Buffalo Springfield
1970s	Rock 'n roll	Led Zeppelin, Black Sabbath, The Who
	Punk	The Ramones, The Clash, The Sex Pistols
	Disco	Bee Gees, Gloria Gaynor, Donna Summer
1980s	Pop	Madonna, U2, Huey Lewis, Whitney Houston
	Rap	Beastie Boys, Run-DMC, Easy-E
	Rock 'n roll	Van Halen, Def Leppard, Ozzy Osbourne

western. The almost instantaneous popularity of rock and roll was demonstrated by Bill Haley and his Comets' 1955 hit, "Rock Around the Clock," which remained number one on the Billboard charts for eight weeks and formally ushered in the rock era.

During the 1950s, country, classical, and Latin music also gained in popularity. Up-and-coming country stars Johnny Cash and Patsy Cline defined what came to be known as the Memphis Sound. Capitalizing on the novel power of television, Leonard Bernstein introduced classical music to millions with a series titled *Young People's Concerts*. The end of the decade witnessed a surge in the popularity of Latin music, with artists such as Perez Prado and Tito Puente introducing Afro Cuban rhythms such as the clave, son, and mambo to very receptive North American audiences.

If the 1950s are to be recognized for innovation, then the 1960s must be credited for giving the new genres shape and lasting substance. The popularity of Latin music continued into the 1960s, especially with the cool sounds of Brazil. Saxophonist Stan Getz is largely responsible for introducing Latin music to large audiences by blending Joao Gilberto's bossa nova with the West Coast sounds of cool jazz. Getz and Gilberto's collaboration would pay off quite handsomely with their 1964 megahit "The Girl from Ipanema."

After smaller bands became the standard in the 1950s, jazz evolved by leaps and bounds during the 1960s. John Coltrane, long a member of Miles Davis's bebop groups, broke away to form his own quartet in the late 1950s and, until his death in 1966, was credited with creating some of the most creative and experimental jazz. The quartet gained critical acclaim with its 1964 album, *A Love Supreme*. Toward the end of the decade, Davis also moved away from more conventional chordal and rhythmic structures and began experimenting with electric instruments, creating a genre of music that was

Many artists of the time perceived U.S. intervention in Vietnam as morally reprehensible.

dubbed “fusion.” His landmark 1969 album, *Bitch’s Brew*, represented the first shot fired in the fusion movement and, along with *A Love Supreme*, remains to this day one of the best-selling jazz albums ever produced.

During this period, James Brown injected R&B with a hitherto unmatched energy, increasing the tempo and organizing ever-tighter arrangements, essentially creating funk. His pathbreaking 1962 live recording, *Live at the Apollo*, reached second place on the Billboard Top 100. Brown influenced myriad pop musicians including Sly and the Family Stone and later Parliament/Funkadelic.

Rock and roll also gained significant momentum throughout the 1960s. The Beatles’ 1964 performance on the *Ed Sullivan Show* marked the beginning of the so-called British Invasion. The Beatles and other groups such as the Rolling Stones and the Kinks produced hit after hit in the United States, dominating the charts and setting new records for album sales. The new sound of the British Invasion, particularly the Beatles and the Rolling Stones, influenced an entire generation of musicians ranging from the Beach Boys to the Grateful Dead.

In 1965, emerging folk icon Bob Dylan rattled the acoustic world by “plugging in” at the Newport Folk Festival. His electric performance of “Maggie’s Farm” was met with an equal mix of boos and cheers. Folk music’s transition from acoustic to electric would influence rock music and, more importantly, the acid rock that would come to define the late 1960s. Moreover, Dylan’s music (his lyrics in particular) is one of the more salient examples of a society expressing its political frustrations through music. Examples of this include “Gods of War” and “It’s Alright Ma (I’m Only Bleeding),” which dealt with the evolving Vietnam War.

It was the ongoing Cold War and the Vietnam War that caused pop music to take on a decidedly political bent in the middle to late 1960s. Many artists of the time perceived U.S. intervention in Vietnam as morally reprehensible. They saw music as a means to express not only their personal dissatisfaction with the behavior of the U.S. government but also, and perhaps more importantly, to spread their message of dissent to the listening public. The protest music of artists such as Jefferson Airplane, Country Joe and the Fish, and Buffalo Springfield resonated with a largely dissatisfied youth. Moreover, protest music contributed to the counterculture that emerged in the late 1960s. Acid rock groups such as the Grateful Dead and the Velvet Underground represented not just an alternative music scene but also an alternative way of being. While the 1969 Woodstock music extravaganza is often cited as the height of the 1960s counterculture, many argue that it also marked the end of an era. Regardless, the concert produced legendary performances by Joe Cocker, Jimi Hendrix, and Joan Baez that to this day define both a decade and a generation.

The beginning of the 1970s was marked by disillusionment and building dissatisfaction. Many African American musicians used music as a medium to express their frustration with the limited gains of the civil rights movement. Dissatisfaction with the persistence of racial discrimination was articulated by Sly and the Family Stone with “Don’t Call Me Nigger, Whitey”

Bob Dylan and Joan Baez sing at the 1963 March on Washington. The pair were again featured in D. A. Pennebaker's 1967 documentary *Don't Look Back*. (National Archives and Records Administration)

and James Brown's "Damn Right, I Am Somebody." Similarly, anger at continued socioeconomic inequality was expressed by Gil Scott Heron with "Whitey's on the Moon" and "The Revolution Will Not Be Televised" and, perhaps most famously, by Marvin Gaye's "What's Going On."

Perhaps reflecting the pessimism of the decade, rock and roll became heavier and darker with the likes of Led Zeppelin, Black Sabbath, and The Who. By 1977, these hard-rock groups would influence the emergence of such groups as The Ramones, The Clash, and the Sex Pistols, marking the beginning of what would come to be called punk music, an alternative to the emerging disco culture. By the end of the decade, disco spiked in popularity, much of which was credited to the film *Saturday Night Fever*.

Disco ushered in the 1980s. Before fading into obscurity, however, it left its indelible mark on the one record that perhaps defined the decade: Michael Jackson's *Thriller*. The album included seven top-ten singles and, with 26 million copies sold, is the second-best-selling album in history. Other pop superstars of the 1980s included Madonna, U2, Huey Lewis, and Whitney Houston.

By 1986, rap was gaining popularity beyond the urban crucible within which it had been created, becoming increasingly recognized among suburban

white teenagers. Rap originated in 1979 with groups such as the Sugar Hill Gang and Afrika Bambaataa, who influenced a new generation of hit rappers in the 1980s including the Beastie Boys, Run-DMC, and Easy-E.

When the Berlin Wall fell on 9 November 1989, Roxette's "Listen to Your Heart" topped the Billboard charts until a couple of weeks later, when Milli Vanilli's "Blame It on the Rain" took the position. What both songs lack are the social or political messages of the music of previous decades, but they did carry the formula for a hit established by producers in the 1950s: singing of love over a catchy rhythm.

Muskie, Edmund Sixtus (1914–1996)

U.S. senator (1959–1980) and secretary of state (1980–1981). Born in Rumford, Maine, on 28 March 1914 to Polish immigrant parents, Edmund Muskie graduated from Bates College in 1936 and received a law degree from Cornell University in 1939. In 1940 he began practicing law in Maine.

Muskie enlisted in the U.S. Navy in 1942, serving in both the Atlantic and Pacific theaters until his discharge in 1945. He returned to Maine, where he became involved in local politics. In 1946 he was elected to the Maine legislature, winning reelection in 1948 and 1950. He then set his sights on the governorship, an office he won in 1954. He served in the governor's mansion until 1959, when he was sworn in as the junior U.S. senator from Maine. His political ascendancy was particularly noteworthy because he was a Democrat in an overwhelmingly Republican state.

Muskie was an effective senator and served on the Foreign Relations Committee, the Governmental Affairs Committee, and the Environmental Committee, which helped him hone his skills as an environmentalist. In the contentious 1968 presidential election, he was the Democratic nominee for vice president. Hubert Humphrey—the Democratic presidential nominee—and Muskie lost a close election to Richard Nixon and Spiro Agnew.

On 7 May 1980, Muskie ended his long senatorial career to take on the position of secretary of state. Sworn into office on 8 May, he retained his post until January 1981, when a change in administrations necessitated his resignation. He assumed his new office under extremely trying circumstances. President Jimmy Carter had chosen Muskie to replace Secretary of State

Cyrus R. Vance, who had resigned in protest over a failed attempt to gain the freedom of fifty-three U.S. hostages being held by student radicals in Tehran, Iran. Muskie left no major impact on U.S. foreign policy, but he worked tirelessly to end the hostage crisis. Carter's inability to bring this affair to a satisfactory conclusion probably cost him the 1980 election.

After leaving office in January 1981, Muskie practiced law, wrote, and spoke on a variety of topics. He died in Washington, D.C., on 26 March 1996.

Cold War strategic doctrine stressing nuclear deterrence between the United States and the Soviet Union, designed ostensibly to prevent a full-scale nuclear exchange. The doctrine of mutual assured destruction (MAD) was an important part of the Cold War beginning in the 1960s and is cited as one of the main reasons that there was no direct military confrontation between the United States and the Soviet Union. The doctrine was founded upon nuclear deterrence and was based on the premise that both superpowers had enough nuclear weapons to destroy each other many times over. Thus, if one superpower launched a nuclear first strike, the other would launch a massive counterstrike, resulting in the total devastation of both nations.

President Dwight D. Eisenhower's administration in the mid-1950s warned that if the United States were attacked first it would unleash massive retaliation. Thus, the MAD doctrine was born in the 1950s but did not reach fruition until the 1960s, when the Soviets achieved rough nuclear parity with the United States. U.S. Secretary of Defense Robert McNamara was then perhaps the first person to fully articulate MAD. Through the years, technological advances were constantly molding the doctrine. The U.S. deployment of submarine-launched ballistic missiles (SLBMs) in the early 1960s, for example, ensured a second-strike capability, thus further deterring the likelihood of a first strike.

The doctrine propagated the notion that each side had equal nuclear firepower and that if an attack occurred, retaliation would be equal to or greater than the initial attack. It followed that neither nation would launch a first strike because its adversary could guarantee an immediate, automatic, and overwhelming response consisting of a launch on warning, also known as a fail deadly. The final result would be the destruction of both sides. The end reasoning of MAD was that it contributed to a relatively stable peace.

Mutual Assured Destruction

The Command Post of the North American Air Defense Command (NORAD) Cheyenne Mountain Complex in April 1984. (U.S. Department of Defense)

The MAD doctrine survived into the 1970s and ironically contributed to the nuclear arms race. Each side tried to outwit and outproduce the other, as the example of the introduction of multiple independently targeted reentry vehicles (MIRVs) demonstrates. MIRVs came on-line in the early 1970s and upped the ante of nuclear deterrence by placing multiple warheads on a single missile. The justification for this and other technological enhancements was that the more missiles produced, the less chance there would be of an intentional nuclear attack.

The MAD doctrine became essentially obsolete on 25 July 1980 when President Jimmy Carter adopted the so-called countervailing strategy by reorienting U.S. policy to win a nuclear war. This was to be achieved by attacking and destroying the Soviet leadership and its military installations. It was assumed that such an attack would precipitate a Soviet surrender, thereby preventing the total destruction of the United States and the Soviet Union. This policy was taken even further by President Ronald Reagan, who proposed the Strategic Defense Initiative (SDI) in 1983. This was a system that would purportedly form a protective umbrella over the United States by destroying incoming nuclear missiles before they reached their targets. SDI has yet to be implemented, however, and many of its critics argue that there is no current technology available to make it a safe and reliable nuclear deterrent.

Mutual and Balanced Force Reductions Talks (1973–1989)

Negotiations aimed at conventional force reductions in Central Europe. In May 1972 the United States and the Soviet Union agreed during the Moscow summit to begin negotiations between the North Atlantic Treaty Organization (NATO) and the Warsaw Pact on conventional force reductions

in Central Europe. The Mutual and Balanced Force Reductions (MBFR) talks began in Vienna on 30 October 1973, but disputes quickly emerged over a number of issues. There was disagreement as to each side's actual existing force levels (the so-called data problem), whether the goal should be parity or percentage reductions, and whether reductions should focus on troops or equipment. Other sticking points included timetables for reductions, whether there should be national subceilings, and the critical matter of verification. Although tentative agreement was reached on most of these points by the summer of 1979, differences remained over the data problem and verification. By the end of the year, hope of agreement had faded with the Soviet invasion of Afghanistan and the end of détente, although the talks continued.

In April 1986, Soviet leader Mikhail Gorbachev proposed a phased reduction of all forces, nuclear and conventional, in a region stretching from the Atlantic to the Urals (ATTU), not just conventional forces in Central Europe. He further agreed to parity in forces and consented to on-site verification. In June, the Warsaw Pact proposed that these points form the basis of new negotiations. Following the Reykjavík summit in October 1986, NATO accepted the proposal, but only if limited to conventional forces. The Warsaw Pact agreed, and over the next two years, discussions established the parameters of the new talks.

On 10 January 1989, an agreement to begin negotiations on Conventional Forces in Europe (CFE) was signed in Vienna. These talks would cover all ground and air conventional forces in the ATTU region but not nuclear weapons. The final session of the MBFR talks was held on 2 February, and the CFE negotiations began in Vienna on 9 March 1989.

Mutual defense and security agreement between the United States and the Republic of China (ROC, Taiwan) signed on 2 December 1954. Convinced that the defeat of Jiang Jieshi's Guomindang (GMD, Nationalist) government in the long-fought Chinese Civil War was inevitable, U.S. policymakers

**Mutual Security
Treaty, U.S.–Republic
of China**
(December 1954)

decided to pursue a hands-off policy toward China and stopped aiding the GMD. After the GMD was defeated and forced to flee to Formosa (Taiwan) in October 1949, the Americans' China policy was made explicitly known by U.S. President Harry S. Truman on 5 January 1950. U.S. Secretary of State Dean G. Acheson elaborated his nation's stance toward the Chinese situation on 12 January 1950, claiming that Taiwan did not fall within the U.S. defensive perimeter in Asia.

Still harboring thoughts of retaking China, Jiang continued to plead for U.S. assistance. The Korean War (1950–1953) provided the first such chance, when Truman deployed the Seventh Fleet to the Taiwan Strait. Intervention by the People's Republic of China (PRC) in Korea in late 1950 quite suddenly made Taiwan a valuable strategic interest. The Republicans' victory in the 1952 U.S. presidential election further signaled American readiness to assist Jiang. In December 1953, Washington incorporated Taiwan into its defensive perimeter.

The need for a U.S.-ROC defense pact became apparent during the First Taiwan Strait Crisis (1954–1955). Following the Geneva Conference in April 1954, the United States worked closely with Southeast Asian nations to negotiate what later became the Southeast Asia Treaty Organization (SEATO) for collective security. Excluded from SEATO, Jiang proposed a bilateral mutual security pact between the United States and the ROC. Meanwhile, he took steps to strengthen the defense of Taiwan and its offshore islands. This pre-

Nationalist Chinese troops on the Tachen Islands, which lie close to the Chinese mainland. (Bettmann/Corbis)

cipitated the PRC's shelling of two island groups in the Taiwan Strait on 3 September 1954, sparking the First Taiwan Strait Crisis. The crisis hardened U.S. resolve to defend Taiwan. Thus, on 2 December 1954 the United States and the ROC signed the Mutual Security Treaty, formally acknowledging U.S.-ROC unity and pledging joint action against a common danger in Asia.

In return for U.S. support, the ROC granted America the right to station troops on Taiwanese soil. When the PRC seized the Dachen and Yijiangshan, another group of islands north of Taiwan in mid-January 1955, the U.S. Congress passed the Taiwan (Formosa) Resolution, authorizing the use of military force to defend Taiwan and its adjacent territory. The resolution committed American forces to Taiwan's defense, although it remained ambiguous whether the offshore islands were covered. The treaty and resolution were followed by considerable U.S. military, economic, and technical assistance to Taiwan, which helped in modernization efforts and maintained Jiang's GMD government. This solidarity, however, waned once the PRC and the United States began to normalize their relations in the early 1970s. On 1 January 1979 the United States severed its diplomatic relations with the ROC and terminated the treaty. The United States granted diplomatic recognition to the PRC in March 1979.

Still unwilling to abandon Taiwan completely, the U.S. Congress passed the Taiwan Relations Act in April 1979, which maintained an unofficial and nondiplomatic relationship with the Taiwanese regime.

The Mobile Experimental (MX) missile was a U.S. intercontinental ballistic missile (ICBM) and centerpiece of the U.S. arms buildup of the late 1970s and 1980s. The MX, formally known as the LGM-118A Peacekeeper, was a four-stage rocket. The largest ICBM ever in the U.S. arsenal, the MX was 71N in length and 7N8O in diameter and weighed at launch some 198,000 pounds. The first three stages were of solid propellant, while the fourth was liquid propelled. The MX had a range of greater than 6,000 miles and a speed at burnout of up to 15,000 miles per hour. The MX carried ten Avco

MX Missile System

Shock-absorbing pads fall away from the surface of an LGM-118A Peacekeeper intercontinental ballistic missile as it emerges from its launch canister. MJ 21 multiple independently targeted reentry vehicles (MIRVs)—its predecessor, the Minuteman III had only three, less powerful warheads—and was believed to be more accurate than any other ICBM. The MX missiles were ultimately placed in canisters in former Minuteman silos to protect them against damage and give them a cold-launch capability. At launch, the Peacekeeper was ejected by pressurized gas some 50 feet in the air before first-stage ignition occurred, the first ICBM to employ such technology.

Development of the Peacekeeper began in 1971 with the search for a successor to the Minuteman, sparked by a perceived growing threat from Moscow in the form of more accurate Soviet missiles. The Strategic Air Command (SAC) sought a missile with greater range, increased accuracy, and variable yield warheads that could take advantage of MIRV technology and counter the new monster Soviet SS-18 missile capable of launching ten warheads at separate targets. Many experts held that deployment of such a missile with a first-strike capability would be destabilizing, and this, along with funding issues and basing questions, impeded development.

Concerned about vulnerability to a Soviet first strike, in 1976 Congress passed legislation blocking funding for any ICBM situated in a fixed silo. The U.S. Air Force then presented a variety of different plans. Finally, in 1976 President Jimmy Carter's administration adopted the shell game plan in which 200 MX missiles would each be shuttled around among 23 different silos. The logic behind this plan was that the Soviets would have to employ 23 warheads to ensure that they had destroyed one MX, or 4,600 warheads to hit them all. When Ronald Reagan became president, he scrapped the Carter mobile plan in favor of placing the MX missiles in existing Minuteman silos.

In 1983 Congress and the Reagan administration reached a compromise. While the MX missiles would be placed in silos, the United States would also build 500 single-warhead ICBMs, dubbed the Midgetman. The Midgetman was never built, however.

The air force successfully carried out the first test of the Peacekeeper missile from Vandenberg Air Force Base, California, on 17 June 1983. Additional tests were conducted from Minuteman test silos. Production of the Peacekeeper began in February 1984, with the first fifty missiles deployed in the Minuteman silos at F. E. Warren Air Force Base, Wyoming. The fiftieth missile was delivered in December 1988.

Additional deployments were halted when in July 1985 Congress cut the total number of MX missiles to only fifty until the Reagan administration could produce a more survivable basing plan. The Reagan administration proposed a rail garrison concept with two missiles on each of twenty-five special trains to be deployed onto the national rail net in periods of international

tension. This plan was never implemented, and all fifty missiles were based at F. E. Warren Air Force Base.

As a part of the Strategic Arms Reduction Treaty II (START II), the United States agreed to eliminate its MIRV Peacekeeper ICBMs by the year 2003. The last of the MX missiles went off alert status on 19 September 2005.

U.S. military atrocity during the Vietnam War. On 16 March 1968, in My Lai 4, a cluster of hamlets in Son Tinh District in Quang Ngai Province, I Corps Tactical Zone, soldiers of Charlie Company, 1st Battalion, 20th Infantry, 11th Infantry Brigade (Light) of the 23rd (Americal) Division killed between 200 and 504 unarmed Vietnamese civilians. Charlie Company was at the time part of Task Force Barker, commanded by Lieutenant Colonel Frank A. Barker Jr. Major General Samuel H. Koster commanded the 23rd Division.

The events of My Lai must be set in the circumstances of the Vietnam War. Although in no way justifying the action taken, it was often impossible to tell friend from foe, and communist forces were waging a guerrilla war and committing atrocities of their own against U.S. and Army of the Republic of Vietnam (ARVN, South Vietnamese Army) forces as well as Vietnamese civilians. In addition, members of Charlie Company were frustrated by recent casualties sustained in the area—which they knew as “Pinkville” for its pronounced communist sympathies—from snipers, mines, and booby traps. Attacking the hamlet seemed a chance for payback for casualties sustained. Poor leadership, and not only at the junior level, certainly contributed to the events that followed. It is unclear what precise orders Charlie Company commander Captain Ernest Medina gave to his platoon leaders, including 1st Platoon commander Lieutenant William Calley, but Calley’s men were under the impression that anyone left in the village was presumed to be an enemy.

My Lai Massacre (16 March 1968)

On 16 March the platoon proceeded into the hamlet and there executed all civilians they encountered. The killing stopped only when Warrant Officer Hugh Thompson, whose helicopter was supporting the operation, landed his craft between Calley's men and fleeing Vietnamese survivors and threatened to open fire on the U.S. soldiers if they did not cease fire. The government of the Socialist Republic of Vietnam claims that 504 Vietnamese perished that day.

Shamefully, the army engaged in a coverup of the affair at both the brigade and division levels. GI journalist Ronald Ridenhour, who had heard stories of a massacre, investigated and tried to get the army to conduct an inquiry. When the army failed to take action, Ridenhour brought the incident to the attention of the secretary of defense and other government officials. In March 1969, he sent written evidence to several dozen people, including President Richard M. Nixon and sixteen congressmen. Only two of these, House member Morris K. Udall and Chairman of the House Armed Services Committee L. Mendel Rivers—took action, demanding a Pentagon investigation.

Lieutenant General William Peers headed the investigation into the My Lai events. By that time, Lieutenant Colonel Barker had died in Vietnam. Only the most junior officer involved, Lieutenant Calley, was ever charged and convicted. He received a sentence of life in prison, later reduced to ten years. Still, there was a great outcry on the part of many Americans who believed that Calley had been made a scapegoat and that the verdict rendered had been unjust. President Nixon later pardoned Calley. General Koster, however, was forced to retire from the army.

The My Lai Massacre and events flowing from it did much to turn public opinion in the United States against the war. In March 1998 the army recognized Thompson and his two crewmen (one of whom was killed in Vietnam in April 1968) with the Soldier's Medal for gallantry.

N

A mountainous region covering 1,700 square miles that was part of the Azerbaijan Soviet Socialist Republic but acquired de facto independence as the result of a war that began in 1991. In 1918 the enclave had a population of some 330,000 people. In 1921 the Soviet regime handed over Nagorno-Karabakh to Azerbaijan, despite the fact that its population was predominantly Armenian and that it was separated from Armenia proper by only a few miles. Josef Stalin, who was in charge of nationality policies in the Soviet Union at the time, deliberately placed different ethnic groups in the same administrative unit in order to dilute national and ethnic cohesiveness and to pit people against people.

Azerbaijanis and the Muslim-dominated Azeri local government did not respect the autonomous status of Nagorno-Karabakh, and Armenians (who are Christian) in the enclave experienced discrimination and the suppression of their cultural traditions. As Armenians left the region, their majority gradually declined from 96 percent in 1926 to 76 percent in 1979, or by approximately 123,000 people. On 20 February 1988, a group of Armenian nationalists responded to growing uncertainty in the Soviet Union by publicly calling for the transfer of Nagorno-Karabakh to Armenia. The Azeri government responded with an attack on Armenian residents in Sumgait, a town outside the Azerbaijani capital of Baku. When Armenians demonstrated their solidarity with the victims by organizing protests in Yerevan and in Stepanakert (now Xankändi), the principal town of Nagorno-Karabakh, the Azeris responded with more anti-Armenian violence. On 12 July 1988, an assembly in Nagorno-Karabakh voted to secede and join Armenia. The Armenians feared that if the Soviet Union disintegrated, they would have no political or economic future in a nationalist Azerbaijan.

In January 1989, Soviet President Mikhail Gorbachev attempted to deal with the crisis by replacing Azeri control over the enclave with direct control from Moscow. When the Azeris responded with a rail and road blockade of the region and Armenia, however, he backed down. Gorbachev's vacillation served only to provoke the Armenians of the enclave. After Armenia declared its independence in September 1991, a referendum on independence was

Nagorno-Karabakh

held in Nagorno-Karabakh. On 10 December 1991, 82 percent of the enclave's eligible voters went to the polls, and of those 99 percent voted for independence. For the Armenian residents of Nagorno-Karabakh, the 2 January 1992 declaration of independence was meant to be a step toward eventual amalgamation with Armenia.

The response of Azeri President Ayaz Mutasilbov was to proclaim direct control of the enclave and send in a military force, which surrounded and bombarded Stepanakert. Karabakh Armenians, claiming that they had no assistance from Armenia proper, formed self-defense forces and drove the Azeri army back. In the process the Armenians took control of the Lachin Strip, which gave them road contact with Armenia proper. When the Azeri Army recovered and again bombarded Stepanakert, the Karabakh Armenians established close contact with the Armenian government headed by Levon Ter-Petrossian. With aid from Armenia and the Armenian diaspora, the Armenians went on the offensive. During October 1992–September 1993, the Armenians drove the Azeri Army out of the enclave and went on to occupy an additional 3,400 square miles of Azeri territory. Hundreds of thousands of Azeris fled the advancing Armenians, and Azerbaijan was thrown into political turmoil.

In September 1993, Turkey and Iran sponsored a successful United Nations (UN) resolution demanding that the Armenians withdraw from Azeri

territory. The Armenians ignored the resolution and temporarily pushed almost to the Iranian frontier. An Azeri offensive in December 1993 succeeded in regaining some of the lost territory, but the Armenians remained in control of Nagorno-Karabakh. Finally, in May 1994, through the mediation of the Organization for Security and Cooperation in Europe (OSCE), a fragile cease-fire was signed by representatives of Armenia, Azerbaijan, and Nagorno-Karabakh. It is estimated that during 1988–1994, the Nagorno-Karabakh conflict cost some 18,000 lives. Another 25,000 people were wounded, and approximately a million Azeris were displaced from their homes.

Despite efforts on the part of the OSCE to mediate, a tense standoff continued. When Ter-Petrossian, attempting to end the crisis, announced that Nagorno-Karabakh could expect neither to join Armenia nor to become independent, he was removed from office in February 1998 and was replaced by Robert Kocharian, the Armenian prime minister and a native of Nagorno-Karabakh. The president of Azerbaijan, Haydar Aliyev, and Kocharian met more than twenty times during 2000–2003, but a permanent settlement of the crisis proved elusive. Despite the protests of Russia, Azerbaijan, and the European Union (EU), Arkady Gukasyan, a staunch proponent of Nagorno-Karabakh independence, was reelected president of the enclave in August 2002 by 90 percent of the Karabakh voters.

Egyptian military officer, prime minister (1952–1954), and president of Egypt (1953–1954). Born on 20 February 1901 in Khartoum, Sudan, Mohammed Naguib graduated from the Royal Military Academy in Cairo in 1925. He led a machine gun and infantry regiment in the Sinai in the 1948 Arab-Israeli War and was wounded three times.

Naguib was one of the leaders of the Committee of Free Officers (El-Doubat El-Ahrar), a secret group established in 1947 by young nationalist army officers who were determined to end British rule in Egypt and the political excesses of King Farouk I and sought to introduce social reforms. In 1951 Naguib became commander of infantry forces in the Egyptian Army as a major general.

On 23 July 1952, the Committee of Free Officers, including Naguib and Lieutenant Colonel Gamal Abdel Nasser, led a popularly supported coup

Naguib, Mohammed
(1901–1984)

Egyptian Premier Mohammed Naguib in 1953. (Bettmann/Corbis)

against Farouk's government. A Revolutionary Council of eleven officers, with Naguib as ostensible leader, then assumed control of Egypt. Naguib became commander of the Egyptian armed forces. On 26 July he presented Farouk with an ultimatum to abdicate and leave Egypt immediately. Farouk departed the same day. On 18 June 1953, following introduction of a new constitution, Naguib declared Egypt a republic and became president of Egypt.

The revolutionary leaders claimed to be animated by five basic principles: an end to colonialism, an end to economic inequality, the maintenance of a strong military, embrace of social justice and economic reform, and support for the democratic process. Naguib was much more cautious and conservative than many of the other younger officers. Nasser was the real leader of the movement from the beginning, and during February–May 1954 he and his supporters stripped Naguib of his posts. By May, Nasser had replaced Naguib as prime minister and president of the Revolutionary Council, leaving him only with the nominal position of president. Finally, in November 1954, the Revolutionary Council deprived Naguib of the presidency as well and, accusing him of treating with enemies of the revolution, placed him under house arrest. President Anwar Sadat, Nasser's successor, freed Naguib in 1971. Naguib died on 28 August 1984 in Cairo.

Nagy, Ferenc (1903–1979)

Hungarian politician and prime minister (1946–1947). Born on 8 October 1903 in Bisse, Hungary, to a peasant family, Ferenc Nagy completed elementary school and then worked on his parents' tiny farm. In 1930 he cofounded the Independent Smallholders Party and served as its first general secretary until August 1945. He was elected to parliament in 1939 and cofounded the Hun-

garian Peasant Union, serving as its first chairman during 1941–1943. At the end of World War II in 1945, he became the chairman of both parties.

Nagy reentered parliament in 1945, becoming minister of reconstruction in 1945 and chairman of the National Assembly (November 1945–February 1946). On 4 February 1946 he was appointed prime minister. During his short tenure in office, he faced three sizable challenges: inflation, nationalization, and growing pressure from the Communist Party. Inflation subsided when new currency was introduced, but the other two problems remained unresolved. Nagy had falsely expected that Soviet troops would depart Hungary after the signing of a peace treaty. Moscow had already decided on the Communist Party takeover of government, however, and the Smallholders Party was gradually eliminated from the political scene. Nagy resigned on 1 June 1947 while on holiday in Switzerland. Soon thereafter he was expelled from the Smallholders Party and deprived of his citizenship.

Nagy moved to the United States and settled in Virginia, where he ran a dairy farm. In 1947 he participated in the foundation of the International Peasant Union, and he became its deputy chairman and then chairman during 1964–1970. During 1963–1970 he also gave speeches and conducted seminars at American universities. After 1970 he withdrew from politics altogether. Nagy died in Fairfax, Virginia, on 12 June 1979.

Hungarian communist politician and premier (1953–1955, 1956), executed for his involvement in the 1956 Hungarian Revolution. Born on 7 June 1896 in Kaposvár, Imre Nagy joined the Austro-Hungarian Army in 1915. Taken prisoner by the Russians in July 1916, he was held in Siberia until 1918, during which time he converted to Bolshevism. From March to September 1918 he was a member of the Red Army. Captured by White forces, he managed to escape and in 1920 joined the Russian Communist Party.

In 1925 Nagy joined the illegal Hungarian Communist Party and in 1930 left for the Soviet Union. During the next fourteen years, he studied agriculture and became an expert on rural welfare. In December 1944 he participated in talks with Soviet leader Josef Stalin on future Hungarian governance.

Nagy, Imre
(1896–1958)

Imre Nagy was premier of Hungary during that nation's abortive 1956 revolution. He defied the Soviets and, after the failure of the revolution, was tried and executed. Nagy was rehabilitated in 1989 following the collapse of communism in Hungary. (Library of Congress)

With the defeat of Germany, Nagy returned to Hungary and served as agriculture minister (1944–1945), interior minister (1945–1946), speaker of parliament (1947–1949), minister of food supply (1950–1952), minister of harvest (1952), and vice prime minister (1952–1953). In 1945 he implemented long-awaited land reforms.

Nagy's criticism of the Hungarian Communist Party's agricultural and economic policies resulted in his expulsion from the party leadership in 1949, although he was readmitted in 1950. On 4 July 1953 he became premier, replacing Mátyás Rákosi, who had fallen out of favor with the new Soviet leadership following Stalin's death. Nagy's 1953 reform program, called the New Course, was aimed at relaxing the pace of industrialization, allowing peasants to leave collective farms, and mitigating police terror. When the political climate in Moscow changed in favor of the hard-liner Rákosi in April 1955, however, Nagy was forced to resign and was expelled from the party in November.

Nagy again became premier during the anti-Soviet Hungarian Revolution of 24 October–4 November 1956. At first, he advocated only moderate reforms. But by proclaiming Hungary's neutrality and announcing its withdrawal from the Warsaw Pact on 1 November, he clearly overreached and provoked a Soviet intervention. After the Soviets invaded Hungary on 4 November to crush the rebellion, Nagy secured political asylum at the Yugoslav embassy in Budapest. Promised safe conduct out of the country by Hungarian authorities, he was arrested on 22 November by Soviet authorities when he left the Yugoslav embassy and was sent to Romania, where he was held for seven months. In February 1958 he was secretly tried on charges of treason and found guilty. Nagy was executed on 16 June 1958 in Budapest. In 1989, during the Velvet Revolution, Nagy's courage and sacrifice were officially recognized, and his remains were reburied with honors in a state funeral.

Japanese Liberal Democratic Party politician and prime minister (1982–1987). Born in Gunma Prefecture on 27 May 1918, Nakasone Yasuhiro graduated from Tokyo Imperial University in 1941. After serving in the navy during World War II, he won election to the House of Representatives in April 1947. In 1951 during the Korean War, he gained notoriety by petitioning American occupation authorities to revise the constitution and rearm Japan.

As director general of the Defense Agency during 1970–1971, Nakasone sought to develop a more autonomous defense posture. As trade minister during 1972–1974, he initiated a breakthrough trade agreement with the People's Republic of China (PRC) in January 1974. He also defied U.S. leaders by supporting an accommodation with the Arab states to sustain oil supplies during the 1973–1974 oil embargo.

On 27 November 1982, Nakasone was elected prime minister. In this post he continued his efforts to transform Japan into a geopolitical and strategic power. Ironically, given his intensely nationalistic reputation, Japan's deeper integration with the Western alliance also characterized his administration. He quickly established a close relationship with President Ronald

Nakasone Yasuhiro (1918–)

Japanese Prime Minister Nakasone Yasuhiro at the conclusion of a convention of the ruling Liberal Democratic Party in Tokyo, 22 January 1985. (Reuters/Corbis)

Reagan and spoke of Japan acting in a crisis like “an unsinkable aircraft carrier” to prevent Soviet forces from entering the Pacific.

At the May 1983 G7 summit, Nakasone’s insistence that members’ security was indivisible precluded agreement on an intermediate-range nuclear forces (INF) treaty that would have allowed Moscow to redeploy SS-20 missiles in Asia. Under pressure from the U.S. government, Nakasone agreed to participate in research on Reagan’s Strategic Defense Initiative (SDI) missile defense system in September 1986, and in January 1987 Nakasone broke Japan’s mandated ceiling on defense spending, which had been limited to 1 percent of gross national product (GNP). However, fierce domestic opposition blocked his efforts to send minesweepers to the Persian Gulf in 1987 during the Iran-Iraq War.

Nakasone cultivated a personal relationship with Soviet President Mikhail Gorbachev but failed to improve Japan-Soviet relations significantly. Similarly, despite making an unprecedented visit to the Republic of Korea (ROK, South Korea) in 1983 and providing a large government loan to the PRC in 1984, Nakasone’s official visit to the Yasukuni Shrine—dedicated to Japanese war dead—in September 1985 poisoned relations with both Beijing and Seoul. He resigned as prime minister on 19 June 1987.

Many of Nakasone’s goals went largely unfulfilled during his tenure. However, he did help to set the course of post-Cold War Japanese foreign policy. Nakasone retired from politics altogether in 2003.

Namibia

Southwestern African nation covering 318,261 square miles, approximately three times the size of the U.S. state of Colorado. With a 1945 population of some 4.8 million people, Namibia is a mineral-rich country that borders on Angola and Zambia to the north; Zimbabwe and Botswana to the east; South Africa to the south; and the Atlantic Ocean to the west.

The population of Namibia is composed of at least twelve different ethnic groups. The largest groups are the Ovambo, representing eight tribes and

slightly more than 45 percent of the population, followed by the Damara, approximately 9 percent of the population; the Herero, approximately 7 percent of the population; and the Kavango, approximately 7 percent of the population. The Ovambo live in northern Namibia, spilling across the Angolan border on either side of the Cuene River. As in much of postcolonial Africa, there was interethnic rivalry in Namibia, particularly between the Ovambo and the Herero.

The Conference of Berlin during 1884–1885 granted Germany the right to colonize what became known as South West Africa (Namibia). Following Germany's defeat in World War I, South Africa received South West Africa as a League of Nations mandate in 1920. In 1966, the United Nations (UN) General Assembly revoked the South Africa mandate, but South Africa refused to give up the territory. The International Court of Justice, in 1971, thus declared South Africa to be in illegal occupation of Namibia. Subsequently, the South West Africa People's Organization (SWAPO) began a war of independence, which directly or indirectly drew in the competing superpowers. In 1978, UN Resolution 435 called for the independence of Namibia.

After the Soviet Union's 1979 intervention in Afghanistan marking the end of détente, the global geopolitical chess game between the Soviets and the Americans shifted to Africa. U.S. President Ronald Reagan's administration sought to roll back Soviet gains, particularly those made in the developing world, and in the words of Reagan's assistant secretary of state for African affairs, Chester Crocker, "Namibia served as the most active diplomatic interaction between Africans and Americans." Namibia was strategically squeezed between apartheid South Africa and Soviet-supported Marxist Angola, and its struggle for independence involved both Zaire and Zambia. Namibia's Cold War experience had two distinct eras: 1945–1966, when it was formally under South Africa's control, and 1966–1990, during which time it fought for independence.

The nations that held mandates under the League of Nations acceded to the same rights under the Trusteeship Council of the UN. This included, under Article 119 of the Treaty of Versailles of 1919, the principles of non-annexation and self-determination. But General Jan Christiaan Smuts, head of the Union Government in South Africa, petitioned the UN for formal annexation of Namibia. The UN rejected this. Rather than accept UN demands to place Namibia under a trusteeship in preparation for independence, in 1946 South Africa announced its intention to formally incorporate Namibia. With the coming to power of the National Party in 1948, South Africa continued to ignore its trusteeship obligations and the UN demands. Then, in 1951, it annexed Namibia.

The apartheid government set up a 1962 commission of inquiry concerning self-determination in Namibia. The commission predictably prescribed the same separation of races in Namibia that was apartheid policy in South Africa: it divided the country into distinct areas for natives, Europeans, and so-called coloreds. Besides the overt racism, the problem (as with South Africa) was the distribution of land: the population of natives, whites, and coloreds was proportioned 18:3:1, while the division of land was proportioned 0.74,

6.74, 0.62 per native, white, and colored persons, respectively. Nonwhites had no say in the division of land.

South Africa was not meeting its obligations. Thus, the UN took steps to restore the rights of the people involved in the impasse. During 1946–1965 it passed seventy-three resolutions on South West Africa, calling on South Africa to discontinue its policy of apartheid and adhere to the mandate agreement.

Until 1960, the superpowers had few interests in southern Africa (the Soviet Union maintained consular relations with South Africa only until 1956). The year 1960 was dubbed “the year of Africa,” and many newly independent African states joined the UN. Throughout the early to mid-1960s, the UN provided the rhetorically anticolonial Soviet Union with a ready-made solidarity with much of the developing world.

Involvement during the Cold War by the People’s Republic of China (PRC) in Africa and in Namibia in particular should not be ignored. It was at least as much in competition with the USSR as with the United States. Because SWAPO received Soviet support, the PRC supported the South West Africa National Union (SWANU), SWAPO’s main domestic rival.

SWAPO, the nationalist movement that led the fight against South African rule, was founded in 1957 by Ovambo intellectuals in Cape Town, South Africa. It was thus dominated by the northern Ovambo people with some Herero participation. However, the Herero broke away from the organization in 1959 and formed the SWANU in Windhoek. In 1962, SWAPO decided to employ terrorist tactics to gain independence and trained in camps located in the Soviet Union, China, Algeria, Ghana, and Tanzania. Sam Nujoma became SWANU’s first president in 1966 and based his operations in Dar es Salaam, Lusaka, and Luanda.

SWAPO was divided into SWAPO-external and SWAPO-internal. The latter was never declared illegal by South Africa. SWAPO-external maintained offices in New York, London, Cairo, Algiers, and Dakar and used its external ties to become the dominant party.

In 1973 the UN General Assembly declared SWAPO the authentic representative of the people of South West Africa. Four years later, it endorsed SWAPO as the sole and authentic representative of the Namibian people. The UN supplied financial assistance to SWAPO, reaching \$230,500 per year in 1980. SWAPO received additional support from the UN World Food Program; the UN Trust Fund for Namibia; the United Nations Educational, Scientific and Cultural Organization (UNESCO); and the UN Development Program.

The Namibian independence struggle was in some ways typical of those that preceded it in sub-Saharan Africa. In most cases, the revolutionary group adopted a Marxist-Leninist program. There were multiple reasons for this. They rejected democratic capitalism as the ideology of the colonial powers, the Soviet Union’s rapid state-sponsored industrialization was seen as a model of success, and to some extent socialism appealed to the more communal nature of traditional (precolonial) African politics. SWAPO’s 1976 Political Programme adopted at Lusaka was based on the principles of scientific socialism. This included the usual socialist litany of public-sector control over

finance, external finance, and the means of production. SWAPO would also support peasant cooperatives and state-owned ranching. In November 1988, as Namibian independence appeared imminent, SWAPO issued the so-called Economic Policy Document indicating that land, mineral and fishing rights, public utilities, and former South African companies would be part of the public sector.

SWAPO's independence struggle took on a regional dimension when Portugal suddenly withdrew from Angola in 1974. The Soviets and Cubans intervened in Angola in support of the Marxist Popular Movement for the Liberation of Angola (MPLA) regime there and subsequently developed close military ties with SWAPO as well as with Mozambique, Zambia, and the African National Congress (ANC) in South Africa. Angola's independence created new strategic opportunities for SWAPO. Before then, SWAPO used the Angolan territory dominated by the MPLA's major rival, the Union for the Total Independence of Angola (UNITA), to support its insurgency. It now used MPLA-controlled territory. The MPLA also offered SWAPO a new headquarters and extensive basing facilities. Thus, the South Africans saw Angola as a forward defense area and allied with UNITA in the Namibian bush war that had begun in 1966.

The terrorist activity of the military wing of SWAPO, the People's Liberation Army of Namibia (PLAN), was limited to a few border areas. Approximately 85 percent of PLAN forces was comprised of Ovambo. PLAN cooperated with the military wing of the MPLA in Angola and thus was able to use Angolan territory from which to launch attacks. But the counterinsurgency operations of the South African Defense Force were able to contain the SWAPO insurgency, largely by pushing its bases deeper into Angola.

The most important effort at internal reform of South West Africa during South Africa's control was the Turnhalle Conference. It actually consisted of six sessions (September 1975–October 1976). In 1975, Pretoria announced that a formal constitutional conference would begin on 1 September. SWAPO and SWANU would not be allowed to participate. In May 1977, there was a referendum by white voters on the Turnhalle Constitution, which 95 percent of the voters approved. This did not, however, meet the demands of SWAPO or the international community. Because the Democratic Turnhalle Alliance (DTA) failed to end discriminatory legislation and practices or even effectively to start economic and social development programs, the prevalent attitude among Namibian blacks was that only SWAPO, the guerrilla fighters, merited their political endorsement.

As early as July 1979, President António Agostinho Neto of Angola held secret talks with American negotiators. Among the issues discussed was the establishment of a demilitarized zone of 50 kilometers on each side of the

Namibians celebrating independence in Windhoek, 21 March 1990. (Alexander Joe/AFP/Getty Images)

Namibian-Angolan border and restrictions of SWAPO bases in Angola. Agreement was never reached, however, and the conflict escalated. The United States and its British, French, West German, and Canadian allies formed the Contact Group to negotiate Namibia's independence with South Africa and the so-called Frontline States (FLS), comprised of Angola, Botswana, Mozambique, Tanzania, Zambia, and Zimbabwe. The FLS acted as patrons and advisors to SWAPO. The negotiations between the Contact Group and the FLS resulted in UN Security Resolution 435 in September 1978.

During Ronald Reagan's presidency (1981–1989) and eight years of negotiations led by Chester Crocker, the United States eventually brokered the 1988 peace accords that linked South Africa's withdrawal from Namibia and independence for that country to Cuba's exit from Angola. This occurred despite the fact that for many years Angola and its FLS partners (with the support of the Soviet Union and radical nonaligned states) had rejected linking Namibian independence to Cuba's withdrawal from Angola. The decline of Cold War tensions was symbolized by the Soviet Union's willingness to pressure its clients, Cuba and Angola, to accept a negotiated settlement.

Nasser, Gamal Abdel (1918–1970)

Egyptian nationalist politician, vice president (1953–1954), premier (1954–1956), and president (1956–1970). Born in Beni Mor, Egypt, on 16 January 1918, the son of a civil servant, Gamal Abdel Nasser at an early age developed great antipathy toward Britain's rule over Egypt, setting the stage for his later championing of Egyptian nationalism and Pan-Arabism. Settling on a military career, he graduated from the Egyptian Royal Military Academy in 1936 and was commissioned as a second lieutenant. While stationed at a post in the Sudan, he met and became friends with future Egyptian president Anwar Sadat. Based on their mutual dislike of the British, they eventually laid the groundwork for a secret anti-British organization that came to be called the Free Officers.

The Free Officers recruited Egyptian military officers who wished to bring about an end to British colonial rule and to oust King Farouk I. After

months of painstaking planning, the organization fomented a revolt against Farouk's government on 23 July 1952. Three days later, the king abdicated and fled Egypt. Upon Farouk's abdication, a Revolutionary Command Council was established under the leadership of Major General Mohammad Naguib, with Nasser working behind the scenes. When the council declared Egypt a republic in June 1953, Naguib became its first president, with Nasser as vice president. Beginning in the winter of 1954, a political power struggle ensued between Nasser and Naguib. Within months, Nasser took de facto control as president of the Revolutionary Command Council. Naguib was allowed to continue as president of Egypt, although this was in reality little more than a figurehead position.

Nasser and his faction consolidated their hold on power, and after the October 1954 attempt on his life, which he blamed on Naguib, Nasser ordered Naguib arrested. Using the assassination attempt to solidify his power base, Nasser became premier of Egypt on 25 February 1955. Seven months later he also took the title of provisional president.

Nasser quickly moved to centralize his authority, creating a tightly controlled police state in which political opponents were imprisoned, intellectuals and elites disenfranchised, and industries nationalized. In June 1956 a national election occurred in which Nasser was the sole candidate for the presidency, and thus he officially became Egypt's second president.

In addition to seeking land reform and following quasi-socialist economic policies, Nasser sought to modernize Egyptian infrastructure. His public works projects included the building of a massive dam at Aswan, for which he received promises of financial support from the United States and Great Britain. He also approached the United States about purchasing arms. When the United States refused this request, fearful that the arms would be used against Israel, Nasser turned to the Soviet Union.

The Soviets saw a chance to increase their influence in the region and began negotiating an arms deal with Nasser, whereupon the United States and Britain withdrew their support for the Aswan Dam project in early July 1956. Seeing an additional opportunity to gain more influence with the Egyptians and to establish a foothold in the Middle East, the Soviet Union quickly offered to help Nasser with the dam.

Nasser used the loss of Western financial support as a pretext to nationalize the Suez Canal on 26 July 1956. This action provoked joint French, British, and Israeli military action against Egypt, beginning the Suez Crisis. On 29 October 1956 Israeli forces attacked Egypt, and two days later French and British forces attacked by air. On 5 November, French and British forces landed at Port Said, further escalating the conflict. The United States, not privy to the attack, applied great pressure on the Israelis as well as on the French and British to withdraw, which they did on 7 November. Far from

The United States applied great pressure on the Israelis as well as on the French and British to withdraw, which they did on 7 November.

being defeated, Nasser was vindicated by the Suez Crisis, and he shrewdly used this victory to further consolidate his rule at home and to promote Pan-Arabism throughout the Middle East. The Suez Crisis turned him into a hero of Middle East nationalism.

In pursuit of his Pan-Arab vision, Nasser established the United Arab Republic (UAR) on 22 February 1958. Consisting of only Egypt and Syria, however, the UAR fell apart when Syria withdrew on 28 September 1961. Nevertheless, Nasser continued to promote Arab nationalism and his vision of a Pan-Arab union.

Nasser's strong-arm rule began to work against him as the years progressed. Losing some of his popular appeal at home, he attempted to reform the government, which was corrupt and riddled with cronyism. Instead, he was forced to crack down on his opponents who tried to expand their power during the attempted reorganization. In foreign affairs, in an effort to play up Arab resentment toward Israel, he signed a defense pact with Syria in November 1966. In early 1967, he began provoking the Israelis through a number of different actions, including insisting on the departure of United Nations (UN) peacekeepers from the Egyptian-Israeli border, blockading the Gulf of Aqaba, and moving troops into the Sinai.

In retaliation, on 5 June 1967 the Israelis attacked Egypt, Syria, and Jordan. The war lasted only until 9 June and proved to be a humiliating defeat for Nasser. His miscalculation further eroded his support in Egypt and blemished his reputation throughout the Middle East. In March 1969 he launched the War of Attrition against Israel, which resulted in many more Egyptian than Israeli casualties. In July 1970, he agreed to a cease-fire arrangement put forward by U.S. Secretary of State William Rogers, ending the war. By then in deteriorating health, Nasser died on 28 September 1970 in Cairo.

National Cold War Museum and Memorial

A depository for Cold War memorabilia and an educational opportunity for the general public. The National Cold War Museum and Memorial is currently a portable exhibit of historical artifacts that travels around the world in hopes of promoting interest in a permanent Cold War museum facility. The museum's current holdings include reference material from a variety of Cold War personalities and events as well as unique artifacts such as U-2 pilot

Francis Gary Powers's flight helmet and the suitcase carried across Berlin's Glienecke Bridge on 10 February 1962 when the Soviets turned Powers over to the United States in exchange for Soviet spy Colonel Rudolf Abel.

Francis Gary Powers Jr. and John Welch formally established the museum in 1996. Powers's father unwittingly became a major figure in the Cold War when the Soviets shot down the U-2 reconnaissance plane he was piloting on 1 May 1960. His capture and imprisonment in the Soviet Union led to a full-blown diplomatic crisis that deepened Cold War hostilities and embarrassed President Dwight Eisenhower's administration on the eve of a U.S.-Soviet summit, which was promptly canceled by an angry Soviet Premier Nikita Khrushchev. Resolved to honor Cold War figures such as his father, who died in 1977, the younger Powers dedicated the museum to preserving and relating the many stories and incidents indelibly marked by the Cold War.

Plans are under way to locate a permanent home for the museum. One potential location is a twenty-acre former Nike Missile site outside Washington, D.C.

U.S. intelligence report intended only for the highest-ranking government officials. Information for National Intelligence Estimates (NIEs) is gathered from all the intelligence agencies of government and assembled under the direction of the Central Intelligence Agency (CIA).

Most NIEs deal with the threat posed by other countries to the security of the United States. NIEs on a specific country include analysis of all aspects of that nation, including its foreign policy objectives, leadership, military capabilities, and economic strengths. The most important country NIEs during the Cold War were those dealing with the Soviet Union. Special NIEs treat specific problem areas or probable reactions to a U.S. initiative.

CIA Director General Walter Bedell Smith initiated the NIEs in 1950. At first they were produced by a Board of National Estimates, with its membership from the different federal intelligence agencies. In 1973, however, the board was replaced by intelligence officers with specialized knowledge in the specific areas under study.

National Security Act (26 July 1947)

Legislation effecting sweeping organizational changes in U.S. military and foreign policy establishments signed into law by President Harry S. Truman on 26 July 1947. The National Security Act was a critical step in preparing America to wage the deepening Cold War. Specifically, the act created the National Security Council (NSC), National Security Resources Board (NSRB), Central Intelligence Agency (CIA), Department of Defense (DOD), Joint Chiefs of Staff (JCS), and U.S. Air Force (the third branch of the U.S. armed forces). Congress amended the act in 1949, providing the secretary of defense with more power over the individual armed services and their secretaries.

Soon after World War II ended, the uneasy alliance between the United States and the Soviet Union began to degenerate, and a long-standing ideological and military confrontation between the two superpowers quickly set in. By late 1946, the Truman administration had adopted a defense policy that became known as containment. This policy sought to contain Soviet influence and the spread of communism throughout the world. It was this mind-set that prompted passage of the National Security Act.

By the end of 1947, the containment policy had elicited both the enunciation of the Truman Doctrine and the implementation of the Marshall Plan. The National Security Act was an effort to add a domestic component to containment and to help coordinate U.S. diplomatic and military commitments to meet the challenges of the Cold War. The act was designed to centralize the military services under the single banner of the DOD—which was directed by the secretary of defense, a new cabinet-level position—to provide one main intelligence apparatus in the new CIA and to provide foreign policy advice directly to the president via the NSC, which resided within the Executive Office of the president. The JCS, composed of a representative from each of the armed services, was to act as a military advisory group to the president and his civilian advisors.

The CIA emerged from the World War II Office of Strategic Services (OSS) and smaller postwar intelligence operations. Its first director was Rear Admiral Roscoe Hillenkoetter. The existing War and Navy Departments were folded into the DOD, whose first secretary was James V. Forrestal. The new U.S. Air Force, which became a free-standing entity, was built from the existing U.S. Army Air Corps. The NSC's chief role was to coordinate and prioritize information it received from other agencies and to advise the president on national security issues based on analysis of that information. At the time, there was no provision made for a national security advisor, a post that

came into being under President Dwight D. Eisenhower in 1953. Taken in its totality, the National Security Act provided for a powerful, well-coordinated system that linked national security with foreign policy and military decision making.

U.S. intelligence-gathering agency. Headquartered at Fort Meade, Maryland, the National Security Agency (NSA) is the highly secretive component of the U.S. intelligence community and specializes in activities related to cryptography and signals intelligence (SIGINT). Established on 4 November 1952 by President Harry S. Truman in the wake of a series of intelligence lapses regarding the Korean War, the NSA served as the U.S. government's primary technical intelligence-collection organization throughout the Cold War.

The United States was renowned for its success in the realm of SIGINT (the gathering and analysis of intercepted voice communications intelligence, or COMINT) and electromagnetic radiation (electronic intelligence, or ELINT) during World War II. Yet the Americans entered the early years of the Cold War with a disorganized SIGINT apparatus loosely coordinated among the independent and oftentimes redundant cryptologic agencies of the army, navy, and air force. In line with the centralizing theme of the 1947 National Security Act, Secretary of Defense Louis A. Johnson established the Armed Forces Security Agency (AFSA) in 1949 to streamline SIGINT collection. Plagued by the weaknesses of limited jurisdiction and ill-defined authority, however, deficiencies in AFSA's relationship with the service agencies were made readily apparent prior to and during the outbreak of the Korean War in June 1950.

At the urging of President Truman, Secretary of State Dean Acheson appointed New York attorney George Abbott Brownell to head a probe investigating AFSA's failings. The resultant "Brownell Committee Report" advocated replacing AFSA with a centralized national agency capable of

National Security Agency

Headquarters of the National Security Agency (NSA), located at Fort George G. Meade in Maryland, 4 August 1960.
(Bettmann/Corbis)

unifying all U.S. SIGINT efforts. Fully agreeing with this recommendation, within months President Truman dissolved the AFSA and quietly signed into law the NSA.

Throughout the 1950s and early 1960s, the NSA established itself as a key intelligence player in virtually all major Cold War political and military conflicts. In 1953 the NSA began overflights of Soviet airspace using converted B-47 Stratojets equipped with various receivers capable of intercepting Soviet air defense radar signals. By intentionally triggering the activation of the Soviet air defense radar system, the B-47s could pinpoint and map the locations of Soviet systems on the ground, providing crucial information for U.S. pilots. By the late 1950s, the Stratojets had been replaced by the high-flying U-2 reconnaissance jet, and overflights to collect Soviet SIGINT data continued, focusing on radar emissions and telemetry information related to intercontinental ballistic missile (ICBM) launches. The overflight program ended suddenly amid an international crisis when, on 1 May 1960, U-2 pilot Francis Gary Powers was shot down over the central Soviet city of Sverdlovsk. Initially disavowing any knowledge of the overflight program, the

Eisenhower administration was forced to concede that it had ordered the flights when faced with irrefutable evidence presented by Soviet Premier Nikita Khrushchev.

Although direct flights over Soviet airspace were terminated in the wake of the Powers controversy, the NSA maintained a robust collection effort utilizing ground, air, sea, and space-based antennas and sensors to monitor the transmissions of the Eastern bloc as well as nonaligned and allied nations. In an often contentious relationship with the U.S. Navy, NSA listening posts were established on both adapted warships such as the *Liberty* and on smaller dedicated collection platforms such as the *Pueblo* to loiter in international waters collecting transmissions, while NSA-directed submarines tapped into undersea communication cables. Ground stations concentrating on intercepting shortwave and very high frequency (VHF) emissions were established in strategically important locations around the globe ranging from Ellesmere Island in the upper reaches of the Arctic Circle to Ayios Nikolaos in Cyprus, to Field Station Berlin in West Berlin, to Misawa Air Force Base in Japan. After the undisclosed launch of the first SIGINT satellite in June 1960, the NSA also began to establish an array of ground-based relay centers in remote locations on the periphery of the Soviet Union.

By the late 1970s the NSA was enjoying great success in decoding the encrypted Soviet messages that had previously eluded the U.S. intelligence community. As the NSA's mission grew, its budget increased exponentially. Exact budgetary figures from the Cold War period continue to be withheld as classified information, but during that time the NSA established itself as the largest U.S. intelligence agency in terms of both manpower and financial resources.

NSC-68 was a response by President Harry S. Truman's administration to the Soviets' first atomic explosion in late August 1949 as well as the October

National Security Council Report NSC-68

1949 communist victory in the Chinese Civil War. The top secret report was released to the president on 14 April 1950. Its principal architect was Paul H. Nitze, director of the State Department's Policy Planning Staff.

The basic premise of NSC-68 was that since the Soviets had developed a workable atomic bomb, a hydrogen (thermonuclear) bomb would not be far behind. The drafters of NSC-68 estimated that by 1954, "the year of maximum danger," the Soviets would be capable of launching a crippling preemptive strike against the United States. According to NSC-68, the United States could not prevent such a blow without a massive increase in its military and economic capacities. Should the report not be heeded, in case of Soviet aggression the United States would be forced into appeasement or nuclear war. Nitze and other policymakers believed, therefore, that the key to avoiding this dilemma and preserving free-world security lay in a vast conventional rearmament. NSC-68 also demanded greater foreign aid, however, along with expanded military assistance to the Western Allies, additional funding for information and propaganda campaigns, better intelligence gathering, and an expansion of nuclear weapons programs.

Alarmed by the report's recommendations and likely costs, President Truman initially shelved the plan. Only after the sudden outbreak of the Korean War in June 1950 did he agree to implement the NSC-68 rearmament program. Thanks in part, at least, to the Korean War, U.S. defense expenditures quadrupled, going from \$13.5 billion before the war to more than \$54 billion by the time Truman left office in January 1953. The lion's share of this massive rearmament program in fact was not directed to the Korean War but instead went toward fulfilling America's long-term mobilization base as envisioned in NSC-68. Indeed, NSC-68 put muscle into Truman's containment policy.

Although subsequent administrations would tinker with the recommendations in NSC-68, the report nonetheless guided U.S. national security and military mobilization planning for almost a generation after its drafting. Fundamentally, NSC-68 was underpinned by the traditional Cold War mentality. Many of its critics have argued that the report overstated the nature and extent of the Soviet threat. Some, however, have maintained that NSC-68 was a wise and prudent response to a real and present Soviet danger. Still others have pointed out that although NSC-68 may have painted a somewhat distorted picture of the Soviet Union, this distortion results more from what is now known from newly opened Eastern bloc archives as opposed to what was known to officials at the time. Whatever the case, it is a truism that NSC-68 was a seminal and paradigmatic Cold War document.

Review of American foreign policy in southern Africa, commissioned during President Richard Nixon's first administration. On 10 April 1969, U.S. National Security Advisor Henry Kissinger authorized National Security Study Memorandum 39 (NSSM 39), a detailed critique of American foreign relations in southern Africa that included proposals for future policy options. Both the memorandum and the study itself were imbued with Kissinger's notions of realpolitik. Avoiding a military confrontation in Africa was a high priority given the nature of U.S. military commitments elsewhere, particularly in Vietnam. Thus, to ensure the region's political stability, NSSM 39 analysts suggested that U.S. doctrine shy away from dictating reform policies to colonial governments. Public denunciations of South Africa's racist politics were therefore deemed unwise for fear of risking American intervention and strategic destabilization in the region.

Rather than advocating social justice, the study's key recommendations revolved around safeguarding American strategic and economic interests. Maintaining South Africa's gold production was the chief financial concern, while the prime strategic goal was limiting Soviet and Chinese influence in the area. Conceivably, these policies were intended not only to enhance the U.S. government's regional influence but also to reduce the likelihood of American military intervention in an African civil conflict. The report stated explicitly that "the whites are here to stay and the only way that constructive change can come about is through them."

Nationalism

Political and social movement seeking to promote the interests of an individual nation at the expense of the wider international community but also to rid nations or regions of colonialism and to actualize self-determination based upon ethnic, racial, or religious cohesiveness. During the Cold War, nationalism was often used as an instrument of leverage by the Western and communist blocs to attract new allies and to gain or maintain hegemony in certain states or regions. Eventually, nationalism led to the collapse of the communist bloc, the dissolution of the Soviet Union, and the fragmentation of artificially incorporated national entities such as the former Yugoslavia.

Following World War II, nationalist movements blossomed throughout the world. The main contributors to this development were the principles of self-determination and decolonization. These in turn were driven by economic and political forces and were pushed forward by several labor parties, most notably those in Britain and France. This ultimately brought about the independence of most African and Asian nations.

In addition, the role of native intellectuals educated in Western Europe or the United States, and there exposed to Western political and economic thought, strongly impacted the domestic and foreign policies of the newly independent states. The geopolitical climate of the Cold War brought strong pressures on every new nation to align with either the United States or the Soviet Union. In their desperate search for new allies, both nations sponsored national liberation movements that often bred corruption and human rights abuses.

The Soviet Union played the role of the anti-imperialist power, opposing Western colonialism in favor of nationalist causes and striving to associate national liberation with socialism. The Americans were similarly driven by ideology. Often in favor of native peoples struggling for independence, they liberated the former Commonwealth of the Philippines in July 1946 and transformed Puerto Rico into a self-governing commonwealth in 1952. The United States intervened in almost every nationalist dispute in the world, ostensibly to defend democracy and champion the national cause.

In January 1961, Soviet leader Nikita Khrushchev pledged Soviet support to wars of national liberation, as in Vietnam. This point was amplified by Soviet leader Leonid Brezhnev when he reasserted in the Brezhnev Doctrine of November 1968 the rationale already used to justify the crushing of the 1956 Hungarian Revolution—that the Soviet Union had the right to intervene in the internal affairs of a socialist state in order to preserve socialism there.

The American policy toward nationalism, launched in 1947, was predicated on the Truman Doctrine, which pledged support to any nation under siege by internal or external communist forces. In Europe, U.S. policy relied on the Balkanization of the communist bloc based on nationalism. Exploitation of nationalist movements was a common *modus operandi* of U.S. foreign policy in Yugoslavia, the Baltic states, and Eastern Europe as a means of weakening Soviet control and influence. In Greece, just after the 1945 liberation, a leftist nationalist uprising led by the National Popular Liberation Army (ELAS) and helped by communist Yugoslavia tried to overthrow the authoritarian British-backed government. Fearing a communist victory, President Harry S. Truman asked for and obtained from Congress \$400 million in aid to Greece and Turkey to support democratic movements.

Despite ideological similarities with the Soviets, Yugoslavian leader Josip Broz Tito's interpretation of communism and nationalism alarmed the Soviets after 1945. Pan-Slavism was invoked by both the Soviet Union and Yugoslavia. While the USSR used this to contain centrifugal forces, particularly in Ukraine, Tito's attempt to form a southern Slavic union with Bulgaria alarmed Soviet leader Josef Stalin and contributed to the 1948 Soviet-Yugoslav split.

Nationalism was a dangerous force inside the USSR itself. Apart from nationalist movements in the Baltic region, the Soviet Union was at risk from internal ethnic strife. Indeed, the risk of Pan-Turkish nationalism had informed Stalin's decision to separate the Turkish peoples of Central Asia into five distinct republics. From the Khrushchev era on, while stressing the importance of policies of nativism, the creation of the *Homo Sovieticus* was enhanced. Mixed marriages, forced migration, and the mandatory use of Russian were used to de-emphasize the separate nationalities and form a Soviet citizen who, regardless of his place of birth, was faithful to Moscow. For this reason, in the Soviet empire the word "patriotism" was always preferred to "nationalism."

Despite the 1947 Asian Relations Conference, which pledged support for all national movements against colonial rule, both the Americans and the Soviets continued to justify their intrusions in domestic politics under the guise of national liberation support. The two superpowers chose as one ground for confrontation the divided Korean Peninsula, each backing a different regime claiming to be the legitimate government for all Korea. The Korean War, a result of this policy, lasted for three years (1950–1953).

In Vietnam, nationalists led by veteran communist leader Ho Chi Minh succeeded in driving France out of the northern part of the country in 1954. The 1954 Geneva Conference temporarily divided Vietnam at the 17th Parallel, pending national elections to reunify the country in

A Soviet poster titled "Love Your Motherland" showing a schoolteacher with her students in Moscow, 1949. (Library of Congress)

1956. Because Ho was a communist and was supported by the communist bloc and because the communists had never voluntarily relinquished power once they had secured it, President Dwight D. Eisenhower's administration chose to support South Vietnamese leader Ngo Dinh Diem when he refused to hold the elections in the Republic of Vietnam (ROV, South Vietnam) as scheduled. The United States supported Diem in his stand. This failure to hold the elections called for by the Geneva Accords in effect led to the renewal of warfare and the start of what became known as the Vietnam War. This struggle, which began in earnest in 1957, would not end until the fall of Saigon in April 1975.

In Latin America, economic interests were not easily subordinated to the natives' cause. In Guatemala in 1954, a coup led by the Central Intelligence Agency (CIA) overthrew the nationalist and reformist government of Jacobo Arbenz, which had tried to expropriate the lands of a U.S.-based company. The Arbenz regime was replaced by a pro-American government. After Fidel Castro's 1959 coup in Cuba, his nationalization of land and companies resulted in a full-blown crisis in U.S.-Cuban relations. This precipitated an ongoing U.S. effort to dislodge Castro from power, including the failed 1961 Bay of Pigs invasion, and drove the Cuban government closer to the Soviet Union.

Arab nationalism emerged as a driving force during the Cold War, although not necessarily aligned with the two superpowers. In 1945 seven nations—Egypt, Iraq, Lebanon, North Yemen, Saudi Arabia, Syria, and Transjordan (Jordan since 1948)—created the Arab League, which was destined to expand to more than twenty countries by the end of the century. Its aim was mutual aid and the improvement of economic conditions in Arab states. Beginning in the 1970s, the Arab League helped financially strapped African nations reduce their economic dependence on the United States and the Soviet Union.

The United States feared Arab nationalism in the Middle East. In April 1955, Britain and the United States pushed Turkey and Iraq into forming the Baghdad Pact, a mutual defense pact also known as the Middle East Treaty Organization. Iran and Pakistan joined later that same year. In 1959, on the departure of Iraq from the organization, it became known as the Central Treaty Organization (CENTO). CENTO was dissolved in 1979 with the withdrawal of first Iran, following the overthrow of Shah Mohammad Reza Pahlavi, and then Pakistan.

During the Eisenhower presidency, containing Arab nationalism by offering help to individual Arab states was a chief priority. Thus, policy was aimed at keeping the Middle East under Western control. It was also a way to contain the nationalist forces unleashed by Egyptian President Gamal Abdel Nasser.

In 1958 Egypt and Syria joined to create a new nation, the United Arab Republic (UAR). Attempts to include neighboring Yemen failed. After the 1961 military coup in Syria, Egypt remained the only country in the new republic, which ceased to exist in 1971.

Nationalist motivations were behind the March 1951 murder of Iranian Prime Minister Haji-Ali Razmara, who had opposed nationalization of the Anglo-Iranian Oil Company in 1951. Mohammed Mossadegh took control of

Carrying a huge portrait of President Gamal Abdel Nasser, Egyptians protest the Syrian decision to end the United Arab Republic of Egypt and Syria, 30 September 1961. (Bettmann/Corbis)

Iran and subsequently nationalized the Anglo-Iranian Oil Company, run by the British and paying royalties only to the shah of Iran. These events caused a rupture in Iranian relations with the Western powers. Consequently, the CIA sponsored a coup to topple Mossadegh, who was arrested in August 1953 and was replaced by General Fazlollah Zahedi.

The desire for independence pushed the National Liberation Front (FLN) in Algeria to begin a guerrilla war there against France in November 1954. After prolonged warfare and much bloodshed, France gave Algeria its independence in 1962. Continuing the nationalist tradition that engaged him in the 1948 Israeli-Palestinian War, Nasser assisted the FLN in Algeria, gradually shifting both Algeria and Egypt toward a socialist orientation, although both nations were technically part of the Non-Aligned Movement.

In 1956, meanwhile, the United States and Britain reneged on an agreement to help finance the building of Egypt's Aswan Dam, provoking Nasser's decision to nationalize the Suez Canal to make up for the lost funding. This in turn led to the October 1956 Suez Crisis in which British, French, and

Israeli forces attacked Egypt. Due to strong U.S. pressure, the three powers soon withdrew, but the attack nonetheless served to strengthen Nasser's nationalist and Pan-Arab agenda.

Libyan President Muammar Qadhafi has also been a staunch promoter of Arab unity based on ethnoreligious similarities. In December 1969 he signed the Tripoli Charter, calling for a flexible federation with Sudan and Egypt. On 1 January 1972, the Federation of Arab Republics, consisting of Egypt, Syria, and Libya, came into existence. Unity with Syria (in September 1980) and Morocco (in August 1984) was attempted but never came to fruition.

Nationalism, of course, contributed to the collapse of the communist bloc and the Soviet Union beginning in 1991. After failed attempts at liberalization during the 1956 Hungarian Revolution and the Prague Spring of 1968, the Solidarity movement in Poland finally arranged for free elections in that nation in 1989. Hungary followed suit, and by the fall of 1989 the Velvet Revolution, made possible because of Soviet leader Mikhail Gorbachev's refusal to employ force, had swept through Eastern Europe, completing the process of democratization and the reassertion of national sovereignty. Demands for independence in the Soviet Baltic Republics and the nationalist Rukh movement in Soviet-controlled Ukraine played a main role in the December 1991 dissolution of the Soviet Union, formally ending the Cold War. That same year, the dismantlement of Yugoslavia unleashed nationalist forces that engulfed the region in civil war for more than a decade.

The Cold War was over, but nationalism continued to exact a frightful toll in terms of human suffering in the Horn of Africa, Sudan, the Yugoslav successor states, Sri Lanka, and many other places around the globe.

French Army general and commander in chief of French forces in Indochina (1953–1954). Born on 31 July 1898 at Villefranche de Rouergue in Aveyron, Henri Navarre enlisted in the French Army in 1916 to gain admission to the French military academy at Saint-Cyr in 1917, receiving a commission in the cavalry (Hussars) the following year. As a career army officer, he served with distinction in Syria, Morocco, and Germany during the 1920s and 1930s. He became an intelligence officer in 1939 for the French command in North Africa and in metropolitan France for the French resistance during World War II. He was promoted to brigadier general in 1945 and became inspector general of French Army troops in Germany. Advanced to major general in 1950, he commanded the French 5th Armored Division in Germany. He was promoted to lieutenant general in 1953.

In May 1953, Navarre was selected to replace General Raoul Salan as commander in chief of French forces in Indochina. Navarre soon changed French tactics from defensive to offensive operations. In July 1953 he flew to Paris to present his plan to win the war. The Navarre Plan called for deployment to Indochina of 20,000 additional French troops, the expansion of the National Vietnamese Army to at least 200,000 men, and the granting of greater independence to the Indochinese states in order to secure their support for a wider war.

In undertaking offensive operations, Navarre set up a major blocking position in northeastern Vietnam that he hoped would prevent a renewed Viet Minh invasion of Laos. He also hoped to draw limited Viet Minh forces into a set-piece battle in which they might be destroyed by French artillery and airpower. Navarre's plan, Operation CASTOR, positioned sizable French military assets in the remote valley town of Dien Bien Phu. Viet Minh commander General Vo Nguyen Giap took the bait, and the result was the March–May 1954 Battle of Dien Bien Phu. The Viet Minh decision to commit much greater assets than Navarre had anticipated coupled with their success in bringing artillery to the mountains around Dien Bien Phu and Navarre's overestimation of French air capabilities spelled defeat for the besieged and allowed French politicians to shift the blame to the military and extract the nation from the war.

An embittered Navarre retired from the army in 1956 to run a brick factory and to write his memoirs, *Agonie de l'Indochine* (1956). He died in Paris on 21 June 1983.

Ne Win

(1911–2002)

Burmese general, interim prime minister during 1958–1960, and despotic leader of Burma (Myanmar) during 1960–1988. Ne Win, born Shu Maung to a Chinese family on 24 May 1911 in Paungdale, Burma, was a lackluster student who failed his entrance exams to the University of Rangoon. After that he held a series of odd jobs until joining the nationalist group Dobama Asiayone (Our Burma Association) in 1938, where he met fellow nationalist and future Burmese leaders U Nu and Aung San.

In 1941 Shu Maung was among the so-called Thirty Comrades chosen by Japanese forces occupying Burma to lead the Burmese Independent Army (BIA) against British rule. By 1943 he commanded the BIA and formally adopted the name Ne Win, meaning “radiant sun.” In 1945 the BIA switched allegiance, fighting alongside British forces against the Japanese and, later, against communist insurgents.

Aung San, widely considered the “father” of Burma, was assassinated by rivals in July 1947. His heir apparent, U Nu, thus presided over Burma’s independence in January 1948. U Nu appointed Ne Win chief of staff of the army, which, like the new country itself, was sharply divided along ethnic lines. He rebuilt and unified the armed forces but was not content in a subservient position. With his sights set on becoming uncontested leader of Burma, in September 1958 he and two other military commanders seized

power after they forced U Nu’s resignation. In February 1960 the military junta allowed elections that returned U Nu to power. A deteriorating economy and internal strife prompted yet another military coup in March 1962, however, with Ne Win assuming the role as president.

Ne Win’s Revolutionary Council implemented the “Burmese Way to Socialism.” The regime was brutal and corrupt, based on a bizarre mix of extreme nationalism, Stalinism, and indigenous religious practices. Many Burmese dissidents were executed, jailed, or forced to flee the country as the regime savagely repressed ethnic rebellions. Equating capitalism with foreign domination, non-Burmese citizens were stripped of their assets and deported. Banks and industries were nationalized, and private land was expropriated. Profoundly xenophobic, Ne Win virtually sealed Burma off from the outside world. He was himself an odd recluse, pursuing his bizarre fascinations with numerology, Buddhism, and animism. It is rumored that he routinely bathed in dolphins’ blood to stay young.

By the 1980s, Burma was desperately poor and hopelessly isolated, despite expectations in 1948 that it would become Asia’s success story. Ne Win avoided the revolutions that swept Southeast Asia during the Cold War but nevertheless destroyed Burma’s economy and exacerbated internal divisions. On 8 August 1988 he suddenly resigned,

Burmese General Ne Win, who became prime minister and then president of Burma. (Keystone/Getty Images)

claiming that the date (8-8-88) was propitious. Despite a fleeting hope that democracy might flower after his resignation, generals loyal to him took over and continued his troubling legacy. They continue to rule today amid international condemnation for human rights abuses. Ne Win remained influential until his death, in seclusion, on 5 December 2002 in Yangôn, Myanmar.

Indian nationalist leader and first prime minister of India (1947–1964). Born in Allahabad, India, to a wealthy and influential family on 14 November 1889, Jawaharlal Nehru was tutored in Indian culture and language from an early age. His formal education took place in Britain, where he graduated from Trinity College, Cambridge, in 1910 and the Inner Temple, London's venerable law school, from which he earned a law degree, in 1912. He returned to India in 1912 and joined his father's legal practice but soon entered politics and in 1919 joined Mohandas Gandhi's campaign of civil disobedience to gain Indian autonomy.

However, Nehru wanted more than self-rule and sought complete independence from Britain. In spite of this difference, both Gandhi and Nehru supported and encouraged one another. Nehru's influence on the Indian Congress (INC) was significant, and almost single-handedly he extended the independence movement's agenda to include myriad issues, both domestic and international, that affected the interests of the Indian people.

Nehru also prompted members of the INC to consider the full future of India, that is, what form of government it should have, what rights should be incorporated into its constitution, what India's place in the world should be, and what planning would be necessary to bring about full and unfettered independence. Nehru's involvement in the independence

Nehru, Jawaharlal
(1889–1964)

Indian nationalist leader Jawaharlal Nehru was the first prime minister of independent India during 1947–1964 and a leader of the nonaligned nations during the Cold War. (Library of Congress)

movement resulted in his imprisonment by British authorities on several occasions during the 1930s and 1940s.

During the 1930s, the British government moved tentatively toward granting India self-rule. World War II postponed that plan, however, as the Japanese threat and increased violence between Muslims and Hindus created a turbulent environment during the early 1940s. Following the war, the British Labour government under Prime Minister Clement Attlee moved ahead with plans for an independent India. The major impediment to independence resided in the controversy over whether India would be a single unified state or two separate states: a Hindu India and a Muslim Pakistan. Nehru envisioned a single state but was persuaded by Lord Louis Mountbatten, viceroy of India, to accept a partitioned India. In August 1947 India and Pakistan gained full independence, and Nehru became India's first prime minister.

By the time India's independence had been established, the Cold War between the United States and the Soviet Union was already well under way. While following a general theme of nonalignment, India's foreign policy tended to reflect Nehru's personal preferences. In the 1920s Nehru had visited the Soviet Union and was sympathetic to the goals of communism. In 1949 he made a state visit to the United States and found the experience unnerving, as he found the postwar materialism of American society and the politics of anticommunism very unappealing. Many

historians have argued that Nehru's sympathy for the Soviet Union and antipathy toward the West was evident in 1956 when he openly condemned Britain, France, and Israel for their involvement in the Suez Crisis but remained almost silent during the Soviets' brutal suppression of the Hungarian Revolution that same year. Over time, however, he moved toward a more centrist position as Anglo-American policies became more tolerant of non-aligned nations.

In the late 1950s Nehru was confronted by People's Republic of China (PRC) incursions into Tibet and regions along the border between India and China. At the same time, Indian-Pakistani tensions were repeatedly exacerbated over the contested region of Kashmir. Indian and Pakistani forces clashed frequently in the mostly Muslim Kashmir. In 1962 a border conflict escalated into the Sino-Indian War. The United States supported India in its conflict with China but not in India's struggle with Pakistan, then an American ally. The Soviet Union, on the other hand, expressed support for India in its clash with Pakistan but remained noncommittal regarding the India-China conflict.

Nehru continued his nonaligned stance in spite of these crises, while India's independent foreign policy was viewed admiringly by many of the newly independent states of the developing world. He died in office on

27 May 1964 in New Delhi. Nehru left an indelible mark not only on modern Indian history but also on the history of independence and nationalist movements all around the globe.

Nehru, Swarup Rani

Hungarian reform communist politician and prime minister (1988–1990) who played a key role helping to end the Cold War. Born on 24 January 1948 in Monok, Hungary, Miklós Németh graduated from the University of Economics in Budapest in 1971. During 1971–1977 he taught at the same university, interrupting his professorship in 1974 to study at Harvard University in Cambridge, Massachusetts.

In 1977 Németh became deputy head of a division in the National Planning Institute. During 1981–1987 he served as deputy head and then head of the Department of Economic Policy of the Hungarian Communist Party, and in 1987 he became a member of the party's Political Committee and secretary in charge of economic policy for the party's Central Committee.

On 24 November 1988 Németh was appointed prime minister of Hungary. In this position, he pushed for comprehensive economic and political reforms, which set the stage for Hungary's eventual transition to democracy. On 10 March 1990 he signed an agreement with Moscow that brought about the withdrawal of Soviet troops from Hungary. Following Hungary's first democratic elections in March 1990, József Antall succeeded Németh as prime minister on 23 May 1990. Later in 1990, Németh was elected to parliament

Németh, Miklós
(1948–)

as an independent representative, but he resigned in 1991 when he was appointed vice president of the European Bank for Research and Development in London. He returned to Hungary in 2000 but chose not to reenter the political arena.

Without doubt, Németh was the single most important player in ending communist rule in Hungary and in ushering in the Velvet Revolution. When Soviet leader Mikhail Gorbachev acquiesced to greater independence for Eastern Europe, Németh immediately began to implement fundamental reforms, realizing that such sweeping changes would be next to impossible to reverse once in place. His objective was to reintegrate Hungary and the whole of Eastern Europe into the world economy and the free market system. During his tenure, Németh agreed to the state reburial of Imre Nagy, the executed premier and hero of the 1956 anti-Soviet Hungarian Revolution. Németh opened the border to East German refugees, which triggered a sequence of sweeping international political changes. He ordered the barbed-wire fence along Hungary's western border with Austria removed, and he and other party reformists founded the Hungarian Socialist Party. During his period as premier, the constitution was modified, Hungary was declared a republic, and laws were passed to bring about a new election system and political pluralism.

Nenni, Pietro

(1891–1980)

Italian Socialist Party (PSI) leader, foreign minister (1946, 1968), and vice premier (1963–1968). Born in Faenza, Italy, on 9 February 1891 to a peasant family, Pietro Nenni was influenced in his youth by the local tradition of radical republicanism. He migrated into journalism and in 1911 was jailed for protesting the Italian war in Libya. In 1914 he participated in the demonstrations and strikes known as the Red Week.

Nenni served in the Italian Army in World War I and joined the PSI in 1921. An opponent of Benito Mussolini's fascist regime, he was forced to take up residence in France in 1926 and became one of the leaders of the party. Nenni also edited that party's newspaper, *Avanti*, and fought on the republican side in the Spanish Civil War.

Incarcerated by the Nazis in 1940 and transferred to confinement in Italy, Nenni was liberated in 1943. He became a key player in the Resistance and

played a major role in the birth of the postwar Italian Republic, serving as foreign minister in 1946. He then led the PSI into a close alliance with the Communist Party to help preserve the unity of the Left, forcing a schism with Giuseppe Saragat's moderate faction. This move ultimately paved the way for a major defeat of the Left in the April 1948 elections. Nenni's decision shaped the future of the Italian Left, and it was not until after 1956 that he distanced the PSI from the Communist Party and opened a dialogue with the Christian Democrats.

Nenni's drawn-out negotiations with Amintore Fanfani's Christian Democratic Party—the so-called opening to the Left—finally succeeded in December 1963, when the PSI was readmitted to Aldo Moro's government. Nenni served as vice premier during 1963–1968 and briefly as foreign minister in 1968. His passionate approach to politics made him a widely popular figure in Italy and helped to solidify coalition politics. Nenni died in Rome on 1 January 1980.

South Asian nation covering 54,363 square miles, a little larger than the U.S. state of Arkansas. The Kingdom of Nepal, with a 1945 population of some 6 million people, is located south of the Himalayas and is bordered by Tibet, now part of the People's Republic of China (PRC), to the north and by India to the east, south, and west. A predominantly Hindu nation, the Nepalese constitutional monarchy is the only official Hindu state in the world.

Modern Nepal dates back to the late eighteenth century, when the expansionist Shah dynasty of the Kingdom of Gorkha established control in the foothills of the Himalayas. The establishment of Nepal coincided with establishment of the British East India Company's control in India. An 1816 treaty marking the conclusion of the 1814–1816 Anglo-Gorkha War established a British Resident ruling in Kathmandu. In general, the British refrained from interfering in the internal affairs of Nepal while also guaranteeing protection for the kingdom. While Shah rulers remained on the throne, the hereditary prime ministers of the Rana family exercised real political power during 1846–1951. In 1951, disaffected elements of Nepalese society joined with King Tribhuvan (ruled 1906–1955) to overthrow the Rana autocracy.

Nepal

In the two world wars, Nepal supported the British by sending recruits for the Gurkha (distortion of Gorkha) Brigade. Since the nineteenth century, the British had employed Gorkhali fighters for their military needs. A 1947 agreement divided the existing Gurkha battalions between India and the United Kingdom, and a small number of Gurkha soldiers remain in the British Army today.

Nepalese cooperation in World War I partly prompted the 1923 treaty by which Britain recognized Nepal's independence. Hence, when the British withdrew from the Indian subcontinent after World War II, Nepal remained an independent kingdom.

Nepalese foreign policy after 1945 continued a long historical trend of nonalignment and the practice of balancing itself among the great powers. Nepal maintained a formally equidistant relationship with both the PRC and India but made overtures toward one or the other when its interests so warranted. Thus, while Nepal espoused neutrality in the 1962 Sino-Indian Border War and the 1971 Indo-Pakistan War, the government nonetheless bought

arms only from India. Although wary of Chinese expansion, Nepal nonetheless established relations with the PRC in 1955, recognized its sovereignty in neighboring Tibet, and concluded an aid agreement the following year that provided Nepal with Chinese economic and technical assistance.

Nepal dealt with the two Cold War superpowers in a similar fashion. Cordial diplomatic relations with both the United States and the Soviet Union ensured the flow of U.S. and Soviet aid to Nepal. In 1973 at the summit of nonaligned nations in Algiers, King Birendra (ruled 1972–2001) proposed the concept of Nepal as a zone of peace. Some 110 nations have since endorsed this proposal.

Since World War II, Nepal's shift away from its traditional isolationist posture is also reflected in its membership in a variety of international organizations, including the United Nations (UN), the Non-Aligned Movement, and the South Asian Association for Regional Cooperation.

From 1951 until the launching of the 1990 prodemocracy movement, Nepal adopted three different constitutions (1951, 1959, and 1962). Although the 1959 constitution created a bicameral legislature, with a popularly elected lower house, disproportionate political power still rested with the reigning monarch. The 1962 constitution, also known as the Panchayat (Council of Elders) Constitution, introduced a form of guided democracy that abolished political parties, created a legislature indirectly elected by members of the local panchayat and other functional groups, and further concentrated royal power.

In 1990 a prodemocracy movement ended the Panchayat system, and a new constitution not only created a multiparty parliamentary system and an independent judiciary but also codified basic individual rights. As subsequent events have shown, this did not stop King Gyanendra (ruled 2001–present) from stepping in and dissolving the government as he saw fit.

From 1996 onward, a guerrilla-style People's War led by the Communist Party of Nepal (Maoist), a faction that broke off from the United People's Front, has been a major threat to internal stability. In 2001 Crown Prince Dipendra murdered his father King Birendra, mother, and seven other family members before killing himself. Gyanendra, the new king and Birendra's brother, chose to deal with the Maoist insurgency by dismissing his government in February 2005 and assuming absolute power to rule, a suspension of democracy that he justified in the name of national security.

Netherlands

A small and densely populated country of 16,033 square miles, or roughly twice the size of the U.S. state of New Jersey, with a 1945 population of just over 9 million people. The Netherlands is bordered to the north by the North Sea, to the southwest by Belgium, and to the east by Germany. During the Cold War, the Netherlands was a solid and dependable member of the Western community of nations. It was also an economically prosperous and politically stable state that made a significant contribution to the economic unification of Europe, while it played a substantial part in Allied defense efforts with its relatively sizable armed forces.

Few nations suffered the extent of physical damage during World War II that the Netherlands experienced. Its cities, especially Rotterdam, had been subjected to extensive air attack, and at the end of the war defensive flooding inundated large areas. Half of the large Dutch merchant marine was lost in the war. However, economic recovery was surprisingly rapid, and both Amsterdam and Rotterdam soon flourished. Rotterdam became the major entrepôt for oil into Europe from the Middle East and the highest-volume seaport in the world.

Not even the loss of the Netherlands East Indies, formerly a major source of income for the country, prevented the Dutch resurgence. During

A typical scene in the Waalhaven basin, Rotterdam, Netherlands. During the Cold War, Rotterdam was the world's highest-volume port. (Corel)

the war the Japanese had occupied the colony, and they encouraged Ahmed Sukarno to set up an independent state. Weakened by the war, the Dutch had no choice but to acquiesce when Sukarno proclaimed Indonesia a republic in August 1945. The Dutch subsequently tried to reverse events, but heavy pressure from the United States and Britain led the Netherlands to agree in December 1949 to the establishment of the United States of Indonesia within a larger Netherlands-Indonesia Union. Sukarno was unhappy with this solution and continuing ties with the Netherlands, and in 1950 he set up the unitary Republic of Indonesia.

Again under U.S. pressure, the Dutch gave up Dutch New Guinea (Irian) in 1962 to Indonesia. Of its former vast overseas empire, the Netherlands retained only Suriname and Curaçao with a few nearby islands, including Aruba. Surinam, part of the northeastern Latin American mainland, is now independent. In 1954 the Netherlands Antilles, including Curaçao and Aruba, received internal autonomy and equal status, sharing foreign affairs and defense arrangements with the motherland. Although they lost an empire, the Dutch have added to their continuous territory thanks to an ongoing program of draining the *Zuider Zee*.

Queen Wilhelmina abdicated in 1948 after fifty years on the throne and was replaced by her daughter, Queen Juliana. She, in turn, abdicated in 1980, to be followed on the throne by her daughter Beatrix. Beatrix's marriage to Claus von Amsberg, a German diplomat who had been in the Hitler Youth and in the Reichswehr, was at the time quite controversial.

The Netherlands has enjoyed one of the longest periods of representative government in all of Europe, although the large number of political parties made parliamentary government at times difficult. In the 1963 elections, for example, twenty-four parties contested, and ten of them won seats in the States General, which is allocated on proportional representation. Two parties dominated: the Catholic People's Party, later part of the Christian Democrats; and the Labor Party. A coalition made up of these two parties ruled the country until 1958, when Labor lost support by its unorthodox policy of wage fixing. After 1958 the Catholic People's Party formed a ruling coalition. In the 1960s and 1970s there was a transition from a center-rightist to a center-leftist government and then, after 1977, a shift back to a center-rightist government. Traditionally, the Christian Democrats or Labor formed cabinets with Labor and/or lesser parties (such as the Liberals).

The Netherlands remains among the world's most liberal states. Dutch theologians clashed with Rome, and Dutch welfare benefits were among the most advanced in Europe. Among controversial issues during the Cold War were the 1976 revelations of payoffs by the Lockheed Corporation to Queen Beatrix's husband, Prince Bernhard, and the decision to approve the stationing of cruise missiles on Dutch territory.

Following World War II, the Dutch abandoned their policy of neutrality, which dated back more than a century, by becoming a signatory to the Treaty of Brussels in 1948 and to the North Atlantic Treaty Organization (NATO) in 1949. This decision was motivated not only by fear of the Soviet Union. Equally important in the short term was the need to ensure American

Although they lost an empire, the Dutch have added to their continuous territory thanks to an ongoing program of draining the *Zuider Zee*.

economic aid. For the longer term, the Netherlands regarded U.S. involvement as the best way of opening up international trade, extremely important for a country dependent on foreign trade, and curbing potential power plays by larger European powers.

The outbreak of the Korean War in June 1950 prompted the Netherlands to increase its defense efforts, within the framework of NATO. The Dutch sent a battalion to Korea and nearly doubled their defense budget. The latter was the outcome of intense and prolonged political debate, concluded in early 1951, concerning the direction of the Dutch armed forces. A strong maritime-naval lobby managed to prevail on the initially reluctant government to build a relatively large naval force that included an aircraft carrier, cruisers, frigates, submarines, minesweepers, and aircraft. The Dutch undertook this program against the wishes of the United States and Britain, both of which envisaged modest tasks for the Dutch Navy involving the North Sea and Dutch territorial waters.

The need for the buildup of the army and air force, on the other hand, was not in dispute. In close consultation with Supreme Headquarters Allied Powers Europe (SHAPE), the Royal Netherlands Army (RNLA) constructed an army corps with one combat-ready division and just under four mobilizable divisions. The fact that the Netherlands, against the wishes of SHAPE, maintained a large number of mobilizable territorial units showed the limits of NATO influence. The Royal Netherlands Air Force (RNLAf) developed into a sizable power with squadrons of fighter jets and squadrons of tactical fighter bombers.

Under Dutch Minister of Foreign Affairs J. M. A. H. Luns (1952–1971), the Netherlands showed itself to be a loyal ally. Following the relinquishing of Dutch New Guinea in 1962, the Dutch armed forces concentrated almost exclusively on conventional and nuclear NATO tasks. Thus, the Royal Netherlands Navy (RNLN), together with Great Britain, focused on the forward combat of the fast-growing Soviet submarine fleet near the Norway-Iceland gap. A second combat-ready division gave added mobility to the army corps. On top of that, a reinforced brigade was garrisoned in close proximity to the deployment area on the North German plain. The RNLAf, with surface-to-air guided weapons, among others, contributed to the Allied air defensive perimeter that extended over Federal Republic of Germany (FRG, West Germany) territory from the North Sea to the Swiss and Austrian borders.

From the second half of the 1960s, the image of the staid Netherlands was restyled by a number of developments. Young people no longer imbibed traditional concepts and beliefs, instead adopting a more critical stance. Many Dutch began contemplating probing questions. Could the United States, which intervened with large-scale air strikes and napalm in the war in Vietnam, remain the leader of the West? How could continued membership in NATO, which allegedly defended freedom and democracy, be rationalized when these same values were being trampled by dictatorial regimes in various South European states? Was it not time, in a period of détente between East and West, to move the North-South issue to the forefront of the international agenda? For the first time, the Dutch NATO policy and the military

contribution to NATO became the subjects of frenzied public debate in the Netherlands.

The Netherlands also manifested itself strongly in new domains, such as human rights within the context of the Conference on Security and Cooperation in Europe (CSCE). Until the end of the Cold War, however, the Netherlands embraced the policies of maintaining Atlantic unity, the movement toward the economic integration in Western Europe, and a supranational European Economic Community (EEC). The Netherlands made a contribution to the peacekeeping mission in southern Lebanon, the United Nations Interim Force in Lebanon (UNIFIL) during 1979–1985.

The UNIFIL episode coincided with the dramatic national and international debate on the stationing of new intermediate-range nuclear weapons on the territories of Belgium, West Germany, Great Britain, Italy, and the Netherlands. After three times deferring a decision, the Dutch government finally agreed at the end of 1985 to the United States flying in forty-eight cruise missiles. The Dutch behavior was a source of constant irritation to its allies, who characterized it as “Hollanditis” or the “Dutch disease.” The ratification by Moscow and Washington of the Intermediate-Range Nuclear Forces (INF) Convention in 1987, which provided for the removal from Europe of all American and Soviet nuclear arms of intermediate range, precluded the actual stationing of the cruise missiles. This agreement formed part of a period of relaxation that ended with the dissolution of the Soviet Union and the end of the Cold War.

A nuclear device, also called an enhanced radiation weapon (ERW), designed to minimize the usual catastrophic blast effects of a conventional nuclear

Neutron Bomb

detonation while releasing large and concentrated amounts of deadly radiation. Invented by the American scientist Sam Cohen at the Lawrence Livermore National Laboratory, neutron bombs are thought to have been first added to the U.S. nuclear arsenal in the mid-1970s. The bomb is a nuclear device similar in construction to other small thermonuclear devices. However, the neutron bomb differs in that its explosive yield is purposefully capped. Thus, damage to structures is limited in scope.

The bomb's true effectiveness as a weapon comes in the amount of radiation that is unleashed in a fairly concentrated area. Indeed, the radioactive yield of a neutron bomb can be many times more potent than that of other nuclear warheads. Upon detonation, a neutron bomb unleashes massive amounts of ionizing radiation (neutrons, hence its name), which in turn delivers an immobilizing electromagnetic pulse (EMP) and a lethal dose of radiation.

Because of its unique characteristics, the neutron bomb had several tactical uses. First, it could be deployed around U.S. nuclear missile silos and detonated during a Soviet missile attack. The damaging EMP would disrupt the electronics of incoming missiles and render them inoperable. Second, the neutron bomb was built to be deployed as a tactical (or battlefield) nuclear bomb. In this case, it would be used to kill soldiers protected by armor and to stop advancing armored vehicles such as tanks, which tended to be somewhat more impervious to the effects of nuclear-induced blast and heat. The lethal doses of radiation would kill humans almost instantly, while the EMP would render mechanized vehicles useless. Finally, the bomb could be used as a tactical weapon in densely populated areas (such as Central and Western Europe) without causing wholesale destruction to surrounding towns or cities. Of course, many of the alleged benefits of the neutron bomb were theoretical and oversold. Damage to surrounding structures, not to mention to people, would have been astronomical anywhere near ground zero. Cohen also made the argument that the bomb could be a highly effective antiship weapon if detonated high above enemy vessels.

In the late 1970s, President Jimmy Carter's administration announced its intention to deploy tactical neutron bombs in Europe, ostensibly to stop a Soviet armored attack against the West. The decision brought immediate consternation in Western Europe as well as in the United States. Mass protests quickly ensued across Western Europe, and Belgium, Holland, and Norway publicly refused to allow neutron bomb deployments on their soil. Carter had intended to deploy neutron warheads on Lance missiles and as artillery shells in Europe. In the spring of 1978, he announced that he was delaying production of the bomb but was reserving the right to go forward with it at a later date for the purposes of negotiating future arms control deals.

During the 1980 presidential campaign, Republican candidate Ronald Reagan pledged to reverse the Carter administration's neutron bomb moratorium. When Reagan became president in 1981, he gave the green light to resume neutron bomb production. It is believed that approximately 1,000 neutron bombs were built during the early and mid-1980s, but strong anti-nuclear campaigns in Western Europe prevented the deployment of the

weapons. At the same time, the Soviets, French, Chinese, and Israelis all embarked on neutron bomb programs or built their own stockpile of ERWs.

Embraced by President Dwight D. Eisenhower's administration on 30 October 1953, through the National Security Council (NSC) policy document NSC 162/2, the New Look defense policy was designed to implement U.S. military policy in a more cost-effective way without losing any ground in the Cold War. During the 1952 presidential election, Eisenhower had criticized President Harry S. Truman's administration both for being soft on communism and for risking the economic health of the nation due to high defense costs and budget deficits. Once in office, the Eisenhower administration sought a new policy that would fulfill its election pledges and address the events that unfolded during 1953.

Following the start of the Korean War in June 1950, the defense budget had nearly quadrupled by 1953, a fact that greatly troubled President Eisenhower. Working with his treasury secretary, George Humphrey, and his director of the Bureau of the Budget, Joseph Dodge, the president proposed a policy of fiscal conservatism that would help balance the budget and allow the nation to wage the Cold War without risking its economic well-being.

The need for a new defense posture was highlighted further when the policymaking apparatus of the Eisenhower administration ground to a halt as its leading protagonists were racked by indecision in the wake of Soviet leader Josef Stalin's death in March 1953 and the East German uprising in June of the same year. Leading members of the NSC argued over how best to exploit these situations and whether or not the United States should seize the initiative and attempt to roll back communism. In May 1953, Eisenhower launched Operation SOLARIUM, which established three task forces to study and debate the future of American military policy. Task Force A was headed by George Kennan and advocated a scenario loosely based on the containment policy already in place; Task Force B, led by Major General James McCormack, proposed a more muscular type of containment that would emphasize nuclear deterrence; and Task Force C, headed by Admiral Richard L. Conolly, examined the potential of a policy that would liberate

New Look Defense Policy

Eastern Europe by rolling back communism. By July 1953 all three task forces had reported their findings to the NSC, although they were unable to reach consensus on the preferred course of action. Ultimately, the approach chosen would borrow from all three recommendations.

Discounting the 1950 NSC-68 policy document that presumed 1954 would be the “year of maximum danger,” NSC 162/2 instead outlined a plan that would see the United States prepare for a long-haul struggle. The document called for greater use of covert operations and psychological warfare, an increase in aid to European and Asian allies, and a readiness to use nuclear weapons as a first response to any Soviet aggressive action, be it conventional or nuclear. At the same time, the New Look would decrease reliance on conventional forces, which, it was hoped, would bring down defense expenditures. The document was eventually initialed by Eisenhower on 30 October 1953. The policy was soon put into place, although U.S. defense budgets fell only marginally during 1954–1958 before rising once more.

New Thinking Policy

An important component of Soviet leader Mikhail Gorbachev's far-reaching perestroika reform agenda begun in 1985 and designed to bring about a new approach to Soviet foreign policy. New thinking (*novoe myshlenie*) acknowledged that a superpower nuclear exchange would bring about mutual assured destruction (MAD). Thus, a major goal of new thinking was to greatly ease tensions between East and West.

In July 1985, for example, Gorbachev unilaterally announced a moratorium on nuclear tests to demonstrate his commitment to nuclear arms reductions. President Ronald Reagan dismissed the initiative as propaganda, and when Gorbachev came under fire from Soviet military leaders, he was forced to back away from the moratorium. Even so, he never allowed nuclear tests to resume at the same scale as before the moratorium. In 1987, he negotiated reductions in both nations' nuclear arsenals via the Intermediate-Range Nuclear Forces (INF) Treaty. Despite Gorbachev's agreement to a highly disproportionate reduction of Soviet missiles, Reagan insisted on moving forward

President of the Soviet Union Mikhail Gorbachev addressing the United Nations, December 1988. (Robert Maass/Corbis)

with the Strategic Defense Initiative (SDI), which in turn threatened Gorbachev's ability to further justify Soviet disarmament on a large scale. The most important example of the new thinking in Soviet foreign policy was Gorbachev's December 1988 speech to the United Nations (UN) in which he announced a dramatic reduction in Soviet conventional forces and committed the USSR to grant freedom of choice to East European nations.

The explanation for this radical shift in Soviet foreign policy is twofold. First, Gorbachev recognized that his nation could no longer afford to engage in a never-ending arms race because of the severe strains under which the Soviet economy was laboring. Second, the new thinking was based on a fundamental shift in ideology. The influx and acceptance of new ideas, particularly from Western Europe, prompted greater awareness of the advantages of a free-market economy and an open society.

These new ideas were aimed toward incrementally transforming the Soviet economy to a mixed system of free market and central planning. This synthesis of socialism and capitalism sought to create a new hybridized form of socialism. In foreign policy, the new thinking turned present economic weakness into a moral strength. By reducing military spending, perestroika reforms were meant to unburden the Soviet economy while at the same time demonstrating the moral superiority of the new Soviet socialism. Instead of promoting the age-old class struggle and the East-West antagonism that went with it, new thinking based Soviet foreign policy on universal human values

and the creation of a new and mutually beneficial system of security in Europe and around the world. Ultimately, of course, the new thinking wrought historical changes that neither Gorbachev nor his fellow reformers could have envisioned. The new thinking not only hastened the end of the Cold War but also led to the dissolution of the Soviet empire in 1991.

New Zealand

English-speaking island nation in the South Pacific Ocean located approximately 1,000 miles to the southeast of Australia. With an area of 104,454 square miles and a population of approximately 1.7 million in 1945, New Zealand experienced the Cold War as a product of both its geographic isolation and its own foreign policy priorities.

Domestically, the Cold War influenced New Zealand politics. In 1949 the New Zealand National Party came to power under a platform aimed at safeguarding the country against communism and socialism. The National Party retained power in New Zealand for much of the remainder of the Cold War.

New Zealand formalized its relationship with the United States via the September 1951 Australia–New Zealand–United States (ANZUS) Pact. The ANZUS Pact provided New Zealand with some assurances that the United States would come to its assistance if attacked, while New Zealand's interpretation of the pact served as its guide for Cold War foreign policy. The treaty is significant in that it was the first one signed by New Zealand without the United Kingdom and ultimately led to New Zealand's participation in various Cold War conflicts around the world.

New Zealand was one of the first countries to respond to the call by the United Nations (UN) for troops in support of the Republic of Korea (ROK, South Korea) after that country was invaded by the Democratic People's Republic of

Korea (DPRK, North Korea) on 25 June 1950. On 26 July, the New Zealand government voted to raise a volunteer force, known as Kayforce, to serve with UN forces in Korea. Kayforce remained in Korea until 1957, almost four years after the July 1953 armistice. Nearly 6,000 New Zealanders served in Korea during this period, with 33 killed in action.

Concurrent with the Korean War, New Zealand responded to British appeals for support during the Malayan Emergency (1948–1960). New Zealand contributed a number of different types of forces to the Commonwealth cause against the communist insurgents, and in the process fifteen New Zealanders died. New Zealand also contributed to the Commonwealth force that operated in Borneo during Indonesia's *konfrontasi* policy during 1963–1965 and remained involved in the region until October 1966, after which time its Cold War focus turned to the conflict in Vietnam.

New Zealand's involvement in the Vietnam War began in 1962, when it sent a small number of military advisors to the Republic of Vietnam (RVN, South Vietnam) in support of that country's war against communist insurgents. In May 1965, New Zealand agreed to add an artillery battery to its Vietnam contingent. Prime Minister Keith Holyoake (1957, 1960–1972) helped push through parliament a resolution to introduce additional forces in June 1966 that fell under the operational control of the Australian Task Force positioned in Phouc Tuy Province. Approximately 3,900 New Zealanders served in Vietnam during 1962–1972, with a peak strength of 543 in January 1969. Thirty-eight soldiers were killed in the war.

In 1972, New Zealand elected the Labour Party to power, altering the country's foreign policy objectives and Cold War experiences. The Labour Party had opposed New Zealand's Vietnam War participation and believed that an adjustment in that country's alliance system was required in order to avoid future foreign entanglements. Prime Minister Norman Kirk (1972–1974), who oversaw New Zealand's withdrawal from Vietnam, pushed for a more independent foreign policy that limited American and British influences in favor of action better suited toward New Zealand's regional goals. The first test of this new policy emerged in the Middle East. When the United States called for a trade embargo against Iran after Iranian students had taken hostages from the American embassy in Tehran in 1979, New Zealand refused to go along. The first significant movement away from New Zealand's traditional Cold War policy would culminate six years later with a break between the two Cold War allies.

While New Zealand's Cold War experience often occurred beyond its borders, the perceived threat of communist agent provocateurs was always present during the period. One prominent example was the case of William Ball Sutch who, in September 1974, was charged under the 1951 Official Secrets Act with passing information to Soviet embassy officials. Sutch, New Zealand representative to various UN offices and secretary for the Department of Industries and Commerce, was accused of being a communist. He was acquitted in February 1975 after an investigation yielded no evidence that he had passed information or had been a member of the Communist

Party. The episode, however, was a reminder that the Cold War mentality that pitted the Western world against communism could permeate even a remote island-nation such as New Zealand.

Toward the end of the Cold War, the New Zealand government reassessed its international position. In January 1985, when the U.S. Navy destroyer *Buchanan* was scheduled to make a visit to Auckland, Labour Party Prime Minister David Lange (1984–1989) asked for assurances that the ship carried no nuclear weapons. Because it was American policy not to identify whether one of its ships possessed nuclear weapons, the visit was denied. This event precipitated a rift between the two countries during which the United States canceled nearly thirty combined military exercises and stopped sharing intelligence information. In August 1986, the rift widened when the United States officially proclaimed that it no longer considered New Zealand a participating member of the ANZUS Pact, and New Zealand was thus no longer eligible for U.S. security guarantees.

This rupture in relations occurred near the end of the Cold War. It was probably no coincidence that the two events were contemporaneous. The end of the Cold War called for a reevaluation of foreign policy objectives for all involved. For New Zealand, whose reliance upon the United States resulted in its participation in a number of Cold War battles, the end of the Cold War meant an opportunity to realign itself toward regional matters. The rift did not last long, as the two countries, which shared similar histories and traditions of democracy, searched for accommodation and consensus following the Cold War.

Ngo Dinh Diem (1901–1963)

Vietnamese politician, prime minister of the State of Vietnam during 1954–1955, and president of the Republic of Vietnam (RVN, South Vietnam) during 1955–1963. Born on 3 January 1901 in Hue to an aristocratic Roman Catholic family with close ties to Vietnamese Emperor Thanh Thai, Ngo

Ngo Dinh Diem, president of the Republic of Vietnam (RVN, South Vietnam), shown during a visit to Fort Belvoir, Virginia, on 11 May 1957. (National Archives and Records Administration)

Dinh Diem for a time considered entering the priesthood. His elder brother, Ngo Dinh Thue, became a priest and eventually archbishop of Saigon. Diem graduated from the School of Law and Administration of the University of Hanoi in 1921 and embarked on a promising career as a public administrator. He became a provincial governor at age twenty-five, and at age thirty-two he joined the cabinet of the youthful emperor Bao Dai. During and after World War II, Diem opposed both French colonial rule and the communist-led national independence movement.

In 1945, Diem rejected an offer from Ho Chi Minh to join the communist-dominated Viet Minh as premier of the short-lived Democratic Republic of Vietnam (DRV, North Vietnam) government because he viewed the communists as a threat to his Catholic values and to his vision of an independent Vietnam and because the North Vietnamese government had executed one of his brothers. Diem left Vietnam in 1950 in self-imposed exile. During the next four years, he traveled extensively in Europe and the United States. He lived in a Catholic seminary in New Jersey for two years, and there he met

several prominent American Catholics, including Cardinal Francis Spellman and then-Senator John F. Kennedy. Through his youngest brother, Ngo Dinh Luyen, Diem also kept in contact with Dai. As the French negotiated their exit from Indochina at the 1954 Geneva Conference, Dai named Diem prime minister in June 1954.

In October 1955, with the help of his large family, especially his younger brother Ngo Dinh Nhu, Diem staged a referendum that deposed Dai and made Diem president of the newly created South Vietnamese government. Most of the key positions in the new government went to Diem's family and friends or to fellow Catholics, although the latter comprised only 10 percent of the population. Diem's government was characterized by corruption, nepotism, and favoritism. His secret police, directed by brother Nhu, sought to repress all political opposition. With American support, Diem canceled the 1956 elections that had been called for in the Geneva Accords. Discontent in South Vietnam grew into an armed insurgency, which North Vietnam clandestinely helped organize as the National Liberation Front (NLF).

American officials had harbored doubts about Diem's leadership since 1954 but overlooked his liabilities because of his staunch anticommunist stance, trumpeting him as a leader who had triumphed over great obstacles to create an independent South Vietnam. Diem refused to accept American advice to institute domestic reforms to win the support of the South Vietnamese people, and he would not accept American advice on the choice of his army commanders and tactics to win the guerrilla war then raging. As his regime became more oppressive, even forbidding Buddhist religious observances in a country that was 80 percent Buddhist, Diem faced growing challenges not only from Buddhist monks but also from students, peasants, NLF guerrillas, and even members of his own armed forces. As the situation grew more untenable, a group of South Vietnamese generals, tacitly supported by the U.S. government and the Central Intelligence Agency (CIA), plotted against Diem. The coup began on 1 November 1963, and the next day Diem and his brother Nhu were assassinated. Although President Kennedy voiced shock at Diem's murder, his administration was certainly complicit in the coup. After Diem's death, South Vietnam was ruled by a rapid succession of unstable military governments.

Vietnamese military officer and politician, premier of the Republic of Vietnam (RVN, South Vietnam) during 1965–1967, and vice president during 1967–1971. Born on 8 September 1930 in Son Tay, Nguyen Cao Ky graduated from high school and in 1951 was drafted into the Vietnamese National Army, formed to fight the communist-led Viet Minh. Following six months of officer training, he was commissioned an infantry lieutenant. Volunteering for pilot training, he spent two years in France and Morocco and returned to Vietnam in 1954 a fully qualified pilot.

Ky rose rapidly in rank in the new Republic of Vietnam Air Force (RVNAF, South Vietnamese) and participated in the November 1963 coup against Ngo Dinh Diem that brought General Duong Van Minh to power. That same month, Ky was promoted to brigadier general and assumed command of the RVNAF, a post he held until June 1965. In January 1964 he supported Major General Nguyen Khanh in a coup against Minh. The new regime promoted Ky to major general. In 1965, after several more coups and changes of government, a group of military officers known as the Armed Forces Council formed a new government, and Ky was subsequently elected premier while Nguyen Van Thieu, an army general, became the head of state.

As premier, Ky directed the daily operations of the government and played the principal role in meetings with U.S. President Lyndon B. Johnson in Hawaii in February 1966. As the 1967 presidential election approached, he and Thieu vied for control of the government. The Armed Forces Council put Thieu at the head of its ticket and gave Ky the vice presidential slot, based solely on military seniority. They won the election, with 34.8 percent of the vote against ten other tickets.

Alienated from Thieu, Ky intended to challenge him in the 1971 elections but instead decided to retire from politics when he found that the Thieu faction would never permit a free and unfettered election. Ky was well known for his personal integrity and honesty, and he never trusted Thieu or his supporters. Although the Republic of Vietnam Supreme Court agreed to permit Ky's name on the ballot, he nevertheless chose to withdraw from the race.

Ky publicly criticized Thieu's leadership in the last days of South Vietnam, proclaiming defiantly that he would never leave Vietnam. On 29 April 1975, however, as North Vietnamese forces closed in on Saigon, Ky flew a helicopter to a U.S. aircraft carrier off the coast and later settled in California. In 2004, he became the first former South Vietnamese leader to visit Vietnam.

Nguyen Van Thieu (1923–2001)

Military officer and president of the Republic of Vietnam (RVN, South Vietnam) during 1967–1973. Born on 5 April 1923 in Try Thu, Ninh Thuan Province, the son of a small land owner, Nguyen Van Thieu was educated in Roman Catholic secondary schools in Hue. He joined the Viet Minh nationalist organization in 1945 but became disillusioned with it because of its hard-line communist leanings. He abandoned his flirtation with the Viet Minh and attended the National Military Academy in Hue, graduating in 1949. He also attended infantry school in France and the staff college in Hanoi in 1952. As a battalion commander in 1954, he drove the Viet Minh from his native village.
